STATE LIBRARY

*When, from whom, and how this volume was obtained,  
with the price paid, if any, may be found opposite  
the above number in the Register of Books,  
which is always open to inspection.*

*Extract from the Political Code.*

SECTION 2296. Books may be taken from the Library by the MEMBERS OF THE LEGISLATURE, DURING THE SESSIONS THEREOF, and by other State officers at any time.

SEC. 2298. The Controller, if notified by the Librarian that any officer has failed to return books taken by him within the time prescribed by the Rules, and after demand made, must not draw his warrant for the salary of such officer until the return is made, or three times the value of the books, or of any injuries thereto, has been paid to the Librarian.

SEC. 2299. Every person who injures or fails to return any book taken is liable to the Librarian in three times the value thereof.

No person shall take or detain from the General Library more than two volumes at any one time, or for a longer period than two weeks. BOOKS OF REFERENCE SHALL NOT BE TAKEN FROM THE LIBRARY AT ANY TIME.—[Extract from the Rules.]

The Foregoing Regulations will be strictly enforced.

SACRAMENTO VALLEY EDITION—THIRTY-TWO PAGES.

Vol. XXXII.—No. 1.]

SAN FRANCISCO, SATURDAY, JULY 3, 1886.

{ \$3 a Year, in Advance  
SINGLE COPIES, 10 CTS.

### An Important Northern Town.

We give on this page an engraving of one of the representative towns of the Sacramento valley, Red Bluff, the county seat, and largest town of Tehama county. Upon another page may be found an article written by a resident of the county, giving some interesting statements about the area, resource and development of the county. In connection with the

substantial business blocks, a number of factories and mills, including several carriage and wagon factories, harness shops, marble works, gas works and water works; in fact, all the trades and professions are well represented. The water supply is a credit to the town, the main supply being taken from Antelope creek, on the east side of the river, across which it is carried in iron pipes, having a distributing capacity of 1,000,000 gallons in 24

annual dividends, of from 10 to 12 per cent each.

The yards, factory and planing mill of the Sierra Flume and Lumber Company, which has added so much to the prosperity of Red Bluff, are situated, as shown in the engraving, on the east side of the river, being connected with the town by a long wagon bridge, across which a side-track extends from the railroad right into the yards, enabling the company to ship lum-

municipal development. Many of them are no doubt destined to be cities of high rank, for the development of the vast and rich area of California will call for a number of centers of trade and manufacture. We rejoice in the growth of sturdy young towns; they are exponents of the progress of the country surrounding them. A grand metropolis like San Francisco is a credit to a commonwealth, but a metropolis is not the only need. We need plenty of interior towns.

VIEW OF RED BLUFF—A REPRESENTATIVE SACRAMENTO VALLEY TOWN.

engraving we present a description of the town, written for the RURAL PRESS, by Mr. Chas. E. Heaton:

Red Bluff is situated on the California & Oregon railroad about 15 miles from the northern boundary, and is distant about 250 miles from San Francisco. It contains about 4000 inhabitants, and lays claim, along with several other towns, of being the coming metropolis of Northern California. The town, which is incorporated, has a fine location, being built upon a high plateau overlooking the Sacramento on the west side. It is tastefully laid off, contains a great many handsome residences and fine public buildings.

Red Bluff is the great wool market of Northern California, the total shipments from there for the past year having amounted to 2,500,000 pounds. It is a very prosperous young city, though it has suffered greatly from several destructive fires, the greatest occurring in 1882, when the property destroyed amounted to half a million dollars. The town contains many

hours. This can be largely increased by the well-equipped pumping works located on the river on the north side of town. There is a glove factory (established in 1864) that gives employment to about 40 persons, mostly women and girls, and manufactures between 3000 and 4000 gloves each season, requiring nearly 2000 dressed hides. The employees receive \$1.50 per cent for closing up the gloves, and the pay amounts to about \$4000 a month. There are several weekly and daily newspapers published, the place also boasts seven churches and 12 fraternal societies. The educational institutions consist of a fine public school, the Red Bluff Academy—a school of high grade, and the Academy of our Lady of Mercy. All the schools are rank high and are open to both sexes. The Bank of Tehama, incorporated in 1874, is located in a fine building on the main street. It has a paid-up capital of \$300,000, represented by 3000 shares, at \$100 each. It has a surplus of \$640, and an undivided profit of \$12,500. During its existence it has paid out 21 semi-

ber without handling it more than once after it is taken from the flume. About 3,000,000 feet of lumber per annum is used in the manufacture of doors, sash and blinds. A sample of the work in this line may be seen in the doors and windows of the well-known Phelan block, in San Francisco, which were manufactured at this place. The trade of the company in lumber and other products extends to all parts of the world. The pay-roll at this place amounts to over \$4000 per month, and more than 100 men find employment the year round in the different departments. The citizens of Red Bluff build high hopes on having a woolen mill established at this place; and, considering the excellent water facilities and other inducements for such an enterprise, their expectations will no doubt some day be realized.

The growth attained by Red Bluff and the progressive spirit which has ministered to it, as described by our contributor, can also be observed in the recent history of many California towns. They are models of health and vigor in

We shall always be glad to minister to their growth by making them and their advantages better known, as we have done in this case with Red Bluff.

**BET SUGAR WINS US FAME IN NEW ZEALAND.**—The Auckland *Weekly News* contains an illustrated article describing the Beet Sugar Works at Alvarado and asks why a similar enterprise cannot be started in New Zealand. It is satisfactory to see that the enterprise which has been carried to success with such zeal and patience by Mr. Dyer and his associates is attracting such wide attention. It seems to us that the lesson to be drawn is that it ought to receive more attention from California capitalists, now that the pioneer work has been done and success has been reached.

**STATE HORTICULTURAL SOCIETY.**—The meeting of this society on June 25th was well attended, and the discussion on apple growing was interesting. We are obliged to defer the publication of our report until next week.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Solano County Notes.

EDITORS PRESS:—The weather is very pleasant, the thermometer ranging from 80° to 90°; nights cool and pleasant. The hay crop is about gathered in and not a drop of rain on it, something unusual. What little grain there was in this neighborhood is thrashed, and turned out 45 to 50 bushels per acre.

The prospect for shipping fruit East is not so bright as it was some time ago. Fifteen carloads have been sent from Winters and about the same amount from Vacaville, and the market is broke. Some have quit shipping and gone to drying apricots. The amount sent East is not more than three men could send from Pleasant valley, and if three little orchards will break the market it is certainly not very strong. Some say that Porter put the price of fruit down so as to break up Earl, who is shipping from Vacaville now; others, that the fruit was put up in poor condition and a little of it went a long ways. Be that as it may, the prospect is not bright at present.

I saw some peaches and apricots to-day which were put up 10 days ago to ship East, but were not sent. They looked very well, but tasted as though they had been picked from a tree that was half dead and could not mature the fruit. They also tasted strong of the paper in which they were wrapped.

There is another thing which makes a vast difference in the sale of fruit, and that is the manner in which it is packed. At a recent meeting of the Fruit-growers' Association at Winters it was proposed to have a man appointed as fruit inspector. He said that one man could not go all through the district and oversee the packing. Then it was proposed to open some of the boxes at the cars and see what shape the fruit was in, but one man objected and said no one should open his fruit, and so the proposition was dropped. But something of that kind must be done, or shipping fruit East will never be a success. Some fruit that was brought to Winters was full of bird-pecked holes, some too ripe and some so small that it rolled out of the baskets at the corners. This kind of fruit should not be sent, as it will not only be a loss to the owner but is liable to damage other fruit.

Some apricots have been sold the past week for 1½ cents per pound, and I think plenty could be bought at 1½ and two cents per pound. A canner was here from Los Gatos two weeks ago, but could not get any then at two cents per pound.

## Drying Apricots.

In answer to "Subscriber" in regard to drying apricots and prunes, I would say the apricots should be thoroughly ripe but not soft. As for sulphuring apparatus, it depends upon the amount that one has to sulphur. I sulphured some yesterday by putting the sieves on some fruit boxes, covering them with a wagon sheet, set the sulphur on fire in a pan and put it under the fruit. A cheap way, and a good one, would be to get some wire cloth, coarse enough to be stout, make some frames three inches wide on the sides, and 30 by 36 inches wide and long. Then make a box about six feet high to fit the sieves. Nail some cleats 18 inches from the bottom, to set the first sieve on. There should be about 12 sieves for what four men could cut. Put in the first sieve, spread the fruit on it, about two inches deep; then another, and so on until you have all in that you want in.

Then take an old iron vessel (a frying-pan is good), put in some pieces of burlap sack, and about a teacupful of sulphur on it and light it. Set it under the fruit and shut it up tight from 25 to 35 minutes.

The amount of sulphur put on does not matter, as what is not burnt one time can be used at another. There should be a hole in the top of the box to give draft. If the top trays do not sulphur enough, leave it open a little while.

After using the sieves awhile the fruit will stick to the wire. Take a rag swab, dip it in melted lard and rub it over the wire.

When the fruit has been in long enough turn it on to trays or boards and set it up edgewise. The length of time required to dry in the sun depends on how hot are the days, and how damp the nights. It should be taken up before it gets too hard to wash with the fingers.

If the fruit is to be boxed when dried it should be put into baskets and dipped two or three times into boiling water, and then be poured into a pile, covered with some canvas or sacks and left to sweat 12 hours, then packed in a box and pressed, which can be easily done with a long scantling. About 25 pounds are put into the boxes.

## Drying Prunes.

The French prune, or, as it is called here, "petty prune," should be left upon the tree until very ripe, the longer the better, only if left too long the nights get so cool that they will not dry. It is said that in France they leave the prune on the tree until it drops off of its own accord; but Mr. J. M. Pleasants, who has had considerable experience with prunes, says that he left one tree to see how long before they would drop off, but the longer they were left the more they did not drop. The dipping

solution that Mr. Pleasants uses is one pound of lye to 15 gallons of water; dip while the water is scalding hot. The hotter the weather the better after they are put out to dry; sometimes they have to be dipped a second time; it depends on the fruit. In some localities and some years the skin is much harder to cut than others. A man has to judge of that when the fruit is drying. When dried they should be treated the same as apricots. G.

Vacaville, June 20, 1886.

## SHEEP AND WOOL.

## Kids With Neck Swellings.

EDITORS PRESS:—We are having some trouble with kids born with swellings on their necks. We had 12 kids thus affected last year and are having a few cases this year. It is not proving as serious as feared, but might become so. Some of those having the neck swellings last year died, others got well. I am told that lambs are also similarly affected, but in a long experience in goat breeding I never saw anything of the kind until last year.—GOAT BREEDER.

Our correspondent is fortunate in not having suffered from the trouble before, because it has long bothered the sheep and goat-breeder, and for a long time was thought to be beyond treatment because it was congenital. There will be, of course, cases in which there can be no help for the lamb or kid, because of its being still-born, or so low in vitality that it will not take up the burden of life. On the other hand there will be many cases which will readily yield to treatment, as we shall show below.

Although the disease has existed for a long time, its nature was not discovered nor effective remedies hit upon until about 25 years ago. So far as we know the late H. S. Randall, the well-known sheep-grower and writer upon sheep husbandry, is entitled to the credit of pointing out the nature of the disease, and making its cure known to the public. We shall quote from "Randall's Practical Shepherd" on this point presently. First, as to the

## Nature of the Disease.

Our correspondent states that he is told by a doctor that it is not "goitre," as that disease is known in the human subject. That is true, yet it also possesses resemblances to that disease which justify the use of the same term with a modification, and Randall calls it "congenital goitre or bronchocele," and he gives the following characteristics which distinguish it from goitre:

1. That it was so often congenital; 2. That it so frequently affected the progeny of parents that were not themselves subjects of the disease or known ever to have been subjects of it; and 3. That it should so often affect young animals, and so comparatively rarely affect grown ones. The additional anomalies disclosed by the facts stated in the text (if they are facts) are the following:—4. The very sudden and spontaneous disappearance of the supposed goitrous enlargement; 5. Its sudden disappearance on the application of camphor, and the apparent equal power possessed by camphor and iodine to cause its absorption.

We will give now Mr. Randall's description of the seat of the disease, and the steps by which a satisfactory treatment was arrived at:

## Congenital Goitre or Swelled Neck.

The thyroid glands are small, soft, spongy bodies on each side of the upper portion of the trachea (windpipe). Lambs are sometimes born with them enlarged to once or twice the size of an almond, and they then have the feeling of a firm, separate body, lying between the cellular tissue and the muscles of the neck. The lamb thus affected is generally small and lean, or if it is large and plump it has a soft, jelly-like feeling, as if its muscular tissues were imperfectly developed. In either case the bones are unnaturally small. It is excessively weak—the plump, soft ones being often unable to stand, and usually dying soon after birth. The others perhaps linger a little longer—sometimes several days—but they perish on the least exposure. So far as my observations have extended this condition always, to a greater or lesser extent, accompanies the glandular enlargement under consideration; but it also appears without it, and, as I shall presently show, sometimes to a highly destructive extent.

Having early adopted the view that the preservation of the life of a lamb, which is incapable of attaining that full structural development on which the vigor of the constitution depends, is a loss instead of a gain—and being specially averse to tolerating in a breeding flock any animal even suspected of being capable of carrying along and transmitting a hereditary disease—I never have applied any remedy whatever for "swelled neck." I have seen very little of it for the last few years; but events in 1862, presently to be mentioned, have surrounded the subject with new interest, and now I regret that I have not experimented more fully in order to ascertain the precise nature of the malady.

I have learned some new facts in relation to it. Two or three lambs which I saw, in 1862, decidedly affected by it, but not as weak or as attenuated in the bony structures as usual, very rapidly threw off all appearance of the goitrous enlargement of the glands; and they

thenceforth grew about as rapidly and appeared about as strong as ordinary lambs. I saw another such case in 1863. I made no memorandum of the facts at the time, but my impression is that in all these instances the enlargement of the thyroid glands disappeared within the space of as short a period as a fortnight. An intelligent friend informed me that having some goitrous lambs in his flock last spring, he placed a bandage round the neck of each over the thyroid glands, and wet it a few times a day with camphor (dissolved in alcohol). The swelling, he thinks, disappeared in less time than a fortnight. Mr. Daniel Kelly, Jr., of Wheaton, Illinois, who is represented to be a highly successful flock-master, states, in an article in the *Rural New Yorker*, that the disease is frequent among his lambs; that he binds a woolen cloth about their necks and keeps it wet "with spirits of camphor or the tincture of iodine;" that "there is little, if any, difference in the effectiveness of these tinctures;" that either "is sure to cure them."

These facts would seem to add to the number of anomalous features of the malady, when they are compared with those which appear in the human subject of goitre, if, indeed, it is the same malady; and they suggest some doubts of the latter fact. But fortunately no question affecting the practical treatment of the disease is to be settled by the determination of that identity. It would now seem that mere evaporants and external stimulants rapidly control it. Should the fact be found otherwise, in the case of a lamb worth saving, the application of iodine would undoubtedly remove the glandular enlargement. It might be applied to the parts with a little less trouble in the form of an ointment, composed of one part by weight of hydriodate of potash to seven parts of lard.

## Dr. Law's Opinion.

In his "Farmers' Veterinary Adviser" Prof. James Law draws a closer resemblance to goitre, and gives this paragraph:

Goitre, a diseased enlargement of the thyroid body, situated beneath the throat, is common in animals and in man, wherever the water is charged with the products of magnesian limestone. Hence its frequency on the limestone formations of New York and Pennsylvania. Weakness from disease, poor feeding, abuse, overwork, etc., aggravate the affection. In solipeds there are two distinct swellings, one on each side, but in other animals, and above all in swine, the swelling is single and in the median line. At first it is soft and even doughy, but afterward it becomes firm, tense and resistant, and if cut into may be even gritty. In lambs it may form a great engorgement from the jaw to the breast-bone, and the whole produce of the year may be still born or die soon after birth.

Treatment.—Give rainwater and iodine freely, both internally, on an empty stomach, and over the swelling. Persist in this for months. Weak solutions of iodine may be thrown into the tumor by a hypodermic syringe, or the nutritive bloodvessels may be tied.

The destruction of lambs by goitre may be obviated by giving the ewes rainwater, good feeding and plenty of exercise in the open air during the winter.

## Swellings an Impediment in Parturition.

In his excellent work on "Veterinary Obstetrics," George Fleming mentions a case described by Pfug who was called to attend a goat in difficult labor and on manual exploration discovered that the first fetus was in normal position, but that on each side of the head in the parotid regions and toward the larynx were two large swellings (congenital serofula) which prevented the passage of the young creature. By manipulation, pressure on the tumors—which were as large as a small fist—first on one side and then the other, with gentle traction, the kid was released. Two other kids which were in proximity to the first were also artificially delivered.

This last described case is evidently from a different cause than the foregoing, and where the trouble comes from serofula it is of course serious, as it argues dangerous impurity in the blood of the flock and it should be most carefully weeded out. The swellings which our correspondent describes as noticed in his flock are less serious and will no doubt yield readily to the treatment described by Mr. Randall, except when the animal is too far gone to be worth saving. We should like to have experience and observation on this point.

## THE DAIRY.

## A California Jersey Ranch.

A correspondent who signs himself "Veri" writes for the *Country Gentleman* the following account of his visit to Henry Pierce's "Yuba Buena Ranch":

The ranch is situated about 10 miles from the town of San Jose, at the foothills, and comprises about 3000 acres of field and pure land. It is stocked with horses and cattle. These run out of doors each day of year, and have green feed daily. There are barns for the storage of feed and for shelter in exceptionally bad weather. The principal herd is Jersey cattle, the foundation of which is laid in the sixties, when the first import was made directly from the Island of Jersey ship

around Cape Horn; subsequently fresh blood was obtained in the same way by other importations. It was not until lately that any animals were brought here from the East. Hence it is interesting to notice the characteristics of this herd for comparison with our Eastern herds, the blood elements in both being in many instances the same. Senseless requirements of fashion, or favorites created by auction prices, have had no influence upon this herd, which is the sole outcome of grand cows crossed on the best bulls, with constant, long-continued weeding out of poor ones as judged by a better basis.

We find the blood that made Coomassie, Jersey Belle of Scituate, Mary Anne of St. Lambert, and the Signal family of our Atlantic coast; and the Bloomer family here—a family unknown at the East, yet leading here. Looking over the breeder's certificates, we notice that Duke 76, Victor, Vertumnus and Welcome have contributed their blood.

The bull Jack Low, whose sire Forget-me-not was a son of Farmer's Glory, is out of Beulah de Gruchy, with a record of 22 lbs. two oz. in seven days, as reported by Mr. Cornelius Wellington of Massachusetts. This bull is long-bodied, medium high, well ribbed, with great capacity, combined with fine neck and cow-like head; in color a silver gray shading to black, and altogether a very striking picture of a Jersey bull. One cannot well help thinking that from the lineage of Farmer's Glory there will come daughters whose better qualities will enhance their good looks. They certainly have the requisites of form, size and vigor.

Victor of Yerb Buena, imported before registration was required on the island, is the sire of several daughters with tests of over 16 lbs. in seven days. It is a pity that his pedigree is not known, for he could but add laurels to some family. I fancy it would be found that he is of the Coomassie family, for his get resemble it most strikingly. Coomassie of Y. B., his daughter, out of a Vertumnus cow, is one of the finest young cows we ever saw, and Fairy of Y. B. is a good second.

Mon Plaisir is one of the show cows of the herd, having already earned distinction in the show-ring, and would, in my estimation, stand high in an Eastern show-ring; but beyond good looks she has quality, for she has a test of 18 lbs. 12 oz. in seven days on grass. She has been bred to William of Scituate, whose sire, Black Defiance, was a double grandson of Jersey Belle officiate, famous as the first Jersey to make 25 lbs. of butter in seven days, and still held by all breeders to be the ideal type of a Jersey cow.

Princes of Yerb Buena strikes the eye as we pass, and is hard to decide her place in the herd. She is of the desired type, and her record of 14 pounds in seven days makes her standard. She is bred to a son of Romeo de Bonair, the Stee Pogis 31-Victor Hugo bull, well known to your readers. Her daughter, Alta of Y. B., is fair to be a chief attraction.

On the fields, as we pass to the pasture, the men are plowing, seeding and harrowing in the grain. They say they have been doing since Dec. 1, and will continue so long as the soil is moist.

Wind the pastures green, the grass growing with considerable strength, for the animals, with exception, are fat and sleek. The milchcows have large udders, that milk out; and cannot doubt that for milk-flow the winter feed of California is unsurpassed. Young heifers show great development of udder. We saw large number of attractions, of which we recall Sylvia of Y. B., a yearling heifer by Silverloud's Son (he by Forget-me-not, dam Silverloud, the famous Jonathan Smith cow), these should like to own ourselves.

Atti of Y. B., Yesso of Y. B. and Millbrook strike us as larger than animals of the same age East; they have size, vigor and capacity, but preserve the symmetrical figure and graceful lines of this breed.

This herd won 12 prizes at the California State Fair, 1885, beside herd-prizes in each class (izes being given to herds over two years and der); also sweepstakes and special prizes.

## Warts on Cows' Teats.

A reader asks about removing warts from cows' teats. A writer in *Howard's Dairyman* gives the following, which seems quite practicable: "Warts are quite common on cows' udders; also the large, rough, bleeding ones that appear on various parts, and have been known to grow to a large size. They are often very troublesome when the cow is in milk, as these cause pain from being pulled out of the root by the hand of the milker. Take a pair of sharp scissors and clip them off near the skin, then dress with chromic acid, one part, and pure water four parts—it should be kept in the dark—take a stick as large as a pencil and tie a small fine rag on one end; dip in the acid and apply to the cut surface once a day or once every two days until the wart is level with the skin. This must be washed off before milking. If properly done there will be no mark. It is equally as good on the human subject. In treating the large warts it is not best to cut them much, if at all, as it makes them very painful. Apply the acid carefully so that all the surface is wet, and when a black scab is formed remove it carefully and renew the application until it is near the skin, then stop and the space will heal nicely without leaving a mark."

## THE GARDEN.

## Testing Seeds, Etc.

EDITORS PRESS:—I left Pennsylvania last October and came here to settle. Besides farming I am trying to garden some in the valley of Ballard where I can irrigate. On December 10th I sowed radish, onions, lettuce and celery seed; all grew but the celery. I have sowed twice since, but cannot see any of it growing.

I planted potatoes on February 15th, but they were frozen down twice. The last time, on April 4th, when the thermometer was at 30° just before sunrise. I would like to get a little information through the PRESS, how to test seed for its power to germinate. Second, which would be the best way to start celery and cauliflower seeds? I believe my first two sowings were covered too deep. The last sowing I only sprinkled a little wood ashes over.

I also put sweet potatoes into the ground to start plants, but I cannot see any of them coming up. Maybe they need a different treatment here than in the East. Hoping to find answer in the PACIFIC RURAL PRESS.

CHRISTIAN ERNST SCHNEIDER.

Ballard, Cal.

We hope some of our correspondents will give their experience with the plants named. As for testing seeds, the following from an Eastern exchange may be of service:

The plan of testing seeds by seedmen before sending them out is more and more appreciated. In fact, before ordering the year's supply, seedmen now generally test samples—at least the better class of them do. It is no less essential that buyers test seeds before planting. This is fairly accomplished by placing the seeds between folds of flannel or blotting-paper, and keeping them moist and at a temperature of 65 to 70° Fahrenheit.

For testing seeds in a large and critical way, however, many different plans have been devised. Perhaps the most complete, insuring proper warmth and at the same time constant moisture, is that of a prominent seed firm of England. It may easily be applied to the testing of seeds on the farm, where a considerable number of samples is required to be tested. The arrangement consists of a wooden frame with sloping glass cover, inside of which is fixed a shallow tank of water. In this tank are placed bricks of the ordinary size and of a porous nature, the surface of which stands well above the water, but in a position to absorb sufficient moisture to cause germination; and on these bricks the seeds being tested are laid.

The surfaces of the bricks are divided into spaces sufficient to contain one test of from 200 to 300 seeds, and numbered for the sake of accuracy in registration. The temperature is kept at about 70° Fahrenheit, and at this point tests of clovers and some of the grass seeds can be completed in from two to three days. Its advantages are that seeds can be watched in the actual process of germination, and non-germinating seeds examined for the cause. The ease with which a humid atmosphere and even temperature can be obtained and preserved when the bricks are once heated is apparent. The regular supply of the exact amount of moisture without its having to be applied by hand at almost haphazard, as in the case of tests in soil, and speed, accuracy and simplicity in working, are also apparent.

## Vegetables for Shipment.

The shipment of vegetables overland during the period of cheap freights was immense and at other times the amount shipped is quite an item. We believe it may be greatly increased and we hope the gentlemen named to present the subject at the next Horticultural Convention in Sacramento are preparing their essays. The overland fruit train from Sacramento carried a car and a half of "garden sass." We find the following in the Los Angeles Herald:

There is much said about the money-making in oranges, lemons and grapes, in Los Angeles, but the Chinamen are supposed to be making more money out of common plebeian cabbages than any orange-grower or vigneron in the country. There is an enormous demand for cabbage for shipment to the East. This flood runs at the full from January to April inclusive, but there is more or less of this demand at all seasons of the year. The supply is at all times less than the demand, and the only way of regulating the price is the San Francisco market. Commission men and shippers here have to send to that city to fill their Eastern orders, but they pay a little more for the home product than for that supplied at San Francisco. The Los Angeles cabbage is greatly preferred by the Eastern dealers, hence our merchants would rather fill their orders at home, even if it cost them a little more.

The price at present is \$1.50 per hundred or \$30 a ton. In this climate there is no trouble to grow two crops of cabbage per year. Big Drummond heads will weigh 15 to 20 pounds each, and the smaller, more compact sorts preferred for shipping, will certainly average all of five pounds each. They are planted about

two feet apart, which will give 10,000 to the acre. This is 25 tons to the crop, or 50 tons a year, off an acre of good ground. The gross results of such a crop are \$1500 an acre. It is not probable that, even with white labor, the care of the two crops would come to more than \$500, leaving a net profit of \$1000 an acre. It is said that some of the Chinese make that much.

Cauliflower will pay as well if not better than cabbage. It is not shipped in quantity for the simple reason that it is not to be had. In small lots it has been sent as far as Omaha, and it has gone there in perfect condition. It is said that Vick of Rochester, New York, had an immense patch of cauliflower caught in the freeze-up in Florida last winter, where he has grown it for some years past for the New York market. He is supposed to have a representative in this city now studying up Southern California as a field for a similar enterprise.

## METEOROLOGICAL.

## The Climate of the Sacramento Valley.

Sergeant Barwick, Observer of the U. S. Signal Corps at Sacramento and Meteorologist to the State Board of Agriculture, has prepared for the latter body a very valuable special report on the "Meteorology and Climatology of the Great Valleys and Foothills of California," including records of observation covering from 15 to 36 years. From Sergeant Barwick's report we compile certain statistics and descriptive matter as our space will admit.

## Yearly and Seasonal Rainfall, Etc.

The instructive tabulated information below gives the rainfall at Sacramento annually—that is, from January to December of each year—for 33 years. Also, the rainfall by seasons, beginning with September 1st of one year and ending with August 31st of the next year, the wettest season being 1861-2—35.56 inches; the driest that of 1863-4—7.87 inches; the wettest calendar year being 1880—31.99 inches; the driest being 1877—8.44 inches; the mean average seasonal rainfall for 32 years being 19.076 inches; the mean average for the year, or the mean annual average, being 19.529 inches. The difference between the mean average rainfall, calculating from January 1st to December 31st of each year, and from September 1st of one year to August 31st of next year, is .453 of an inch in favor of the calendar year:

YEAR OF	Yearly Rainfall.	Total No. of Days Rain Fell.	Season of—	Rainfall—Inches.	Total No. of Days.
1853....	19.99	51	1853-54	20.06	51

## Average Annual and Seasonal Temperatures.

The statement below shows the average temperature at Sacramento for each year for 33 years; for the spring, summer and autumn for 33 years, and the average winter temperature for 32 years. The coldest year, inferring from the average temperature, was that of 1880—57.5°; the warmest was 1864—62.8°—the mean average for the past 33 years being 60.2°, showing the coldest to have been 2.7° below the mean average, while the warmest year being that of 1864, when it was 2.6° above the mean average for 33 years. By careful study of the following table, one is struck by the slight difference between the coldest and warmest year, as compared with a 33 years average, generally not more than 3°. That is, we might safely say that the average temperature of any year is not likely to vary more than 3° from 60°, either way, between the hottest and coldest

est year, as compared with the mean average temperature for the past 33 years:

YEAR.	Mean Annual Temperature.	Mean Spring Temperature.	Mean Summer Temperature.	Mean Autumn Temperature.	Mean Winter Temperature.
1853.....	62.6	62.9	74.3	69.0	47.3

‡Mean for thirty-three years.

## General Remarks.

The climate of the Sacramento valley and foothills being of great interest just at present and since the holding of the citrus fair, January 11, 1886, I thought it a very appropriate time to reprint a portion of an article by the late lamented the Honorable B. B. Redding, published in the State Agricultural Society's Report for 1878. The subject spoken of above is on the general climatic condition of the Sacramento valley and foothills, from Redding on the north to Sumner on the south, and is as follows:

From Redding, in the northern end, to Sumner, at its southern extremity, is a distance of 350 miles. The mean annual average temperature of Redding is 64°. The lowest point to which the thermometer has fallen since a record has been kept was 27°, in December, 1876. [In all probability it fell lower than that since the above article was written, for in 1883 it fell to 19° at Red Bluff.—SERGEANT BARWICK.] Sumner, at the southern end of the valley, has an annual average temperature of 68°, and an average rainfall of four inches. The lowest point to which the thermometer has fallen at this place was also 27°, on the same day, in December, 1876. [In December, 1883 (since the above was written), the temperature fell to 25°, according to the railroad weather reports.—SERGEANT BARWICK.] There is a remarkable uniformity in the climate throughout the Sacramento valley. In it, a difference of 5° of latitude, between 35° 30' and 40° 30', only lowers the annual average temperature 4.15°. The difference of the annual average temperature between corresponding degrees of latitude in the Atlantic States, at an equal distance from the ocean, is more than 8°.

It has been found that the foothills of the Sierra, up to a height of about 2500 feet, have apparently the same temperature as places in the valley having the same latitude. It has also been found that with increased elevation there is an increase of rainfall over those places in the valley having the same latitude, as, for illustration, Sacramento, with an elevation above the sea of 30 feet, has an annual average temperature of 60.48°, and an average fall of rain of between 18 and 19 inches, while Colfax, with an elevation 2421 feet, has an annual average temperature of 60.50°, and an average annual rainfall of from 42 to 43 inches. This uniformity of temperature and increase of rainfall appears to be the law throughout the whole extent of the foothills of the Sierra, with this variation as relates to temperature, viz.: as latitude is decreased the temperature of the valley is continued to a proportionally greater elevation. To illustrate, approximately: if the temperature of Redding, at the northern end of the valley, is continued up the foothills to a height of 2000 feet, then the temperature of Sacramento, in the center of the valley, would be continued up to 2500 feet, and that of Sumner, in the extreme southern end of the valley, up to 3000 feet. The increase of rainfall on the foothills in the latitude of Sacramento, due to elevation, is about one inch to each 100 feet. South from Sacramento the proportion decreases until, at Sumner, the increase due to elevation is but half an inch to each 100 feet. This is shown by the record kept at Fort Tejon, in the Tehachapi mountains near Sumner, at an elevation of 3240 feet, where the annual rainfall is between 19 and 20 inches. There is no record kept at any point in the hills above Redding, but prob-

ably in this latitude the increase due to elevation is about 1½ inches to each hundred feet. The increase of precipitation on the hills at the northern end of the valley gives greater density to the forests, and permits them to grow at lower elevations than in the southern end of the valley. At the same time the difference in temperature is so small that the character of the vegetation of the hills at each end of the valley is not dissimilar. The trees found in the vicinity of Redding, at the northern end of the valley, below an elevation of 500 feet, are not found at the southern end until we pass Caliente, at an elevation of 1300 feet. It would seem that the temperature of the valley prevails up the Sierra to an elevation that equals the height of the Coast Range of mountains. If a line were drawn parallel to the surface of the ocean from the top of the Coast Range, east, until it met the flanks of the Sierra, it would mark a level on the Sierra below which the temperature would not materially differ from that in the

## Sacramento Valley.

This fact is probably to be ascribed to the prevailing southwest return trade winds which blow over the State from the ocean for more than 300 days in the year. Passing the summits of the Coast Range, but small portions descend into the valley; the remainder reach the sides of the Sierra at about the level of the summits they have passed.

## Arboreal Vegetation.

At the northern end of the valley, at an elevation of 500 feet above the sea, the most of the California oaks are found; of pines, only the nut or digger pine; the buckeye and chemical. This is the characteristic arboreal vegetation throughout all these 350 miles. Its presence everywhere shows increased rainfall over the valley, and similarity of temperature to that of the valley. Our pasture oak is found at lower elevations in the valley, but always on moist land or near river courses, proving that it demands, in addition to temperature, the increased moisture. In the southern end of the valley this vegetation prevails at higher elevations, because it there finds the proper temperature and moisture. Wherever, on the foothills, any of the trees named constitute the preponderant arboreal vegetation, it is an evidence that the temperature is the same as that of the valley, and plants that can be successfully grown in the valley can be grown to as high an elevation on the hills as these trees abound. If one tree were to be taken as the evidence of this uniformity of temperature, it would be the Sabin's (the nut or Digger) pine. It is never seen in the valley or on the hills below an elevation of about 400 feet. It is not found at a higher elevation than that in which the temperature is the same as that of the valley. It is never found in groves, but singly among other trees, yet it prevails throughout these 350 miles of foothills. While the vegetation is more dense on the hills at the northern end of the valley, due to increased precipitation, there are also local differences—where there is similarity of soil—due to exposure. Throughout all the lower hills the greatest number of trees is found on gently sloping eastern, northeastern and northern hillsides, which necessarily are more moist and cool. The southern aspects contain less trees, because exposed to the direct rays of the sun and to the full force of the prevailing winds.

## Crops Suitable for Cultivation.

Every agricultural product that can be grown in the valleys, including the semi tropical fruits, can be grown with equal facility in these foothills. Ordinarily the land has to be cleared of the trees found upon it, and cultivation must be continuous, for on the whole western face of the Sierra the native trees, when cut or burned, are rapidly replaced by a new growth of the same kind. These lands are found to have all of the requisites for the successful growth of orchards. Fruit trees thrive better upon them than on the lands of the valley. None of the many theories advanced as to the cause of the treeless condition of many plains and prairies having ample rainfall, seem to be entirely satisfactory, but experience has demonstrated that orchards grow best and thrive with less artificial aid on lands that in a natural condition are covered with trees. The increasing exports of small fruits, such as strawberries, blackberries and raspberries, from the vicinity of Newcastle and Auburn, and their superior size and quality, prove that this region is better adapted to their culture than any place yet found on the level lands of the valley. The peaches of Coloma have a State reputation for flavor and size. The apples of Nevada and Georgetown are equal in size, taste and keeping qualities to the best imported from Oregon. The Oroville oranges have been pronounced equal to the best from Los Angeles. The vine grows with luxuriance, and bears abundantly wherever it has been planted throughout all this region. "The wines of Coloma have more than a local reputation. Persons competent to judge assert that wine from grapes grown on the foothills is free from the earthy taste that characterizes much of the wine of the flat land of the valleys. They also express the belief that if ever wine is to be made in California as light as that from the Rhine, and as free from alcohol, the grapes will be grown in the higher elevation of the foothills, where snow falls and remains on the ground a few weeks each season. It is said that the long summers and great heat of the valleys develop the saccharine matter in the grape, which by fermentation is converted into alcohol."

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Fraternal Plan of Life Insurance.

Some members of the Order Patrons of Husbandry have favored the idea of establishing a "life beneficiary branch" as a promising means of adding to Grange benefits and increasing the interest and membership of the Order among our rural population. The subject is well worthy of consideration, and the growth of fraternal organizations based upon mutual insurance as a central idea furnishes valuable data to calculate the advantage of extending Grange work in this direction. We are glad to minister to the interest in this subject by quoting a large part of a report made to the Supreme Lodge of the A. O. U. W. by William H. Barnes, of San Francisco, who is chairman of the Statistical Committee of the Supreme Lodge. Readers will notice what strong points are made in favor of economy in insurance on the fraternal plan, also the low death rate among rural dwellers and the superior longevity of women, both of which should go to lead farmers and farmers' wives to consider how much cheaper they could insure themselves than by joining in with other occupations where life is less certain and rates consequently higher. Another reason why Californians should consider the matter is the fact that our climate favors longevity by freedom from epidemic diseases and freedom from severe cold weather, of which a leading Scotch authority in life statistics says: "The descent of temperature below the freezing point in Scotland causes a greater increase in deaths than the most deadly epidemics to which the inhabitants are liable."

We quote as follows from

## Mr. Barnes' Report.

The business of this committee, as we understand it, is to collect and present facts especially relating to death rate, with the view of applying said facts to the system of the A. O. U. W., to see if it is feasible, upon the payment of a reasonable sum of money monthly—say one-half, or less, than is charged by strictly business corporations—to guarantee upon the death of a member in good standing the sum of \$2000. It would not be difficult to array here scores of what are called mortality tables, expectancy figures, tables of graduation, etc., and confuse the mind by legions of numbers in serried columns; but we desire to say emphatically that, correct and reliable as such tables may be to a certain number of lives followed from beginning to close, they are not of the slightest information when applied to associations of such character which have, as all fraternal Orders do have, a constantly changing membership. Nor ought they to be applied to even business corporations which have, as will be shown, only the smallest percentage to be paid out of the vast number that originally apply.

## Death Rate.

We hold that the only true and correct method of presenting the subject is to give facts and the actual results, and when statistics and figures are employed to see that such figures and statistics come from unbiased and unprejudiced sources, and in the following there is no doubt as to the truth. They are the work of Surgeon J. S. Billings, to be found in the United States census for 1880, and far exceed in value (in our judgment) any figurings from any other sources:

Population, United States, 1880.....	50,155,783
Males.....	25,618,820
Females.....	24,536,963
Of which there were, colored.....	6,580,793
Chinese.....	105,465
Japanese.....	145
Indians.....	66,407
Total.....	6,752,813

The total deaths for the year were.....	756,893
Males.....	391,980
Females.....	364,913

The percentage of death per thousand was:	
Males.....	15.35
Females.....	14.81
General average.....	15.01

One thousand and seventy-four males died to every thousand females. The percentage on deaths under one year of age was:

Males.....	248.08 to thousand
Females.....	215.38 " "

Under five years of age:	
Males.....	415.51 " "
Females.....	381.85 " "
Both sexes, 5 to 15 years of age.....	87.57 " "

Taking percentage of death to be 15 to each thousand of population annually, they would be composed as follows:

Under 5 years of age.....	6,855.5
Five to 15 years of age.....	1,3135.5
Over 60 years of age.....	2,5890

15,0000

Of the population of the United States, including colored, Chinese, Japanese and Indians, there are 12,830,349 males over 21 years of age—about one-fourth of the population. But giving a liberal estimate, and taking from the age of 15 up, it will be seen that of the total deaths of 1880 on the general average of 15 per thousand, eight of said deaths were under the age of 15 years, and only 7 deaths per thousand above it; and, consequently, that the death rate of the male population above voting age could not have been over 7 in proportion to the entire population per thousand.

But the question immediately arises, How does the male death rate above the voting age compare with its own numbers?

Total deaths per year.....	756,893
Under 15 years of age.....	403,605
Seventeen to 80 years of age.....	237,531
Over 60 years of age.....	115,797

It will be considered that the population between 15 and 21 are equivalent in number to those over 60, and that when we include from 15 to 60 in this estimate, a most liberal concession is made. The deaths from 15 to 60 in 1880 were 237,531, half of which were females, leaving the male deaths above voting age to be 118,765 for said year.

What would it have cost each of the male population of the United States in 1880 to have paid \$2000 at death of every man over 21 years of age who died in said year? One hundred and eighteen thousand, seven hundred and sixty-five deaths at \$2000 call for \$237,530,000; and 12,830,349 paying \$18.51 each, or \$1.50 per month during the year, would have equaled the indebtedness. Going still further, How much would it have required of each member of the population of 1880 in the United States to have paid \$2000 at every death—old, young, infants, all nationalities combined, etc.—of said year? Take the death rate, 15 to the thousand, and the answer appears \$30; or, to be exact, 756,893 at \$2000 each would be \$1,513,786,000, which would require of each of the 50,155,783, population of 1880, the sum of \$13.17 to pay \$2000 for every death that occurred. Half of the entire population is over 21 years, and, as is stated, this half is 7 out of each 15 deaths. Again, half of this population over 21 years of age are females, whose death rate is a trifle better than males, even as 14.81 per thousand is better than 15.35, making the male death rate  $7\frac{1}{2}$  per thousand, female  $6\frac{1}{4}$  to the total number.

Dividing the population into classes, viz., up to 15 years, from 15 to 60, over 60 years of age, and compare the death rate of each class with the number in said class, also aggregate population, and all over 15 years of age, gives the following results:

AGE.	Number in said class.	Deaths in said class.	Percentage of deaths.	Amount paid to pay \$1000 each death.	And pay to pay \$1000 each death.
Under 15 years.....	20,043,659	403,605	2.01	\$40.27	17.16
Fifteen to 60 yrs.....	27,622,742	237,531	85.5	17.16	17.16
Over 60 years.....	2,399,731	115,797	4.82.5	96.50	96.50
Total population.....	50,155,783	756,893	1.50.1	\$30.17	
All over 15 years.....	29,922,473	353,328	1.18.1	\$23.61	

## Foreign.

In the death rate, attention is called to the following fact in the census of 1880, viz: that the number of deaths among the colored population is  $2\frac{1}{2}$  per cent higher than among the white. The number of the white population in 1880 was 43,402,970, in which 750,191 deaths occur, or 14.74 per cent. The colored population numbers 6,752,813, in which the deaths were 116,702, or 17.28 per cent. It is also a remarkable fact that the death rate of the United States is much lower than that of other civilized countries. In the rural population of England, the death rate is 18.05 per thousand, and in all England is 20.05 per thousand. In rural Scotland the death rate is 17.03, while all Scotland shows the high rate of 21.03 per thousand. In commenting upon these facts Surgeon Billings remarks: "The low death rate in the United States is considered to be due to the absence of overcrowding and to the more general and equitable distribution of the means of supporting life, including especially the bountiful food supply of good quality for all classes of people."

## The Results of Fifty Years.

The following facts taken from the records will, I think, carry with them much more satisfaction than any tables of expectancy or so called "Results" published by business corporations. They are those of an Order with which I have been closely identified for much more than half the time specified, and at least three-quarters of the transactions have occurred under my own observations,

and its membership, progress and financial ability, more than trebled during said time.

I allude to the 50 years of American Odd Fellowship from 1838 to 1883, and I unhesitatingly assert, the A. O. U. W., or any other legitimate, progressive Order, will have a similar experience. In the 50 years the I. O. O. F. received by initiation 1,318,225 persons; during the same time the reinstatements and admissions by card were 439,408, making a grand total, 1,757,633. At the end of 50 years, in round numbers, 500,000 were in membership, and 106,900 had died in good standing in the Order, equivalent to about one in 16 of the admissions from all sources. The admissions of the half century average 35,000 per year; but the loss from suspensions, withdrawals, etc., including an average of 2138 annually by death, average 25,000 annually, leaving the average net gain but 10,000. Giving the 500,000 membership at the close of the 50 years at 10,000 net gain for one year, or an average membership for the half century of 255,000 members per year, the average annual death rate as stated for the same period was 2138 annually, or 106,900 for 50 years. The relation of 2138 to 255,000 gives the annual percentage of the death rate a trifle less than one per cent, and this, it must be remembered, is not for a few exceptional years, but for a long period, and covers the time of the civil war and terrible epidemics of the South in days gone by.

Another fact must be taken into consideration. Save in a few localities, no medical examinations were required of persons joining the Odd Fellows, nor is there any age limit as in the A. O. U. W.; and if medical examinations are of the value that some claim for them the record for the A. O. U. W., so far as death rate is concerned, should be much better than that of the I. O. O. F. Now for a moment let us look at what would have been the result if American Odd Fellowship had collected \$20 yearly of its 255,000 members for 50 years for a death benefit fund. It would have amounted to 255,000,000 of dollars. To have paid \$2000 at the death of its 106,900 members would have required \$213,800,000, and left a balance in said fund of \$41,200,000; and in this estimate no calculation is made for receipts from those who have been in the Order for more or less years and then dropped out. The figures show the admissions and reinstatements to be 1,757,633; the deaths, 116,900; the membership, 500,000, leaving 1,250,733 unaccounted for; all of whom in this half century have been members for a greater or less period. It is generally considered that the average duration in fraternal life of all who join is similar to that of those who have taken out insurance policies, namely, about 7 years, and consequently 1,750,733 were in the Order each that length of time, and would have contributed their \$140 each to this benefit fund ere they dropped out, swelling the surplus to over \$200,000,000.

## Lapses.

An interesting diagram published by *Our Society Journal* in November, 1884, shows a few life policies taken out in the American companies and what became of them. The number in force at the end of the second year were as follows: Second year, 875; sixth year, 500; seventh, 396; ninth, 201; twelfth, 107; fifteenth, 80; twenty-first, 30. Allow 1 per cent annually for deaths for all said policies in force in the 21 years, there would have only been 60, making a total of 90, leaving 900 to be accounted for. The answer is simply: These 900 paid in an average of over \$60 each and then dropped out, relieving the company of all expenses so far as they were concerned. In these 21 years 6197 annual premiums were paid, which, at the rate of \$10, would have been sufficient to pay \$1000 at death on the A. O. U. W. plan. But when it is realized that the lowest premium per thousand in a company for the age of 40 years, which is the average in societies, is \$26.61 annually, it is not difficult to perceive the line of profit or to account for the mighty reserves accumulating in the vaults of the corporations.

## Actual Cost of Insuring \$1000.

Allowing that the actual cost of carrying a money guarantee of a specified amount (like the \$2000 of our Order, which we promise to pay our membership) is properly within the province of this Committee, from the official tables we give the average cost annually to the companies named, of carrying each \$1000, or, to put it definitely, how much parties would have had to pay annually per thousand of the amount of their policies to settle the policies of those who died during the term. The period of time embraced below is 25 years in the history of each company ending in 1883:

Company.	Actual cost of insuring \$1000.
Mutual Life of New York.....	\$11.09
Equitable.....	11.02
New York Life.....	11.70

In an order like the A. O. U. W., where every dollar collected for assessments is appropriated for death claims and for no other purpose, it needs no figuring to show that the highest amount here would have been only \$23.54 annually to have carried \$2000, as no expense of any nature or any amount can be deducted from the moneys paid for this purpose. In companies of an exclusive business character, it is necessary and essential to collect for other purposes; salaries, commissions, advertising, rent, medical examinations and other expenditures are imperative. There are also what are known as dividends and reserve, also unknown and not required by our Order; and for these purposes amounts largely in excess of actual cost must be and are collected by the business corporations, and add to their income, as also the item of interest which in one company now is annually nearly sufficient to pay the actual death claims, less dividends. In this connection it will be interesting to see what was the actual annual income of these companies from 1859 to 1863 inclusive for each thousand insurance.

Mutual Life.....	\$63.20
New York Life.....	60.80
Equitable.....	61.62

Or for each dollar actually necessary to pay for death loss alone the incomes were:

Equitable.....	\$4.06
New York Life.....	5.17
Mutual Life.....	5.70

This, of course, gives a great surplus, large amounts of which are returned as dividends, and millions piled away as reserve, year by year constantly increasing. Should no more money be received, as President Winston said in his report of 1884, speaking of the Mutual Life, "Its assets are \$101,148,248.25, which by the laws of this State will enable the company to pay all its obligations as they may mature and leave a surplus of over \$12,000,000." We have no war to make upon insurance companies in our day. Nor do we believe the education of the people to the necessity and value of insurance by our fraternal Orders is of any disadvantage to them. They have a right to prosecute that business as they and their customers agree. The fraternal co-operatives claim, and propose to exercise, the same right, and believe that they are able to carry a guarantee of a specified amount upon their members at the same figure that it would cost a company for a similar risk.

## Average Age.

"Will not the death rate increase as an Order grows older?" is often inquired. Up to a certain maximum, yes. And that maximum is the average age of 40 years for its members, which is the average age of the members of all fraternities a half century old. But beyond this it can never go in any standard, progressive association, that by the addition of what is termed "new blood" each year fills up the gaps caused by loss and presents even a slight increase at the end of each year. In such a one the average age will be 40 and the death rate one person "ad infinitum;" and here let us say that by *new blood* is not meant *young blood* as many suppose, but that of any eligible age who, fresh from any medical examination, give promise of long and useful lives. The moment this accession of new blood ceases to be added to the body prolific, or when losses are larger than gains, then the average age and death rate advances. Orders, business enterprises, etc., are like velocipedes; keep moving steadily forward, there is progress and safety, but with laziness, failure to work, neglect, lethargy, carelessness or ignorance, they fall. This Order, nor any other Order, or business, is exempt from the law of such work, and the most vital truth we can utter is that "He who by the plow would thrive, himself must either hold or drive."

## What Enterprise Grange Proposes.

EDITORS PRESS:—The farmers are becoming more and more determined to stand together, no longer affiliating with the old parties. Silence may at times be golden, and a still tongue indicate wisdom. But conformity to the old maxim, "The less said the sooner mended," does not always meet the urgent demands, and silence at this critical moment may be considered both cowardly and criminal. The time has arrived in our political history when the truth must be spoken, even in meeting. The life of the politician depends on his ability to procure office, and the first and most important step for him is to succeed at the primaries and secure the nomination; this done, the battle is half won. He naturally looks to the monopolists who furnish money to conduct the campaign. This wealthy and powerful class usually need some legislation in their own interest. They enlist the candidate in their behalf and reward him by securing his election, furnishing money to be lavishly spent for votes;

and, as a rule, the farmers and producers supply the votes, when even before the election their rights have been bartered away. When Congress meets the monopolists seem to have everything their own way and then the people declare that no man can be trusted.

Now the farmers and toilers propose to nominate their own candidates; and they do not need much money, as they have the votes. And when they are selected let them understand that they are to work in the interest of those who elect them, and that their political future depends upon their honesty and good works. This, with united action, may restore to the toilers their rights. The politicians, however, advise the farmers to wait till after the two old parties have made their nominations and see what bid will be made for the farmers' support. But the farmers have been slaughtered so often that, like Banquo's ghost, they will not down; and at Enterprise hall, June 8th, they elected 10 delegates to be in readiness for the State Convention when it may be called. We desire all the Granges in the State to do likewise, show a united front, abolish the rule of bossism, and thus establish justice, promote domestic tranquillity, and secure the blessings of liberty to ourselves and our posterity. But we would not consolidate the Government and the means in the promotion of injustice, causing domestic discord and depriving the people of the blessings of liberty forever. If the farmers of the State fail to hold a convention and put a State and Congressional ticket in the field, the farmers of Sacramento county will organize, make a county ticket, and vote for their own interests.

GEORGE WILSON,

Enterprise Grange, Sacramento county.

**EXHIBIT DURING THE ENCAMPMENT.**—Sonoma Pomona Grange decided, awhile since, to make a showing of the county's agricultural products at San Francisco during the G. A. R. Encampment week. Their committee, consisting of G. N. Whitaker, E. A. Rogers and J. Hawkins, is stirring energetically to secure contributions of material, and insure a creditable display. They are seconded by Messrs. McDonald and De Turk, on the part of the Fruit and Grape Growers' Association, who have petitioned the Board of Supervisors to assist the Grange in bearing the expense of the proposed exhibit at the Lick House.

**THE NEW BUILDING AT MARYSVILLE.**—Of the new building in which a part at least of the sessions of the next State Grange meeting will be held, the Marysville *Appeal* says: The new pavilion has the finest floor that can be made of lumber. It is Oregon pine, vertical grain, three inches wide by one and one-quarter thick, and has been planed smooth and oiled since it was laid. There is ample room for all who wish to dance and plenty of gallery room for those who do not, and no doubt on such an occasion, and in the interest of a good cause, the pavilion will be filled.

**WATSONVILLE GRANGE** purposes giving a popular entertainment on the afternoon of Saturday, the 17th inst. The program includes musical selections, recitations, a comedietta representing the seasons and a harvest feast. Farmers are requested to contribute for exhibition specimens of remarkable farm products, such as high or heavy grain, fine fruits and large vegetables. All patrons and their families are specially invited.

**NO FARMERS' CONVENTION.**—There was no farmers' convention in Sacramento on June 24th. The attendance did not warrant action.

**COST OF GROWING HOPS ABROAD.**—American hops come into competition with those from the Continent of Europe, and it may be of interest to our readers to see a statement of the cost of producing hops abroad. Ch. Fruwirth, of Vienna, Austria, writes to the *Country Gentleman* that "the cost of producing 100 lbs. of hops in Alsatia in 1869 was \$16 to \$17; in Bohemia in 1870, \$15, and in 1876, \$18." When some people think hops can be profitable at the prices which ruled here during the last year, it will be well for them to know what it costs to produce them in the cheap labor countries of Europe.

**A HYDRAULIC DECISION CLINCHED.**—Supreme Judge Keyser of Yuba county enjoined the Eureka Lake and Yuba Canal Company, consolidated, prohibiting hydraulic mine working, and imposed a fine of \$500. The company took an appeal from this order to the Supreme Court of this State in July, 1883, and the lower court was sustained. The case was carried on a writ of review to the Supreme Court of the United States, which Court has affirmed the decision of the State Supreme Court.

**THE MARSH FAMILY.**—We receive notice that the Marsh Family Association, including all persons by the name of Marsh, or who have descended from any by that name, and their families, are invited to attend the third family gathering and basket picnic at Lake Pleasant, Montague, Mass., July 20, 21 and 22, 1886, and to bring or send all they know or can learn of the genealogy of the family.—DWIGHT W. MARSH, President, Amherst, Mass.

**LARGE** quantities of tomatoes, cabbages and potatoes are being shipped East from Los Angeles by express.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Alameda.

**SUGAR FACTORY.**—Haywards *Journal*, June 26: While at Alvarado Sunday we learned that the sugar mill will commence operations in August. The beets are now well advanced, and it takes about 1500 acres to meet the requirements of the mill. The extensive additions contemplated, if carried out, will make it the largest sugar mill in the country.

**FRUIT NOTES.**—Orchardists report that apricots are beginning to drop from the trees, caused no doubt by the excessive rains some months ago. Rod Thomas informs us that on the Carr place this is particularly the case, and it is hard to figure on what amount will remain. The price of cherries naturally ascends as the fruit disappears. Royal Anns are now being shipped, and bring top prices. Currants are paying much better this year than last, and the prospects are that the price will touch \$4 a chest before long. The continued cool weather for weeks past has allowed currants to fully mature, and the berries are unusually large, fine ones. Picking will continue for three or four weeks longer in many orchards, and the price appears to be getting better each week. L. B. Anway has a large crop and will have the latest currants in this section.

#### Contra Costa.

**BUYING PEARS.**—Martinez *Gazette*: Mr. W. Treat of Ygnacio valley, one of the trustees of the California Fruit Union, is engaged in buying up the pear crop of the present season in Contra Costa, which he will ship to Porter Brothers, formerly the largest fruit-shippers on this coast, and now engaged as agents for the Union, with headquarters at Chicago, which is the central distributing point of the Union at the East. Mr. Treat will also ship fruit from Davisville and Marysville as well as from this county. Of course, the pears handled will be principally Bartlett and the late fall varieties. No county in the State is capable of raising finer pears than those raised in Contra Costa. The soil and climate in the San Ramon valley are especially adapted to pear raising, and it is to be hoped that next spring will witness a large increase in the acreage of pear orchards, not only in that valley but also in other portions of the county.

#### Fresno.

**PLASTER FOR ALFALFA.**—Fresno *Republican*, June 25: Sowing gypsum or land plaster, on the alfalfa patches is no longer an experiment in our colony. Wherever it has been tried it has quadrupled the crop, and it is evident that it will pay to use it at least three times a year as a top dressing, after cutting the alfalfa and before irrigating. Quite a number will try it in their vineyards the coming winter.

**BLACKBERRIES.**—W. A. Cowan, of Fresno Colony, has a patch of blackberries of a little over half an acre in extent, from which he is now marketing a good yield of first-class berries. For his early berries he got 10 cents per pound, for a considerable amount five cents per pound, and the balance of the crop he expects to dispose of at four cents per pound. The crop is now far enough advanced that he can count with certainty on a yield of a ton and a half, and not less than \$120 return from his small patch of berries. For little more than half an acre of land, cultivated at a nominal expense, this is certainly a profitable crop as can be counted on with certainty from any source. Mr. C. also has a fine prospect for apples, grapes and other fruit, and altogether is well satisfied with the result of farming a 20-acre tract.

#### Humboldt.

**THOROUGHBRED SPANISH MERINOS.**—Eureka *Standard*: More fine stock arrived yesterday by the ocean route. It was a consignment of 50 head of thoroughbred Spanish merino rams. Fifteen will be taken to the Fort Baker ranch, for Porter & Hanson, and the rest disposed of to various parties. They are all from the stock farm of E. W. Woolsey & Son of Fulton, Sonoma county. Having a just pride in the quality of mutton and wool Humboldt county produces, ranchers here spare neither pains nor cost to improve the breed of their sheep. If both Humboldt mutton and wool are already superior to any other, there is no telling how much they may be improved by judicious breeding.

#### Los Angeles.

**A BIG DAIRY.**—Times: At the big dairy of Sessions & Bigelow, near Florence, machinery of the latest improved pattern has been received, and yesterday machinists from Los Angeles went down to put it up. Messrs. Sessions & Bigelow are expending \$25,000 for the improvement of their large dairy. No less than 250 cows will be milked on it from and after the 1st of September.

#### Placer.

**DANGER IN DOSING.**—Republican: A curious accident happened to William Barry, of Doty's Flat, last week. He was doctoring a cow which had been poisoned, and had one hand in the animal's mouth when its jaws closed on his thumb and cut that member almost off. The wound is very severe and painful, and it may yet be necessary to have the thumb amputated. The cow was poisoned by eating wilted peach leaves from limbs that had been cut off in pruning. It

may not generally be known that such leaves will kill animals that eat them, but such is the case, as will also wilted leaves from the wild cherry. The leaves contain a large amount of hydrocyanic acid, which is very poisonous to stock.

#### Napa.

**A VINE DISEASE.**—Rutherford Cor. Star, June 25: A strange disease has appeared among the vines in some localities, and is rapidly killing them off. Some say it is the work of insects; others, of gophers and squirrels preying upon the roots. Whatever it may be, the cause should be investigated. No large tracts have yet been affected.

#### San Benito.

**APRICOT SALE.**—Hollister *Advance*, June 25. Chas. Stranbe has sold his crop of apricots to parties from San Jose. He will have about 15 tons of apricots, for which he is to receive 15 cents per pound, delivered at the Hollister depot, the buyers to furnish the boxes.

**TRUCKS.**—Vol. Garner sold the first new barley of the season in this county on Friday, at 90 cents. It was threshed out by Ryason and purchased by Griffith & Dabzell. From San Benito we learn that the farmers have commenced harvesting in earnest. The grain was not injured to any great extent by the late hot weather, and but very little rust has made its appearance. A full and bountiful crop will be harvested. John Sherman, the bee-keeper of Erie, has been in town this week shipping his season's honey product to market. The honey is unusually clear and of good flavor this season, and has been sold as high as 15 cents a pound. Mr. Sherman will have several tons for sale. Joe Grubb has invented a new way of exterminating rats. Putting a pan of flour in the chicken-house, he mixes it heavily with yeast powder. The rats partake freely of the mixture, and, as a natural consequence, swell up and burst. The remnants of what were once live and active rodents are then greedily devoured by the chickens. The invention is known as Grubb & Ingels patent rodent exploder.

#### San Joaquin.

**WHEAT GRAIN THRESHERS' EXHIBIT.**—Lodi *Sentinel*, June 26: Col. L. O. Gillispie started up his combined harvester this week. He claims that new wheat threshes easier and cleaner when cut in the "stiff dough" than to wait till it is dead ripe. His reasons are that the kernel is largest when in the dough, and that the hulls of the grain are opened by the increased size; that as the grain ripens and shrinks away the hulls close and hold the grain more firmly in the head. This idea prevails to a great extent among our farmers, and many of our combined harvesters will be in the field by the first of the coming week. Wheat in the Live Oaks is turning out well both in quantity and quality.

**WATERMELONS.**—The late warm weather during the last two weeks has been "bricks" for our melon-raisers. The vines are growing wonderfully and show indications of a good crop. Over 1500 acres are planted in the vicinity of Lodi. It is reasonable to calculate the shipment of melons from this point during the season at 2000 carloads of 100 dozen each. They will be ready for market from the 10th to the middle of July.

#### San Mateo.

**HAY AND FEED.**—Times and Gazette, June 26: The amount of hay cut in this county this year probably exceeds the amount cut here in any previous year. It is good hay, too, for the most part, though mustard, wild turnips and thistles fouled many fields badly. On the mountain pastures the native grasses have not been so fine for many a year. Many fields that would not support 100 head of cattle last year will easily carry 150 head this year. The abundant late rains brought out the wild oats, the alfalfa and other favorite grasses with stock. If dairy products were what they were last year, or if beef cattle were not so cheap, the outlook for dairymen and cattlemen in this county would be exceptionally bright. Unfortunately, though hay was never more abundant or more cheap, pasture never more luxuriant and young stock never more easily obtainable, the dairymen and cattlemen of the county are not doing so well as they ought to be doing. "Best butter"—and San Mateo county makes as good butter as does Marin or Mendocino—is now wholesaling at from 14 to 16 cents a pound. "Good butter" wholesales at from 10 to 13 cents; "ordinary," at from 8 to 11 cents. Circumstances prevent many excellent butter-makers from producing "best" butter; and even at 15 cents a pound it is hard to make ends meet on a dairy ranch. Only close economy, careful management, unflagging industry and favorable natural conditions may enable dairy farmers who own their own farms and are out of debt to pay fair wages and keep out of debt. But a large number of dairymen in this county are not out of debt. Some of them have purchased land on part payment and are under heavy interest expense. Many of them are running behind at a rate that must mean ruin to them unless they can retrench in some way at present not clear to them or known to the writer.

#### Santa Cruz.

**PARIS GREEN.**—Sentinel: A. A. Green, from Vine Hill, informs us that the Chinese who raise strawberries near that place are in the habit of sprinkling Paris green on their strawberry plants to kill the insects. The result of

eating strawberries purchased from them came near proving fatal to several members of Mr. Green's family, some of them being taken quite ill, while those who did not eat of the berries suffered no illness whatever. Any person, Chinese or white man, who uses such deadly poison for killing insects, and then sells the fruit, should be prosecuted.

#### Santa Barbara.

**FLAX.**—Independent, June 26: Hiram Pierce has returned from a trip to Santa Ynez. He reports that George Culbertson has in 100 acres of flax that promises to yield an abundant crop. This crop is something new for the Santa Ynez farmers. Mr. Culbertson introduced the same but last year.

#### Tenama.

**WHEAT.**—Red Bluff *Courier*: The new wheat crop is coming in slowly. Harvest is progressing with reasonable rapidity. There is some inquiry for hands, but most of the farmers and harvesters find men as needed. The average scale of wages paid is about the same as last year, from \$1.50 to \$4 per day for threshing hands, header crews getting from \$1 to \$3, according to class of work and facilities furnished by employers for performing it.

**THE STRIKING BOYS.**—Yesterday we reported a strike among the boys employed as drivers on the Ashurst ranch. As soon as Mr. Ashurst learned the condition of affairs he went down with another crew of boys and paid off the ten who had struck, telling them to take up their blankets and walk. One of the boys who had not joined the strikers said, as they left the ranch: "You fellows have struck yourselves into traps; I am earning a dollar a day." The second crew, or a number of them, struck in about an hour after going on duty, but all but one thought better of it and resumed work. This is about all there is about the strike. But it should be added that the work of a driver now, as compared with that of 15 or even 10 years ago, is as play. Then the wages were \$2 per day, and the driver pitched his own load from the wagon to the stack; now the load is taken from the wagon in netting, by horse-power. Then the price of wheat was from \$1 per bushel upward; now it is scarcely more than that per cental. Everything was running smoothly at Ashurst's last visit, and we presume when the boys reflect that they are saving more money at \$1 per day and board than many of their elders, who, not entirely without reason perhaps, have struck in the cities, they will conclude that they are doing well enough after all.

#### Tulare.

**A THREE TEAM HARVESTER.**—Tulare *Times*, June 24: The combined reaper, header and locomotive of G. S. Berry started work on Tuesday, and gave perfect satisfaction to all who saw it. It continued in operation yesterday and will probably work in the grain fields the rest of the season. Mr. Berry, its inventor, has applied for patents. He estimates that it will harvest 3000 acres of grain between now and the close of the summer. This novel machine is geared to run a mile and a half an hour, and cuts a swath 22 feet in width. It is worked by seven men. The locomotive power is furnished by one engine, and the power which operates the reaper and header is furnished by another. Thus the speed of the traction part can be increased or diminished without affecting that of the harvesting machinery, and vice versa. The engine is connected with the same boiler. Fuel is furnished by the straw, which runs through a funnel into a tender. Mr. Berry claims that his machine will harvest 30 acres of grain per day.

**FRUIT SHIPMENTS.**—I. H. Thomas is making daily shipments of peaches, plums and figs to Los Angeles, El Paso, Albuquerque and Tombstone. He is also making considerable shipments of figs to San Francisco. Last Monday he shipped a general assortment of fruit, consisting of peaches, apricots, plums and figs, to Kansas City. The shipment was made as an experiment. Since his return from the East he has been making a number of trials relative to the removal of insect pests from his old orchard. The chief enemy with which he has had to contend in this respect is the scale bug. He has given bunches a thorough test, but finds it to be a failure so far as the scale is concerned. He applied a new compound to the trees a few days ago, and will be prepared to announce the result in a short time. Mr. Thomas has received a letter from a correspondent in Texas, stating that the fruit crop of that State will be almost an entire failure.

#### Yuba.

**THE DISTRICT FAIR.**—Appeal: The managers of our District Fair offer premiums for livestock to the amount of \$2000. This includes horses, cattle, sheep, swine and poultry, and we are informed that the premiums are as large as are offered by any other district in the State. They offer \$2000 in premiums for farming, mechanical, mercantile and manufacturing exhibits, and \$3500 for speed and walking contests. This makes a total of \$7500 and is some \$1500 more than was offered two years ago. The principal part of this amount is distributed among the people in this immediate vicinity, as Sutter and Yuba counties furnish fully three-fourths of all the exhibits, or have heretofore. The expenses being greater this year, owing principally to the increased premium list, it becomes necessary that each of us should take an active interest in making it a success financially and otherwise.

## Northern California.

(Written for RURAL PRESS by MALLIE STAFFORD.)

I sing of a land that is washed on the west  
By the waves of Pacific's proud sea;  
And circling the plains on the eastward the crests  
Of Sierra rise proudly and free.  
Snow-crowned in their pride,  
Green-plumed are their side;  
Like an army of heroes, embattled they stand  
To guard in their grandeur the vales of our land.

'Neath their deep-bosomed summits below the green  
Lies treasures like India of old.  
Brave hearts and strong hands have wrenched from  
The mines  
Their burden of silver and gold;  
And cities rose up from the dust of the plain—  
Like a flower they arose from the wave-washing  
main;  
Still ceaseless, and ever like the song of the pine  
Flows out to the seaboard the wealth of the mine.

There are leagues of green plains that lie bathed in  
the sun,  
Abloom with rich fruitage and grain;  
And the gems from the mines, and the wealth that  
is won

From the soil is borne to the far-reaching main—  
To the ships that are bound for the ports of the world,  
Full-laden they speed with their sails all unfurled.  
They bear on the bosom of Neptune's deep breast  
The measureless wealth of this clime of the West.

There are plains and fair valleys that bloom like the  
rose,

With the orange, the fig and the vine;  
When the golden fruit bends and the purple wine  
flows

Thro' the vales of this beautiful clime.

There are streams that flow onward thro' regions of  
flowers,

And bright homes that nestle in forest and bower,  
Like a dream of the Orient—a mythical tale—  
Is this wondrous empire of mountain and vale.

Arcadian Heights, Napa Co.

## Magnolia.

## A Fourth of July Story.

(Written for RURAL PRESS by M. B. D.)

The July dust lay deep upon the pines and  
oaks that fringed either side of Reed's turn-  
pike. This road wound along Mead's bill,  
forming a semi-circle, beginning where the  
great water tank overflowed with pure spring  
water that rippled down a green bank into the  
creek, which ran under a bridge across the  
road and then was lost in the precipitous walls  
of a dusky ravine. Upon the crown of the hill  
was an old ranch-house, with broad verandas  
extending the whole length of its long front;  
and its white walls and mossy roof were sheltered  
beneath gigantic oaks that held their  
boughs aloft in umbrageous arches over them.

Vines and flowers twined the pillars of the  
veranda, and among these stood Evelyn Mead,  
the rancher's daughter, idly culling the withered  
leaves from among their fresh companions.  
She heard a horseman ride up the hill, and,  
stopping at the gate, dismount; yet she neither  
turned nor gave him a single glance, for she  
knew who he was and felt no interest in his  
arrival.

The visitor—a tall, brawny young man—did  
not appear surprised or displeased. He gave  
her his hand frankly, at the same time smiling  
and saying a few pleasant words; then he took  
the easy chair which she offered him, and,  
leaning back, seemed content to watch her in  
silence.

Evelyn looked down the dusty turnpike, to-  
ward the west, which was in an opposite direc-  
tion from that leading to the great water tank.  
The declining sun cast a golden light, and long,  
cool shadows from the hills, that formed the  
horizon, miles away across the bluish wood-  
lands between.

"I wish I could live beyond those mountains,"  
she said, as much to herself as to her compan-  
ion. "It seems to me the whole world lies on  
the other side of the rough ridges that hem us  
in."

"You would very soon tire of the valleys and  
the noisy, crowded cities," answered her compan-  
ion, whose name was Henry Manning.

"I have traveled over nearly the whole  
coast, and am of the opinion that these foot-  
hills are more desirable than any other place  
for a home. Next spring I shall set out an  
orange grove, and dig a trout pond upon my  
land. Then a cozy little house, fixed up with  
greenery like this; and then, Evelyn—" he  
lowered his voice and extended his hand as if  
to take hers while he said this, but was inter-  
rupted by a merry peal of childish laughter.

Evelyn's sister, Grace, a roguish girl of ten  
years, came bounding toward them, and seating  
herself upon the arm of a chair, inquired: "Will  
you let me fish in your pond, Mr. Manning?  
I can catch almost a dozen minnows at a time  
in my net, and it would be such fun to get fish

we could eat. I am going to tell mamma what  
you said—all about the house, too;" and away  
she ran again.

Shortly after, Mr. Mead joined them, and  
Evelyn soon found an excuse for entering the  
house. Her mother was bustling about the hot  
kitchen preparing dinner, and half a dozen flat-  
irons were heating upon the stove behind the  
bubbling kettles. Evelyn knew what this  
meant, and hastened to get the ironing board  
and clothes basket.

"There are only a few pieces, Eva, my dear,"  
said her mother. "The fine napkins and table  
cover for dinner tomorrow, and a white dress  
for Grace, are all that have been sprinkled.  
When the dress is dry, you had better fasten  
her blue ribbons upon it too, for we will have  
to hurry off early in the morning."

Evelyn proceeded to rub a hot iron in some  
salt, and to try it with her finger to see whether  
it was of a proper temperature before she be-  
gan. She ironed until her cheeks were flushed,  
and her forehead, and the little curls that clus-  
tered above it, were damp. In the meantime  
her thoughts were far from pleasant.

The people of Bell's Camp had announced a  
picnic through the columns of the *Citizen*, one  
of the county papers; and every one was invited  
to celebrate the Fourth of July at Oak grove.  
She knew exactly what they would all do, for  
she had attended half a dozen such gatherings.  
Judge Manning, standing upon a platform, fea-  
tioned with cedars and roses, would read the  
Declaration of Independence, the minister  
would say a prayer; then would follow some  
patriotic songs and recitations by the school  
children. Afterward the old people would as-  
semble in congenial groups, and chat over their  
lunch, the young people stroll about in couples,  
or play croquet, and the children amuse them-  
selves with frolicsome games.

Evelyn thought of the dress prepared for her-  
self; then of her kid shoes, and here she pouted.  
One of them had been worn through at the toe,  
and though she had mended it neatly and care-  
fully polished it the stitches were still provoking-  
ly plain. "Oh, if we only had enough so that we  
could live in some style I should be quite con-  
tented, but to always endure these petty trials  
is too much for any one." Here she suddenly  
recalled the orange grove and fish pond that  
Mr. Manning had just mentioned to her.  
"How perfectly absurd such an idea is," she  
mentally commented, "as if I cared about  
those things. Of course, he will drive his little  
white nag, Magnolia, up here and invite me to  
go with him tomorrow. Well, let him come.  
He certainly will not see me again this even-  
ing."

Her fretful musings were interrupted by her  
mother's voice, addressing in her usual cheerful  
tones old Lem, a colored farm hand in her  
father's employ. He had cut his arm quite  
severely while disengaging the steel teeth of  
the mowing machine from the rod to which  
they were fastened. On hearing of this, Mrs.  
Mead sent for the old man in order that she  
might dress his wound. She had just com-  
pleted this task herself and was saying: "That  
will soon be all right, Lem; just take a few  
days' rest and you will scarcely know that you  
have been hurt."

"You are the blessedest lady I ever come  
across, Missus," said the old negro, gratefully;  
and continued, "in fact I only saw one who  
was anyways like you for goodness and for  
taking an interest in a poor fellow like me.  
Dat were more dan 20 years ago, away along  
in dem orful wartimes."

Then he proceeded to tell her how he, with  
many other slaves, was taken from the planta-  
tions of Alabama and put to work on the rebel  
fortifications along the Chattahoochee river in  
Georgia. These were to obstruct the march  
of Sherman's armies, which were then sweep-  
ing through the State like a whirlwind to the  
sea.

"Is that so, Lem? Well! I declare you are  
quite a hero to have been there at that time.  
Tell me about it," interrupted Mrs. Mead,  
and taking a lapful of peas she seated herself  
upon the porch and began to shell them for dinner  
while she listened.

"A hero!" thought Evelyn, with a scornful  
glance at the negro. "Mamma is so eccentric."  
As she had finished ironing, she hurried away  
with the pretty white dress, all covered with  
lace and ruffles, to add the ribbon bows. Still,  
when seated in her airy chamber, and bent upon  
knotting the glossy strips of satin into  
proper form, she wondered what old Lem had  
seen and done in those famous days of the Re-  
bellion; yet she was in such a dissatisfied mood  
that she would not join her mother and listen  
to him. The sound of carriage wheels ascend-  
ing the hill soon came to her ears.

"Those aristocratic Goldwaites are coming,  
I suppose," she thought. Every summer these  
people spent a few weeks in the lovely foothill  
town of Bell's Camp, and they often drove out  
to Mead's ranch for a walk through their or-  
chard, and a glass of fresh milk to drink, while  
they ate the tempting fruit which was gathered  
for them freely. Knowing that her mother was  
engaged, Evelyn cast her work aside and hur-  
ried down to entertain them. She was agree-  
ably surprised to see, instead of the fastidious  
Goldwaite ladies, with their bevy of children  
and governesses, a gentleman with whom she  
was acquainted, Colonel Allen. Though past  
middle-age, this man dressed very stylishly, and  
beside, wore much jewelry. A large diamond  
sparkled in his ring, another in his scarf-pin,  
and his gold watch and chain were simply mas-  
sive. He was the superintendent of some new  
mines in the vicinity, and it was reported that

he had made splendid investments in the mines  
of Arizona. So with his dashing team and fine  
dress, he was quite dazzling to many of the  
people of Bell's Camp.

Colonel Allen returned the greeting of Mr.  
Mead and Mr. Manning in a polished yet con-  
fident manner that Evelyn imagined must be  
quite distinguished. The attentions he imme-  
diately began to show her were somewhat over-  
whelming, but she supposed this was because  
she was not used to such society as that in  
which he was accustomed to move. He in-  
vited her to accompany him to the picnic upon  
the morrow, at the same time remarking that  
he knew that she would enjoy riding behind his  
horses.

"They are different from the animals one  
usually finds in these parts, you see, and I am  
very fond of them."

When he drove away he had the promise of  
Evelyn's company for the next day. Mr. Man-  
ning soon took his leave. He held her hand an  
instant longer than was necessary when he said  
good-bye, and in his eyes was an expression of  
pity which puzzled her. If he had shown the  
least resentment she would have thought him  
presumptuous, but a look like that she failed to  
understand. Before the echo of his horses'  
hoofs had ceased she was half smiling to her-  
self with gratification at the prospect of the  
morrow. At last she was to attend the picnic  
in a style that would do credit to her taste.

With the first streaks of rosy light that her-  
alded the summer dawn, the roar of cannon re-  
verberated among the hills and through the  
wooded gorges and ravines. The sound awak-  
ened Evelyn, and she lifted as blooming a face  
from the pillow as were those of the fresh and  
dewy morning-glories that peeped in at her  
window.

Some hours later she came down the garden  
walk in her broad straw hat and fine lawn,  
which fell about her as gracefully as might a  
summer cloud. Colonel Allen said he could not  
refrain from remarking that he had not seen so  
lovely a sight since he last visited Saratoga.  
As they drove along in the glorious morning  
sunshine he voluntarily favored her with a de-  
scription of that fashionable watering-place.  
Somewhat in this way he entertained her, yet  
he managed to inquire about her father's busi-  
ness affairs in an indirect way; still Evelyn  
shrewdly imagined that he would scarcely  
have said what he did if she had been Miss  
Goldwaite. A brighter tinge mantled her cheek  
as she thought of it. They were gliding  
smoothly along the road under stately oaks at  
the entrance of the picnic grounds, and as they  
entered them she was proudly conscious that  
the attention of the large assembly of people al-  
ready in the grove was fixed upon them and  
their spirited team.

Later, she was conversing with a group of  
young friends, and keenly enjoying the fragrant  
wood scents, the music of wild birds and the  
sight of happy throngs, when a surprising pic-  
ture broke upon her sight. Down the road,  
over which she had so lately passed in the joy  
of pride, came a gentleman and lady superbly  
mounted.

"Can it be possible!" was her mental ex-  
clamation. "Mr. Manning and Miss Goldwaite  
coming here together. How elegant she looks,  
too, even if she is so thin and delicate."

Miss Goldwaite certainly did look well in her  
blue habit, upon the handsome cream-white  
horse, which seemed scarcely able to restrain  
the fiery animation that beautified every mo-  
tion. Evelyn wondered also at Mr. Manning's  
appearance. He looked so different from what  
he did yesterday. Was it the green and sun-  
dappled vistas of the background, the bright  
morning air, and the confusing glory of flags  
and banners fluttering all about them that made  
the difference? She frowned unconsciously  
and turned her eyes upon the creek which a  
few minutes before was brilliant with the rip-  
ples that seemed to change the sunbeams into  
a net of gold, and cast it upon their pebbly bed.  
Now even that was transformed. She  
could see that the banks were muddy and  
treacherous, and that all sorts of unpleasant  
insects and water-snails clustered about the  
half-submerged stones. A tiny pale green  
worm had dropped from the boughs overhead  
upon her sleeve, and was vainly trying to wrig-  
gle out of the meshes of lace that imprisoned it  
there. She gave a nervous little scream, and  
tried to brush it away with her fan. Several  
young men idly chatting near by came to her  
assistance, and soon the helpless creature was  
lost among the wild flowers at their feet.

Some dire magic had cast a spell to spoil the  
charming scene for Evelyn. Even now she  
could hear Miss Goldwaite's thin, yet artfully  
modulated voice, saying to one of her city  
friends:

"You have no idea what a delightful com-  
panion he makes—so original, too. He would  
be a perfect lion in our set at home. Of course,  
he is not rich, but then Judge Manning is cer-  
tainly well off. I am going to coax papa to in-  
vite Mr. Manning to our house the next time  
he happens to be in town."

While she was talking she leaned languidly  
back in her chair, and watched with an indif-  
ferent air the young man who formed the sub-  
ject of her thoughts. He was swinging little  
Grace Mead, whose yellow curls and blue rib-  
bons fluttered in the breeze, caused by her rapid  
motion back and forth as she swung, and she  
laughed and shouted in childish glee.

"It was thoughtful and kind of him to notice  
Grace," thought Evelyn, "for she loves to swing  
like that, and so few are willing to spend a few  
minutes of such a time as this in amusing a

child." She did not admit, even to herself, that  
if his kindness had been shown to another than  
Grace, it would not have struck her so pleasant-  
ly. Though she looked for him to join her as  
the hours slipped by, he had not found an op-  
portunity to exchange even a dozen words with  
her, when the Colonel's spirited bays came dash-  
ing up to take her home. True, he could scarce-  
ly have done so, for Colonel Allen had been very  
attentive, and besides, other friends had claimed  
a share of her time; yet she could not help feel-  
ing disappointed.

On stepping from the carriage at the garden  
gate, she realized how different her feelings  
were from those which had made her heart leap  
in the morning. Colonel Allen now appeared  
to typify all that was vain and ostentatious, in-  
stead of what was admirable and elegant. His  
ideals were entirely erroneous, according to her  
simple standards of perfection. They had been  
formed from the deceitful objects of ignoble  
ambition and hollow pride; while hers sprung  
from the free haunts of nature in her pristine  
beauty, and were reflected upon a mind unpre-  
judiced by contact with the artful and false.

As he drove away, after having made an un-  
necessarily ardent promise to call upon her soon,  
the sunset salute was fired. Its boom rolled out  
among the hills, startling countless echoes, that  
made the woodlands ring for miles. The sound  
seemed solemn and gloomy to Evelyn, present-  
ing to her imagination the picture of deserted  
battlefields, instead of the exultation of triumph-  
ant liberty. After all, the gratification of  
pride and vanity gave no real satisfaction. As  
she entered the house, she caught a glimpse of  
her mother, whose cheerful face and light step  
seemed inspired by the tranquil happiness which  
is given as the reward of faithfully performed  
duties. In her daughter's eyes, she suddenly  
became a heroine—one worthy to be followed  
as a model; and Evelyn resolved to profit in  
future more by her example.

Though she succeeded in appearing lively and  
pleasant at dinner time, her unhappy mood  
still held sway in her mind, and after the meal  
was over she concluded to walk a little way  
down the turnpike, in hopes that the quiet  
evening scenes would tranquillize her thoughts.  
Grace joined her and together they sauntered  
past the orchard where they saw Lem, who was  
lingering to weed a bed of lettuce. He re-  
minded Evelyn of last evening, and revived  
her curiosity to hear the story which he had  
probably told her mother; so she rested her  
elbows upon the rail fence, and requested him  
to tell them his experience in the Rebellion.

"You should not work upon such a holiday  
as this, so come along and talk to us about the  
plantations and the Yankee soldiers," she said;  
and in obedience to her wishes the hale old  
man accompanied them on their walk.

The crimson glow of sunset shone around  
them, and the water in the creek beside the  
road rippled along almost at their feet, while  
crickets and other insects chirruped in the wild  
grasses and snapdragons upon the banks. Ere  
long Evelyn's thoughts were entirely absorbed in  
Lem's story.

During those terrible June days of 1864 he  
had toiled upon the mighty abatis and re-  
doubs, which were built by the Confederate  
General Johnston's orders, to protect his strong  
army and prevent Gen. Sherman's soldiers from  
crossing the Chattahoochee river.

The boys in blue, nearly 100,000 strong,  
were advancing upon Atlanta, the citadel of  
Georgia. They reached the banks of this wind-  
ing river upon the third of July, and celebrated  
the Fourth by a battle to gain the crossing.  
For more than five miles up and down the  
broad, crystal stream the mighty forces con-  
tended, pouring upon each other the leaden  
hail of musketry and the fearful missiles of  
artillery. These filled the air with booming  
and shrieking sounds which were more hideous  
than those ever awakened by the rolling of  
thunder; while the woods were gleaming with  
flames and the heavens were lurid with powder-  
smoke.

One of the slaves, who had been at work  
upon the frowning defenses, resolved to escape  
from bondage; so, in the confusion of battle, he  
managed to hide between some logs that formed  
an abatis, and there for hours a regular storm  
of lead passed over him or pelted his frail re-  
treat, while he lay trembling with mortal ter-  
ror. At last the firing ceased for a short time  
and he crept out of his hiding-place and fled as  
fast as his trembling limbs would permit to the  
Union skirmishers. They sent him to the great  
Commander-in-Chief, Gen. Sherman, who talked  
to him and to whom he explained all about the  
formidable field fortifications that he had helped  
to build. Before nightfall Sherman's army had  
won the battle. Then what shouting and music  
rang out upon the sultry air as the triumphant  
soldiers gathered in groups about their bivouacs.  
The sweet strains of the "Star Spangled Ban-  
ner" and the "Red, White and Blue" swelled  
gladly upon the southern winds, which had not  
been freighted with such patriotic sounds for  
many months; and so they celebrated, with due  
honor, the anniversary of independence, even  
there in the heart of the Rebellion.

The grateful negro followed the wounded  
men, who were borne to hospital tents, and  
helped to take care of them there. He was  
about to describe those pitiful scenes, and to  
extol the gentle and self-sacrificing women who  
nursed the soldiers night and day, declaring  
that he had never seen any one half as good as  
they were, except Evelyn's mother, when he  
was interrupted by the clatter of a horse's hoofs  
approaching with unusual speed.

On came the flying beast, like a phantom,

(Written for RURAL PRESS by REIS SAMPSON.)

down the turnpike. The twilight had deepened almost into starlight, which was relieved by the silvery sickle of the new moon. They all fled from the road, seeing that the horse was not under the control of its rider, a slender girl, who clung desperately to the saddle. While Evelyn and Grace were scrambling up a dusty bank, Lem, with unusual presence of mind, held himself safely against the trunk of a tree that leaned over the road, and caught the dangling bridle of the runaway as it was passing. The horse suddenly jerked back, reared and plunged a few minutes, but was finally stopped, and the trembling girl, who had been in such imminent peril, was assisted to dismount.

Evelyn was startled to perceive that Lem had rescued Miss Goldwaite, and that the white horse, all foamy and panting before them, was Magnolia. She was left in Lem's care, while every attention possible was shown to Miss Goldwaite by the sisters. Grace wet her handkerchief in the creek and bound it around her throbbing temples, while Evelyn held her head until she was so far recovered from the shock as to be able to walk. Then they supported her as well as they could, while they all proceeded toward the house, where she was immediately placed in Mrs. Mead's skillful hands and made comfortable. She was soon able to explain how Magnolia had been frightened.

"I forgot that she was not to be touched with the riding whip," she said, "and so gave her a smart cut which made her gallop off at full speed. She could be managed until the little flag that had been stuck in her bridle fell down so that it fluttered in her eyes; then she became thoroughly frightened, and I could not hold her."

Evelyn, after doing all that she could to assist her mother, went out into the garden for a few minutes' rest in the cool air. She saw poor Magnolia fastened to a hitching-post. Her head drooped until her long, flowing mane nearly touched the ground; and as Evelyn approached to caress her she perceived that the animal was still trembling excitedly and was wet with foam.

The intelligent animal seemed grateful for her attention, and whinnied softly as her white nose was petted. Thinking herself alone, Evelyn said, in tones that were unconsciously low and plaintive, "Poor Magnolia! like me, you are unhappy for having been vain and willful;" and leaning her forehead a moment upon the horse's silken mane, she bedewed it with tears.

Mr. Manning had arrived at the house immediately after Miss Goldwaite, and now, having come to attend to his horse, he chanced to overhear Evelyn's remark. It was an agreeable revelation to him, and rekindled the feelings of hope and admiration which had been so chilled by her conduct of the preceding day. With manly confidence he took her hand and gently said—well, what he said ought not to be repeated, because his words were intended for Evelyn alone.

After this, the evening seemed supremely beautiful; and at nine o'clock, when the cannons in Bell's Camp were fired again, their loud peals awoke ten thousand echoes, that thrilled like exultant notes of joy upon Evelyn's listening ears.

That starlit summer night has long since vanished into the past, but it dwells in memory among the brightest gems that are treasured there. At present she feels a deep interest in Mr. Manning's orange grove, which is so promising; and she has smiled down upon her own image, reflected in his newly-made trout pond.

Magnolia is frequently surprised by the lavish caresses which she receives at Evelyn's hands; but if she could understand what that young lady has whispered against her velvet-like neck, once or twice, she would know why she is such a favorite. Evelyn thinks that if it had not been for Magnolia's madcap race last Fourth of July evening, she would have missed her greatest happiness.

**MARKINGS OF ANIMALS.**—Eimer advances the view that the markings on animals were primitively longitudinal stripes that have subsequently broken up to form dots, and these fusing to form transverse rings. This view is supported by the ontogeny of many animals. Dr. Haacke controverts this view from the study of an Australian fish *Helotes Scotus*. In this species the adult is marked with eight longitudinal black bands. Young specimens have, in addition, a row of clear, transverse bands, which disappear when the fish attains maturity.

**THUNDER, LIGHTNING AND RAIN.**—Meteorologists have found that there can be no thunder and lightning without rain. When thunder is heard beneath a clear sky, the reports must either come from distant clouds or be the result of some other cause than a discharge of electricity. Harvest or heat lightning is produced by a distant storm. Thunder seldom ever accompanies heat lightning, the sound reaches only 12 miles, while lightning is often seen by reflection upon nearer clouds, at a much greater distance.

**VEGETABLE LIFE AND TEMPERATURE.**—It appears from observations made in France that the development of vegetable life is retarded by an average of nearly four days for each additional 100 yards of altitude. The arrival of the chimney swallow is delayed about two days for each increase of 100 yards in height.

## YOUNG FOLKS' COLUMN.

## Joey's Fourth of July.

(Written for RURAL PRESS by REIS SAMPSON.)

Dinner was just over, mamma had gone upstairs to the nursery with the baby, papa was seated in the big armchair reading the evening paper, while Master Harry lay stretched upon the floor, counting the contents of a tin bank.

"Let me see," he mused, "two fives make a ten, and four tens make forty, and a quarter makes sixty-five cents. Too little for my Fourth of July. Papa, I say, papa," he continued, "please put down your paper; I want to speak to you."

"Yes," replied papa, without raising his eyes. "Now, papa, that's not fair; I want you to pay attention," and Harry jumped up from the floor, ran to his father, pulled the paper away, and seated himself on his knee.

"Well, what is it?" asked papa with a sigh. "I suppose I'll have no peace until I listen to you."

"There, that's a good papa," said Harry, stroking his face.

"What do you want, you little monkey?" asked papa, returning the caress.

"Say, papa, do you know that to-morrow will be Fourth of July?"

"Of course I do," answered papa, "but what about it?"

"Nothing, only all the boys of my class are going to buy soldier caps and swords."

"Well," said papa, "that's real nice."

"Don't tease, papa, please; I only have sixty-five cents, and firecrackers are so dear."

Papa laughed, and putting his hand into his pocket drew out a handful of small change, which he gave Harry, saying:

"Now run off, you rogue, and let me read my paper."

Harry jumped off his father's knee, went over to the table, and commenced to count his money.

"Two dollars and a half!" he exclaimed, when he had finished; "won't I have lots of firecrackers, though?"

"Harry," said his mamma, coming into the room, "I want you to run down to the drug store and bring me a bottle of cough syrup; baby seems croupy. If the boy is there you can let him bring it, and you may remain out until bedtime."

"All right, mamma; I'll see you get the medicine."

Harry put on his cap and started down the street, bought the medicine, and then went off to the common to find his friends. He had bought a toy pistol, and was amusing himself by shooting it at all the trees. As he passed one of the small houses near the outskirts of the village, he saw a little boy sitting at the window. Thinking to frighten him, he put a cap on the pistol and shot it off. Instead of frightening him, the little boy gave a cry of delight and said in a weak, tremulous voice:

"Please let me shoot it once."

"Come out here and I'll let you shoot it off as much as you want."

"I would, only I can't leave my chair. I'm a cripple, you know. I fell downstairs when I was a tiny baby, and the doctor says I will never walk, not even with crutches. It's awful lonesome. Won't you come in and sit by me for a little while?"

Harry went up the few broken steps that led to the house, opened the door and went in. It was only on entering the room that he saw the little boy was strapped in a large chair, looking very thin and pale.

"What is your name?" he asked, as he seated himself on a low stool near the chair.

"Joey Daniels," replied the child; "and I know your name, too—it's Harry Drummond. I've seen you pass here lots of times."

"Why didn't you ever speak to me before?"

"I didn't like to; but to-night, when I saw you firing off that pistol, I couldn't help asking you to let me try. I love anything like that."

"Here," said Harry, handing him the pistol, "I'll give it to you."

"For my very own, to keep and shoot off as much as I like?" asked Joey, eagerly.

"Yes, and when you've used up this box of caps I'll get you some more. I always have plenty of money."

"You're so good," said Joey, taking Harry's plump brown hand in his thin white one.

At the sound of a strange voice, Mrs. Daniels came in from the other room, and seeing Harry said: "I am glad you have come to see my little boy. He has no playmates and but few things to amuse himself with when I am not here."

"See, mamma," said Joey, holding up the pistol. "Harry has given me this for my very own. I am going to put it away until to-morrow and then you needn't feel bad because you can't get me any firecrackers."

"Why, won't you have any firecrackers?" asked Harry, in amazement.

"No," replied Joey, shaking his head sadly.

"I never do. We're too poor, and all the money mamma earns she has to spend for medicine."

"And won't you go to the procession, either?"

"No; but you tell me all about it. That will be almost as good as going."

"Well," commenced Harry, "first is a band, then all the policemen on horseback, and my

papa follows dressed in uniform with gilt buttons and a sword; then another band comes, playing 'Yankee Doodle' and 'Hail Columbia.' It makes you feel like dancing to hear them. Then comes the Goddess of Liberty, and that is beautiful. I can't describe it very well, but there is a great big wagon all covered with red, white and blue and lots of little girls dressed in white waving flags, and far up above them stands the Goddess of Liberty with her hair hanging; she holds a shield in one hand and a flag in the other. Everybody cheers when they see her."

"Oh, dear! oh, dear!" exclaimed Joey, excitedly, "please go on; what comes next?"

"Next, let me see; oh, yes, the firemen with their engines all fixed up; then the butchers. I think their wagons look the prettiest of all."

"Is that all, then?"

"Gracious, no. There are loads of soldiers and cannons, lots more music, and all the school children; but they have a wagon to themselves drawn by six horses. They have crowns on their heads, and sing 'The Star Spangled Banner.' They are called 'the rising generation.' Now, I'll tell you what the boys of our class are going to do. There are 12 of us, and we are nearly all 10 years old. We are going to buy soldier-caps and guns, and swords and knapsacks, and we are going to march in the procession."

"Won't that be lovely?" cried Joey, clapping his hands. "Don't I wish I could see you? but you'll come up after it's all over and tell me about it, won't you?"

"Yes, I will; but don't you think your mamma could manage to bring you?"

"No. It's too far for her to carry me, and she couldn't hold me up so long. But never mind, I have my pistol, and I can think about what you have told me."

Just then the clock struck eight, and Harry said good-night to Joey, promising to come back and see him the next day. Harry ran home as fast as he could and rushed breathlessly into the house, knocking over the baby's carriage which stood in the hall.

"Why, Harry, what a noisy boy you are," said mamma, coming out of the sitting-room. "Where have you been? I was getting quite worried about you."

Then Harry told his tale, and when he had finished mamma said:

"I will go down with you to see Joey some day, and you can take him some of your books and toys, if you wish."

Suddenly an idea seemed to strike Harry, and he said:

"Mamma, is baby going out in her buggy to-morrow?"

"No, dear; it is hardly safe to take a baby in the street on the Fourth of July."

"Then, mamma, will you lend me the buggy? I'll take good care of it."

"I must know what you want it for, Harry; of course I will not allow you to take it in the procession."

"I've decided if you let me have the buggy I won't take part in the procession."

"Not take part in the procession! What do you mean, Harry?"

"I thought, mamma, I would like to take Joey down to the procession; he's never seen one in his life. You could fix up the buggy with cushions, and I'll take splendid care of it. Please, mamma, let me; it will make him so happy."

"And you, Harry, are you willing to sacrifice your whole day's amusement to take Joey around?"

"Yes, yes, mamma; it won't be a sacrifice, but a pleasure."

"Then, dear, you may have the buggy, but now you had better go to bed or you will be too tired to enjoy yourself to-morrow."

The next morning at eight o'clock Mrs. Daniels was startled by hearing a loud rap at the door. Upon opening it she saw Harry there, so excited he could scarcely keep still.

"Please, Mrs. Daniels, won't you get Joey ready? I am going to take him to the procession. See, mamma has fixed the baby's carriage for him."

Mrs. Daniels looked and saw a pretty wicker buggy filled with soft rugs and cushions, the outside decorated with dozens of flags. Her heart was too full to speak; she stooped and kissed Harry and went into the house for Joey. She wrapped him up carefully and fixed him in the buggy, while Harry gave him a sword and cap. "There, Joey," he said, "these are for you. I've got lots of firecrackers and things. Now, old boy, I'll start if you are feeling comfortable."

Very carefully Harry wheeled the buggy until he reached the street through which the procession was to pass; then, choosing a place where Joey could see everything, he gave him a flag and told him to wave it whenever he saw any one he knew.

Words fail to express the delight with which Joey viewed every item of the procession. When Harry's class passed, the boys with one accord stood still and gave a loud cheer. Every cap flew up into the air as they shouted, "Three cheers for Harry Drummond and lame Joey! hip, hip, hurrah!" The people even joined in.

As Harry looked at Joey's happy face he felt that he would not change places with a king. When he brought Joey home the little fellow put his arms around Harry's neck, saying: "I love you, Harry; this has been the happiest day I ever spent. I'll never, never, forget it, and I'll think of you every Fourth of July." And Harry felt, too, that it was the happiest day he had ever known.

Alameda, Cal.

## DOMESTIC ECONOMY.

**MARMALADE PUDDING.**—One quart of milk, four eggs, one cup of sugar, slices of stale bread buttered; fruit marmalade, peach is best if you have it, but apple, quince or raspberry will do if you have not. Scald the milk and pour it on the eggs, which should have been beaten light with the sugar. Return to the farina kettle and cook five minutes, but not until it thickens. Cut the bread an inch thick, pare off the crust, butter on both sides, and cover the bottom of a pudding dish with slices fitted in neatly. Spread the marmalade thick on this layer and wet with the boiling custard, waiting to see it absorbed before putting another layer above it. Proceed in this order until all the materials are used up. Fit a plate or other lid on the bake dish and let the whole stand for half an hour to absorb the custard before it goes into the oven. Bake, covered until the pudding is heated through, then brown nicely. Eat cold with cream. This excellent pudding may be made more elegant by whipping the whites of three eggs to a meringue with a tablespoonful of powdered sugar and spreading it over the top after it begins to brown. Shut the oven door until the meringue is faintly covered.

**LEMON PICKLE.**—Choose a dozen fine, middle sized lemons, fresh and perfectly sound, scrape the outside of them with a piece of broken quart bottle, and then cut them lengthwise down into four quarters, but not quite asunder; they must be left so as to just hang together. Rub these over with salt on the rough outside, and fill the cuts with salt in the same manner; put them into a china or earthenware bowl that will just hold them, sprinkle some more salt over them, and turn them once a day; let them lie thus four days. Parboil 12 cloves of garlic or small onions cut into thin slices; add to these an ounce of white sugar, a handful of white mustard seed, and as much cayenne pepper as will lie upon a dime. Sprinkle some salt among these, and let them stand all the time the lemons are in the bowl. Then have a clean stone jar ready, take out the lemons one by one, squeeze them a very little, and lay them carefully in a jar; lay in the spices all about them, and tie them close down; let them stand a month, and they will be fit to eat. Sugar can be added to taste when served.

**VEAL CUTLETS.**—A correspondent sends this recipe for cooking veal cutlets: After the cutlets are trimmed, salt and pepper them and broil them on each side over a brisk fire for five minutes; then place them without delay on a buttered dish by the fire. While the cutlets are broiling prepare the sauce for them. Mix three eggs with two tablespoonfuls of flour, seasoning with a very little nutmeg and salt and pepper; then mix carefully with two cups of milk and pour over the cutlets. Put the dish in the oven until the cutlets are well browned; then serve.

**WHITE FRUIT CAKE.**—One cup of butter, two cups of sugar, one cup of sweet milk, two and a half cups of flour, the whites of seven eggs, two even teaspoonfuls of baking powder, one pound each of seeded raisins, figs, dates and blanched almonds, and one-quarter of a pound of citron, all chopped fine. Mix all thoroughly before adding the fruit. Put baking powder in the flour and mix well before adding to it the other ingredients. Sift a little flour over the fruit before stirring it in. Bake slowly, and try with a splint to see when it is done.

**CLAM SOUP.**—Put 30 hard clams in a pot with two quarts of water, and let them boil gently for two hours. Then take out the clams, chop them fine and return them to the pot with 12 pepper-corns and a bit of mace, and boil one hour more. While boiling mix a small tablespoonful of butter smooth with two tablespoonfuls of flour, and stir the mixture into one pint of boiling milk until it is smooth. When the clams are done, strain the soup into a tureen and stir in the hot thickened milk.

**SUCCOTASH.**—Empty a can of corn and one of string beans several hours before you wish to use them, draining off the liquor from both. Put together into a saucepan half an hour before dinner, and barely cover with milk and water in equal parts, boiling hot and slightly salted. Cook gently 20 minutes, and stir in a tablespoonful of butter rolled in one of flour. Season with pepper and salt, stew 10 minutes more and dish. You may substitute Lima for string beans if you like.

**JELLY ROLL.**—Three eggs, one cup of prepared flour and one of powdered sugar, one tablespoonful of butter, jelly or jam; rub the butter into the sugar, add the beaten eggs, the flour, and pour into a broad baking pan, well greased. Bake rapidly, and while still warm spread with jelly, jam or marmalade. Roll it up, pin a band of soft cloth about it to keep it in shape, and do not move this until the cake is cold and firm.

**PINEAPPLE FRITTERS.**—Peel the pineapple, taking care to remove all the eyes; cut in slices and remove the core, dip in batter and fry a delicate brown. They may be eaten with a sauce made of sugar boiled to a syrup and flavored to taste.

## The Week.

This issue will reach our readers just on the  
eve of the great national holiday. As the  
Fourth falls on Sunday the formal celebration  
will be on the following day, but the small boy  
will enjoy the exceptional opportunity for cele-  
brating this year. He will begin at daybreak  
on Saturday morning, and will have the patriotic  
fervor strong upon him until the last rocket is  
fired on Monday night. The Sunday-school  
teacher may possess his body for an hour on  
Sunday, but his mind will be with the coming  
parade, and his pockets charged to the brim  
with explosives.

The celebration in this city will be quite sub-  
dued, and will consist of literary exercises during

the day and fireworks in the evening. The com-  
ing grand event, the National Encampment of  
the Grand Army of the Republic, with its wealth  
of displays and parades, will be this year's ex-  
ponent of San Francisco's patriotic fire. All  
our people who can will escape from the city  
and pass the Fourth in the delicious quiet of  
rural resorts.

What the Artists Have Done with  
Washington.

It is quite natural that every patriotic  
American should desire to know just how the  
"Father of his Country" really looked. No  
other American has been so often a subject for  
the painter's brush as George Washington.  
Artists and sculptors, native and foreign, have  
expended their skill upon him with results  
which refuse to agree. Each picture and bust  
represents a different man in looks and char-  
acter. No two resemble each other. But for  
the fact that they are labeled "Washington,"  
it would be impossible to guess who the original  
had been.

Over 300 portraits, busts and statues of the  
great Pater Patriæ by painters and sculptors  
who were distinguished in their day are in ex-  
istence. They depict their immortal subject in

as many different guises. Sometimes they  
make him a noble Roman, with a nose that  
equals the bravest of them in contour and a  
mouth as grim as a stone wall; again, they  
make him a sinister old barrister, a wily diplo-  
mat, a bespangled brigand, or a smirking  
courtier. It was long since discovered that  
every one put some of his personality, and even  
his nationality, into his work. When the work  
is picture-making, particularly portrait-making,  
the subject undergoes a denationalizing process  
and comes out, when the picture is finished, a  
countryman of the artist. This isn't a fancy;  
it's an undeniable and rather tragic fact.

Washington has suffered this kind of trans-  
formation with greater frequency and cruelty  
than any other martyr dead or alive. He, the  
grandest American of all, the truest patriot,  
has been sent out on canvas and in marble as a  
Frenchman, a Dutchman, an Englishman, and  
every other kind of a man that he was not. In  
order to demonstrate this fact, we reproduce  
here a few of the pictures of Washington by ar-  
tists of different nationality. A bust made in  
1792 by Ceracchi, an Italian, makes an inflex-  
ible Roman of him, stern and grim as Cato.  
Unconsciously the Italian artist Italianized him.  
A picture by Wright, an Englishman, made in  
1790, transforms him into a haughty old  
Briton. De Brehan, a Frenchman, made a bust  
of him in 1789, which depicts him as a French  
hero. Houdon, also French, in 1785, completed  
a Washington bust which could well be mis-  
taken as having had for its model a refined and  
elegant French scientist. In 1779 Du Simitiere  
painted a Washington portrait which is so  
blandly French that it must have astonished the  
great American patriot himself. St. Memin, in

1798, almost excelled him in the peculiar art of  
painting an American into a Frenchman. His  
picture is a typical old French nobleman, of the  
severe and dignified school of manners. Sharp-  
less, an American, painted him in 1796, permit-  
ting him to be an American—an American of  
that grave and dignified time.

Out of these seven profiles modern ingenuity  
has evolved, by means of composite photo-  
graphy, one picture which contains the best of  
the seven, and in all probability bears a stronger  
resemblance to the original than any one of  
them. In this the seven artists present, in one  
face, their impressions of the great Washing-  
ton's appearance. Each artist contributes only  
one-seventh of the whole. No one has an op-  
portunity of putting more of himself in the pic-  
ture than he is entitled to. Each artist's work  
differs from the others, yet the picture evolved  
from all is distinct.

The photograph is the work of W. Curtis  
Taylor, a leading photographer of Philadelphia,  
who found his subjects among the collection  
of William S. Baker, of that city. Possibly all  
the world may not know that composite photo-  
graphy has been brought to something like per-  
fection, and that its uses are ennobling. It  
gleans from many the best and builds up a sin-  
gle picture which represents the spirit of many.

## The Destiny of the Democratic Idea.

Before the next issue of the RURAL PRESS  
Independence Day will have come and gone.  
All over the land the orators will lift the veil  
of time upon the sublime enthusiasm with  
which two millions of people arose with one  
accord to assert their rights and follow their  
new-made flag with unshaken confidence  
over many a bloody field until victory crown-  
ed their efforts at Yorktown. But the des-  
tiny of the great idea that has made us one  
of the most rich and powerful nations of the  
earth specially claims our attention.

Among the many legends of the Civil War  
is a story of a dinner party in Paris given by  
a number of Americans on Independence  
Day, at which were propounded sundry  
toasts. Although it was during the darkest  
hours of our civil strife, the bigness of the  
country seems to have been the dominant  
feeling. The first speaker arose and said:  
"Here is to the United States, bounded on  
the north by British America, on the south  
by the Gulf of Mexico, on the east by the  
Atlantic Ocean, and on the west by the Pa-  
cific." Not to be outdone, the second  
speaker announced as his sentiment: "The  
United States, bounded on the north by the  
North Pole, on the south by the South Pole,  
on the east by the rising sun, and on the  
west by the setting sun." This would seem  
large enough to have gratified the most patri-  
otic imagination, but the third speaker put  
on the capsheaf when he said: "I give you  
the United States, bounded on the north by  
the Aurora Borealis, on the south by the pre-  
cession of the equinox, on the east by prime-  
val chaos, and on the west by the Day of  
Judgment."

Extravagant as this post-prandial rhetoric  
seems, it contains a kernel of truth. It is  
now about fifty years since that keenly pen-  
etrative and sagacious Frenchman, M. De  
Tocqueville, said that he did not believe that  
democracy was the best thing for the world,  
but that it was inevitable, and the sooner the  
crowned heads of Europe made up their  
minds to meet it, the better. The ablest  
political writers of the age—John Stuart  
Mill, Herbert Spencer, Walter Bagehot and  
a host of lesser lights—all confess that as  
civilization advances the people begin in-  
stinctively to feel for the reins of power. It  
is becoming every day more apparent that  
the monarchical governments of Europe are  
doomed to melt away like huge icebergs in  
southern seas.

Russia, the brawny, shaggy-bearded giant  
of the North, is the last of the old despotic  
race. But every one knows that this vast  
empire is mined and only needs a spark to  
fire a train that may blow it to atoms. Of  
the limited monarchies, the most of them are  
monarchies only in form, the substance of  
power having long since leaked out of them.  
The average king is a mere figure-head in  
the drama of affairs. A traditional respect  
clothes the royal family with a semblance of  
authority; but let there be the slightest  
rustle of an undue use of it, and it will be  
found to vanish like fairy money. The  
House which represents the popular will is  
conscious of its power and quick to resent  
the very shadow of trespass upon the  
sovereignty of the people. The caldron  
bubbles; chaos ferments. The rays on the  
horizon point to the heaven of the people.

It should be a matter of some pride that  
the movement toward equal rights and the  
present struggle for Home-rule in England,  
the agitations in Sweden, Denmark and Rus-  
sia, and the almost general discontent in  
Spain, all point in the direction we have  
taken. There is a growing faith in Repub-  
lics. Everywhere there are indications that  
the empire of the million has begun—the  
empire of one ruler, or a select circle of  
rulers, is over. Of one thing we may rest  
assured, our country is in front of a world-  
movement which has not yet produced its  
best men, best laws and government, a  
movement that began in primordial chaos,  
and is "bounded by the Day of Judgment."

**NURSERYMEN'S ASSOCIATION.**—A goodly num-  
ber of California nurserymen met in San Fran-  
cisco last week and effected a permanent  
organization of which we will give the particu-  
lars next week.

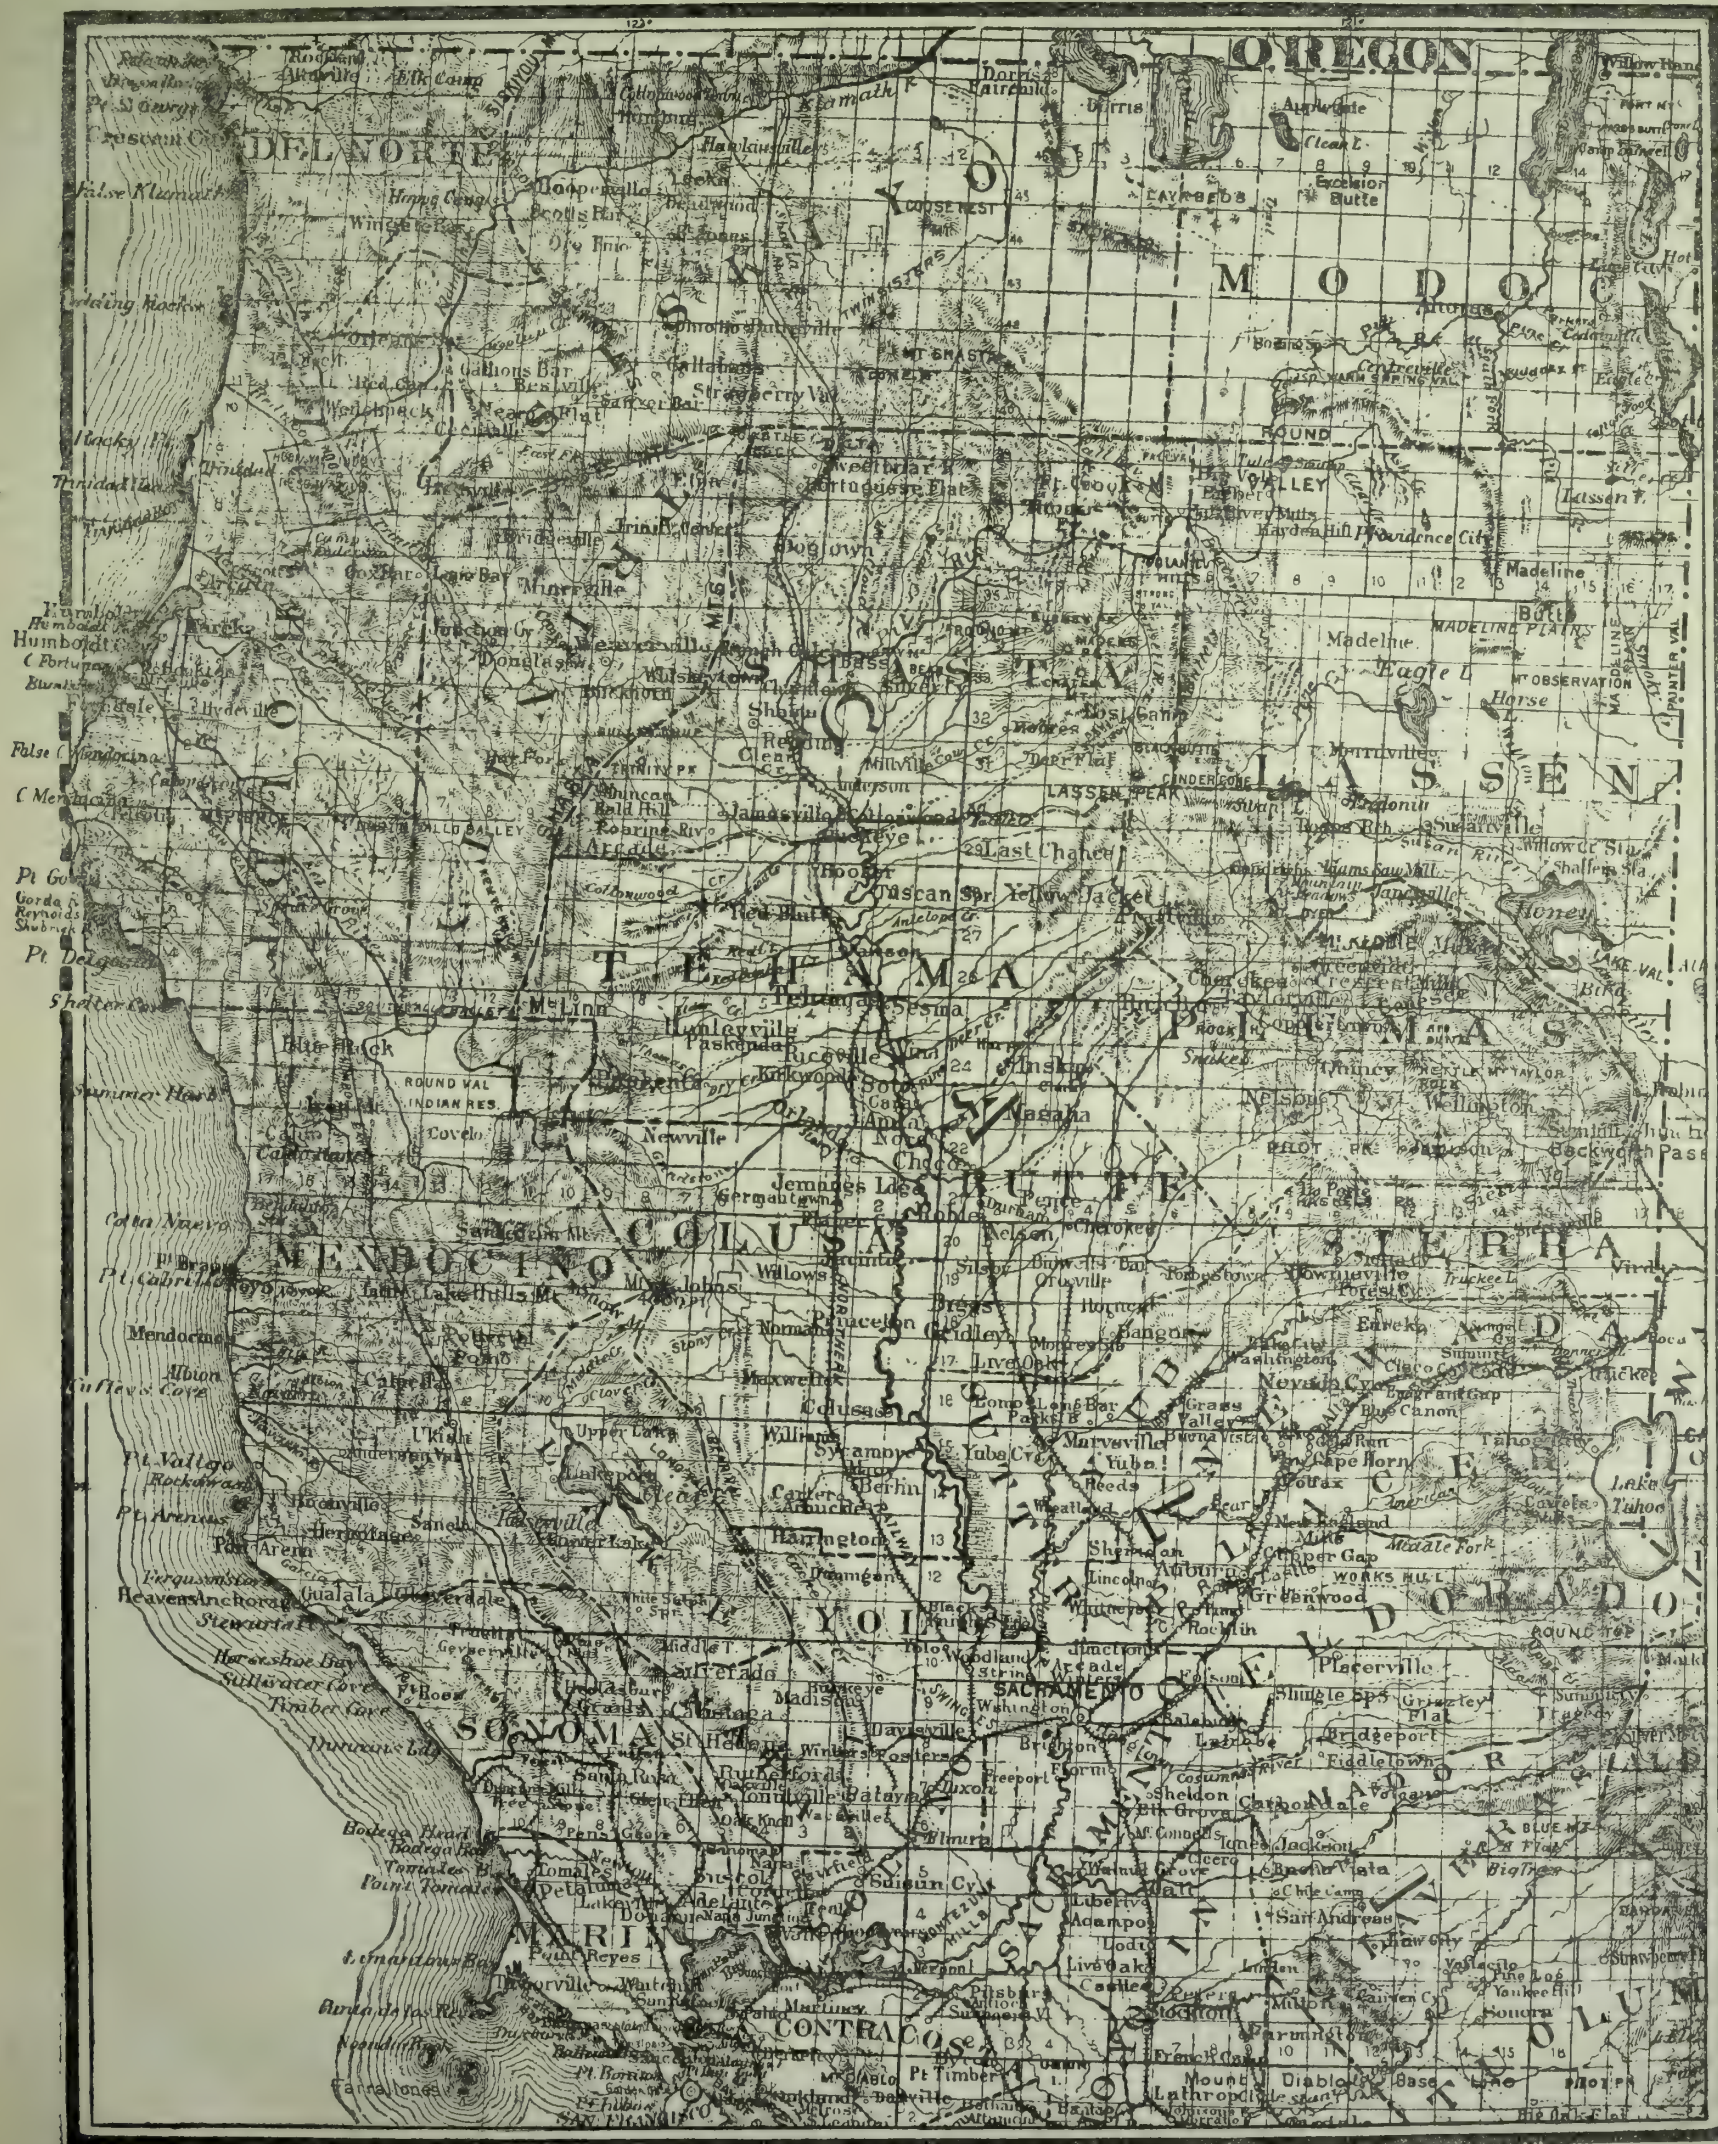

We give herewith a map of that portion of the State of California lying north of an east and west line drawn just below the metropolis

issue to the Sacramento valley, expecting to do as well hereafter for the two remaining divisions, the tier of rich coast counties on the west of the valley and the rapidly advancing foothill counties on the east.

hills and valleys. On the west, from the Golden Gate to the Oregon line, the Coast Range rises from 2000 to 5000 feet high. This range, at its broadest base, has a width of 50 miles. In the eastern part of this section the Sierra Nevada

south. This great valley presents the appearance of an inland basin, and was undoubtedly, in a former age, a vast interior lake. It is 250 miles in length and 50 miles in width. There are many large and beautiful valleys on the

MAP SHOWING PORTIONS OF CALIFORNIA LYING NORTH OF THE LATITUDE OF SAN FRANCISCO.

of San Francisco. It was our first intention to issue a special edition treating fully of the resources and progress of this vast and rich portion of the State, but it soon became apparent that the subject was too large to enable us to give anything more than a cursory treatment in a single issue. We therefore decided to divide the area and give special attention in this

Northern California has an area of 84,000 square miles, or more than 54,000,000 acres. This is an area twice the size of the "Keystone" State, which has a population of 4,000,000. North and south it embraces five degrees of latitude, and east and west three degrees of longitude. The northern half of the State has a diversified surface of mountain ranges, foot-

range extends the whole length, rising from 4000 to 8000 feet in altitude. On the fortieth parallel of latitude these ranges put out connecting spurs, forming the Siskiyou or Shasta range.

Between these two north and south ranges is the Sacramento valley, in the shape of a gigantic horse-shoe, with the opening to the

Pacific Slope and in the interior basins of the continent, but in area, beauty and fertility the valley of the Sacramento excels them all. It was this valley that enraptured and retained the Spanish explorers and the devout Jesuit Fathers of the 16th century; that excited the admiration of the bold rovers of the seas in the 17th and 18th centuries; that extorted the most

extravagant praise from the explorers and pathfinders in the middle of this century, and that made the "argonauts" willing exiles from their childhood homes. Ask any of those wanderers in many countries where is the fairest land he has ever seen, the most genial and hospitable climate, the most bountiful soil and the brightest skies, and where he would rather live, die and be buried, and he would tell you here in the Sacramento valley. This great basin is bisected through its entire length by the Sacramento river. On either side of this stream are wide plains that extend for miles away to the foothills of the Coast and Sierra Nevada ranges.

### Butte County.

[Written for RURAL PRESS by C. E. HEATON.]

Butte county has been greatly favored by Nature in the variety and extent of its natural resources. Lying partly in the Sacramento valley and partly on the western slope of the Sierras, it has a total area of 1746 square miles, or, in other words, 1,117,440 acres. It is bounded on the north by Tehama county, east by Plumas, and south by Yuba and Sutter, while its western boundary is washed by the Sacramento river. Its greatest length from north to south is about 60 miles, and its greatest breadth, east and west, from the Sacramento to the summit of the Sierra, is nearly 50 miles. About 550,000 acres of the county's area are timber lands, between 250,000 and 300,000 acres are agricultural lands, and the balance mineral. The agricultural area is capable of being greatly extended, as there is a large belt in the foothills containing much land valuable for farming and fruit-growing purposes. The principal industries of Butte are mining, farming, fruit growing, lumbering and stock raising. The total population at the present time is estimated at 25,000, which is an increase of about 7000 since 1880. The county is a prosperous one, and occupies the twelfth place in property rank among the 52 counties of the State.

### Watercourses.

This is one of the best watered counties in the State. Up amid the perpetual snows of the Sierras, numerous streams take their rise, and, flowing thence to the Sacramento, intersect the county in all directions, making fruitful as a garden large tracts of agricultural land, furnishing water for hundreds of miles of mining ditches and lumber flumes, and affording excellent manufacturing facilities. Of these streams the largest is the famous Feather river, so closely connected with the early mining history of Northern California. Its three branches, after forcing their way through the mountains, unite just above Oroville, the county seat, and from that point the river flows through rich alluvial lands to the southern boundary, 20 miles distant. Next in importance comes Butte creek, flowing from the northeast corner to the southwest corner, the entire length of the county. There are some rich placer mines along its borders in the mountains, and where it flows through the valley and lower foothills may be found the choicest fruit and vine land in California, a fact that is attested by the fine orchards and gardens lining this stream. Honcut, Chico, Mud Rock and Pine creeks, besides numerous other living streams, all contribute toward the advancement of the mining, grazing, agricultural and manufacturing interests.

### Climate—Rainfall.

"What is the climate like?" As this is one of the first questions asked by the intending settler, and having visited at all seasons all the different localities, the writer feels justified in stating that nearly every kind of climate or degree of temperature may be found within the borders of this favored county, from the, at times, almost tropical heat of the valley portion, where the mercury sometimes stands at 115° in summer, to the cold, bracing climate of the ever-frozen mountain peaks. At the town of Chico, near the foothills, the mean annual temperature is 62.46°, and the mean for the coldest month is 45.19°, a slightly higher mean temperature for the year than either Rome or Madrid, and about the same mean temperature for the coldest month as those two cities. At an altitude of 2000 or 2500 feet a most delightful climate is experienced both summer and winter, the fall of snow at this height never exceeding a few inches in depth. The rainfall in the county averages about 24 inches annually.

### Scenery.

For the tourist and geologist Butte possesses a great many attractions, with its cozy mountain retreats, beautiful orchards and extensive mines. Among the objects of interest are the falls of Fall river, which is a clear, bold mountain stream rising in the mountains near Laporte and emptying into the middle fork of Feather river, about 18 miles above Oroville. The river falls in an unbroken sheet over a precipice between 400 and 500 feet, and striking on the rocks below produces a sound like volleys of musketry fired in rapid succession. A short walk of a few hundred feet from the head of the falls brings one to a point directly in front of them, where a splendid view may be obtained of this miniature Niagara. A cloud of mist or

spray rises from the foot of the falls to a height of 200 feet, and when the sun plays upon the waters the effect is very beautiful. As the falls are comparatively easy of access, the tourist who loves wild natural scenery will be amply repaid for visiting them.

### Mines and Mining.

This is one of the most celebrated of the early mining counties, and has passed through all the exciting scenes and experienced many of the ups and downs of those stirring days. For over 30 years its mountains and hillsides have poured forth a steady stream of golden treasure that has gone to swell the great gold product of the State. Still the supply of the precious metals holds out, new claims are being constantly developed, and at the present time Butte is the center of some of the heaviest mining operations in the State. Mining is carried on chiefly by hydraulic methods, though some very rich quartz lodes have been discovered and worked, and many more discovered that yet remain to be developed; while in some localities the old-fashioned cradle and rocker are still profitably used in washing out the golden sands.

It is reported in mining circles that several new quartz mills will be put in operation during the present year. The principal mining localities are Oroville, Cherokee (Cherokee Flats), Forbestown, Magalia (Dogtown), Lovelocks, Inskip, Mountain House, Wyandotte and Bangor. Five miles above Cherokee the Big Bend Tunnel and Mining Company, of which R. V. Pierce, of Buffalo, is president, have just completed their great tunnel, which has occupied three years and four months in building, and upon which a vast amount of capital and labor has been expended. This tunnel cuts straight across the big bend in the main Feather river where it flows through Dark canyon, and is designed to lay bare the bed of that stream for 14 miles. The tunnel is 1200 feet long, 16 feet wide, and 9 feet high, with much larger openings at both ends. It has a fall of 30 feet to the mile. A dam 16 feet high and 160 feet long is now being built across the river near the head of the tunnel. When that is completed, the entire body of water in the river will be diverted from its old channel and sent through the tunnel, and mining operations will then commence in the river channel thus laid dry. This river bed to be mined is the bottom of an immense canyon, and the indications are that gold exists in great quantities; but, owing to the nature of the ground, which made it impossible to build wing dams or flumes, it has never been worked, though thousands of dollars' worth of gold have been taken out of the river above and below this section. This great work was originated by Major F. McLaughlin, of Oroville, to whom is due the credit of interesting capital in it. The surveys were made by ex-County Surveyor Jas. McGann, who at times was forced to carry on his work while suspended by ropes from the top of some high precipice. In cutting the tunnel a six-foot quartz lode was struck at a depth of 1200 feet below the surface, besides many smaller ones. It is said that the company will not work these lodes until the river bed is mined out, unless during high water in winter when the river can be turned back into its old channel, while the quartz lodes are being worked. Besides gold, nearly all the valuable minerals have been found in this county, and many of the precious stones, the latter being mostly diamonds, found at Cherokee Flats. These are small, and generally range in value from \$10 to \$50 each, though some of much greater value have been unearthed.

### Soil.

Nearly every kind of soil is found in the county, ranging from black adobe to red, gravelly, and sandy tracts. The western or valley portion embraces nearly 200,000 acres of fine level land, a large body of which is rich alluvial, and produces large crops of grain every year.

### The Principal Productions.

The principal cereals are extensively raised, as the following statistics will show: To afford a comparison, we give the figures both for the years 1880 and 1884. In the former year there was cultivated 127,189 acres of wheat, which yielded 2,244,770 bushels; 23,288 acres of barley yielding 516,474 bushels, and 1325 acres of corn that produced 31,210 bushels, which placed Butte for that year third on the list of wheat-growing counties. In 1884 there was sown to wheat 123,715 acres, which produced 2,227,500 bushels, 49,500 acres devoted to barley, yielding 1,485,000 bushels, and 11,000 acres sown in oats, yielding 330,000 bushels, while corn was planted on 950 acres which produced 30,600 bushels.

Among the other crops are included hay, rye, broom corn, alfalfa, and fruit and vegetables of every description.

### The Fruit Interests—Orange Culture.

Fruit-growing, including orange, lemon and olive culture, is making rapid strides in this county, and is destined in the future to prove the principal source of wealth, the horticultural resources being practically unlimited. Aside from the great belt of land in the foothills adapted to fruit-growing, all that part of the county lying in the Sacramento valley proper is capable, with the well-adapted climate, of producing profitably and successfully all the products of the temperate and semi-tropical countries. Here are to be found the principal orchards and vineyards, the largest fruit-grower

being Gen. John Bidwell, proprietor of the famous Rancho Chico Orchards, the fruit from which has an excellent reputation in the San Francisco and Eastern markets. During 1885 there was an increase in the area planted in fruit trees, berries and vines in the county of about 3000 acres; while, for the present year, tree-planting has been especially active. The cultivation of citrus fruits is receiving a great deal of attention. It is estimated that there are 1500 bearing orange trees in the county and as many more to come into bearing within two years. An association was formed during the past winter and a tract of land purchased in the foothills near Oroville, which was cleared of brush and planted with 3000 orange trees; while it is estimated that as many more were planted in other places by private parties. Oranges begin to ripen in November and are in shipping condition the last of the following month. It is claimed that acclimated fruits (seedlings) thrive the best and are not affected by frosts. The oldest orange tree in the county is one that was planted in 1859 at Bidwell's Bar, a famous old, abandoned mining camp on the Feather river, eight miles above Oroville, but where some of the best fruit in the county is now raised. Most of the seedling orange trees in the county sprang from this tree, which came from Acapulco, and has borne fruit for 20 years. The native or seedling orange trees bear at ages varying from 7 to 12 years, though some have been known to produce fruit at the age of five and six years. For many varieties of fruit the foothill region is the true home; here, on the sunny slopes and in the warm, sheltered little valleys, the orange, lemon, lime, olive and Japanese persimmon all thrive better than on the open plain, while the wine and raisin grape grow to perfection. The olive flourishes at an altitude of 1500 feet and the orange at 1000 feet, while peaches, pears, plums, cherries, figs, quinces, berries and vegetables of all kinds grow luxuriantly at an altitude of from 1500 to 3000 feet. Apples thrive well at this and much higher elevations, and are of a finer flavor and much more juicy than when grown in the valley. Though irrigation is not considered absolutely necessary in fruit-raising in this county, it has been found a great aid in many places, many of the old mining ditches being drawn on for this purpose.

### Forests—Lumber Manufacture.

The timber of the foothills, from the edge of the valley to the altitude of 2000 feet, consists mostly of oak and digger pine, and is valuable only for firewood. From that point to the summit the mountains are densely covered with fine qualities of sugar pine, pitch pine, yellow pine, fir, spruce and cedar. There are about a dozen large saw mills in the county, and 10,000,000 feet of lumber is manufactured annually. Six hundred carloads were shipped from Butte in 1885. A large number of men and teams are kept busily employed during the summer months, hauling supplies to the saw mills in the mountains, and transporting lumber to the valley. Common lumber, such as is used for fencing, generally sells for \$10 per M at the mills, and about \$18 per M in the valley.

A large force of men scattered throughout the mountains are engaged in making shakes. These, when of fair quality and put up in bunches, sell for about \$5 per M in the mountains and about \$9 per M in the valley.

### Live Stock.

Stock-raising is profitably and extensively engaged in; the number of live stock in the county being estimated as follows: 100,000 sheep, 25,000 hogs, 17,000 head of horned cattle, 10,000 horses and 2000 mules.

The dairy business is also of considerable importance, and is a paying industry.

### Railroads—Communication.

The California & Oregon Railroad extends lengthwise through the county, running through the valley portion, and the California Northern, starting from Marysville and proceeding north, extends for about 20 miles up into the southern part of the county, following the general course of the Feather river on the east side, to Oroville, the present terminus. This is one of the oldest lines in the State, and but one fatal accident has ever occurred upon it. Considerable traffic is also carried on by the Sacramento river. In addition to these lines of travel, four splendid stage roads lead over the mountains into Plumas and Sierra counties, with which a large trade is carried on.

The principal towns and villages are Chico, Oroville, Cherokee, Biggs, Gridley, Nelson, Durham, Dayton, Magalia (Dogtown), Moores and Live Oak.

### Chico—A Beautiful City.

Chico is a flourishing young city of about 6000 inhabitants, situated on the C. & O. R. R., in the northwestern part of the county, close to the foothills, and a few miles east of the Sacramento river. It is about 100 miles north of Sacramento City, and is frequently spoken of by visitors as the garden city of Northern California. The rich, level farming country surrounding the town is dotted with widespread oaks of noble proportions, many of them showing great age. This is one of the best shaded towns in the State. Its streets are wide and regular, and one may stroll for hours along the well-kept avenues lined with beautiful shade trees, without being exposed to the rays of the sun. Elegant private residences,

set in the midst of tastefully-arranged lawns and gardens, and pretty little vine-covered cottages, are to be seen on all sides, while an attractive feature of the place is a handsome little park, occupying a square in the center of the town. Chico creek, a clear, cool stream from which the town takes its name, flows through the place; and Recreation Park, Bidwell's Park, and other fine groves in the suburbs, contribute to the beauty of the surroundings. The town has well-equipped gas works and water works, and an effort is being made to place electric lights on some of the main streets. The press is well represented by several live weekly and daily newspapers. Chico is noted for the large number and variety of its well-filled stores and the many different business establishments. The High School building, a fine brick structure, the different private schools, and the several large churches, show that educational and religious matters are not neglected.

The new opera house, the commodious public halls, the many hotels and restaurants, and the elegant equipages seen on the streets, give the place quite a metropolitan appearance. Chico has two solid banks—the Bank of Butte County and the Bank of Chico. Both are located in fine brick blocks on opposite corners of Broadway and Second street. The former has a capital of \$250,000, with a surplus of about \$24,000. N. D. Rideout, the well-known banker of Northern California, is president, and Charles Faulkner cashier. The Bank of Chico, organized in 1872, has a paid-up capital of \$100,000, and a surplus of \$30,000. W. D. Heath is president, and Alex. Crew cashier. Both banks carry on a general banking business, and buy and sell exchange on all the principal cities of the United States. Among the manufactories are included planing mills, box factories, foundries, breweries, soda works, carriage and harness factories, and two large roller flour mills fitted with the latest improved machinery. On the east side of town is situated the extensive lumber yard and planing mills of the Sierra Flume and Lumber Company, whose great V-shaped flume extends for 40 miles up into the fine timber belt of the Sierras. The company manufacture extensively sash, doors and blinds of all kinds, and give employment to a large force of men. The immense lumber yard, embracing 15 acres, is filled with lumber and building material of every description. A side track from the railroad, running through the yard, affords excellent shipping facilities. Chico has lines of stages running to Oroville, Prattville (Big Meadows), Cherokee, Deadwood, Colusa, and to Newville, Colusa county, by way of St. Johns and Orland.

### Rancho Chico.

Adjoining Chico on the northwest side is General John Bidwell's princely estate, the famous Rancho Chico, which embraces over 20,000 acres of the most fertile land, and is noted for the great variety of its productions. Here are to be seen miles and miles of beautiful avenues, lined with stately trees laden with the choicest fruits of many different climes; northern and tropical trees and plants flourishing side by side. One famous fig tree on the ranch never fails to attract the attention of visitors. It was planted in 1856, and has attained a marvelous growth. One foot above the ground the trunk measures 11 feet in circumference; the wide-spreading branches have been trained toward the ground, and taking root there, banyan-like, they now form a wonderful inclosure over 150 feet in diameter. The tree is loaded every year, and has produced tons and tons of figs. A short distance in the rear of the General's residence is a pretty little deer park, which adds much to the beauty of the grounds. Chico creek flows through the ranch, and irrigating ditches run in all directions. On the estate is a flour mill, a fruit cannery, a dairy, and numerous hothouses, fruit-driers, packing-houses, etc. A curious feature of the place is the large Indian rancherie situated on the back part of the ranch. The dusky inhabitants of this village live very contented lives here in their primitive fashion, and fare much better than their brethren in many other parts of the State. They are wedded to many of their old customs and traditions and have an immense sweat-house, in which, at certain times, they hold their usual orgies and go through the famous melting process. A brass band, composed of about a dozen braver bucks, is much in demand at picnics and outdoor celebrations. Many of the Indians find profitable employment on the ranch and prove valuable help during the fruit gathering season. The prosperity of Chico would be further advanced by the subdivision into small farms of several large tracts of land in this vicinity now held by a few persons. The Reavis ranch, the Pratt grant and the Parrott grant include immense tracts of land of more than ordinary fertility, which at present is almost exclusively devoted to wheat-raising on a large scale, but should be divided into 20 and 40-acre plots and set out in fruit trees and vines. It is estimated that in this county there are 102 land-owners whose holdings vary from 1000 acres to 116,000 acres each. That these large tracts will in the near future be subdivided and sold off in small-sized farms seems very probable, as the land must soon become too valuable for farming by the present methods.

### Oroville—Its Surroundings.

Oroville, the county seat, is situated just in the edge of the foothills, on the right bank of the Feather river, and is the terminus of the C. N. R. R. It was born in the flush and exciting times of the early mining days, and was

originally called Ophir, a most appropriate name, and one suggestive of the fabulous wealth of precious metals which have literally been taken out of the earth in this vicinity. The town contains a population of about 3000, and is very advantageously located as a trade center and distributing point of supplies for the mountain localities. Stretching away to the south and east is a fine farming country; while in the foothills in the vicinity extensive mining operations are carried on. The town has splendid gas works and water works. The water supply—it is claimed by the citizens—is the best in this part of the State. The court house and the county hospital are fine large buildings; the former was erected at a cost of \$25,000,

has for its mines in the past. Already there are 700 bearing orange trees in the place, besides hundreds of others more recently planted, many having been set out the past season. Handsome residences, surrounded by beautiful gardens in which the orange, lemon, lime, pomegranate and Japanese persimmon flourish side by side, now charm and astonish the traveling visitor who has heard of Oroville chiefly as a mining town. All through the foothills the same fact is being demonstrated, that the old mining localities generally possess the soil and climate especially adapted to fruit-growing. Reliable information in regard to real estate in this section may be obtained from Judge J. P. Leonard, real estate agent, who has been estab-

lished here for 30 years. Oroville claims the distinction of having been the home, at the time of his election, of ex-Governor Geo. C. Perkins, who first embarked in business here away back in the fifties. He still retains valuable interests at this place, being connected with his brother, D. K. Perkins, in an extensive wholesale and retail business under the firm name of Perkins & Company. Oroville is connected by stage with Chico, Quincy, Prattville, Laporte, Cherokee, Dogtown and intermediate points.

#### Cherokee—Great Gold Mines.

Twelve miles north of Oroville is the important town of Cherokee, better known as Cherokee Flats, the center of the heaviest mining operations in Butte. The town is not a handsome one, as it stretches in one street for nearly a mile along the side of a canyon in which the

mining is carried on. The town contains several hotels and saloons, two stores, a number of shops, several public halls and a fine school-house. The population numbers about 800. The Spring Valley Company, an English corporation, owns the principal mine here, and at present is employing more men than ever before. The mining is mostly heavy hydraulic, and several hydraulic chiefs are kept at work both day and night, electric lights, placed on tall masts, being used to mine by at night. This mine has paid its millions. The company has about 80 miles of ditches and six miles of iron pipe leading to the mine. The water supply is gathered in two large reservoirs in the mountains, one near the summit

and one at Concow valley; the latter is two miles long by half a mile wide. The supply of water at the mine is between 2000 and 3000 inches daily. Hundreds of thousands of dollars have been expended on the ditches and reservoirs. The tailings from the mine run down the canyon and empty into the valley along Dry creek, about two miles below this place. As many of the farms along Dry creek were being covered up by the tailings, the company was obliged to purchase them, and also to build expensive levees along the creek, which has necessitated an outlay of over half a million dollars, but has secured to the company perpetual dumping grounds without violating the law against hydraulic mining.

#### Pentz

Lying just in the edge of the valley, about two miles below Cherokee, in the midst of a

perfect labyrinth of mining and irrigating ditches, pipes and flumes, is the little village of Pentz, named after the late W. Pentz, a pioneer of Butte, and long proprietor of the well-known Pentz ranch and hotel, one of the finest farms and most popular hostleries in the county.

There are some fine orchards and vineyards in this vicinity, some of the fruit having secured prizes at the Sacramento Citrus Fair. The Flee Valley and Rock Creek Lumber Co. have a yard and planing mill here, and conduct an extensive business. The saw mills are situated in the mountains at Rock Creek and Flee Valley, about 25 miles distant, and the lumber is shipped to this place by means of a V-shaped flume.

#### Gridley—A Growing Town.

Situated on the C. & O. R. R., a few miles from the southern boundary, in the midst of beautiful groves of live oaks, is the enterprising town of Gridley. It contains about 800 inhabitants, is surrounded by a wealthy farming community, and is a great grain center. The town is well built up and boasts a weekly paper, a bank, a fine public school building and several churches. There are large grain warehouses, hotels, livery stables, and several first-class general merchandise stores, a well-stocked hardware store, and a well-filled lumber yard, besides several mechanics' shops. A fine roller flour mill, with a capacity of from 200 to 300 barrels per day, a planing mill, and a broom factory, are among the manufacturing industries. The broom factory has a large trade throughout the northern counties, the broom-corn used being raised at this place. A splendid one-span wagon bridge, built at a cost of \$18,000, to which the town contributed \$10,000, spans Feather river near the town. Gridley has long been known as a wide-awake town. It has many natural advantages, its people are enterprising, and its future certainly looks bright.

#### In and Around Biggs.

Biggs is a thriving place, and claims to be the third town in importance in the county. It is located on the railroad about seven miles north of Gridley. The town contains about 1000 inhabitants, and is pleasantly situated on the open plain about midway between the Feather river on one side and Butte creek on the other. To the east of town the soil is red loam, and to the west it is black adobe. Good crops are the usual result of farming in this section. The town contains some mammoth grain warehouses, two large hotels, several well-filled stores and mechanics' shops of different kinds. There is a weekly paper, a bank and a fine two-story brick public school building, in which four teachers are employed. Several religious denominations have places of worship and some of the fraternal societies are represented. Biggs also has a system of water works, with pipes laid throughout the town. The citizens have long wanted a flour mill, and, considering the large amount of wheat raised in this section, there would seem to be a fine opening for one here.

#### Other Towns.

Nelson is a prosperous little town on the same railroad, ten miles north of Biggs. It lies in the richest part of the valley, is a shipping point for an immense amount of wheat and boasts of one of the handsomest public school buildings in the county.

Next comes the village of Durham, located on the railroad seven miles south of Chico. It has the usual store, hotel, saloon, blacksmith shop, etc. Like the other towns on this road, it is an important shipping point for grain and derives additional importance from its fine steam flour mill, which is the means of drawing a large trade to the town.

Nord, Dayton, Moores and Live Oak are small towns and important fruit and grain centers in other parts of the valley. Centerville, Dogtown, Nimshew, Lovelocks, Powellton, Forbestown, Deadwood, Yankee Hill and Mountain House are important mountain villages in the mining and lumber districts. According to a late report Butte has 78 school districts, maintains 98 schools and has 4083 school census children; 500 miles of mining ditches, 125 miles of telegraph lines and 150 miles of telephone lines. The assessed value of property of all kinds in the county in 1885 was \$17,066,271, an increase of \$4,178,177 since 1880. In the mountains there is some Government land yet remaining subject to location, much of it adapted to fruit growing, but from which the brush and trees must first be cleared before it can be brought under cultivation. Land adapted to farming and fruit-growing can be purchased all the way from \$12 per acre for partly cleared foothill land to \$50 and \$100 per acre for rich valley land, such as is now offered for sale in the vicinity of Gridley and Biggs. Butte county is easy of access, and to parties seeking homes in California we say, pay it a visit and carefully examine its resources and attractions.

**THE WATER OF TREES.**—In the latitude of New York, Prof. P. D. Penhallow has found the proportion of water in trees and shrubs to vary according to these general laws: 1. The water in woody plants is not constant for all seasons, and depends upon conditions of growth. 2. It is in greatest amount late in May or early in June, and least in January. 3. It is in greatest proportion in the sap wood; least in that which is older. 4. When plants grow most rapidly they have most water.

THE SIERRAS—EASTERN BOUNDARY OF THE VALLEY.

and is well arranged in all the different departments. The town has first-class hotel accommodations and boasts some conspicuous buildings. Business in all its different branches is well represented. Rideout, Smith & Company—established since 1866—have a bank here and conduct an extensive general banking business. Among the manufacturing industries is a fine four-story roller flour mill, with a capacity of 150 barrels of flour per day. The press is ably represented by the *Mercury* and *Register*, two papers that have contributed greatly toward the development of the resources of the county. To the editor of the latter paper, S. S. Boynton, is due the honor of having originated the Northern California Citrus Fair, which has so thoroughly demonstrated the fact that Northern California is the home of the citrus family of fruits. Oroville bids fair to become as famous for its orange groves in the future as it

## Colusa County.

[Written for the RURAL PRESS by CHAS. E. HEATON.]

Colusa, the banner grain county of California, embraces an area of about 1,800,000 acres, and includes within its borders nearly one-fifth of the great Sacramento valley. It extends from the river of that name on the east to the summit of the Coast Range on the west, a distance of over 45 miles; while its length from north to south is just 60 miles. About three-fourths of the county's area is adapted to agriculture; the balance is mountainous, but valuable for its timber and stock ranges. The population numbers about 15,000, but when the great ranches—many of which contain from 5000 to 25,000 acres—are subdivided into moderate sized farms, and diversified farming takes the place of wheat growing, this county, with its generous soil and great natural resources, can easily support a population of from 150,000 to 200,000. A healthy movement has already set in in this direction. Besides several private sales, two organized land sales have recently taken place. The Northern Immigration societies are aiding the matter, and fresh stimulus has been added by the recent citrus fairs held at Sacramento and San Francisco, which have demonstrated conclusively the wonderful resources of the northern counties.

## Rivers and Creeks.

The Sacramento river, which forms most of the eastern boundary, is, in this county, a clear, deep stream, unaffected by mining debris, and has an average width of 350 feet. It is navigable to the north-east corner of the county by steam barges carrying about 300 tons of freight, and by boats of lighter draught as far north as Red Bluff. The land parallel with the river on both sides, for some miles in width, is a rich, dark alluvial, and will produce anything that can be grown in any part of the State. Oak, sycamore, ash, cottonwood, and willows grow in abundance along the river banks, forming a serpentine path of green through the center of the plains.

Stony creek, a valuable stream taking its rise in the Coast Range, and flowing through the northern end of the county, empties into the Sacramento 12 miles east of Orland. A few miles back from its mouth it goes dry during the latter part of the summer, but in winter, where it flows through the plains, is a rapid stream, from 800 to 1000 feet wide, and from 8 to 12 feet deep. Great quantities of fish come up the creek in winter time and are easily caught with a seine. There are some beautiful, fertile valleys along this stream in the mountains. There are a number of smaller creeks—all dry in summer—which empty into the plains, and do not reach the river. The valley is therefore constantly enriched with the deposits from the rich wash of the hills.

## Irrigation.

Irrigation has not been much resorted to in this county, because, as a rule, it has not been needed. Recently, however, the subject has begun to attract a great deal of attention. Two companies have been formed and two large canals have already been surveyed to tap the Sacramento and Stony creek, and will, if completed, supply water to a large body of land and greatly aid in diversifying the crops. The Cheney Slough Canal Company, besides a few individuals, have the only ditches at present in operation. This company irrigate about 5000 acres in the lower part of the county, the water being taken from the river in large iron pipes. Experiments are also being carried on with a monster steam pump. At a recent test in pumping, three minutes after beginning with 60 pounds of steam the flow averaged 25,000 gallons a minute. As water can be found any place on the plains at a depth of 10 to 20 feet, this will no doubt prove a success.

## Development of Wheat-growing.

Agriculture made but little progress in this county until 1870; previous to that time stock-raising was the chief industry and there were but a few scanty settlements west of the Sacramento river. From that date settlers began to arrive in greater numbers; the profits of wheat-growing began to be understood, farming operations were extended over the plains, the stock law followed in 1873, Colusa county rapidly advanced as a grain-growing locality, and in 1876 exported wheat to the value of \$4,500,000. The cereal crop continued steadily to gain in importance until 1884, when the yield of wheat reached nearly 10,000,000 bushels, and barley over 2,000,000 bushels, this great crop making Colusa the banner grain county of the State. For several years so great was the fertility of the virgin soil that large crops were raised by winter-sowing and volunteer. This method has since given place to summer-fallowing, which is found to insure the best crops, except along the river and bottom lands, where the soil, being a rich alluvial, is sown with grain every year.

## Stock Raising

Is still a prominent interest in this county, followed mostly in the mountainous and hilly portions, where the raising of sheep, cattle and hogs is profitably engaged in, and the breeding of Angora goats has been successfully pursued. The poultry business is beginning to receive a great deal of attention in this county, as it is attended with much profit and success.

## Fruit and Viticulture.

Fruit and viticulture, though as yet in its infancy in this county, is destined in the near future to become a leading industry. With wheat selling at from \$1.50 to \$2.25 per cbl., other branches of husbandry received little attention, but the decline in the price of this cereal during the last few years has led to much study and many experiments, and though matters have not been greatly changed so far, enough has been accomplished to show that the large tracts of land that have for years been used exclusively for grain raising are also wonderfully productive in growing many varieties of fruit, either with or without irrigation, though the former is generally accepted as the method calculated to insure the best results. Peaches, pears, apricots, plums, figs, grapes, berries, and nut fruits, all seem specially adapted to the soil and climate in the different sections of the county. Apples find their true home in the belt along the foot of the mountains, where they attain a fine flavor. Citrus fruits have been experimented with, and some fine specimens raised both on the plains and in the lower foothills. Some of the older settlers along the river and the different streams in the county have small family orchards that have yielded fruit which can scarcely be surpassed in quality; peaches weighing nearly one pound each, plums as large as eggs, and watermelons that would fill a large washtub, have been raised.

## Climate.

The winters in the valley are mild, ice seldom forming a quarter of an inch thick. The thermometer during July and August, the hottest months, averages about 100°, sometimes showing 116°; but as there is generally a breeze stirring, outdoor work seldom has to be stopped on account of the heat, and sunstrokes are almost unknown; while the nights are generally cool and pleasant. A day's drive through grand scenery will take the traveler to the cool, bracing climate of the mountains, where, after harvest, scores of ranchers with their families may be found enjoying a brief holiday amid the tall pines of these glorious camping grounds. Here deer, bear and lesser game are plentiful; while in the numerous ice-cold streams the mountain trout disport themselves. The average annual rainfall is about 20 inches.

## Timber Resources.

The eastern slope of the Coast Range is thickly covered with good qualities of pine timber, but little of which has been utilized, there being only one or two saw mills of small capacity in the county; but with the increase in population and value of the timber lands the day is not far distant when the lumber business of Colusa county will become an important industry. The middle range of the foothills is also thickly studded with oak timber, which furnishes fuel at reasonable rates to the inhabitants of the valley.

## Mines.

The discovery of gold on Sulphur creek in the southwestern part of the county, a number of years ago, and the experiments carried on since then, has lately developed into a mining excitement of considerable importance, by the additional discovery of large quantities of gold-bearing quartz along this creek, assaying from \$100 to \$150 per ton. A ten-stamp mill has already been put in operation, and a San Francisco and New York company, who have purchased several claims along the creek, have lately shipped to the mines \$20,000 worth of machinery for a new quartz mill now being erected. Quicksilver, iron, copper and chrome mines have been discovered, but have not been worked to any extent, though the deposits of all exist in considerable quantities.

## Mineral Springs.

There are many valuable mineral springs in this part of the county, that are growing in popularity each year, as their healing qualities become known. Among them are Wilbur's Hot Sulphur Springs, on Sulphur creek—which have obtained a favorable reputation as a cure for rheumatic and other complaints—Cook's and Fout's Springs, in the vicinity of Bear valley, and Hough's Springs, the latter near the Lake county line, and but a short distance from the famous Allen and Bartlett Springs, most of the travel to which passes through this place. The location is a beautiful wooded slope at an altitude of about 1500 feet. A large hotel and a number of neat cottages have been erected at this place, and the grounds laid off in a tasteful manner.

## The County Seat.

Colusa, the county seat, is situated in the midst of oak trees, on the west bank of the Sacramento, in the southeastern part of the county. It is surrounded by a rich farming country, and has a population of between 2000 and 3000. The county buildings, consisting of the courthouse, jail, hospital, and new hall of records, are substantial buildings, having an estimated aggregate value of \$75,000. The town contains a large flour mill, extensive lumber yards, a number of business houses, and a bank with a paid-up capital of \$500,000. The Colusa Sun is a weekly paper edited by W. S. Green, and is known as one of the leading Democratic papers of the State. All the trades and professions are well represented. A fine wagon bridge spans the river at this point, connecting the county seat with a small but rich portion of the county lying between the river and Butte creek, a stream entering the river a few miles below Colusa. Lines of daily stages run to

Marysville, Chico, Williams, and other points. A narrow gauge railroad, nearing completion, is now being built from Colusa to connect with the Northern railroad at a point near Williams. It is rumored that it will be extended westward from that town through the hills to Bartlett Springs, via Antelope and Bear valleys. Jacinto and St. Johns, at the mouth of Stony creek, are river towns in the northern part of the county. The former is situated upon the great Glenn estate which fronts for 20 miles along the river, and has become widely known as the largest wheat farm in the world. Expensive wagon bridges have been constructed across both streams near the latter town, and in its vicinity some fine oranges have been grown.

## The Northern Railroad.

Which was completed through the county in the fall of 1882, enters the southern end of the county near the foothills, and, gradually moving out in the valley, crosses the northern boundary about midway between the river and foothills. It becomes merged in the California & Oregon road at Tehama, and on the completion of this line will be the direct route, by rail, from San Francisco to Oregon and Washington Territory. A number of prosperous towns, all founded since 1877, have sprung up along the railroad. Beginning with College City and Arbuckle on the south, the others, following in the order named, are Berlin, Williams, Maxwell, Willows, Germantown and Orland.

## A Model Town.

College City is a flourishing town of 500 inhabitants, three miles to the east of Arbuckle. It is the seat of Pierce Christian College, an institution that has greatly advanced the cause of education in this county. It is a pretty little place, and is the model town of the county, there being no saloon allowed or liquor sold within two miles of the college. Stages connect with all trains at Arbuckle, which is a somewhat smaller town, and divides with College City the trade of this rich section of country.

## Williams.

Williams is an important town, 12 miles west of the county seat. It contains a large brick public school building, several stores, a well-equipped flour mill, and foundry, and supports a weekly paper, the Review, which is ably edited and devoted to local interests. Several stage lines converge here, this being the chief distributing point for tourists for Allen and Bartlett Springs and the different health resorts in this county. During the summer months the big six-horse Concord stages, rolling in and out of town, give the place a very bustling, business-like appearance.

## Maxwell.

Maxwell is ten miles from Williams, and something of a rival of that place; and, like the latter town, has been greatly retarded in its growth by several destructive fires. It boasts a weekly paper, and is a shipping point for a large amount of grain. It is but a few miles from the foothills, and is surrounded by a country well adapted to fruit growing.

## An Ambitious Young City.

Willows is a newly-incorporated city of about 1200 inhabitants, and one of the most enterprising towns of Northern California. It was for some years the terminus of the railroad, and enjoyed, almost from its foundation, an excellent degree of prosperity. The town contains several large warehouses, fine railroad buildings, a number of handsome brick business blocks, a bank, and one of the largest and best equipped hotels in the county. Two weekly papers are published, the Journal and Democrat. There is a public school of four departments, several fine churches and some costly residences. The business portion of the town has several times been destroyed by fire; but in every instance the ruins had not fairly quit smoking before new buildings were in course of erection.

Germantown, the center of a wealthy colony of Germans, is the next place on the railroad. Eppinger & Co., of San Francisco and Dixon, have a branch house here and conduct one of the largest general merchandise stores in the county. The town contains a brewery and several mechanics' shops.

## In and Around Orland.

Last comes Orland, situated half a mile south of Stony creek and close to the low undulating hills which terminate six miles west of town in the black buttes, a number of lofty promontories, from whose rocky summits a splendid view is obtained of the whole valley. It is a lively town of 900 inhabitants, and is the center of a populous farming country. The town is generously laid out; the lots are large, and the streets wide and regular; and, as the northern end of the county possesses some of the best natural roads in the State, the location is all that could be desired. A long wagon bridge, constructed at a cost of \$13,000, spans Stony creek, directly north of town. The railroad also crosses the creek near the same point. A tri-weekly stage, running from Chico, Butte county, to Newville, near the foot of the mountains, stops at Orland; distance to each place, about 20 miles. All branches of trade are well represented. There are several conspicuous buildings, among them the large warehouse of Logan, De Pue & Co., 50x750 feet, laid throughout with a concrete floor; the new public school building, costing \$6000; the Roman Catholic

church, and the Orland college, a two-story brick building, located in the center of the college addition, a plot of 40 acres adjoining the town on the east side. This latter institution has only been a short time in existence, but is steadily growing in favor. The Times is a weekly newspaper, well patronized. Like most of the other towns on the railroad, Orland has several times suffered severely from fire. A large flour mill, built at a cost of \$25,000, was burned a few years ago, together with a large amount of grain. The insurance was very light, and other difficulties arising it has never been rebuilt. It was paying handsomely at the time. There are no other mills within many miles, and a milling business equaled by few in the State certainly awaits any man who should erect a good flour mill at Orland.

This is the only railroad town in the county possessing a natural park, a large oak grove on Stony creek being used for that purpose, and is the popular resort for picnics and national celebrations. Good fruit and vine lands, within four miles of town, are offered for sale at \$15 and \$20 per acre. A preliminary survey has just been completed, looking to the construction of a narrow gauge railroad from Orland via African Valley and Newville, to the foot of the mountains, there to connect with the Round Valley wagon road from Mendocino county. There are several other small towns in different parts of the county, of more or less importance as trade centers and shipping points. The price of land ranges from \$10 to \$50 per acre, according to quality and location. A great deal of land is rented for grain-growing, the renters paying from one-fourth to one-third of the crop in the sack. There are no Government lands subject to location, except a few mountain ranges. The assessed value of property of all kinds, according to the assessment roll of 1885, is \$21,560,786, an increase of over \$9,000,000 since 1878. The tax rate is \$1.35 on the \$100. The county is out of debt and stands eighth on the list in property rank.

## Orland.

## Sacramento City and County.

[Compiled for the PACIFIC RURAL PRESS.]

Sacramento, California's capital—the Queen City of the Plains—is situated on the west bank of the Sacramento river, the principal stream of the State, and is the most centrally located city in California. The site is level, and broad thoroughfares, 80 feet in width, numbered one way and named alphabetically the other, traverse the city. Not only is Sacramento one of the most beautiful, but statistics prove it to be one of the most healthful, cities in the civilized world. The climate is equable and agreeable, averaging about 60° the year round. Tropical trees and plants flourish, and the orange, the pomegranate and the almond may be seen growing in gardens which are in perennial green. A very large proportion of the population own their own homes, and seem to vie with each other in perfecting the beauty of their surroundings. No house is too humble to have its garden, containing rare plants of foreign or native growth, and in the springtime cottages may be seen completely embowered in roses and trailing vines. Most of the principal thoroughfares have rows of elm, poplar, walnut or other trees, planted on either side, which, when in full foliage—especially when viewed from a distance—give the city almost the appearance of a dense forest.

The population of Sacramento has steadily increased since its earliest settlement. According to the census, there were in 1850, 6820 inhabitants; in 1860, 13,788; in 1870, 16,283; in 1880, 21,420, and its present population is estimated at 30,000.

The State Capitol building—the architecture of which is fashioned after that of the National Capitol at Washington—which is the pride of all Californians and excites the admiration of all visitors, is located in a large and beautiful park, with terraced grounds and broad graveled walks. The park is planted with native and tropical trees, plants and flowers, and is one of the loveliest spots upon earth. In these magnificent grounds are also situated the State Printing Office—one of the most extensive and complete institutions of the kind in the United States, and the immense Exposition building of the State Agricultural Society, constructed at a cost of nearly \$100,000. Nearly all the religious denominations have places of worship, and some of them have several churches. All of these have large congregations, a reliable indication of a lawful and steady state of society. The public schools are among the best to be found anywhere. There are 15 or 20 public school buildings in the city, many of them large and costly structures. The city owns its water works, and is abundantly supplied with the cheapest and most wholesome water in the State.

In Sacramento are located the race-track and fair grounds of the State Agricultural Society. The annual expositions of this society are yearly growing in importance and magnitude, and always attract thousands of visitors. Sacramento is a great railroad center. The Central Pacific has machine shops, roundhouses, rolling mills, etc. Two routes—the California Pacific and Western Pacific—connect Sacramento to San Francisco and the ocean. The California & Oregon road leads up through the great Sacramento valley, making its products tributary to this market. A branch from the California Pa-

cific runs through the rich counties of Yolo and Tehama, connecting with the California & Oregon. Steamboats also make regular trips between Sacramento and San Francisco, via the Sacramento river and the bay.

#### Sacramento County.

Sacramento county is bounded on the north by Placer and Sutter, on the south by San Joaquin and Contra Costa, east by El Dorado and Amador, and west by Solano and Yolo. The Sacramento river courses the entire length of the county on the west side, and the American traverses the northern portion from east to west, debouching into the Sacramento river at this point. The Cosumnes river crosses the southern portion of the county, forming a junction with the Mokelumne. For some years after the discovery of gold on one of the tributaries of the American river the eastern or foothill portion of Sacramento was a great placer mining section, and bustling mining camps and villages sprang suddenly into existence, and almost as suddenly disappeared as the diggings were exhausted. Even now, however, there is considerable mining going on.

Sacramento county has an area of 1026 square miles, with a population of from 43,000 to 45,000. The census of 1880 placed it at 37,000, but it has since then increased materially. Farming, fruit-growing, hop culture, wine-making, fruit-drying, dairying, etc., are the chief industries outside the city, aside from what mining is carried on in the foothills and the granite output of the Folsom quarries.

#### Sacramento County's Orchard Fruits.

Sacramento county doubtless leads all others in the State in the production of orchard fruits, those of the citrus family alone excepted. Her

as is evidenced by the amount and quality of the crops grown on it, even with scant cultivation. This soil is, over a great portion of the district, but 15 inches deep and never more than five feet. Immediately below this is the bedrock, on the top of which is a thin crust, similar, in some respects, to the glazing on earthenware, and so hard that it will often break the tempered point of a pick. Under this surface crust the hardness diminishes and ceases at from two to four inches, and then appears an easy-picking marl, which readily disintegrates on exposure to the air. This marl is claimed by some of the farmers to be a valuable fertilizer and has been used as such by a few, but whether the good effects said to follow its use are to be attributed to the actual presence of plant food, or only to the assistance lent in the mechanical manipulation of the soil, is yet to be learned.

All over this district an inexhaustible supply of excellent water is to be found in the first sand immediately below the marl, and therefore at a depth of from five to twelve feet. A day's labor will give a man a well with water enough in it to feed a large windmill. The country about Florin is dotted all over with windmills for raising water to be used for irrigating vines, trees and small fruits.

With such a shallow soil, very little rain, of course, suffices. Eight to ten inches is plenty for a good crop, and better, as regards results, than 16 or 20 inches. In this fact is one reason why the crop in Sacramento county in the memory of civilized man has never been a failure, although other localities will often produce a larger yield.

#### Vegetables.

The marvelous richness of the bottom lands along the Sacramento river was early exem-

the average is about ten cents. In 1884 seed sold as high as 20 cents a pound. In some seasons seed has been imported for local use, but usually there is a considerable surplus to supply outside wants. Alfalfa hay in this market varies in price from \$9 to \$14 a ton baled, the average being about \$11. These are wholesale prices to the producer. The hay is mostly consumed here, though some is shipped to the mountains or more distant points. Two tons of hay to each cutting is an ordinary yield. Irrigation is not practiced on the bottom lands in Northern California, though experiments at Colusa this season show that the crops can be increased by occasional flooding.

It has been found that hogs will thrive throughout the year on alfalfa alone, and that they need no other food until it is desired to harden their flesh in preparation for slaughter. An acre in alfalfa will maintain 20 hogs. In illustration of the productiveness of alfalfa, the experience of a Bear river farmer may be cited. He cut seven and a half tons to the acre in one year, taking off three crops, and in the same year sold the pasturage of the land for four months at \$2 a head for stock.

Owing to the fine growth of alfalfa, all the best and largest dairies of the county are located on the river bottoms. We give below some of the largest dairymen, whose carefully selected stock and system, and general use of recognized improved methods, entitle them to the name. The figures indicating the size of the herds are approximate only, but will give a fair indication of the truth. William Johnston, of Richland, milks 100 half-breed Jerseys. J. B. Green, of Clarksburg, has 150 head graded Shorthorns. Dwight Hollister, of Courtland, has doubtless the best Shorthorn dairy herd in the county. He has about 100 head high grade—all three-

was held yesterday afternoon in the Board of Trade rooms in this city, in accordance with published notice, and the matter considered. As a result of the deliberations, it was decided to take advantage of the very prosperous condition of the immigration work, and to extend the plans and increase the funds and facilities, sufficient to reap the benefits of the successful work inaugurated less than two years ago. To this end a new organization was formed, to be known as the Central and Northern California Immigration Association, having an active Directorate of 15 members from Sacramento and representation in the other counties covered by the section of the State named.

This will afford a very active and efficient Board of Directors at the central point where the headquarters of the organization is located, and in every way secure increased facilities and greater efficiency in the work. The directors elected from Sacramento city and county are T. B. Hall, F. R. Dray, N. D. Rideout, E. K. Alsip, Joseph Steffens, R. D. Stephens, Frank Miller, A. S. Hopkins, D. O. Harvey, C. R. Parsons, L. L. Lewis, J. A. Parker, C. H. Hubbard, E. J. Holt and Wm. Ingram, Jr. The board subsequently organized by electing A. S. Hopkins, President; T. B. Hall, Vice-President; Wm. Ingram, Jr., Secretary; and Frank Miller, Treasurer.

Subsequently the former organization, known as the Sacramento County Immigration Association, held a meeting and disbanded, turning over its assets and work to the new immigration association. After this action had been taken a meeting of the Board of Directors of the new Central and Northern California Immigration Association was held, and most vigorous plans were considered and adopted for carrying forward the work so auspiciously in progress. The new association is in a most healthful financial condition, and its directors enthusiastic.—*Record-Union.*

#### The First Trainload of Northern Fruits.

EDITORS PRESS:—Twenty years ago, or even less than that, this part of the country was considered worthless except for mining purposes. No one ever regarded it as of any value for agricultural or horticultural pursuits; but recent developments prove it to be a grand success as a horticultural district. No section of the State can excel, and I think few, if any, can equal it. We can raise to perfection a full line of fruits, from the apple to the orange, including the olive, which does exceptionally well. Towns and villages are growing rapidly; depot and track facilities have to be increased at every railroad station; land is advancing rapidly; men of means are investing in land, clearing and planting it to orchards. These men are not amateurs or adventurers, but practical business men, such as P. W. Butler, Parker Whitney, and the firm of W. R. Strong & Co., of Sacramento. The last-named gentlemen have been fruit-shippers on a large scale for many years, and, of course, know what they are doing; and, by the way, these gentlemen with the aid of E. T. Earl, another fruit-shipper of Sacramento, have this day forwarded to the East

#### The First Special Train of Green Fruits

Under the new arrangements with the railroad company. This is the first full trainload of fruit that ever crossed the continent (except trains of oranges from the Southern counties) and it reflects great credit on the shippers. Very few men could have got up a train of 15 cars of fruit thus early in the season, and when there is so little shipping fruit ripe. A month hence 40 cars could be got up much easier than 15 now. These men have a right to be proud of their success, especially since they had been repeatedly told that with the special arrangements with the railroad company, and with Porter Bros. at the East to sell their fruits, all such men as Strong & Co. would be completely shut out and must take a back seat. It now seems that the back-seat fellows have come to the front and stand ahead. The train which left Sacramento at 4.15 P. M. to-day, June 24th, passed Penryn at 5.45 P. M. running at a high rate of speed. It is to be pushed through on the fastest time possible, making no stop except for wood and water. It will no doubt attract great attention all along the line, as it was most beautifully decorated with flags.

Penryn, June 24th.

FRUIT-GROWER.

#### Full Description of the Train.

The Sacramento papers are naturally very much delighted with the shipment of the first full train by Sacramento firms. The *Record-Union*, after a general discussion of the features of the event, gives the following interesting particulars:

Two of the most prominent fruit-shippers in the State—W. R. Strong & Co. and E. T. Earl, members of the California Fruit-Growers' Association—have shown themselves equal to the emergency, have demonstrated the practicability of the railroad company's proposition (to carry trainloads at \$300 per car), and have inaugurated what must become a new and an important era in the great fruit industry of our State.

Yesterday those firms, after a quiet but thorough preparation of several days, loaded and started the first special fruit train that has ever left California. A description of this pioneer train, that will blaze the way for countless numbers that will speedily follow, will no doubt

SUTTER'S MILL, WHERE GOLD WAS FIRST DISCOVERED IN CALIFORNIA.

orchards line the eastern shores of the Sacramento river from end to end of the county. Among them are the largest in the State, aggregating thousands of acres. From Freeport down to the county line pretty much all the best bottom land is planted with fruit trees. Several river steamers are kept employed during the season to carry to market the products of this magnificent belt of orchards. Among them are those of the Runyons, embracing hundreds of acres. Here, too, is the Kercheval orchard, containing 40 or 50 acres in pears alone. The largest peach orchards in the State are also to be found here. On the American river the county can also show numerous fine orchards, including the Hopping pear orchard, which this year gave a return of over \$11,000 from 20 acres. In this belt is Routier's fine orchard and vineyard. On the red lands, or plains, in the region about Florin, there are hundreds of acres devoted to orchards, vines and berries. Near the capital, on these high lands, are three nurseries of fruit trees, covering a large area. Here, also, is a new orchard of some 150 acres, recently planted by C. W. Reed, one of the most experienced fruit-growers in the State. Going eastward, the great Natoma vineyard is encountered before the foothills are reached. This is one of the largest vineyards in the world, and lines the highway for miles on either side. It contains about 3000 acres, including several hundred acres in orchard. In the neighborhood of Folsom, in the foothills, are numerous vineyards.

The tract of land known as the "Redlands," and also as the "Bedrock Lands," extends, perhaps, from Brighton to McConnell's, and from the lower Stockton road to the Cosumnes river. There are over 100,000 acres of "bedrock" land, and it is generally held in small pieces of from 40 to 160 acres. There are not many who own in one piece more than the latter number, and the very highest in one piece, so far as known, is 970 acres. Included in this district are the towns of Florin, Galt, Elk Grove, Franklin and Sheldon.

The soil is a red clayey loam, very fertile,

plified in the great yield of sweet potatoes and other root crops. The first sweet potatoes cultivated here were of the Sandwich Island variety, sometimes called "yams" or "reds." The yield in early days was astonishing, and still remains large, even where manuring has not been resorted to. Five hundred sacks to the acre is about the largest yield reported. This would be over 25 tons to the acre, or from 800 to 900 bushels. E. F. Aiken, one of the early growers, raised on his ranch near Courtland a Sandwich Island potato weighing 15 pounds. The average annual product now is probably about 200 sacks to the acre, which would be regarded anywhere as a large yield. The sweet potato requires a light-colored, deep and sandy soil, and there are few localities which produce it in perfection, as do certain of our Sacramento river lands. Its cultivation, of late years, has fallen mainly into the hands of Portuguese and Chinese. Formerly it was a very profitable product, but now that the price has fallen to 50 or 75 cents per 100 pounds, the returns are not as remunerative. The variety principally grown now is the Carolina, which is preferred to the "reds." The cultivation is by slips, after the manner common in the Southern States. Shipments are made to various points along the line of the overland roads, as far as Omaha.

#### Stock and Dairy.

In Sacramento county there are several thousand acres devoted to alfalfa, and its cultivation is common throughout the Sacramento valley on suitable soils. The yield in this section is enormous. Three or four crops a year are obtained, and the annual yield averages from six to eight tons an acre. Occasionally ten tons to the acre is obtainable. Sometimes two hay crops are taken and also a seed crop, and sometimes stock is turned upon the land at intervals between the hay crops, or the land may be used entirely for pasturage. An average seed crop here is from 300 to 400 pounds to the acre. The prices of both seed and hay fluctuate a good deal from year to year. The price of seed varies from 7½ to 15 cents a pound, and

quarters and upward. J. M. Stephenson, of Franklin, has 100 graded Jerseys and Shorthorns. C. W. Clark has about the same number of graded Durhams. All of these dairies feed alfalfa, and all find their markets in Sacramento and San Francisco. They make butter only and feed their milk to the hogs. The average yield of Senator Johnston's herd is 200 pounds per year to each cow, and this doubtless would give a fair average for the other dairies mentioned. Besides the herds mentioned, there are a number of others of inferior grade. The largest of these (and the largest, indeed, in the county) is owned by N. M. Fay, who has a large cattle ranch on the Sacramento river about 13 miles below this city. He makes both butter and cheese. In addition to these there are a number of milk dairies milking from 15 to 50 cows each.

#### Immigration Work at Sacramento.

An important step in the immigration work having headquarters in Sacramento took place June 23d at the meeting held in the Board of Trade rooms. For some time the Board of Directors of the Northern California Immigration Association, with its members so scattered over the several counties of this section of the State, and many of them not active, has fallen so far short of answering the rapidly-increasing demands for furnishing the necessary information, by publication and otherwise, to applicants, and for general distribution at the East, that the work has very largely devolved upon the Sacramento County Immigration Association, both for funds and active work. This the county organization has supported so far as necessary, until the success of the work has demanded more expanded outlay of means and broader plans to keep pace with the incoming tide of immigrants and information anxiously sought for.

To meet the exigencies of the situation, a meeting of prominent business men and citizens

prove of interest to many of our readers who are watching the development of the business, and also to those who recognize the indisputable fact that Sacramento is beyond all questions of doubt the grand central point from which these shipments must be made.

The train consisted of 15 cars, containing 300,000 pounds of freight, and, with the exception of 30,000 pounds of potatoes, was entirely green fruit. When it is considered that each specimen of the fruit, each individual peach, apple, pear, apricot and plum has to be wrapped in paper, and all must be accomplished within about 36 hours prior to the departure of the train, the magnitude of the undertaking will be appreciated. In the work of picking, making boxes, packing, hauling, loading and handling this enormous quantity of fruit, it is estimated that over 500 men found employment on this train for two days, an equivalent to the labor of one individual for over three years. The fruit consisted mainly of the following varieties: Apples, Bartlett and other pears, peaches, plums and apricots.

Messrs. Strong & Co. and Earl do not handle fruit on commission, but make direct purchases, and have already contracted for large quantities in all the leading fruit districts. Among those whose fruit make up the shipment under consideration may be mentioned the following:

In the Sacramento river district, Messrs. Davis, Stewart, Barry, Kennedy, Talmage, Crofton, Reynolds, Crew, Thisby, Hensley, Hanson, Bryan, Johnson, Johnston, Williams, Ralston, P. Green, J. Green and G. Green, Dean, Osborn, Calloway, Doty, Simms, Bates, Wedley, O. R. Runyon, W. Runyon, Kercheval, Hollister.

In the American river district, Messrs. Stephens, Routier, Olsen, Grondone, Hutchinson, Reed, Flint and others.

Winters and Vacaville districts, Messrs. Seaman, Thisell, Tucker, Porter, Reed, Brink, Pleasants, Martel, Pierson, Cantelow, Steiger, Collins, Garlish, Korn and Lyon. The picking and packing were done under the able supervision of Messrs. C. B. Strong, Coulter, Osborn, Curtis, Steiger and Glatz, representing Strong & Co., and Messrs. Rhoads, Mixer and Collins for Mr. Earl.

Some of the most particular work in connection with the getting up of this train was the loading of the cars, which was under the management of J. H. Platt and Mr. Harding, with a small army of assistants.

The shippers were aided as much as possible by the railroad company's employees, who spared no pains in placing the cars promptly and otherwise assisting in their speedy loading. The shippers expressed themselves as being obligated in this respect to Messrs. Urquhart, assistant superintendent; C. A. Stevens, freight agent, and Mr. Kelsey, his assistant; also to Martin Holland, chief yard-master, and Robbins, his assistant.

The train, when loaded and standing on the track west of the passenger depot, presented a very handsome appearance, with a strong engine at the front and a neat caboose attached to the rear, awaiting the signal to pull out of the yard and start upon its long and rapid journey over the Sierras, the great plains and the Rocky mountains to the Missouri river. The engine, caboose and each of the 15 cars was

#### Gaily and Tastefully Decorated

With flags, streamers of bunting and the tricolor show-cards of the two shipping firms. The engine and caboose thus gaily dressed presented quite a holiday appearance, and will prove an attractive sight to the residents of the many cities and towns of the States and Territories through which the train passes en route to its destination. In addition to the decorations mentioned, a large white placard was nailed on the center of each car, printed in red and blue letters, as follows:

SPECIAL  
FRUIT TRAIN  
ON  
PASSENGER TIME  
TO  
MISSOURI RIVER.

A large number of people assembled at the depot to witness the departure of the train, and just prior to its leaving photographs were taken of it. The train was drawn by engine No. 18, which is one the largest and most powerful running between Sacramento and Truckee. It was run by M. L. Rudeck, engineer, and A. K. Prather, fireman. The train was in charge of D. C. Halsey, conductor, with V. Curran, J. Congrove and E. Fay, brakemen.

At 4:15 promptly the train started on its Eastern trip, followed by the best wishes of Messrs. Strong & Co. and Earl's many friends.

It was originally intended to fill 17 cars, but this being the first train, the railroad company suggested that 15 would insure its going through on passenger time, and more might not. Two carloads of fruit, therefore, which was at the depot ready for shipment, was diverted. While this train will not run with the rapidity of the express, it makes no stoppages except for wood and water, and thus, although running slower, it makes up by constantly forging ahead, and like Billy Birch's bug "it will get there" on express time "just the same."

The firms making this initial special train shipment intend from this date, together with other members of the California Fruit-growers' Association, to forward similar special trains of cars, or more, twice a week or oftener.

Mount Shasta.

Behold the dread Mount Shasta where it stands Imperial 'mid the lesser lights, and, like Some mighty, unimpassioned mind, companionless And cold. The storms of heaven may beat in wrath Against it, but it stands in unpolluted Grandeur still; and from the rolling mists upheaves Its tower of pride e'en purer than before. The wintry showers and white-winged tempests leave Their frozen tributaries on its brow, and it Doth make of them an everlasting crown. Thus day by day and age by age, Defy each stroke of time, still rising higher Into heaven!

Aspiring to the eagle's cloudless height. No human foot has stained its snowy side; No human breath hath dimmed the icy mirror which It holds unto the moon and stars and sov'reign sun. We may not grow familiar with the secrets Of its hoary top, whereon the Genius Of that mountain builds its glorious throne! Far lifted in the boundless blue, he doth Encircle, with his gaze supreme, the broad Dominions of the West, which lie beneath His feet, in pictures of sublime repose No artist ever drew. He sees the tall, Gigantic hills arise in silence And peace, and in the long review of distance Range themselves in order grand. He sees the sunlight Play upon the golden streams which through the valleys Glide. He hears the music of the great and solemn sea, And overlooks the huge old western wall, To view the birth-place of undying melody! Itself all light, save when some loftiest cloud Doth for awhile embrace its cold, forbidding Form, that monarch mountain casts its mighty Shadow down upon the crownless peaks below,

That, like inferior minds to some great Spirit, stand in strong contrasted littleness! All through the long and summery months of our Most tranquil year, it points its icy shaft On high, to catch the dazzling beams that fall In showers of splendor round the crystal cone, And roll in floods of far magnificence Away from that lone, vast Reflector in The dome of heaven. Still watchful of the fertile Vale and undulating plains below, the grass Grows greener in its shade, and sweeter bloom The flowers. Strong purifier! From its snowy Side the breezes cool are wafted to the "peaceful Homes of men," who shelter at its feet, and love To gaze upon its honored form; aye, standing There the guarantee of health and happiness, Well might it win communities so blest To loftier feelings and to nobler thoughts— The great material symbol of eternal Things! And well I ween, in after years, how In the middle of his furrowed track the plowman In some sultry hour will pause, and wiping From his brow the dusty sweat, with reverence Gaze upon that hoary peak. The herdsman Oft will rein his charger in the plain, and drink Into his inmost soul the calm sublimity; And little children, playing on the green, shall Cease their sport, and turning to that mountain Old, shall of their mother ask: "Who made it?" And she shall answer: "Child, it was thy God!" And well this golden State shall thrive, if like Its own Mount Shasta, Sovereign Law shall lift Itself in purer atmosphere—so high That human feeling, human passion at its base Shall lie subdued to the law's mandate; As high in man's esteem and just as pure As the immaculate snow on that mountain's brow.

—John Rollin Ridge.

#### Shasta County.

[Compiled for the RURAL PRESS.]

This county is situated in the northern part of the State, being separated from Oregon by the counties of Siskiyou and Modoc. It is bounded on the east by Lassen, on the south by Tehama and on the west by Trinity. The extent of the county is 2,500,000 acres. The Sacramento river traverses it from north to south, about two-thirds of its territory being to the east and one-third to the west of that stream.

The Shasta of the past was known only as a stock and mining country, and thought to be possessed of a cold and disagreeable climate, a rough and mountainous surface, a worthless and unproductive soil, inaccessible to the homeseeker, and full of malaria to the hardy pioneer; but the developments of the past few years have quite dissipated these notions and brought in their stead a conviction that no other section of the State offers better inducements for general farming.

Placer mining was the principal industry of the early pioneers, and though the placer mines are not what they were in early days, still there is much gold dust yet extracted from that class of diggings. But quartz mining in our county is yet in its infancy. Many rich mines have been discovered and partially developed during the past year. Iron ore of the best quality is known to exist in vast quantities on the McLeod and Pit rivers, only a few miles north of Redding. Limestone is found at various points, and in former days the burning of lime was a lucrative calling. Extensive marble quarries also exist and have been heretofore utilized.

The middle-northern part of the county is very rough. The lumberman here has a vast area of forest from which to draw his supplies, the streams furnishing the choicest of mill sites. To the east and northeast of Redding, within a distance of from 30 to 50 miles, is a large extent of pine timber, among it some of the finest sugar pine. Also, on the west side of the county and on the Pit and Sacramento rivers is much good timber. There are a number of saw mills, from the simplest to the best, but they have never yet been able to supply the demand. Thousands of shakes, shingles and fence-posts are made in this belt of timber.

The mountain saw mills are 30 to 40 miles from Redding, and the price of common lumber at the mills is from \$8 to \$10 per M. At the mill in the city it is from \$16 to \$20 per M. The town of Millville is very prettily located near the junction of two or three mountain

streams, contains 350 or 400 inhabitants and is about 12 miles from railroad. There is a good deal of very nice level land in its immediate vicinity suitable for fruit and general farming. The land near the railroad is all taken up by actual settlers—that is, on the east side of the river. On the west side and near the town there is a quantity of vacant Government land which has been returned by the surveyor as mineral, and which must be proven better adapted to agriculture than mining before homesteads can be filed. This has been done in a number of instances and probably can be in most cases, as the district is undoubtedly exhausted.

The Surveyor-General's report for 1881 showed only 143,339 acres inclosed, and less than 50,000 acres under cultivation. There has been a considerable increase of population and acquiring of property since then, but immigrants can still find thousands of acres of Government and railroad lands whereon to make comfortable homes. Certain portions of the county are well adapted to stock-raising, grain and grasses, while other portions are equally well suited for fruit-growing.

Redding, the principal town, is located on a plateau 70 feet above and near the west bank of the Sacramento river, and is said by travelers to occupy one of the finest sites in the State. It is the distributing point for Trinity and the western part of Siskiyou counties, portions of Modoc, Shasta and a portion of southeastern Oregon; has a population of about 1800. It derives a large trade from the country on the eastern side of the Sacramento, which is crossed by a free bridge about a mile east of town. In this vicinity wheat, barley and oats grow luxuriantly, while the apple, peach, plum, cherry, fig, grape, berries and early vegetables are raised with success and profit, and experiments in the last few years with the orange, Japanese persimmon and soft-shell almond prove that they are nearly if not as sure a crop as the peach.

Shasta, seven miles northwest of Redding, is the county seat, and the United States Land Office of the Shasta district is here located. It is the oldest town in Northern California. Some of the oldest orange trees in the county are planted here and produce regularly fine fruit. Among the more notable towns and settlements are French Gulch, Anderson, Cottonwood, Igo and Janesville.

In answer to Eastern questioners, D. N. Houn has recently given a description, which we slightly abridge:

From Redding southward the level valley will average four miles in width. The soil is alluvial or sedimentary, containing a good deal of disintegrated rock or gravel and is excellent

for small grains, alfalfa, prunes, plums, pears, figs and small fruits. Bordering the valley on the east and extending back 16 to 20 miles is a series of plateaus or benchlands, varying in elevation from 700 to 1000 feet above the sea level. These are red in color, soils sandy clay loam, granite and clay, and are covered mostly by a growth of white and black oak (scrub) and brush, requiring to be cleared before cultivation. There are a good many boulders scattered over them, and considerable gravel. These lands are peculiarly adapted to fruit and vines. We do not count them good wheat or grain lands, although they will produce fair crops when properly cultivated. East of the plateaus come the foothills and mountains proper. Among these are many benches and comparatively level tracts on which to make beautiful homes. They are pretty heavily timbered with oak, pine and cedar. There are plenty of springs and streams of pure, cold water. The soil is deep red, rich, and when cleared very productive of small grains, grasses (timothy and clover) and hardy fruits, berries and vegetables of all kinds. In the northeastern portion of the county are two fine valleys, the Fall and Pit river. These are 3500 feet above the sea level, and are nearly level. Soil, loam, rich and very productive. Small grains, grasses and vegetables grow to perfection, and yield heavily in this section. It is an excellent stock and dairy location; bunch grass is natural and heavy, and the water excellent.

On the west bank of the Sacramento, and extending back 12 to 18 miles, the land is rolling and billy, rocky in some places and gravelly in others. The growth of timber and brush is almost the same as on the east side. Where it is level enough for cultivation, excellent fruit and grapes may be grown, also small crops of grain and vegetables. In the southwestern portion of the county are the "Bald Hills"—high rolling hills, devoid of timber, soil adobe—a very good country for small grain and stock. The extreme western part is mountainous, but affords good summer range for stock. The climate is peculiarly favorable to sheep.

#### Grain and Grass Culture.

Almost the entire area sown to grain in this county, says Mr. Houn, is for hay, as that pays best, and not for threshing or milling purposes. Good hay brings very readily on the field, when baled, from \$15 to \$20 per ton. Generally wheat and oats are sown together for this crop, and the yield will vary from one to two and a half tons per acre. When threshed the yield of wheat, oats and barley will average 20, 30 and 35 bushels per acre, respectively. Corn is grown to some extent, and is fully up in quality to that raised east of the mountains.

Our mountain country is excellent for corn. The natural grasses and wild oats have been almost eaten out by many years of overstocking with cattle, sheep and hogs; so that no calculation must be made on natural grasses for feed or hay. Alfalfa, so far as tried, succeeds well without irrigation, and two crops can be relied on. When an elevation of 1500 or more feet above sea level has been reached, timothy and clover grow very luxuriantly and yield enormous crops, frequently cutting as high as four tons to the acre. Our grass and grain-growing area is very limited, compared with the entire area of the county, and all kinds of feed must necessarily maintain a good price.

The lowest thermometer in the valley and surrounding country, up to an elevation of 1500 feet, is 24 degrees above zero, and that is of rare occurrence, lasting but a few hours. Oranges and lemons have not been planted here so extensively as in Butte county, or in Tehama perhaps; but a good many which have been growing in different parts of the county for a dozen years have done and are doing well; so that it is safe to say they can be grown here successfully. More attention has been given to orange culture this season, and more trees planted, than in all past years put together. There are some olive trees growing and doing well, but none yet in bearing.

Good land can be purchased within five or ten miles of town and railroad, at prices ranging from \$6 to \$30 per acre, according to location, improvements, etc. Mixed farming, with some fruit, would probably be best for a person of moderate means, wishing to make a home; for during the years that necessarily intervene before he can derive any revenue from fruit he will be producing something that is a source of income.

The rainfall averages 40 inches, and drouth is never known.

The Redding Free Press, a few weeks since, remarked that during the past three years almost an entire revolution in the agricultural and horticultural development of the county has been effected. Lands counted worthless prior to that time have been taken up by the enterprising and energetic settler, cleared of the timber and brush and planted to fruit trees, vines and vegetables and sown to grain, and have produced beyond the expectation of the most sanguine. No part of the State has excelled this in the growth of trees and vines, or in the size or flavor of the fruit produced. Instead of the brush fence and dilapidated dwellings of the old-timer, who depended upon stock for his livelihood, the now rabbit-tight fence and neat dwellings of the new-comer, fresh from the snowbound East, give the county an appearance of thrift and beauty quite pleasing to the eye. Nor is this improvement confined to any particular locality, but extends from the river to the summit of the mountains on either hand.

## Solano County.

[Compiled for the RURAL PRESS.]

Solano county lies north of Suisun bay and Carquinez straits, with Napa, Yolo and Sacramento counties inclosing it to the west, north and east respectively. Of its 670,000 acres about 100,000 are marsh, much of which has been reclaimed and rendered productive. Of the remainder, two-thirds are valley land and one-third foothill. The valley lands extend from the Sacramento to the foot of the Coast Range, have rich, alluvial soils, and produce abundant crops of grain, vegetables and fruits. The foothills are in the western part of the county, and have light loamy soils. Springs are abundant, and water is found at from 10 to 40 feet below the surface.

Solano has free water communication with all points along the bay and the rivers which empty into it, besides enjoying great rail facilities. The California Pacific Railroad runs through nearly the whole width of the county east and west. The Vacaville Railroad runs from Elmira to Madison, in Yolo county. There is also a branch from Vallejo Junction to Vallejo and from Suisun to Vallejo.

Stock raising has been one of the more important industries, as a large portion of the

what may be found elsewhere in this State. Shut in from the fogs of the Napa valley by the high Coast Range and from the sudden changes of temperature characteristic of the Sacramento valley by the foothills which bound the valley on the east, it enjoys an almost perennial spring. The further north in Vaca valley one goes the warmer he finds it, and the dangers from destructive frosts diminish in like ratio. The climate is as much semi-tropical as that of Los Angeles. Here are raised some of the finest oranges, lemons, nectarines, pomegranates, olives and figs, beside the usual fruits of the temperate zone; and what is remarkable, indeed, and rather a puzzle to those who do not comprehend the physical features, and hence the climatic conditions of this section, the Messrs. Wolfskill, whose ranch of semi-tropical fruits is situated on Putah creek, about 14 miles north of Vacaville, are enabled, through the wonderful mildness of the winter and spring weather, to have their oranges for sale in the San Francisco markets a week—often two weeks—in advance of the orange-raisers of Los Angeles, and those who are judges say the quality of these Vaca valley oranges is excellent indeed.

These two valleys, which are essentially one, extending north from Vacaville to Putah canyon, 14 miles, are almost entirely free from both the cold winds and blasting hot winds

seminaries and one college are here located. The United States Arsenal has extensive buildings and grounds.

Fairfield, Suisun and Dixon are places of considerable importance—Fairfield being the county seat, and so closely joined to Suisun that they constitute virtually one town. They are the trade centers for the western and central portions of the county, while most of the trade of the upper section goes to Dixon.

At Rio Vista, on the Sacramento river, salmon fisheries are carried on quite extensively. The other towns of the county are Elmira and Batavia, on the railroad, and Collinsville, on the river.

The prices asked for unimproved land in Solano county vary widely and are regulated more by climatic advantages than by the character of the soil. A very large acreage is available for cultivation, and deep and rich enough to make farming profitable. In the warm valleys, where the fruit and grape interests are well developed, lands are worth from \$50 to \$250 per acre, according to improvements, and pay well even at these apparently high figures. In the northern part prices run from \$20 to \$50 per acre, and in the foothills as low as \$2.50 to \$10. The Government lands are on the hills, and, as a general thing, are not very desirable.

There are some 50 school districts in the county and about 5000 school children, an as-

mento valley and nearly in its geographical center. It is long and narrow, bordered the entire length (some 60 miles) by the Sacramento river, which is second only to the great Columbia, as an artery of commerce and navigation. The Feather, its chief tributary, also navigable, runs through and borders it for 30 miles.

Besides its water connections with Sacramento and San Francisco bay, the county northward from Yuba City is traversed by the California & Oregon Railroad. The California Pacific Railroad formerly penetrated it from the Knight's Landing direction and extended to Marysville, but that route was abandoned some years ago, owing to frequent interruptions and destruction of the track by freshets. Not a farm in the county, however, is over ten miles from water or railroad communication, and fully three-fourths of them lie within five miles of the public highways.

The soil of Sutter county is unsurpassed in fertility, and experience has demonstrated its wonderful adaptability to all the cereals. The better qualities of grain lands often yield from 30 to 60 bushels of wheat per acre. A careful estimate places the average annual wheat crop at 75,000 tons, and barley about half as much. In other products the crop is diversified according to wants and practicability. The yield of fruit from the river orchards is very large. The

OUT-DOOR LIFE IN CALIFORNIA.

county is embraced in the Coast Range foothills, which are specially adapted for grazing.

But Solano is best known as a grain-grower, having always been among the first wheat counties of the State, and having produced fair crops in seasons of extreme drought. Being close upon the bay, the moist, cool winds and fogs therefrom have operated greatly to the advantage of the grain crops when localities farther inland were suffering from lack of rain and from a scorching sun. Cheap transportation to market also has been strongly in its favor, as farmers have had the benefit of unlimited competition among small vessels.

Years ago, big ranches were the rule in Solano county, but of late these have been divided, and farms of 1000 acres and upward are not often met with. There is a steady and increasing demand for land in the more favored sections, and the county may be ranked among the most prosperous and promising north of the bay.

Fruit-growing, wine and raisin-making engage more and more attention every season. One of the oldest orchards in the State is located on the west side of the valley section, close under the protecting hills of the Coast Range, being the result of the early enterprise of John Wolfskill, a pioneer. From this orchard the market for many years received the earliest fruit of the season; but more recently the Vacaville section has been forcing its claims in this respect. Some of the finest and earliest cherries come from that locality, and within the last few years there has been a regular boom in lands thereabout. The PRESS of May 16, 1885, contained an article, by Prof. G. F. Foster, on Vaca valley, portions of which we reproduce below.

The climate of this region is unique, unlike

which sweep over the central plain. The winds from the Pacific, which come in through the Golden Gate and spread out like an enormous fan into the Sacramento and San Joaquin valleys, pass by the narrow opening into Vaca valley, leaving it and its fellow valley further north under the full influence of the sun. Though the climate of all this region is semi-tropical, it is, singularly, wonderfully uniform. The mercury in summer never reaches within 15 degrees of the extreme high point attained at Sacramento, nor does it ever in winter touch the low point of the same place. Even at Vacaville, where the temperature is somewhat affected by winds from the sea and from the north, there are never more than a few sharp frosts at the beginning of the year, while there are points in Vaca valley on the sides of the foothills where frosts have not occurred for years, for instance, at the ranch of Charles Martel, some six miles from Vacaville, where a tomato vine has been growing and bearing unhurt by frost for more than half a decade.

Vallejo, situated on San Pablo bay, is the largest town, having a population of 6500. It derives a large share of its support from the Government navy yard on Mare island, which employs from 500 to 1200 men. All branches of business are well represented. The buildings are substantial, and the Good Templars' Orphan Home is really an ornament to the place.

Benicia, on the Sacramento river, 35 miles from San Francisco, once the capital of the State, has a population of about 2000. It is favorably located for commercial and manufacturing purposes, and has made remarkable progress within the last five years. There is a very large manufactory of agricultural implements here, and four tanneries. Two female

surance that educational facilities are not lacking.

## Sutter County.

[Compiled for the RURAL PRESS.]

The State of California, as formed in 1849, included 27 counties. One of these was named Sutter, in honor of the pioneer, Gen. John Sutter, who was for several years among its residents. Part of its original territory has been acquired by Butte and Colusa counties, and the Sutter of to-day is bounded by Butte upon the north, by Yuba and Placer on the east, by Sacramento and Yolo on the south, and by Yolo and Colusa on the west.

The surface is generally level; but in the northern part the Buttes, a series of rough, craggy peaks, covering about four townships, rise to a height of some 2000 feet. Springing abruptly from the plain, they constitute a very interesting feature of that region.

In 1849 the county seat was established at Oro, on the bank of Bear river, but the following year, and before much settlement had taken place, it was removed to the village of Nicolaus, on Feather river. Six years later that honor was transferred to Yuba City, which still retains it. It is the largest town in the county, in the center of one of the most fertile sections of the State, and distant from the State capital about 50 miles. Yuba City is connected with Marysville by a long and substantial bridge across the Feather river.

The county has a peculiar geography, touching neither the Sierras nor the Coast Range mountains, but lying wholly within the Sacra-

orange, the lemon and the fig flourish alongside the apple, pear, peach, apricot, almond, nectarine, and grape in endless variety. Irrigation is not needed nor practiced, and yet at Christmas time the oak, the willow, the apple and other trees have not entirely dropped their green foliage. The rearing of domestic animals is receiving increased attention, and their number, value and pedigree are making gratifying progress.

Sutter, in proportion to its size, is one of the richest of the agricultural counties of the State, but of late years its farming area has been greatly restricted by the filling up of Bear river with debris from the hydraulic mines, which caused the river to overflow and deposit vast quantities of mining debris on the flat lands along its course. The damage resulting from this cause has been estimated at several million dollars; and to guard against further inroads by the destroying floods, the citizens of the county have raised vast levees. Wherever the land has not been injured by these deposits, however, it is of the first quality and yields heavily, and if there should be a permanent cessation of hydraulic mining, it is expected that large areas now seriously impaired by debris will again become valuable.

The old Mexican grants, under which a great portion of the land was originally held, have been segregated and settled up, until now the population numbers in the neighborhood of 7000. There is no Government land in the county, but in some localities private holders will sell at reasonable figures. There are still many large farms which, with an increase of population, will be cut into much smaller holdings; and a few acres of this rich soil, carefully tilled, can be made equal in value of production to a large farm in many parts of the East.

Land which to-day is selling at \$50 to \$75 per acre is cheaper than that in localities where it can be had for \$10 to \$20, and at the highest figure is equal in intrinsic value to what elsewhere brings from \$150 to \$200.

Like its neighbors, Sutter county is favored with a winterless climate and in healthfulness is unexcelled. It abounds in pleasant homes, and its people are among the most enterprising. Its taxable property has doubled in the past six years; it has long exhibited virtually no delinquent list—an unerring indication of solid prosperity—and claims greater wealth, per capita, than any other county in the State. It is assuming an importance in California's progress not dreamed of a few years ago. In all parts the settlers' cabins are giving place to elegant two-story comfortable farm-houses, some of them rising to the dignity of mansions, and all surrounded with an air of thrift and refinement. The citizens take great interest in educational matters, and the school facilities of the county are excellent and fully adapted to the requirements of the population.

### Tehama County.

[Written for the RURAL PRESS.]

Tehama county has an area of 2,000,000 acres. It has an east and west length of 78 miles, north and south of 38. It is the seventh county in wheat-growing rank, the fourth in wool; it has the largest vineyard in the world at Vina, where 3000 acres of the choicest varieties are grown under one management.

From foothill to foothill on the south it has 43 miles of arable land, and at northern boundary, but one mile less in width, all of which may be cultivated to cereals or fruit, and comprise a grand area of varied plant life, within which the State of Delaware might be placed with many acres to spare, and Rhode Island could find room without encroaching on the foothills, and all her people be provided with homes and land on which to supply their wants. This vast area is fringed on the east and west by noble mountain ranges teeming with a wealth of grasses and merchantable timber. Much of the land is rich bottom loam and level plateaus of deep soil, rich in plant food, while other lands are rolling hills very productive in plant life. Thousands of acres of productive lands lie outside of this at greater elevations, and in thermal belts high above the valley many small plateaus are found where frost is never destructive to the most sensitive fruits.

#### Fruits.

The fruit-bearing capacities of the county are beyond computation. All the fruits and products of the temperate zone and most of the semi-tropical fruits and plants are very prolific even with the least care and attention. Apricots, pears, peaches, apples, figs, olives, prunes, oranges, lemons, almonds, cherries, English walnuts, Italian chestnuts, nectarines, pomegranates, all varieties of grapes, berries, vegetables and melons are now produced at a handsome profit. The ablest horticulturists say that prunes, figs, olives and raisins will grow to greater perfection here than anywhere in California; while the most of other fruits are as well adapted to our soil and climate as to any other portion of the State.

#### Climate.

The United States Signal Service reports show for the three places—Red Bluff, Sacramento and Los Angeles—for the eight years last past the temperature to be as follows:

	Red Bluff.	Sacramento.	Los Angeles.
Lowest temperature.....	24°	22°	28°
Mean " " " " " " " "	64°	61°	65°
Rainfall 7 years average.....	27in	19in	12in
" " " " " " " "	28.42		

The percentage of rainy, clear, and fair days at Red Bluff for eight years last past is: clear, 60 per cent; fair, 21 per cent; rainy, 19 per cent.

The advantage of humidity Tehama possesses over Los Angeles is five per cent, thus rendering irrigation unnecessary except to increase the production, as in any soil or climate water will do.

Our county sent to Sacramento Citrus Fair in 1885, oranges, lemons, olives and pomegranates not from hot-house plants, but from trees grown in open air without any protection during their lives. The lemons were from trees 15 years of age that had borne continuously for years without a failure; the oranges in some cases have matured their fruits at three years after planting. They grow in the black loam of the bottom lands, and they grow on the red and gray hills of the highlands; their beautiful verdure is always the same, and the luscious fruit ripens in midwinter.

California fruits mature earlier than in most States, while Tehama comes in among the earliest in California, and in the future its bright climate and warm soils, its abundance of rainfall, will bring not only the earliest but the choicest fruits to the markets of the world. Thousands of acres peculiarly adapted to fruit culture can be purchased for one-fourth to one-half the price similar lands now bring in older settled counties.

He who will work can in a few years pluck the orange, the peach, or the fruit of his own choice from trees of his own planting, and eat

them under the shade of his own vine and fig-tree on land worth \$500 per acre, that cost him but one-tenth to one-fifth the money.

#### Antelope Valley.

Just east of Red Bluff, contains many thousands of acres of land that will grow fruit or grain, and every acre of it is susceptible of irrigation from the Sacramento river from Antelope, Payne's and Mill creeks, that run through the valley. Fine crops of grain are grown there now as elsewhere in the county without irrigation, and for a third of the century not a crop failure, but experience teaches that one-third can be added to a crop by irrigation. The flume of the Sierra Lumber Company runs through the valley, carrying its lumber to Red Bluff. The Antelope water company's mains also pass through this valley. Water, pure, cool and healthy, can anywhere be obtained at a depth of 30 feet.

By using some of this abundance of water berries of all kinds can be made very prolific, and some varieties kept bearing for nine months every year. A narrow strip of land on Deer creek, cultivated to fruit by Chinamen in a very imperfect manner, turns off about \$75,000 worth of dried fruit annually; better methods would double the yield, in the opinion of fruit men.

Wood is plentiful; lumber is made in the mountains and floated down in flumes to the valleys. Lumber will always be cheap and easily gotten in Tehama county. The hill lands are especially the home of the sweet grape. The raisin grape and the choice table varieties grow and mature in luxuriance. The wine grape, especially for the sherry and port wines, and most valuable for blending with the Sonoma and Napa valley grapes, on account of its great abundance of saccharine, arrives at greatest perfection on our hills.

The wheat product of 1884 was 3,000,000 bushels, with a large acre average.

The broad waters of the Sacramento river (at all times a large stream) receive and carry off the entire drainage of the county. Red Bluff, at the head of navigation, is a beautiful town of about 3500 people. The river and railroads bring means of cheap transportation to Tehama county. With such a stream no fears need ever be had of unjust freight charges, as the water is free alike to all men.

#### Streams, Forests and Game.

Tehama has a healthy climate. The Sacramento river, fed by mountain streams, the sources of which, lying in the high lands of the Sierra Nevada, whence they are ever receiving fresh accessions of pure, cool, limpid water, are mostly perennial. Their descent before leaving the mountains being very rapid, give immense power for driving mills or machinery, very little of which, however, is employed. The pine-covered mountains east and west send their cool breezes laden with health-giving tonics to the plains below. The streams abound with trout, pike and other varieties of fish, and the ubiquitous catfish, the salmon and sturgeon all appear in season, affording rare sport as well as cheap and nutritious food.

Red Bluff is the home of some of the most ardent sportsmen. It is but a few hours' ride to the finest deer-grounds in the State. Valley quail, mountain quail, grouse, rabbits, hare, duck and geese, and all in easy reach.

#### Natural Scenery.

Four hours' ride by rail brings us to the foot of Mount Shasta, whose crown is ever covered with snow, whose summit measures 15,000 feet above sea level. At the foot, wild flowers and grasses grow green and luxuriant, and sweet breezes forever blow. In summer never hot, the evening always cool, the lovely valleys spread around, the mirrored lakes that greet one everywhere, the grand old peaks, deep granite canyons, the green sylvan glens where stately trees sigh and nod their heads in the breeze, all invite to rest and invigorate the jaded system with new blood and increased energy, sending you back home, after a time there joyously spent, rejuvenated and ready to meet cares and work, happy and fresh—all because of your few days in this, the finest, grandest of Nature's summer resorts on the American continent.

#### Land Prices, Titles and Taxes.

From what has been said of Tehama county, it will be supposed that the lands of such a favored locality are too high priced for the average settler, whose small store of ready cash will be needed to lay out and start his new possession. But the prices are relatively and intrinsically lower here than in any other agricultural county in the State. No real estate boom has ever been attempted here, and values are founded on real returns and actual sales have been confined almost exclusively for years to actual residents of the county. The county has never had the benefit of advertising as most counties of California have; it has not made inducements for new residents; it has waited, knowing that time would make known its great riches and seekers would find it in the future. Good grain land, ready for the plow, can be had at from \$10 to \$25 per acre; good river-bottom land at from \$40 to \$70 per acre. Cheap lands can be had at \$5 per acre and some even lower, from which trees and brush must be cleared. Besides this there is Government land to be had as pre-emptions, homesteads and otherwise. But these are mostly remote from market and roads must be built to open them up. Where prices are so reasonable

it is better to purchase land to which title is perfected, unless several can go together in one locality and work in unison for roads and needed means of communication. But to all who wish to secure Government land, there are plenty of citizens who will assist deserving persons in finding and locating such lands. Titles are universally perfected. They come through Spanish grants, confirmed by the United States; by United States patents and State patents. Incidental, disturbing elements must be carefully inquired into, and no intelligent purchaser of land will pay out his money until he has submitted his title to an intelligent land lawyer for approval.

Taxes are light; for 1884 the State and county levy was \$1.55 per hundred dollars; the average assessed valuation of land was only \$4.44 per acre, thus making the taxes very light.

#### Money and Land Needed to Start With.

The information now given is sufficient to enable an intending settler in this county to determine quite closely what he may require and what it will cost. Much less money is required than in any other country, on account of the cheapness and productiveness of land. Most of it is clear of timber; where it is not, unless quite a distance from town, the timber will pay for removing it—no stones to remove, no drainage, fencing is cheap, the climate is so mild that houses and barns are cheapened; but few warm clothes are needed, all necessities of life are cheap, stock does not need either so much stabling or food as where the climate is cold. He who will work need not have a great deal of money, though the more one has the greater his opportunities. The right kind of a man may venture to start in on even a few hundred dollars, and by energy and intelligence win in the end. He can buy a piece of land and pay part down—say one-half—and if his means run short he can always find work at \$25 to \$30 per month, with board—during harvest season, \$2 to \$3 per day. Each different man and different business will require different amounts of land. If but one branch of business is followed, such as horticulture, fruit or grape growing, or vegetable gardening, and irrigation is practiced, from five to 40 acres will do. Where land is cheaper and no irrigation is attempted, and more varied industries pursued, a larger amount of land may be safely purchased at the start—say one, two, three or more hundreds of acres. On part, one may grow grain, pasture a few head of stock, on some cultivate his own vegetables and some root crop, raise a few head of hogs and chickens, all of which will give both occupation and an income until his orchard and vineyard come into bearing, and add materially to his income. This can all be done in Tehama county. The soil, the climate, the rainfall, the nearness to market, all insure success to the industrious and intelligent farmer.

Red Bluff, Cal.

### Yolo County.

[Written for RURAL PRESS by J. R. SPRINGER.]

As there does not seem to be any one else to write up Yolo county, I will make the attempt. In the first place, I think that the public at large knows but very little of this northern part of the State, and it is probably our own fault in not letting it be known through the PRESS as have our southern brethren, and they are now reaping the reward of their energy. Many localities in the far West from time to time have advertised their country for no other purpose than to get up a boom in land, and frequently the transportation companies are at the bottom of it, and exaggeration has been so great in some States that the country has been called the "Fools' Paradise," and rightly named. But those charges cannot be brought against us in California; for, while we invite emigration, we have something solid and substantial to offer, for it is apparent to any one that is at all conversant with this country that the population can be trebled without suffering any inconvenience.

While wishing to place ourselves squarely before the public, and not to appear to be engaged in a "wild-cat" scheme to our own benefit and the public loss, I have written this preface to my article; and now I will say some of the things that can be said of Yolo county, and might be said of many of our neighbor counties around us.

Our county is bounded on the north by Colusa county, on the east by Sacramento river. The counties bordering are Sutter, Placer and Sacramento. On the south is Putah creek and the county of Solano, and on the west the Coast Range mountains and the counties of Napa and Lake.

The principal streams that drain the county are Putah and Cache creeks, but there are numerous channels that carry the water off in the winter and are dry in summer. They head in the mountains west of us and run out on the level valley land and spread out and stop.

The greater portion of the county is apparently level, but has a slight inclination to the east. The western boundary of the county is on top of the first range of hills, and runs northwest on the west side of Cache creek for some distance in the mountains, making the principal part of the broken country of the county in the northwest corner. The hills on the west are very abrupt, making but little

broken land in comparison with the size of the county. The eastern portion, lying along the Sacramento river, is a tule marsh, covered with water in winter, where thousands of wild fowl gather and the sportsmen find plenty of sport, but dry in summer, and thousands of head of sheep and cattle find pasture after the feed dries up in the mountains. This strip of tule land is needed to carry off the overflow of the Sacramento river (as it extends to tide-water) and the drainage of the Coast Range mountains, as the banks of all the streams are higher than the surrounding country, and when the water once gets out there is no getting back till it reaches the tide-water of San Francisco bay. This marsh is from one to ten miles wide on the east of this county.

#### Soils.

The soils are adobe and a grayish loam in some places, mixed with sand. The adobe lies along the edge of the tule marsh for a mile or so wide, and in the west and southwestern part, lying along what is called Willow Slough, which heads at Madison, near Cache creek, and runs in a southeast direction for six or seven miles and then empties into the tules. The grayish loam soil runs from Dunigan at the north southeasterly to the southern part of the county, except where Willow Slough cuts through it. This belt is from 5 to 15 miles wide. The extreme southwestern corner is more or less mixed with fine sand and small gravel about the town of Winters, while along the streams of Putah and Cache creeks there is a sediment deposit that is a wash from the mountains, and is composed of a fine sand and a clay loam that is among the richest land in the county. Especially is this true near the sinks of the creeks, as the streams run out into the tules and spread out and lose their channels.

#### Rainfall

I have not the data in regard to the average, but there has only been but one time since the country was settled that it has suffered, and I have seen a good average crop of grain raised when the ground was not wet over one foot, and that year it rained about eight inches; but that is not of frequent occurrence. I should judge from the estimates made that 16 inches would be the average, and possibly higher. I think that I am safe in saying that this county will stand the lack of a heavy rainfall better than the upper Sacramento valley or the San Joaquin. We always raise a crop of everything we produce, but some years not so heavy as others. The extreme wet winters are not always the best for cereals, as too much straw is the result, which causes it to lodge, which makes it difficult to gather.

#### Temperature.

The temperature in the winter will average about 45°. The extreme lowest is about 23° above, and the highest probably 70°. It does not often reach either extreme. I have not seen it lower than 23° during the last eight winters. The summer average is about 60°; the extreme lowest about 50° and highest 110°, which is equal to 85° or 90° in the Atlantic States; and even at that temperature, which does not last long at a time, and only in the middle of the day at that, sunstrokes are unknown, and the heavy work of the harvest is done during that time. It is always cool in the shade and at nights. When the sun begins to drop over the western mountains, the temperature begins to fall; and when evening comes the heat has gone and a laboring man can awake in the morning feeling fresh and vigorous for the labors of the day, which is so unlike experience in the corn-growing regions of the Mississippi valley. Many come here and get well who were troubled with weak lungs and throat diseases, but, of course, there are some whom it does not agree with. The dry air of the summer is a certain specific for many who have contracted diseases in damp localities. There has not been for 20 years or upward any epidemics through the county, and were it not for persons that come here sick, our mortality list would be very small, and be supplied from age and high living.

#### Agricultural.

The principal business of the county is agriculture, and wheat takes the lead. It is grown everywhere, even on the lower foothills of the Coast Range, and on all kinds of soil, and yields abundantly. If prices were as prolific there would be no trouble, for every one knows the present depression in the wheat market. Still, the market will give a margin to the grower. Wheat and barley are the principal cereals grown in this county, but there are some corn and oats grown.

Stock raising is a very important business in the county. Horses, cattle, sheep and hogs are numbered by the thousands, and their growth is a very profitable industry. Alfalfa, the principal feed for stock, grows to perfection, and not only supplies feed for horses, cattle, sheep and the Angora goat, but supplies the place of the western corn for the hog. Many is the hog that gets into the slaughter pen which never saw any grain and nothing but an alfalfa field.

Fruits of nearly every kind grow here to perfection which are grown in semi-tropical countries. The vine, fig, pomegranate, orange, lemon, almond, olive and many other kinds, besides the apricot, plum, prune, peach, pear, apple, Japanese persimmon and cherries. How many other kinds no one knows, for I have yet

## PORT COSTA WAREHOUSE & DOCK CO.,

LOCATED AT PORT COSTA, CALIFORNIA.

G. W. McNEAR, President and Manager.

THESE POPULAR WAREHOUSES ARE NOW READY FOR THE SEASON'S BUSINESS.

Storage 25c. per Ton per Month until Amounting to \$1, Balance of Season Free. Liberal Advances Made at 6 per cent per Annum. Insurance at Lowest Rates.

### SOME OF THE ADVANTAGES OF STORING WITH THE PORT COSTA WAREHOUSE & DOCK CO.:

PORT COSTA is the best market to sell; by having wheat on the spot, ready for immediate delivery, often enabling the farmer to secure a much better price than is obtainable for wheat to come in from the country, which is always uncertain on account of the difficulty to get prompt transportation.

The PORT COSTA Warehouses are regular for delivery of wheat sold on the Call Board. Frequently wheat is in demand for Call Board delivery, and brings much higher prices than wheat to arrive, as deliveries have to be made within five days after call, in lots of 100 tons, piled and inspected.

Wheat stored in the Country Warehouses must ultimately be shipped to PORT COSTA and incur extra expense if delivered on Call Board sales, which can be saved by shipping direct to PORT COSTA from the harvest field. Wheat at PORT COSTA, when on the market for sale, can be sold and cashed at once, with no fear of rejection or drawbacks of any kind, as the

grain is on the spot for inspection. Ship your wheat while the bags are in good condition.

Since the erection of Warehouses and Docks, by G. W. McNear, at PORT COSTA, millions of dollars have been saved to the farmers in freights alone.

Grain received from car or barge without extra expense of any kind to shippers, and prompt returns made. Each farmer's lot always kept separate.

Wheat will be piled in 100-ton piles, when requested, without extra cost, if notified when shipped.

Holders of wheat at this point have the full benefit of competition of all buyers for milling or shipping. We also have superior cleaning and smutting mills for the handling of all grades of inferior grain. Ship your wheat to Port Costa, care of G. W. McNear, and prompt returns will be made. No charge for weighing into the warehouse.

For further information apply to

**G. W. McNEAR, 306 California St., S. F.**

## Yolo County.

(Continued from page 16.)

to hear of any kind that has failed that has been tried; but fruits will not grow promiscuously as they do east of the Rockies, but every locality is especially adapted to some variety. While many localities may grow many kinds, there are others that can grow but few. The adobe soil in some places will not grow any kinds successfully but the pear, plum, apricot, fig and apple, while the gray loam will grow all.

This county has an irrigating ditch that takes water from Cache creek, which supplies water to the alfalfa fields around Woodland. Some fruitmen use it, but not as much as formerly, for men are learning that the best quality of fruit is raised without irrigation.

The vine will grow anywhere it is planted except the very poorest adobe land, and our raisins and wine have a world-wide reputation. R. B. Blowers, the man that took the premium at the world's fair at Philadelphia in 1876, lives at Woodland, and I think we can produce an article of equal quality yet. About the large grape yields that can be substantiated, it is useless to speak, as we wish to confine ourselves to matters that people will give credence to. However true those other matters may be, let people see for themselves when they come here.

## Educational.

Our standard of education in our common schools is much higher than any other State I know of, and we have a college at Woodland, the county seat, called "Hesperian college," with always a good corps of teachers, and which has turned out many of our best men of this coast. In fact Woodland can rightly be called an educational town, as it has three large public schools besides the college. The facilities for learning are not any better anywhere than here, and people avail themselves of them. We are a reading people and will very favorably compare with many of the older portions of the East. This coast is not heathenish, as is said of us in the East, as those who know us can testify. All the towns in the county are well supplied with churches; Woodland has seven, and other towns in proportion to population, and they are usually well filled. Only (in this inland county) during the warmest part of the summer, while many go to the mountains and mineral springs, can any noticeable falling off in numbers be observed; and I will say that religion is not so much worn on the coat sleeve, but goes down into the pocket and feels sorry in dollars and cents for the needy and unfortunate.

We will say to all who have been looking toward this coast for some time in view of giving us a visit: "Come and see us." You are welcome; we will treat you well. We are desirous of a good, solid, substantial element in our population that, with us, will help develop the great resources of this golden West.

## Towns.

The principal town is Woodland, the county seat in point of numbers, with about 3500 population. Winters is located in the southwest, Madison in the west and Dunnigan in the north, Cacheville in the center and Knights Landing on the Sacramento river, nine miles northeast from Woodland. All are railroad towns. Davisville in the south and Washington in the east I forgot to mention. Woodland has two daily papers, the *Mail and Democrat*, and five hotels, the Byrnes not much behind the finest in the State. There are two banks, Bank of Woodland and Bank of Yolo; two water works, one flouring mill (steam), ice works, gas works, two wineries, one brewery, two planing mills, three warehouses. Main street is lighted by electricity.

## Prices.

Land will run from \$10 to \$150 an acre outside of town limits, and there are large tracts in this county that are being divided up into small ones, and sold to settlers desiring to engage in fruit culture. There is land where I live that can be bought or leased for a term of years to either raise vegetables or fruit.

If my description seems to be incomplete, the fact of my being engaged in horticulture and not used to writing will account for it.

Woodland, Cal.

## Fruit Drier on Exhibition.

One of the Meeker Sun Fruit Driers, with all the latest improvements suggested by the experience of last season, is now on exhibition at the factory, 5th and Bryant streets, on and after Monday, Jan. 25th.

As now arranged we consider it much the most perfect and economical of any of the various driers to which the attention of fruit-growers has been called. Its various productions are the perfection of purity and excellence, and at the same time the most economical in cost of production. Fruit-growers are invited to examine and test the drier and the fruit prepared in it. Those using this drier last season realized handsome profits on their fruit.

## Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all throat and lung affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send, free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Power's st., Rochester, N. Y.

## Yuba County.

(Compiled for the RURAL PRESS.)

Lying obliquely southeast of Butte, east and north of Sutter and bordered more or less by the western limits of Placer, Nevada and Sierra counties, is Yuba. It includes nearly 400,000 acres, of which fully one-half are foothill lands, and 175,000 valley, largely under tillage. It is amply watered by the Yuba, Bear and Feather rivers and their tributaries. Springs are abundant and well-water is easily obtained. Timber covers the mountain sides in the eastern portion. Fuel is plentiful in every township. Sand and limestone abound in the hills, and bricks are made everywhere.

Yuba, now classed among the agricultural sections, was formerly a mining county. For several years following the discovery of gold in this State, it had a large and busy population. In the foothills and along the rivers and gulches thousands of men were engaged in digging for gold; but placer mining began to decline about 1856, and Yuba, like nearly all the other mining districts, at once experienced a falling off in the number of its inhabitants. This decrease continued for some years, until new and permanent industries were established, and the character of the population had greatly changed. In the mountain and foothill section of the county, notably at Smartsville and in that vicinity, hydraulic mining, which superseded the placer system, was, until a year or two ago, maintained on an extensive scale. But as this system had entailed immense injury to the river channels, destroyed a vast area of agricultural land in the valley, and seriously threatened the

12 years, and is still rapidly appreciating. The city is handsomely laid out, and contains many fine residences, public buildings, schools, etc. In the days of its prosperity it was regarded as one of the prettiest towns in the State, and it hopes soon again to claim that credit.

Other places of note are Wheatland, the center of a rich agricultural district, and one of the most prosperous of the smaller towns, with 700 inhabitants; Smartsville, Camptonville, Strawberry Valley, Brownsville and Timbuctoo.

The famous Briggs orchard, whence came the chief fruit supply of the State 25 years ago, was located in the southern part of the county, on the bank of the Yuba. As long ago as 1860 this orchard contained nearly 70,000 peach, 6000 pear, 4000 cherry, 30,000 apple, and 16,000 other fruit trees. To-day its site lies buried under 15 feet of slickens, on which the chief vegetation is a wilderness of willows and cottonwoods. In order to overcome the effects of this filling of the rivers from mining flow, the levee system of the county has been brought to a high state of perfection. Vast sums of money have been expended to bring the levees to their present serviceable condition, and it is believed that little or no danger exists of future overflows. The Yuba river is said to have had a great quantity of its debris washed out the past winter, thereby increasing the carrying capacity of its channel, and this cleaning out and deepening will continue each rainy season, with increased protection afforded by the levees.

Severe as has been Yuba's experience in the past, we trust there is a bright future in store for her. There are for sale within her borders large areas of cheap foothill lands, well adapted to all the fruits. There are several thousand acres of vineyards in the county, in which all the grapes of the world grow to perfection.

SOURCES OF STREAMS - OLD MINERS' DITCHES USED FOR IRRIGATION.

existence of Marysville, the chief city of the county, suits were instituted to enjoin the operating of these vast hydraulic mines. After long, tedious and expensive litigation in the State and Federal Courts, the famous Sawyer decision was rendered in favor of the plaintiffs, and as there seems to be little if any probability that it will ever be reversed by the United States Supreme Court, the business of hydraulic mining may be considered as practically at an end. Outside of these mines, and some small manufacturing enterprises, the main business of the population is that of farming and horticulture. The valley and such of the bottom lands as have escaped injury from the flow of debris are very fertile and produce enormous crops of wheat, barley, oats, corn, hops and the whole range of vegetables. The foothills, which formerly swarmed with miners, are regarded as specially adapted to horticulture. All the fruits of the semi-tropics are produced at an elevation of 1000 feet above tide-water. There are a thousand bearing orange trees in Marysville. Sicily and other kinds of lemons are grown. Fig, olive, and all the nut-bearing trees flourish.

The whole population of the county is about 14,000, 6000 of whom are found in Marysville, the county seat, at the junction of the Yuba and Feather rivers. As early as 1852 3 several flouring mills were in successful operation in the wheat-growing section, and in 1867 a woolen mill was established in Marysville, which turned out as high as \$200,000 worth of goods in a year. It is still in successful operation, and its products stand high in market. In the same city several large foundries have been maintained, the bulk of their business coming from the mines in Yuba and other counties. In early days there was considerable steamboat traffic between Marysville and Sacramento, but this has greatly declined since the California & Oregon Railroad was constructed to that city and across the county. Occasional trips are, however, still made between these points, and even between Marysville and San Francisco, by small trading steamers, but the bulk of the business is done by rail. For many years Marysville was at a standstill, owing to the constant danger apprehended from flooding in consequence of the filling up of the river channels with debris; but, since the decision of the Federal Court perpetually enjoining hydraulic mining, this has been greatly changed, and it is claimed that real estate there now commands higher values than it has done in the last 10 or

swimming rink, dining hall and spring house, and during the warm months present a scene of stirring activity, when the tourist, the traveler and invalids long to leave the crowded walks and heated atmosphere of the city and seek rest and repose in the secluded haunts of nature. The natural scenery and surroundings of this quiet retreat are all that the lover of nature could desire, being situated in one of the most beautiful and charming of Napa county valleys; one which possesses rare attractions of climate and scenery. It is like a gem set in the bosom of the evergreen mountains, giving one an ideal picture of the "sweet vale of Avoca," with its winding streams spanned by rustic bridges, its curving roads, well-kept, and affording pleasant drives, revealing glimpses of comfortable farm cottages, half hidden by waving trees and orchards. The green and fertile fields are broken by mountain spurs and hill pastures, whereon feed flocks of sheep, herds of fat cattle and bands of horses. Among the surrounding mountains, and within a radius of a few miles, are various other health resorts—Walters Springs, Samuel Springs, and Anguin's-on-the-mountain—all more or less patronized for the curative properties of their mineral water and the invigorating influence of mountain air, etc.

The moderate price of land and the ease with which homes are obtained by persons of limited means, is due to the fact that as yet the iron progenitor of progress—the railroad—has not penetrated this section. It is, however, hoped that in a short time this disadvantage will be overcome, as interested parties with the necessary capital are now engaged in taking preliminary steps toward the building of a railroad, to run from tide-water through portions of Napa valley and Chilis valley, traversing Pope, and continuing into the heart of Lake

county, piercing its rich valleys, and famous mineral regions.

## Howell Mountain.

Rising above the valley and partially encircling it is the beautiful and evergreen mountain of Howell. Along its green-crested sides and rising higher and higher until we reach its pine-fringed summit, the might of man has cleared in places the forest of its heavy growth, revealing the dark, loose and fertile soil. Many sweet and comfortable homes nestle amid its pine-crowned heights, and midway up its verdant slopes is located the semi-tropical or thermal belt. Here flourish citrus fruits—the orange, lemon, fig, and, unsurpassed in richness of flavor, the purple clusters of the vine. Many acres of vineyard and orchard are planted, and many more acres of evergreen forest wait for strong arms and brave hearts to hew homes in this enchanting wilderness. The climate is uniform, the summer heat is tempered by the invigorating breeze from the ocean. Out of the reach of fog, out of the track of the north wind and above the frost belt, its attractions can scarcely be enumerated. Among its frowning chasms and aerial peaks is some of the grandest and most romantic scenery in Northern California.

To the traveler, the tourist and health-seeker, and lastly, though not least, the emigrant, in search of a pleasant location and comfortable home, this lovely valley and its circle of mountains with their many advantages of soil, climate, productions, beauty of scenery, rural retreats and health resorts, offer better inducements and finer opportunities than many older settled and better known sections.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

# FARMS, ORCHARDS —AND— VINEYARDS FOR SALE!

In Valley and Foothills.  
On River and Plain.

**740-Acre Stock Farm, Vineyard and Orchard;** two-thirds can be irrigated. Situate 4 miles north of Folsom. Large orchard and vineyard in full bearing; good crop of alfalfa; will be sold cheap. **GREAT BARGAIN!** Could be divided into 10 good farms of 74 acres each. Call at once for particulars. Price, \$28 per acre.

**130 Acres.** Thirty thousand bearing grapevines and 300 assorted fruit trees, with abundance of timber, and 20 acres alfalfa. One mile from Folsom. One of the best homes in California. Price, \$7500; ½ cash.

**160 Acres Best Fruit Land,** one mile east of Loomis. Great bargain. \$45 per acre.

**160 Acres.** Thirty acres in vines; all good fruit land, 6 miles N. E. of Folsom. \$4000.

**80 Acres.** Best fruit land, near Ophir; well improved, with best quality of fruit trees and vines. Price, \$4500.

**40 Acres.** Same character and similarly improved, and adjoining the above, both situate in Ophir, Placer county, Cal. \$2500.

All of the above are capable of irrigation; will be sold cheap.

**1007 Acres,** on the east bank of the Sacramento River, at Kirkville. Finest soil in California. \$75 per acre.

**480 Acres Grain Land,** 11 miles southeast of Sacramento. Improved, with crops, well fenced and good buildings. \$35 per acre.

**160 Acres Improved Land,** with crop. New two-story frame dwelling, large barns, granary, sheds, etc., with 5 acres of orchard and vineyard. Nine miles southeast of Sacramento. Price, \$6000; ½ cash.

**160 Acres,** 4 miles southeast of Florin, Sacramento county, improved, with 16 acres bearing vines, etc. \$30 per acre.

**257½ Acres Improved Land,** with buildings. About 60 acres meadow; sufficient timber for ranch use; all good grain land, abounding in living springs of sweet, clear water. Situate two miles west of Shingle Springs. Price, \$7000; ½ cash.

With many other smaller farms. Also, 9000 acres Hay Land in Lassen County, 3000 acres other lands adjoining, commanding 20,000 to 30,000 acres best quality outside range, making the best cattle range in California. An abundance of good water. All well fenced with barb wire on juniper posts. This is the celebrated Meadow Ranch. Besides a great number of dwellings and city lots situate in the city of Sacramento. \$50,000.

All the above lands are for sale cheap and title guaranteed.

Call and get information at office, Room 8, up stairs, Bryte's Building, southwest corner J and Seventh Sts., Sacramento.

## LANGFORD COLONY.

## Homes amid Fruit and Flowers.

The Langford Colony has been located on the rich alluvial soil of the Mokelumne Valley, two miles from the flourishing railroad town of Lodi; one mile from Harmony, a station on the San Joaquin and Sierra Nevada Railroad, on the bank of the Mokelumne River.

The soil of this Colony produces Corn, Alfalfa, all kinds of Vegetables, every Fruit of the Temperate and Semi-tropic zones; all of the nut-bearing trees; without irrigation.

It is the favored home of the Peach, Apricot, Orange, Lemon, Fig, Wine, Table and Raisin Grape.

This land will be sold in quantities to suit the purchaser, on time, at low rates of interest.

A settler here can support himself from the first day of location, and in two and one-half years can have an independent income.

For soil, water, climate, market, school and church facilities, this Colony has advantages superior to any ever offered the home-seeker.

Orchards and Vineyards on land less fertile than this yield from \$300 to \$500 per acre.

Hardware, and Machinery.

### FOR SALE.

Berkshires, old and young, registered, at farmers prices. Jersey Bull, 5 months' old, solid faun, very large; also A. J. C. Bull, fashionable strain. Inquire Room 28, Merchants' Exchange, San Francisco.

## Stockton Notes.

[Written for the RURAL PRESS by MRS. W. D. A.]

June 12th the hardest norther ever known in June blew, twisting and lodging heavy grain into tedious cutting, and rattling out the brittle but juicy heads from three to five bushels to the acre, and snapping off many heads from the tall, slender straws. It was well that grain was so much advanced, for it shrunk late sown.

These longest days of the year, the weather is breezy and comfortable.

Harvest has begun. The resolute army has gone forth with combined machines and headers to the ingathering of the greatest harvest since 1880. It is estimated to take 4000 mules to cut the crop of the State. Truly, "there is work and bread for all; and the sun shines always there." And it does shine always here, if any place on earth. Bread is cheap; work is plenty for patient, saving workers. Clothing is cheap, and summer calls for little.

Houser, Mingos & Shippe's harvester factory, the largest on this coast (doubtless largest in the world), has sent out all machines made this year. Holt, Myers and other shops have machines running to the great satisfaction of owners. Harvesters in good grain average 300 sacks daily with five men and from 16 to 18 and 20 horses, cut for \$2 an acre and waste far less than headers, though they are still used by owners and where many trees are in fields, and because all harvesters do not dump the straw for stacking.

No fires have occurred. Much grain is turning out better than expected; other a little less. The bulk of the crop is not insured, though many have deemed it necessary because of careless tramps. Wheat is worth only \$1.20 per cental.

Butter is worth from 15 to 18 cents. It is a good thing that Congress has taken time to hear the people; that the House has passed the bogus butter bill with five cents a pound tax, and the Senate dare not do otherwise, for maker and consumer have been cheated long enough, and the making of tallow butter diminishes the number of cows kept, consequently runs down the farms.

A word about gardens possible here, this and many other years, with a little watering: Peas put in the first October rain, on table April 6th—last year, April 2d; cabbage, 10th; beans and potatoes, May 15th; cucumbers, June 12th; corn, June 18th—fine ears without worms. Onions sown November 1st and set and watered in May, Yellow Danvers and Silver Skins will be large August 1st. Of course, some years, frost may nip corn, tomatoes, cucumbers and squashes. Striped beetles always come the last of June, and late beans and vines have to be dusted with ashes, air-slacked lime or dust, and given plenty of water. I save Hubbard squashes thus for plenty in winter; cut the last one for pies June 22d.

The 23d the city voted on putting the liquor license up to \$50 a month. Strenuous efforts were made on both sides, but saloons, by "a flowing matter of whisky," won by 350 majority; 2100 votes being cast. Some best citizens voted against it, urging that if men wanted to make beasts of themselves they would get it somehow. This may be so, but it would shut up some of the doggeries that draw into their toils the weak with their earnings. Ice-water, cake and ice-cream were furnished by ladies, so that none need go to saloons. If women could, the city would soon be rid of these vice-breeding retreats. No sadder sight is seen than men standing around the many fine saloons that line Main street. Ninety-seven licensed saloons flaunt in Stockton.

Dr. W. H. Mays, Superintendent of the State Insane Asylum, in a recent article, says 25 per cent of the insane are drunkards, and that it costs \$150 to keep a patient a year, and that most inebriates live years but are rarely cured, dementia usually succeeding. Not less than 80 inebriates are cared for in this asylum year by year, at a cost of \$12,000 a year.

Spellman & Knealy, of Stockton, are to build the Gridley monument, theirs being the lowest bid—\$1776. Something over \$1400 was raised last year and put at interest, so that less than \$300 will have to be raised. The dedication will be next Decoration day. The State ought to help the family. The following has been introduced in the House of Representatives by Hon. Jas. A. Louttit:

A BILL—To compensate Reuel Colt Gridley for services rendered during the late war.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and is hereby, authorized and directed to pay to the heirs of Reuel Colt Gridley, late of California, the sum of \$10,000, out of any sum now in the Treasury not otherwise appropriated, to compensate the said Reuel Colt Gridley for the amount expended and services rendered by him during the late war in raising funds for the benefit of the United States Sanitary Commission.

Cautious citizens and the City Government, as the Court-house, jail and Hall of Records are to be built and the delinquent tax-list printed, decided not to incur the expense of celebrating the Fourth, but the firemen determined to parade and with fireworks flame through the sky the story of 1775.

Stockton Parlor, Native Sons, have taken the grand old day into their hands, too, and mean to have a nice celebration.

The bill to legalize trades unions was passed

in Congress, so we have an authorized body here.

Anti riparian and riparian rights are all the talk now—a mighty subject with many sides. The riparians are willing that a part of the waters should be taken for irrigation, but not for monopoly. An Anti-Riparian Club is organized here, which claims that the cattlemen monopolize the waters of most of the State.

Stockton, June 26.

## Small Farms.

A reader of the RURAL, at Selma, Fresno county, asks us to publish the following:

SELMA, Fresno Co., Cal.

EDITOR IRRIGATOR:—I noticed an article in the Bulletin of the 5th inst., headed "California Lands." The writer says: "Could small tracts of 20, 30 or 40 acres be readily obtained, the State would at once receive a considerable increase in population, for small farms are being sought for, but few are being found. We think such statements as this should not go unchallenged, as they tend to stop the influx of immigration to California."

I traveled all the State south of San Francisco last fall, and have been from San Francisco to Los Angeles within the last month and found no scarcity of small farms; in fact, nearly all the valley land upon which water can be got in Los Angeles, San Bernardino and San Diego counties is being sold in small tracts, the prices of which certainly rule high; but Fresno and Tulare counties have thousands of acres divided into small tracts, and would have much more if there was any demand, the general opinion being that the supply is so much greater than the demand that it does not pay to subdivide, because a man has to wait so long for purchasers and give such good terms to secure sales. Here in the southern part of Fresno county there are colonies being founded where land can be bought in tracts to suit over five acres, very reasonably, and some of it will be sold without any payment, the purchaser contracting to build and improve, and paying seven per cent for five years on the purchase money, so that men of very small means can procure good homes, and there are thousands of acres of land that can be rented for wheat at one-fifth the crop. Of course there are also lands in small tracts for sale in the northern part of the State, but the irrigated counties take the lead, as they are essentially adapted to the cultivation of small farms.

But so long as people will stay in San Francisco and Los Angeles and wait for what they have not energy to inquire about or hunt up, so long will there be a scarcity of small farms, and plenty of people to write such paragraphs as the above mentioned, which are calculated to do great harm to this State: like the old cry which went to the East that all California was in the hands of large holders and the prices of land were high. Such statements may apply to certain portions of the State, but when applied to the entire State are falsehoods, which ought not to be allowed to go out to the world as truths.

L. S.

In accordance with the above we would state that this excessive demand is not for small farms unimproved but for well-improved places. There are but few improved places for sale; the owners, knowing their value, hold them at a very high figure or will not sell at all. As the writer of the above says, there are plenty of small tracts of unimproved land to be had at a very low price and on reasonable terms.—Selma Irrigator.

## Sacramento Notes.

Mr. Van Gelder, of C. W. Reed & Co., the well-known Sacramento nurserymen and fruit-shippers, dropped into our sanctum one morning last week. Their firm, he remarked, plants everything with a view to shipping—no bing for canning or drying. Speaking of the season's yield in Sacramento county, Mr. Van Gelder put apricots at a quarter crop. Growers there have given up planting Moorparkes and the Peach 'cot is now the favorite. Peaches will scarcely exceed half a crop. The varieties chiefly raised are California and Early Crawford. Of pears, plums and prunes an average quantity is looked for, the stone-fruit, however, being not so heavy as last year. Grapes are doing finely and give the same generous promise as in other districts.

John Miller, of Walnut Grove, was in Sacramento June 24, and informed the Record Union that reports published concerning the lower Sacramento river country were hardly as favorable as the facts warrant. While the fruit crop is short, the better prices being paid on account of numerous buyers will make the income to growers very satisfactory. Fruit-shippers are paying, in entire crop lots, to be delivered on river bank in crates, for peaches, three cents per pound and upward, and for prunes \$1 per box and more.

The tules are fast becoming dry enough to be plowed, and within two weeks will be put out to beans, potatoes and barley.

## Take a Receipt.

ALWAYS TAKE A RECEIPT from a newspaper agent. Not simply because a few out of many are tricky or careless, but because accidents will sometimes happen to the best of business men. It is a favor due to the publisher that every subscriber shall take a receipt from the agent, or clerk whom they pay. All our receipts have a corresponding stub which agents are accountable for and are required to return.

## About Obtaining Patents.

## Patents are Virtually Contracts.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, in order that it may afford him complete protection for his invention during the life of his patent.

## Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. If, by this "preliminary examination," the improvement is found to have been previously patented, the inventor will receive, for the small sum of \$5 for the examination, a verbal or written report showing definitely wherein his invention has been anticipated, thereby saving him further expense and perhaps much time, anxiety, etc.

To avoid all needless delay, however, and secure patents at the earliest moment practicable, inventors will do well to forward a model, drawing or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with \$15 as a first in payment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately and forwarded to the inventor for his signature. When he receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps.] When the patent is allowed the inventor will be duly notified, and on sending the final Government fee of \$20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretense of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give up a case so long as there is a chance of obtaining a patent. The Agency charge, including drawings, rarely exceeds \$40, and for this we do all we can without appealing the case.

## Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are more satisfactory to the Patent Office than the old cumbersome system of storing up an immense bulk of countless models.

Drawings or sketches, sufficient to illustrate the invention clearly, with a description that will enable us to make a full set of perfect drawings for the Patent Office, is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings oftentimes prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sale had it been skillfully, completely and artistically portrayed. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken to have the invention fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

## Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. has edited and published the MINING AND SCIENTIFIC PRESS continuously since 1860, a period of 25 years. Few agents, who are still engaged in the business, have had so long extended practice in patent soliciting. The members of the firm give personal attention to the application entrusted to their care; and their familiarity with inventions and with local affairs in the Pacific States and Territories, enables them to understand the wants of inventors on this coast more readily and thoroughly, as we believe, than any other agents in America. Thus there is saved a great deal of the time which ordinarily—when a stranger agent is employed—is wasted in preliminary writing back and forth.

This happy combination of long business experience together, and wide connections, has placed our firm in a position unquestionably most fortunate for affording inventors prompt and reliable advice, and the best facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention, in one or more of our influential and reliable newspapers, affording just the circulation best calculated to widely inform the class of readers especially interested in the subject of his invention.

## Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the inventor to receive notice, for a period of one year, of any application for a patent subsequently filed, which is adjudged to be novel and is likely to interfere with the invention described in the caveat, and the inventor is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from \$10 to \$25. The Government fee is \$9 additional. To enable us to prepare caveat papers, we require only a sketch and description of the invention.

## Rejected Applications.

Inventors who have rejected cases (prepared either by themselves or for them by other agents) and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors doing business with us will be notified of the state of their application in the Patent Office whenever it is possible for us to furnish such information.

## TWENTY-FIRST

## Mechanics' Institute Fair,

SAN FRANCISCO, 1886,

Opens August 24th, Closes September 25th,

—IN THEIR—

IMMENSE PAVILION ON LARKIN ST.,

WITH A GRAND DISPLAY OF

NATURAL and MANUFACTURED PRODUCTS OF THE PACIFIC COAST, including a magnificent collection of Oil and Water Color Paintings, Art Work, and Photography; MACHINERY in operation; a SPECIAL FLORAL EXHIBIT each week; the finest display of FRUITS, GRAINS, and VEGETABLES ever before presented to the people, and a Grand Instrumental Concert day and evening.

The San Francisco and North Pacific Railroad Company and the South Pacific Coast Railroad Company, and the steamers under the management of Messrs. Goodall, Perkins & Co. will transport perishable articles consigned to the Mechanics' Institute Exhibition free of charge, and other articles at half rates.

LIBERAL PREMIUMS of Gold, Silver and Bronze Medals, Diplomas and Cash will be awarded. Members of the Institute entitled to Season Tickets at half rates.

PRICES OF ADMISSION—Double Season Ticket, \$5; Single Season Ticket, \$3; Adult's Single Admission, 50 Cents; Children's Single Admission, 25 Cents.

# CALIFORNIA-MADE GOODS!

C. S. CHAMBERLAIN, President.

(Incorporated June 22, 1885.)

GEO. F. PRATT, Sec'y and Gen'l Manager

— OFFICE OF —

## LOWELL MANUFACTURING COMPANY

WHOLESALE MANUFACTURERS OF

# BUGGIES, BUSINESS WAGONS, AND CARRIAGE WOODS.

DEALERS IN

# HARNESSES, ETC.

FACTORIES—Oakland, Cal., and Lowell, Mich.

California Office and Factory—Cor. San Pablo Ave. and Peralta St., Oakland.

### WE ARE NOW MAKING THE FOLLOWING STYLES WITH SHAFTS OR POLES:

No. 5—Side Spring Piano-Box Buggy, without Top.  
No. 10—Same kind, except with Corning Body, without Top.

No. 100—Lowell Business Wagon, Plain Body, with one or two seats, and with or without drop-end gate.

No. 5—Side Spring Piano-Box Buggy, with Top.  
No. 10—Same kind, except with Corning Body, with Top.

No. 105—Lowell Business Wagon, Panel Body, with one or two seats, and with or without drop end-gate.

These Buggies are hung on the long, easy side spring, the springs being outside of the body, instead of under it, thereby obtaining the entire benefit of the spring.

These Business Wagons have movable seats. These wagons are intended to take the place of a heavier wagon for light delivery purposes, and are also very handy for use on Fruit Ranches. Being hung low, they are especially adapted for Sewing Machine Wagons. With an extra seat they make just the wagon for family purposes.

## EVERY VEHICLE MADE BY US FULLY WARRANTED.

We are convinced that no manufacturer can successfully make all the numerous styles of vehicles that are called for, as good, or as low in price, as one who confines himself to a few styles. By making a few styles, we can give closer attention to each one, and the result will be more perfect work, and therefore better satisfaction to our customers. All of our Vehicles are made with the same discriminate care as if ordered by special customers, and hence those who desire a strictly first-class job can obtain it from us without being subjected to the OVER-TAX OF FANCY PRICES, and not receive a corresponding value therefor. We are making a few styles, and while there are many kinds of Vehicles we cannot furnish you, our GREAT POINT is, that on those WE DO MAKE, we can offer you very superior advantages and defy all competition. Would call particular attention to the fine Wheels and Bodies we are using.

These Vehicles must not be classed with the cheap Eastern goods which are made only to sell. They are as good as the BEST made and LESS in price. We make and sell FIRST-CLASS, substantial, and durable work at about the price of Eastern cheap work. Buying our material in LARGE QUANTITIES DIRECTLY FROM THE MANUFACTURERS, and using the latest improved machinery, we are enabled to do this.

We have Single and Double Harness, HAND MADE, made from OAK LEATHER, on which we are prepared to meet the closest competition.

Send for Circular giving full description of the material used, terms of warranty, etc. We particularly invite a personal inspection of our factory, where can be seen the MATERIAL USED, the process by which they are manufactured, and the vehicle in different stages of construction. We ask you for a sample order, guaranteeing that we will give you satisfaction in price and quality. WRITE FOR PRICES.

## Lowell Manufacturing Company,

P. O. Box 54.

OAKLAND, CALIFORNIA.

## Grain Storage and Shipment.

## The Great Establishments on Carquinez Straits.

At the meeting of the American Society of Mechanical Engineers, held last month in Chicago, a paper on "Handling Grain in California" was read by John H. Cooper, of Philadelphia. The writer treated first of the characteristic California invention, the combined harvester and its operation, matters with which readers of the *RURAL PRESS* are quite familiar. This year the manufacturers of these machines have been unable to fill all the orders received for them. Another portion of Mr. Cooper's paper treats of the grand warehouses lately constructed on Carquinez Straits, and this part of his essay, with the engravings, we reproduce herewith:

A glance at the map of California shows that almost the whole of the watershed from the Sierra Nevada mountains, which rise along the entire eastern boundary of the State, is delivered into the beds of two great connecting rivers and valleys: that of the Sacramento coming down from the north and that of the San Joaquin running up from the south, both areas forming an immense basin and covering a space in the aggregate apparently one-third of the whole State. The one natural outlet for all these waters is through a chain of bays, chief of which is the Bay of San Francisco, extending to the southward from the open way to the sea, and lying nearest to it. The waters first unite in Suisun bay, which lies to the extreme eastward, thence they pass to north-eastward through the Straits of Carquinez into the Bay of San Pablo, which rounds the northernmost end of the group; from this on the flow is to the southward, meeting the waters of San Francisco bay, whence all move westerly into the Pacific ocean by way of the Golden Gate. Somewhere on the shores of these grandest of bays, a shipping point would naturally be selected; not necessarily very near to the city of San Francisco, because the main line of railway does not reach it, nor yet, as they are made on any available part of the shores of any one of these bays, because of their very wide and shallow beaches, which would necessitate long and costly approaches and track extensions, providing it is desirable to build a warehouse, as it must be, beside the deep waters.

The location, although 35 miles from San Francisco, is well chosen; it lies opposite the town of Benicia, on the southern shore of the Straits of Carquinez, two miles northeast of Martinez and one mile southwest of Port Costa; the port of entrance of all west bound trains, which is made over the back of the *Solano*, the largest ferry-boat, so called, in the world.

The available ground for building is narrow between the place of deep water and the lines of railway which run closely to the bulk of the hills. In plan the littoral edge is curved, with the greater circle at the base of the hills; the radius roughly stated is a mile, having its center located somewhere within the precincts of Benicia. This slender segment of wetted foot-land embraced in the site of building and track departures has a chord of 3250 feet. Within this crescent figure, curving with its curve to a radius of 4723 feet, the buildings and approaches have been erected, the whole structure resting upon driven piles, which are surmounted by a solid and even floor above the level of the main lines of railway. The scour of the outflowing waters during the run of the tide through this bend is sufficient to keep it as now, a very deep channel, always open.

A panoramic view of the whole structure is offered in Fig. 1, as it now stands, beyond the waters of the strait, with a line of ships at wharf, trains of cars upon the railway approaches, and with a background of rounded hills, the usual horizon of a California landscape. This is reproduced from a photograph taken from the Benicia side of the strait, and admirably pictures the immense storage and shipping establishment erected by and conducted under the auspices of the Nevada Warehouse and Dock Company.

The improvements of this company, comprising the docks, buildings, and railway switch connections, cover, under franchise grants of the Board of Supervisors, 3250 feet in length, and a width from of 150 to 300 feet, or thereabouts, of State submerged land. The dock frontage of 2300 feet will afford space for eight or ten large ships, with facilities for hauling into or changing berth and loading, which are nowhere else to be found. The warehouses, of which there are two sections, one of 770 and the other of 912 feet in length, have in their greater extent a width of from 110 to 170 feet, with over 190,000 square feet of floor area, and 20 feet clear height for storage. Besides which, under the trestle supporting the covered elevated double railway track on the water front side of the warehouses, is an area of over 80,000 square feet, completely protected from weather and largely available for storage should there be occasion to use it for this purpose.

The elevated double track, which, by an easy rising grade from the main line of railway, brings the grain-loaded freight cars on to a platform 50 feet wide and 11 feet above the floors of the warehouses and wharves, is com-

pletely covered and protected from weather. This elevated road is one of the grand features of the establishment. It extends the entire length of the whole warehouse system, whence bags of grain from the cars can be slid down chutes to the warehouse floor or into the holds of vessels by aid of gravity alone. These tracks are on the water-front side of the warehouses, while another track extends the whole length of the warehouses on the shore side, all of which connect with the tracks of the Southern Pacific Railway. This accomplishes a meeting of rail and water transportation in a way most favorable to the economical handling of the staples of the country.

Between the approaching ends of the two warehouses is a space of 150 feet. On the elevated railroad side of this, and near midway, is a handsome three-story office building with high attic, mansard roof surmounted by an ornate cupola. The first story on the wharf level is fitted up for offices and occupied by grain-shipping firms. In the second story, on the level of the elevated railway track, are arranged the counting-rooms of the company. The third story is provided with sleeping apartments and conveniences for the resident manager, while the high attic contains capacious water supply tanks. Additional buildings, including a hotel for the accommodation of the large staff of weighers, clerks, shipping agents and others, have been built following the completion of the warehouses and to meet the exigencies of the growing business.

FIG. 1. GENERAL VIEW OF THE WAREHOUSES OF THE NEVADA WAREHOUSE &amp; DOCK COMPANY.

The power for driving the grain cleaning and grading machinery, the sack elevators and carriers, the fire pump and other machinery, is furnished by a 100 horse-power O'Neil cut-off engine and horizontal tubular boiler, and is carried by a line of shafting under the main floor, through the grading house, across the western end of warehouse No. 2 to the water side, where it is further employed to operate a swinging crane for discharging ballast and a series of "gipsies," or

veyer. The upper pulley, *E*, carrying the elevator belt, is secured upon a shaft which is driven by the main line of shafting through countershafts and bevel gears. The lower elevator pulley, *E'*, is carried in a tightener slide beneath the table *T*, upon which the bags are placed, ready to be slid on to the rests of the elevator belt over a grating in the table top through the slits of which the rests pass in their upward flight. The carrying capacity of these elevators is 20 sacks per minute.

The conveyor *D* is an endless double chain of iron links embracing steel axles, with a flanged wheel running loosely upon each end of each; the links are connected crosswise by strips of wood securely bolted, three to each pair of links. Upon these strips of wood the bags are delivered lengthwise at *D* by the elevator *E*.

Continued double tracks, composed of light iron bars, "edge laid" upon wooden stringers, extend above and below the roof tie beams nearly from end to end of warehouse. The conveyor is capable of being driven in either direction at a speed of 165 feet per minute, by proper open and crossed belts upon countershaft pulleys; spur gears being employed to overcome the great resistance of so long a linkage laden with weight of many bags of grain at once.

The belts run on large pulleys at high speed on a level with the tie beams and within command of hands at warehouse floor by convenient strap shifters.

The cross conveyers, of which there are four, run from the main conveyor to points over the

into car or ship, or they may be sent from the middle of the warehouse to either end.

This machinery will deposit bags of grain into hold of ship as fast as they can be taken from stacks and weighed and trucked over the warehouse floor to the nearest elevator.

The number of bags that can be gotten out of a car, slid down the chutes, and delivered upon the conveyor by one elevator in one hour, is about 1200. The main conveyor has a longitudinal movement in either direction throughout the whole length of the warehouse connecting with four conveyers moving transversely toward car or ship, and provided with seven elevators extending from floor to tie-beams of the roof, equally spaced along the main line of transfer. When these are taken in connection with the elevated railway, upon any part of which cars can be placed, with the wharf extending the whole length of the warehouse where ships can lie in berth, and the facility with which numerous chutes can be placed in descending lines from any chosen number of elevated points, it can be readily seen that the whole area of the warehouse floor, the entire lines of wharf and railway, are within easy reach. Finally, it may be added, that to any point desired on these a continual stream of bags of grain can be automatically sent and delivered.

At present this system of handling bags of grain is confined to warehouse No. 2, but a similar plant can be extended throughout the entire area of warehouse No. 1, by carrying the

elevated railway, delivering the bags to a height about level with the top of a car body. They are run at a speed of 220 feet per minute, and are composed of heavy belts with cross strips of wood, the ends projecting beyond the edges of the belt and resting upon and are guided by ways framed to and supported by the building. The return fold of the belt is allowed to sag freely, and by its own weight produces sufficient grip upon the 5-foot driving pulley *G*, which is located beneath the main conveyor so

conveyor and shaft lines for driving the elevators across the intermediate space between the two under a covered way and over a supported framework at even height of present conveyor and in same line therewith.

The following statement will show the tonnage of grain handled at Nevada dock, Port Costa, from June 1, 1884, to June 1, 1885:

Flags of Vessels Loaded.	No.
American	55
British	96

FIG. 2. CROSS SECTION OF WAREHOUSE NO. 2—MACHINERY END.

small, vertical windlasses, set at distances of 200 or 300 feet apart between the tracks of the elevated railway, and around which a turn of rope can be thrown as they revolve, to draw loaded freight cars to any desired point, when there is no locomotive at hand, to haul ships into the dock, change their berths, and perform other pulling service.

The grading house is provided with the best and most improved grain cleaning and grading machinery, and has a capacity of 600 sacks per hour, or 800 tons in 24 hours.

Lines of 6", 5" and 4" iron water pipes extend from the steam pump in the engine-room the entire length of the warehouses and dock range; these are furnished with 33 hose connections, at distances of about 128 feet apart, and on each side of the warehouses to which sections of standard San Francisco Fire Department hose are attached ready for use. An auxiliary fire engine pump and boiler for rapid steam generation are located and arranged for quick use in case steam is not "up" in the larger boiler.

A cross sectional view of warehouse No. 2, cut through the end near the space between the two where the motive machinery is placed, is given in Fig. 2, showing, in a general way, and without much regard to exactness of dimension or fullness of detail, the mechanical appliances for elevating the bags of grain to a higher level and for conveying them back to the floor and across the warehouse. The relative positions of ships at wharf and the cars upon the elevated railway are plainly seen.

The elevators, of which there are seven, are located at nearly equal distances along the line of the main conveyor, *D*. They consist preferably of broad, heavy belts to which steel brackets or rests are riveted in cross lines of three each, each set properly distanced to give time for hands to place the bags upon them, as also to enable bags to get out of the way of one another in transit from the elevator to the con-

as to receive the bags therefrom and send them across the warehouse in the direction of the arrow *F* over the belt returning pulley, *C'*. This pulley is carried on adjustable bearings in a framework supported upon the floor of the elevated railway.

The gravity transfer of the bags is conducted on inclined chutes, on which, when worn smooth by use, and having guiding strips on each edge, the bags are found to run on a descent of about one in four.

These chutes are portable and adjustable every way, and are shown in some of the positions in which they are used. Nos. 1 and 2 extend from car door to table, *T*, where the bags are placed in succession against, and to be taken by the up-going belt of the elevator. Nos. 3, 4, 5 and 6 are placed to right and left from the conveyor to any stack, *S*. No. 7 is fixed in position between the main conveyor and the cross conveyor, and Nos. 8 and 9 conduct the bags into the hold of a ship from the pulley *C* of the cross conveyor.

The discharge of the bags from the main conveyor at any desired point is effected by a smooth-faced board placed upon edge close over and at an acute angle with the line of the conveyor. The head end is firmly secured, and the tail end rests loosely in a vertical slit. This arrangement, simple as a railway switch, acts as well in practice. It yields to the bags at first contact, and then straightens out automatically with the persistence of a spring, throwing the bags from the conveyor "end on," to finish their journey down the chutes, thus illustrating the ease with which movement is made after motion begins, when the difficulty of "starting" friction is overcome.

Bags of grain can be brought from any part of the warehouse to be cleaned and graded, if necessary, and returned to be restacked after this process has been completed; they may be sent from either end to the other extreme end, taken over the distant cross-conveyor and put

Total number.....161

Total quantity of grain in warehouses on storage at any one time during the year, 78,000 tons.

The total quantity of grain put on board of vessels out of cars, craft and warehouses for the year, 327,688 tons.

These warehouses were erected under the superintendence of Mr. Ira Bishop, who also invented and patented the bag handling machinery, which was planned and made at the shops of the San Francisco Tool Company at the time, under the management and superintendence of Mr. John Richards.

The engines, boilers and main lines of shafting were made and erected by the Union Iron Works.

It is an agreeable task to write of things seen in a land the visiting of which was a delight, the leaving of which was a regret and the retrospect of which is more than a remembrance. When so many substantial evidences are seen, as now, of prosperity in agriculture, in manufactures and in commerce, we may lament the waste of work and life in the rage for getting grains of gold, but we can feel glad that this has given way to the more peaceful pursuit of raising golden grain. No longer does glitter of metal alone tempt the fortune seeker from Eastern homes and occupation. The insignificant nugget which first met the eyes of James Marshall in the saw-mill race at Coloma, fancy may form into the first link of a golden chain which now represents \$1,500,000,000 of the world's wealth of precious metal. Vast as is this sum, it is trivial when compared with the value of the yield of the soil, and the worth of this is not to be measured wholly by the money which it brings in the world's market.

# THE JAY-EYE-SEE GANG PLOW! PACIFIC GROVE RETREAT, MONTEREY, CAL.

## KING OF THE TURF!

STEEL BEAMS! STEEL WHEELS! STEEL FRAMES!

And best of Hardened Plow Steel Bottoms, with Land Gauge Attachment.

This new departure in the construction of Sulky Plows is fast winning immense popularity everywhere. The J. I. C. Gang, with two 12 or 14-inch bottoms weighs only 600 pounds.

It Cannot be Strained or Broken.

It is the easiest managed Gang Plow, because it has a power lift, and the lowering and raising of the Plows is done by the horses.

## THE JAY-EYE-SEE SULKY PLOW!

Is constructed on the same principle as the Gang, and is made of steel throughout. Weight only 400 pounds. Made with 14 and 16 inch bottoms.

The above Plows are, without doubt, the

**SIMPLEST IN CONSTRUCTION**

And therefore the strongest and easiest managed. Order one on trial and be convinced. Prices same as for iron-frame Plows.

**ARTHUR W. BULL, Sole Agent,**

123 CALIFORNIA ST., SAN FRANCISCO, CAL.

Also Agent for "Racine Chilled" Plows and the "Case" Steel Walking Plows.

## NAPA COLLEGE,

NAPA CITY, CAL.

Fall Session Will Open July 28, 1886.

Faculty Consists of 12 Members.

OPEN TO BOTH SEXES WITH

Classical, Philosophical, and Scientific Courses leading to the degrees of A. B., B. Ph., and B. S.

Preparatory Department Course in Music, Art, and Elocution.

THE SEVERAL DEPARTMENTS ARE IN CHARGE of teachers of experience and ability, chosen with special reference to their work.

The Commercial Department is well provided with facilities for acquiring a THOROUGH PRACTICAL BUSINESS EDUCATION.

Delightful climate, pleasant surroundings, with home on grounds where parents may know that their sons and daughters are carefully guarded, and under the direct supervision of the faculty.

For Catalogue or information, address

A. E. LASHER, President.

California Military Academy, Oakland, Cal.

Special Feature—Commercial Department. Next Term begins July 19, 1886. Send for circular.

COL. W. H. O'BRIEN, Principal.

## BOWEN'S ACADEMY,

BERKELEY, CAL.

First-Class Boarding School for Boys.

Preparatory, Commercial, and Academic Classes.

Preparatory Department, \$30 per school month. Commercial and Academic Department, \$35 per school month.

Next Term will begin Monday, August 2, 1886.

## SACKETT SCHOOL,

Oakland, - - - Alameda Co., Cal.

A Preparatory School for Young Men and Boys.

Next Term will commence on Monday, July 19, 1886.

Healthful location, pleasant home, and thorough School. Send for circular.

D. P. SACKETT, Principal.

## STOCKTON

Telegraph Institute

and

NORMAL SCHOOL.

Open day and evening for both sexes. Expenses less than one-half the usual rates. Excellent board in private families from \$8 to \$10 per month. Address E. C. Atkinson, J. C. BAINBRIDGE, Principal, Stockton, Cal.

## SACRAMENTO

The Business Training School of the Pacific Coast. Graduates assisted in obtaining employment. Send for College Journal. Address E. C. Atkinson, Sacramento, Cal.

INTEREST MADE EASY, the shortest and most practical method, by mail, 50 cents.

## THE WHITMAN PERPETUAL HAY PRESS

BYRON JACKSON,  
Manufacturer of  
HAY STACKERS, RAKES, THRUSHERS, WINDMILLS, PUMPS, HARROWS, ETC.  
625 Sixth Street, San Francisco.

## READ THIS:

EL CAJON, CAL., August 1, 1885.

We have pressed 400 tons with our Whitman Hay Press. We have pressed from 8 to 14 tons a day; in grass hay, from 8 to 10 tons per day with ease; we have pressed in grain hay, 8 tons in 6 hours. In grain hay, bales run from 180 to 240 pounds; in grass hay, 125 to 190. We have pressed 190 pounds with 10 feeds, which the \* \* \* Press cannot do, as their feed box is smaller. Our bales are much smoother and more tightly than those made in the \* \* \* Press. We have averaged 15 tons a day in wild oat hay.

GREGG BROTHERS.

PRICE, \$40.

"ACME" WHEELED The Z. O. 50 P. C.

RAKE

Acme STACKER,

As shown above, with two rakes like this, \$175. The cheapest stacking outfit. Will stack, from swath, 40 or 50 tons per day.

## ECONOMY IS WEALTH! USE BUHACH!

### THE GREAT CALIFORNIA INSECT POWDER.

It exterminates House Flies, Mosquitoes, Moths, Ants, Bedbugs, and all Destructive Insects upon Vines, Fruit Trees, Plants and Shrubbery.

IT WILL PAY TO USE IT, for it reduces the bills for kalsomin-ing, paper-hanging and house cleaning. It preserves from damage clothing, bedding and carpets. It saves and renders productive vines and fruit trees, and renders ornamental plants and shrubbery thrifty and beautiful.

BUHACH IS A NECESSITY in the city residence, the farm-house, the miner's cabin, the hotel, the restaurant, the saloon, the orchard, the vineyard, the poultry yard and stable.

IT IS ECONOMY TO USE IT, as it protects from loss, increases personal comfort and adds to the general happiness.

Manufactured Solely by the BUHACH PRODUCING and MANU-FACTURING CO., 154 Levee Street, Stockton, Cal. Branch Office, 49 Cedar St., New York.

SOLD BY DRUGGISTS AND GROCERS EVERYWHERE.

## ÆTNA HOT MINERAL SPRINGS.

Nearly Identical with the Celebrated Ems of Germany.

For Rheumatism, Neuralgia, Paralysis, Liver and Kidney Complaints, Dyspepsia, Malaria and General Debility, these waters prove highly curative. Situated at the head of Pope Valley, 1400 feet above sea-level. No malaria; no mosquitoes. A fine swimming bath attached. Camp-ing grounds free. Stage leaves St. Helena daily (Sundays excepted) on arrival of A. M. train from San Francisco. For circulars of cures performed and analysis of the waters, address W. H. LIDELL, Proprietor, or S. J. STEUART, Superintendent, LIDELL, NAPA CO., CAL.

TERMS—\$10 to \$12 per Week.

REFERENCES IN SAN FRANCISCO—Ex-Mayor A. J. Bryant, Alvinza Hayward, Prof. W. T. Wenzell, Ex-Lieut. Gov. Machin, D. O. Mills, Dr. G. B. Crane, Rev. Dr. Coyle, Dr. R. H. Plummer, Thomas Agnew, Capt. T. H. Barber, Prof. A. J. Becur.

Fall Term Begins Monday, August 2, 1886.

Full Seminary Course of Instruction given. Pupils fitted to enter the State University and Vassar or Smith College. SEND FOR CIRCULAR

MARY E. SNELL,  
RICHARD B. SNELL, } Principals.

## The Fell Field Fire.

As the fields get dry at mid-summer, the yearly reports of wasting fires flock in. Our exchanges the past fortnight have been bringing sorry tales of crops turned to smoke and ashes. From Los Angeles and Tulare counties, all along up the San Joaquin valley, through Fresno, Merced and Stanislaus, come accounts of how the flames were discovered, how they made headway and devoured grain and stock and pasture, or were checked and subdued by the quick-rallying, hard-fighting ranchers.

Some of these conflagrations have proved exceedingly costly. Near Horr's ranch, on the 18th of June, several thousand acres of grain were destroyed; at Los Banos, two days later, 3000 acres, the damage being estimated at \$25,000; and at Altamont, Alameda county, that same Sunday, wheat, barley, hay and grass were consumed to the value of \$15,000 or \$20,000. Here and there, a header or harvester was burnt up. In one instance a horse was so badly roasted that it was necessary to kill him; and some of the stubborn fire-fighters themselves were severely scorched.

The losses were in some cases covered, or partly covered, by insurance; in others, hapless renters saw the result of their year's toil annihilated in an hour. But in any case, so much labor was lost.

These disasters are ascribed to various causes. Malicious incendiaries and wanton tramps are, perhaps, chargeable with a few; thoughtless boys at play and reckless campers have started others; sparks from a passing locomotive are believed to have kindled more than one, and the hot journal of a header is debited with 70 acres near Los Angeles.

But carelessness on the part of some one—employer, hired man or visitor—especially in dropping matches when the cigar was lighted, or in throwing away the stump when he had had his smoke, appears to deserve the blame for far the greater part of all these cruel, disheartening calamities.

We leave it for our readers to draw the lesson and point the moral.

**SANITARIUM IMPROVEMENTS.**—The Rural Health Retreat, at Crystal Springs, near St. Helena, has hitherto been conducted as one of the best and most successful sanitariums ever attempted in California. Lately its capacity has been increased some one-third by the addition of 18 rooms for guests and patrons, enlarged departments and apparatus for bathing, and a good-sized hall for gymnasium and other purposes. These, with other improvements about the place, with its effective management and attentive corps of helpers, every one of whom is interested in the welfare of their patrons, insure the permanent success of the institution. We consider the Retreat, in its beautiful location and honest deportment, the most successful institution ever attempted in this part of the Union for the benefit of its sick and over-worn guests who come from all parts of this coast and the United States.

**THE CYCLONE WINDMILL.**—The "Cyclone," built by the Pacific Manufacturing Company at Santa Clara, is the result of years of study by one of the best practical windmill-men in the United States. Claiming to be less complicated and more durable than any other mill in the market, it is also thoroughly self-regulating, and when the force of the wind reaches a certain point, an automatic latch locks the vane parallel with the wheel and stops its running. The power, too, is applied to the pump with a minimum of friction. Preferring a small profit on many sales to a large profit on few, the proprietors have cut the prices down to \$65 and \$75 for 12 and 14-foot mills respectively. If you need a windmill, we would refer you to the advertisement in another column, and the descriptive circulars issued by the company.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
J. J. BARTLETT—San Joaquin Co.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
GEO. McDOWELL—Santa Clara and Santa Cruz Co's  
J. B. PATCH, Nevada and Utah.  
M. S. PRIME—Shasta Co.  
FRANK W. SMITH—Oregon and Wash. Ter.  
A. CALDERWOOD—Napa Co.

**FENCING.**—One of the largest and most unnecessary wastes of forest products is in fencing. "Fencing in" instead of "fencing out" animals should be the object of fences. Such is very generally the case in this State, particularly in its southern portion. The rule should be made general everywhere. It would save a mint of money and conserve immensely our forest products.

## The Pacific Rural Press.

*The Leading Agricultural Home Newspaper  
and standard authority on all branches  
of California Agriculture.*

It is the chief medium for the dissemination of information concerning fruit-growing in California.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes; "The greatest praise that could be bestowed on the RURAL PRESS at the late Fruit-Growers' Convention, and which shows, undoubtedly, the well deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

It is a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest. It is handsomely printed and illustrated. It is a 20-page weekly, and is furnished, postage paid, for \$3 per year in advance. Single copies, 10 cents, prepaid.

Established 1870. Yearly subscription \$3. Send for samples. Address,

DEWEY & CO., Publishers,  
No. 252 Market Street, San Francisco.

## Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1). . . . . \$0 25
- 2.—World's Cyclopedia, 794 pages, 1250 illustrations; (exceedingly valuable). . . . . 50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt. . . . . 50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated. . . . . 25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations. . . . . 05
- 6.—To NEW SUBSCRIBERS, 12 select back Nos. of the RURAL PRESS, "good as new". . . . . Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by Mallie Stafford. . . . . 25
- 10.—Life Among the Apaches, 322 pages, stiff cloth. . . . . 25
- 11.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application. . . . . 25
- 12.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.). . . . . 5
- 13.—European Vines Described, 63 pages. . . . . 05
- 14.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable. . . . . 50
- 15.—Architecture Simplified, 60 pages. . . . . 15
- 16.—Beautiful Poetic Review, entertaining and instructive, 35 pages (a handsome and pleasing present). . . . . 25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F. Send for any further information desired. Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

## The Hay Press Suit.

QUINCY, ILLS., U. S. A., June 24, 1886.  
PACIFIC RURAL PRESS, San Francisco, Cal.  
GENTLEMEN: We take pleasure in informing you that the suit, Dederick vs. Ertel, in the U. S. Circuit Court at Springfield, Ill., has been dismissed by the complainant, and at his costs, 22nd inst. Yours truly,  
GEO. ERTEL & CO.

OUR subscription rates are three dollars a year, in advance. If continued subscriptions are not prepaid, in advance, for any reason, twenty-five cents extra will be charged for each year or fraction of a year. No new names placed on the list without cash in advance. Subscriptions delinquent up to March 1, 1886, will be charged fifty cents per annum up to that date. After that date, at the rate of twenty-five cents per annum.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

## Rural Health Retreat, St. Helena.

At Crystal Springs, near St. Helena, under the above title, is one of the best conducted sanitariums in the United States. Its managers are determined to make it one of the leading and most thoroughly conducted health and pleasure resorts on this coast. It is not designed as a money-making institution, but a pleasant rural home for all worthy classes who seek health, rational amusement and genuine recreation.

We herewith give a good illustration, drawn from photographic views, of the hotel, or main building. Its location commands one of the most lovingly beautiful and "constantly delighting" views to be found in all California. The air is pure and healthful. There are several new and commodious cottages, equally favorably located, connected with the retreat. The aim of the institution is not simply to restore the health of its patrons, but what is often more important, to enable them to retain it and avoid illness in future.

Its situation cannot be surpassed for beautiful scenery and convenience of location from San Francisco. It is on the slope of the Howell mountain range, overlooking Napa valley, and almost overhanging, as it were, the eastern suburbs of St. Helena. Howell mountain has long been reputed as one of the choicest localities in the State for health-recuperating qualities, and is yearly gaining in popularity.

The pure, soft water of Crystal Springs would be a great desideratum in any home. The Retreat is under the management of Elder J. D. Rice, who gives constant, careful and conscientious attention to his duties. He is well supported by faithful and competent assistants.

J. S. Gibbs, medical superintendent, is a graduate from a thorough medical and surgical course in New York city, where he afterward had nine years' practice. He was recently associated with Dr. J. H. Kellogg, superintendent of the Medical and Surgical Sanitarium, at Battle Creek, Mich., said to be the largest institution of the kind at present in the world. Dr. Gibbs has associated with him Dr. W. P. Burke, a graduate from Ann Arbor, Mich., and Cooper, Cal., Medical College.

We advise those wishing further information, who cannot conveniently at once visit this place, to address "Rural Health Retreat, Crystal Springs, St. Helena, Napa county, Cal."

## A Safeguard.

The fatal rapidity with which slight Colds and Coughs frequently develop into the gravest maladies of the throat and lungs, is a consideration which should impel every prudent person to keep at hand, as a household remedy, a bottle of AYER'S CHERRY PECTORAL.

Nothing else gives such immediate relief and works so sure a cure in all affections of this class. That eminent physician, Prof. F. Sweetzer, of the Maine Medical School, Brunswick, Me., says:—

"Medical science has produced no other anodyne expectorant so good as AYER'S CHERRY PECTORAL. It is invaluable for diseases of the throat and lungs."

The same opinion is expressed by the well-known Dr. L. J. Addison, of Chicago, Ill., who says:—

"I have never found, in thirty-five years of continuous study and practice of medicine, any preparation of so great value as AYER'S CHERRY PECTORAL, for treatment of diseases of the throat and lungs. It not only breaks up colds and cures severe coughs, but is more effective than anything else in relieving even the most serious bronchial and pulmonary affections."

## AYER'S Cherry Pectoral

Is not a new claimant for popular confidence, but a medicine which is to-day saving the lives of the third generation who have come into being since it was first offered to the public.

There is not a household in which this invaluable remedy has once been introduced where its use has ever been abandoned, and there is not a person who has ever given it a proper trial for any throat or lung disease susceptible of cure, who has not been made well by it.

AYER'S CHERRY PECTORAL has, in numberless instances, cured obstinate cases of chronic Bronchitis, Laryngitis, and even acute Pneumonia, and has saved many patients in the earlier stages of Pulmonary Consumption. It is a medicine that only requires to be taken in small doses, is pleasant to the taste, and is needed in every house where there are children, as there is nothing so good as AYER'S CHERRY PECTORAL for treatment of Croup and Whooping Cough.

These are all plain facts, which can be verified by anybody, and should be remembered by everybody.

## Ayer's Cherry Pectoral,

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.  
Sold by all Druggists.

## HOPKINS ACADEMY.

OAKLAND, CAL.

## Calf Feeders

AND WEANERS

For Rearing Stock by Hand.

Both Proved Successful and Indispensable.

Funk's Calf Nipple is just as important for calves as the nursing bottle is for children. The saliva fluid is necessary for proper digestion of the food, and without the Nipple the calf drinks too fast, takes the milk in bulk and causes bloating, scours and indigestion. The Feeder was invented to raise better calves with less trouble. No air swallowed, no fingers chewed, no ears sucked. It teaches the calf to feed from the pail without assistance. The Nipple always connects with the milk and the calf will soon wean itself. Price, 75 cents; post-paid, 85 cts.

## Rice's Patent Calf Weaner,

AND SUCKING-COW MUZZLE,

Prevents Calves and Cows Sucking Themselves or Each Other.

Habits most injurious to the animal and costly to the owner. It is no hindrance to either eating or drinking, does the animal no injury, has been thoroughly tested, is used and endorsed by the best stock raisers in the United States and England, approved of by the Royal Society for the Prevention of Cruelty to Animals, and acknowledged by all to be the best thing ever made for the purpose.

PRICES.—For Calves, 50 cents; post-paid, 55 cents. Yearlings, 75 cents; post-paid, 80 cents. Full-grown animals, \$1.00; post-paid, \$1.12.

## TEBBETS' IMPROVED MILK TUBE,

Has proved an entire success, for the relief and permanent cure of Garget, or stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Farmers are well aware that cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the Spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the result of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal. We guarantee them to be made of COIN SILVER. A single tube answers for an entire herd, and is cheap insurance against loss. Price, 75 cents each, post-paid.

## Edson's Cream Tester.

A DAIRYMAN'S PRACTICAL INVENTION.

Consists of a frame holding six glass tubes graduated at the sides of the glass so as to show the per cent of cream in freshly-drawn milk. The frames are substantially made of wood, carefully graduated, and the glasses easily removed for cleaning. Actual tests prove that common or grade cows give equally as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to have common stock do this, they must be bred from deep and rich milkers, the bull as well as the heifer, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise bulls from. It is calculated that 20 pounds of milk will make one pound of butter, but instances have been known where 12 pounds made one of butter, thus showing that it is not the cow that gives the largest flow of milk that produces the most butter. It should be our aim to get a large flow of very rich milk. How should we do this? By testing our milk, and only keeping and raising stock from cows that give not less than 15 per cent, and it would be better to say 20 per cent of cream. By this method, you would soon have a dairy of cows that would be a pleasure as well as a profit to you. Price of Testers, \$1.00 each; Large Size, \$2.00. ADDRESS

G. G. WICKSON & CO., 38 California St., San Francisco.

## MERY'S IMPROVED PIONEER BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT!

This Mill has been in use on this Coast for 5 years, TAKEN THE PREMIUM AT THE STATE FAIR

Los Angeles, Cal.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.

TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions:

To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President.

EDWIN F. SMITH, Sacramento.

## S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, June 30, 1886.

Trade is dull. The approach of the National holiday and the general disposition to wait until conditions of supply and demand in different crops disclose themselves more clearly, naturally tends to make things quiet. It is not yet settled that there will be such an immense amount of wheat in the world as buyers would have it believed. Our latest mail advices bring the wheat review of Mr. H. Kain Jackson in the London *Farmer* of June 7, in which he says:

It is not yet at all an assured fact that the beginning of a new cereal year will find the world weighted with a superabundance of wheat. America is likely to exceed her yield of 1885 by ten million quarters, but the yields of England and the continent are by no means secure. Even in Southern Europe a fair July is needed, and in France and Germany a fair July is needed. The English harvest will not be safe till August is past, and the present aspect cannot be said to promise an average crop. In India there has been a good yield, but the crop was needed badly by the inhabitants of India itself, as well as by the shippers at the ports. At Lahore, before harvest, prices had risen to 24s per quarter, which with railway and freight charges, estimated at 18s per quarter, equal 42s on the English exchange. This price showed clearly that wheat reserves were used up. We must again caution our readers against being too much depressed by those who have wheat to buy or bags to sell. The disposition in either case is to exalt the probable aggregate of wheat and define values accordingly. The latest by cable from abroad is the following:

LIVERPOOL, June 30.—WHEAT—Steady, California spot lots, 6s 4d to 6s 7d; off coast, 32s@32s 6d; just shipped, 33s; nearly due, 32s 6d; cargoes off coast, firm; on passage, quiet but steady; Mark Lane wheat and Maize, quiet; English country markets, quiet; French, firm; wheat and flour in Paris, quiet.

## Foreign Review.

LONDON, June 28.—The *Mark Lane Express* in its review of the British grain trade for the past week says: The welcome summer weather has had a marked effect on crops, but it came too late to save a large proportion of the cereals. The outlook, except for the best wheat districts, has been very discouraging. Trade has been in favor of buyers. Sales of English wheat during the week were 37,795 quarters at 31s 1d, against 34,746 quarters at 32s 8d during the corresponding period of last year. In flour, trade is exceedingly dull. Foreign wheats have favored buyers. Foreign flour is cheaper, especially American. Twenty-seven cargoes of wheat arrived, 7 were sold, 3 withdrawn, and 14 remained, including 9 of American. In trade forward there is no inquiry. At to-day's market wheat was dull and 6d lower. Flour was dull and 6d lower.

## London Wool Sales.

LONDON, June 28.—There was an average attendance at the wool sales to-day. Prices were firm.

## New York Wheat Market.

NEW YORK, June 27.—The close was heavy at bottom figures, with losses of 1/4 of a cent for July at 84 cents and August at 84 1/2 cents; 1/2 of a cent for September at 84 1/2 cents; October at 85 1/2 cents; November at 86 1/2 cents; and January at 88 1/2 cents, and 3/8 of a cent for December at 87 1/2 cents.

## Eastern Wool Markets.

NEW YORK, June 27.—The market continues about the same as a week ago. The caution and apparent indifference of a portion of the trade, as well as a large number of manufacturers, remains a noticeable feature, although within a day or two signs of increasing interest among actual consumers have been noticeable, and attempts to depreciate the improvement fail rather flat in the face of the large movements of supplies and fuller rates obtained at all points. Among the sales were 2000 pounds of spring California at 21 cents. In the Boston market the buying of manufacturers has been but little if any larger than for the two previous weeks. Among the sales were 2000 pounds of Territory at 23 to 24 cents. In the Philadelphia market firmness was well sustained, with some slight advances. Among the sales were 10,000 pounds of scoured California at 50 to 57 cents.

## New York Hop Market.

NEW YORK, June 27.—The market remains strong and is fairly active. Interior reports continue to speak of the presence of vermin to an extent that seriously threatens the crop. There is a probability that strictly choice goods might realize 12 cents cash, but 100 bales of very good quality actually sold at 11 cents; Pacific coast crop of 1885, common to choice, 5 1/2 to 10 cents.

## Local Markets.

BAGS—The syndicate prices are still nominally as follows: Calcutta Wheat, spot, 10c; buyer June, 10 1/4c; buyer July, 10 1/2c. Potato Gunnies, nominal; Wool Bags, 29@32c. The market is quiet, however, and as bags are offered outside the ring for 9c, the corner is not working very actively.

BARLEY—Our quotations show a reduction from last week. The market is quiet. Call sales have been made as follows: Buyer '86, after August 1st—100, 83 1/4c. Seller '86—100, 77 1/4c. Seller '86—200, 78 1/4c; 200, 78 1/2c; 200, 78 3/4c; 100, 78 1/2c; 100, 78 3/4c; 300, 79c.

BEANS—Beans are doing better, and an advance has come in nearly all kinds but Limas, which are nominal. Dried peas are lower all around.

CORN—The market is still running on western corn, there being no California in sight. Prices are unchanged.

DAIRY PRODUCE—An improvement has come in both butter and cheese, as noted below.

EGGS—Eggs have sharply advanced several cents per dozen. California eggs are very scarce, and Utah and Western by rail are bringing high prices.

FEED—Bran is \$1 lower per ton. Hay is quiet and in good supply, though extra choice lots sell high. Quotable as follows: Alfalfa, 56@59; barley, 56@58; oat, 57@59; wheat, 59@12 1/2 ton; extra choice, do, 53@14.

FRUIT—Descriptive notes are given below.

HOPS—Hops are showing more life, and dealers report contracts for coming crop at 9 to 10c per lb. This is no price, and growers should not be misled by early contracts for single bales made to influence values. The great reduction in crop should make hops valuable this year.

OATS—Oats are abundant and quiet at unchanged prices.

ONIONS—Onions are doing better this week, owing to light supplies.

POTATOES—Potatoes have improved during the last few days, and good lots are selling well.

PROVISIONS—Lard is reported weaker. Bacon and hams are firm and in good shape. Our list shows an advance of 1/4c per lb. on all grades of hams.

POULTRY AND GAME—Turkeys have the lead this week at an advance. Other fowls are lower.

VEGETABLES—Descriptive notes will be found below.

WHEAT—Wheat is quiet and expectant. Ruling rates are lower than at our last report, as shown in our list. Call sales have been made as follows: Buyer season—300, 1.27 1/2; Buyer '86—300, 1.24 1/2; 200, 1.24 1/2; 300, 1.24 1/2. Seller '86—400, 1.17 1/2. Buyer '86—300, 1.24 1/2. Seller '86—100, 1.17 1/2.

WOOL—The improvement continues and the world's markets are all promising. Fuller notes will be found below.

[COMMUNICATED.]

## Market Information.

## Livestock.

The market has a stronger tone but no higher for beef cattle. The offerings are not liberal for this market. Heavy purchases are reported in the interior on speculation and for shipment to the East. An attempt was made to advance mutton, with success in Oakland, but in this city there is no advance although some butchers report having paid half a cent advance for wethers. The market would be higher the next two months were it not the fear that a large firm's killing 30,000 head of sheep within that time will keep the market down, as the firm, so we are informed, is not disposed to advance the price. In hogs an attempt was made to establish an advance, but free offerings and an inactive demand tend to keep prices down. The market for horses is quiet, with no urgent demand reported in any quarter. The demand for matched horses, for general use, is fair at from \$400 to \$600 a span. Quite a number of medium size work horses were sold the past week at from \$100 to \$150 each.

Lambs closed strong, with an advance likely to take place the last of the week.

The following are to-day's meat prices: Beef—Stall fed 6 1/4@7c lb; grass fed, extra, 6 1/4@6 1/2c; first quality, 5 1/2@6c; second, 5@5 1/2c; third, 4 1/2@4 3/4c. Calves, small, 7 1/2@8 1/2c; larger, 6@6 1/2c lb. Mutton—Ewes, 4@4 1/2c; wethers, 4 1/2@5c. Lamb—Spring, 5 1/2@6c lb. Pork—Live hogs on foot, 4@4 1/2c for both grain and dairy fed; 2 1/2@2 3/4c for soft; dressed, 6@7c for hard, and 4@5c for soft. Grass-fed stock sold on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Bags.

The demand is reported to be less than it was claimed would be. Several reasons are assigned; viz., farmers are slow to make purchases, believing the prices asked are too exorbitant and that values are apt to rule lower in the months of July and August. It is reported that bags are offering on this market from unexpected quarters which disturbs the pool. Sales have been made of Calcuttas as low as 8 1/2 cts cash in round lots. The bag pool is endeavoring in all manner of ways to keep prices up and dispose of their holdings at a big profit.

## Dairy Product.

Butter has ruled steady and firm throughout the week, with choice to extra choice grades fetching an advance on top quotations. Outside or distant orders are light, owing to the very low (lower than ever before known) price ruling at the West for creameries, allowing many sections heretofore supplied by this market to draw supplies from Chicago.

Cheese has been and continues very weak under heavy supplies and a strong selling pressure.

Turkeys advanced last Friday fully one to two cents a pound. As receipts are still light, prices will probably not go lower.

Hens, roosters, broilers, ducks and geese ruled barely steady up to Tuesday, when they all weakened off. The consumption is very light, not more than one-third of what it was last year at this time.

Poultry closed strong to-day, with sales of some choice fat hens at \$7.50 and even \$8.00 a dozen.

## Cereals.

The English wheat market sold 6d per quarter lower for cargoes off coast and nearly due, and 2d per cental lower for spot. The decline was not unexpected and was discounted before it took place by buyers in this market.

The local wheat market ruled weak up to Monday, when an improved tone set in, in sympathy with a better feeling abroad. Sellers in our market do not appear disposed to press sales, thereby keeping values fairly steady with an advance paid at times by buyers to meet an urgent want.

Barley has ruled weak and inactive in this market, but in the interior higher prices have been and are still paid than here. Heavy purchases are reported to have been made for New York, and western account. The grade wanted is from 45 up. Old brewing barley is very scarce with higher prices paid.

Letters received the past few days from points on the west side of the San Joaquin, and from different places in Colusa, Sutter, Butte and Yolo counties, report much more damage to crops by the hot winds than had been estimated. It is safe to say that the crop of the State has been damaged all of 10 per cent and may reach 15. It now looks as if this

State's surplus for export the season of 1886-7 will not be much more than the exportable surplus of 1885-6. The yield will be more this year, but the carry-over of old wheat and flour will be about 225,000 tons less.

The consumption of barley is very heavy, all of one-half more than last year at this time. So that although we have a larger crop, yet the increased consumption will offset the increased yield.

Oats are in light stock, which with light supplies keep prices steady.

Private cables from Liverpool, received to-day, give the wheat market strong, with an advancing tendency. Our market is strong with \$1.22 1/2 bid this afternoon for No 1 shipping.

## Vegetables.

As indicated in last week's report, both potatoes and onions are stronger, with an advance of 10 to 15 cts obtainable.

Asparagus and rhubarb are hardly worth quoting, owing to very light receipts. The same can be said of peas.

String beans have been a drag, with very low prices ruling. The canners are still buying. Yesterday, the market was cleaned up on green peppers at an average price of 8 cts per pound.

Cabbages are still in active demand for shipping, causing the gardens to be kept well cleaned of all desirable heads.

## Fruits.

Apricots have continued in heavy receipts, but prices were maintained with an advance obtainable, owing to heavy shipping, local and canning demands. On Monday over 8000 boxes of apricots were received, yet they sold at a better figure than on Saturday.

Plums are coming in more freely, with the quality beginning to show an improvement. Prices ruled steady.

Apples have been advancing, with astracans sold to-day at \$1.75@2.00 a box and \$2.25 asked.

Peaches jumped up to \$1.65 a basket for choice on wharf, but since fell back, with \$1.10 the top to-day.

Pears are coming in more freely, but the quality being poor, they do not attract attention. Choice will go as high as \$2 to \$2.50 a box for Bartlett's.

Currents have sold for more money. Large, well-conditioned have sold up to \$3.50 a chest with a quick demand. The range was \$2.25 to \$3.50.

Raspberries, strawberries and blackberries have moved off freely, but at lower figures, with canners buying. Receipts have been more liberal of raspberries and blackberries.

Oranges are lower and very weak. Common Los Angeles are hard to sell at over \$2.25.

Limes are strong, owing to the pool not offering on the market only enough to meet the demand.

## Wool.

The market is again higher, with heavy sales reported at the advance. All of 1 to 1 1/4 cents advance is obtainable on last week's prices. This advance was fully set forth in the *RURAL PRESS* early in the season, and if growers sold at low prices they can only blame themselves. Several clips of medium to fine wools, fair length, clean and healthy, sold at over 24 cents, with some reported at over 25 cents per pound.

## Miscellaneous.

The tonnage-movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	305,637	20,861
In port, disengaged.....	31,731	93,858
In port, engaged.....	43,900	19,288
Totals.....	381,268	311,007

The above gives a carrying capacity as follows: 1886, 615,028 short tons; 1885, 497,711 short tons. Increase over last year, 117,317 short tons.

Hops are very strong, with 11 cents freely bid for future delivery; but growers are not contracting, as crop advices at the East and in Europe are unfavorable.

Choice to extra choice hay continues to rule very strong, with some sales afloat at \$13.50 per ton—jobbed out at an advance. The market at the close to-day was weaker under freer offerings.

Hams and bacon are very strong, with another advance obtainable. The stock is light and demand active.

Bran and middlings, under heavy receipts, are weak and lower.

San Francisco, June 30, 1886.

J. E. F.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

## FRESNO COUNTY.

## "BRIGG'S SELMA TRACT"

## THIS COLONY

Has been subdivided into 20-acre lots with convenient ROADS AND DITCHES on the land. Situated 1½ miles N. W. of SELMA (a fast-growing Railroad town 15 miles S. W. of Fresno and the second in the County) and 2 miles S. of Fowler, also a Railroad town.

IT IS FIRST-CLASS

**Fruit, Vine, and Alfalfa Land,**

Some of it being specially adapted to Gardening. It has

SUPERIOR WATER PRIVILEGES,

Having a main Canal 60 feet on the bottom, running through the land and all necessary main distributing ditches, making it a very desirable location for a Colony, as its

WATER AND RAILROAD FACILITIES

Cannot be surpassed in the County.

## TO BE SOLD CHEAP,

AND ON EXTREMELY EASY TERMS TO ACTUAL SETTLERS.

## HOME SEEKERS!

DON'T MISS THIS OPPORTUNITY!

Correspondence solicited and lands shown free of charge.

L. SHARPE, Selma, Cal., or O. J. WOODWARD, Fresno, Cal.

## San Diego County! El Cajon Rancho!

16,500 acres, known as the Jarvis Tract, situated 13 miles from San Diego, surrounded by high hills, protected from winds and fogs—the most equable climate in the world—rich soil and lovely surroundings. Will be offered as a whole or in subdivisions, from 10 acres upward, at prices according to desirability, from \$10 to \$75 per acre, part cash, balance on time. The wonderful Raisins and Olives grown in this valley command the admiration of every one. Water from 6 to 12 feet. No irrigation, and Fruit and Raisins cured by solar heat. All the Semi-Tropical Fruits raised to perfection.

Also 1000 acres, the Smith Tract, adjoining, now in grain.

R. J. PENNELL,

San Diego, California.

## The American Churn

Excels in the art of Churning,  
Washing, Salting and  
Working Butter.

THE AMERICAN IS PERFECTLY CYLINDRICAL IN FORM, leaving no possible opportunity for cream to stick to corners (as is invariably the case with other than round churns); thus works easily, rapidly, and will not make streaked butter. There is no partially churned cream mixed with the butter to make it streaked or impair its keeping quality. The dasher follows the radius of churn body loosely while the blades give the cream a rapid counter-current to and fro movement, agitating the cream thoroughly and making granular gilt-edge butter in from 2 to 10 minutes.

TRY AN AMERICAN CHURN.

We Guarantee Satisfaction.

And will send on trial to responsible parties

## THE PACIFIC ASYLUM,

STOCKTON, SAN JOAQUIN COUNTY, CAL.

PRIVATE ASYLUM for the Care and Treatment of Mental and Nervous Diseases.

The Proprietary Institution called THE PACIFIC ASYLUM, where the Insane of the State of Nevada have been kept for several years, was opened as a PRIVATE ASYLUM for the care and treatment of Mental and Nervous Diseases, on the 10th of August, 1882, the Nevada patients having been removed to the new State Asylum at Reno. The buildings are capacious and comfortable, having been constructed for the accommodation of over 200 patients, and they are pleasantly situated in the suburbs of Stockton, and are surrounded by attractive grounds of 40 acres in extent, with cultivated gardens and pleasant walks. Its advantages over public institutions in facility of admission and procuring extra accommodations, if required, are obvious. For terms and other particulars apply to the proprietor and Superintendent, DR. ASA CLARK, PACIFIC ASYLUM, STOCKTON, CAL. ASA CLARK, M. D.  
REFERENCE—Dr. L. C. Lane, San Francisco.

Also Myrobalan Plum and Pear Seedlings, home grown. Address W. H. PEPPER, Petaluma, Cal.

## "STAMMERING"

Permanently and Thoroughly Cured.

TESTIMONIAL.

New Jerusalem, Ventura Co., Cal., Apr. 16, 1886.

For twenty-three years I had been afflicted with Stammering. After two months' instruction under Professor Whitehorn, No. 1 Fifth St., S. F., I cannot express my feelings of gratitude for being relieved of my affliction. I now have full control over my articulation, and can talk well. I think there can be no method of treatment more perfect for the cure of impediments in speech than Prof. Whitehorn's, and earnestly request all Stammerers to avail themselves of his instructions.

HARVEY WALBRIDGE.

All Impediments of Speech permanently and thoroughly cured. Highest Testimonials.

PROF. J. WHITEHORN,  
No. 1 Fifth Street, San Francisco.

Are you using Wellington's Improved Egg Food for Poultry? If not, why not? Every Grocer, Druggist and Merchant Sells this Egg Food.

## Price Hay Press Co.

SAN LEANDRO, CAL.

## THE JUNIOR MONARCH Self-Tramping Hay Press.

PRICE, \$500.

Patented July 22, 1884, by JACOB PRICE, and manufactured solely by the PRICE HAY PRESS COMPANY, at San Leandro, Cal., has the following

RECORD:

31 Tons (259 Bales) in one day (13 hours);  
136 Tons in one week, 20 Tons  
per day average for weeks  
together.

## THE GENUINE PRICE

(Petaluma) HAY PRESS

With Latest Improvements (Price, \$350),

Invented by JACOB PRICE, and manufactured by the PRICE HAY PRESS CO. at San Leandro, Cal., has for 20 years past been the leading Press of the Pacific Coast, and though now displaced in the large Hay-producing sections by our rapid Self-Tramping JUNIOR MONARCH, is still in large demand back in the hills, on account of its cheapness. We have got them up in splendid shape this year, having imported Eastern Hard Maple for their construction. We have them made of White Oak also.

For Large Illustrated Catalogue of the finest line of Hay Presses in the United States, address me at SAN LEANDRO, CAL.

JACOB PRICE,  
Superintendent PRICE HAY PRESS CO.

## American Fruit Evaporator.

SUPERIOR TO ALL OTHERS IN

DRAFT.—Its air currents pass unobstructed by trays over and under all fruit.

CONSTRUCTION.—Best wire cloth in trays. Trunks bolted solidly together. Every machine either left or right-handed. RANGES of sizes. RATE, ease and economy of work. PRICES.—Nothing cheap but price. Illustrated manual free. Correspondence solicited.

H. C. BRISTOL, General Agent,  
FRANK BROS., 319 Market St., San Francisco.

## THE ELLIOTT,

No. 110 EDDY ST., bet. Mason and Taylor, SAN FRANCISCO.

A First-Class Lodging House,

Located in a new building with all modern improvements and newly furnished with elegant furniture.  
Accessible to seven street car lines, leading to every part of the city, and is within a few minutes' walk of ten restaurants and four theaters and places of amusements.  
Rooms let by the day, week or month, en suite or single, at reasonable prices. People visiting the city can be accommodated with board by the meal, if desired.  
MRS. J. C. JONES, Proprietor.

## RUPTURE

Positively cured in 60 days by Dr. R. HORNE'S Electric Truss. Scientific, Powerful, Durable, Comfortable and Effective. Avoid frauds. Over 1,000 cured. Send \$1.00 for pamphlet. ALSO ELECTRIC BELTS FOR DISEASES.  
DR. HORNE, INVENTOR, 702 MARKET ST., SAN FRANCISCO.

## Concrete Apparatus

RANSOME, 402 Montgomery St., S. F. Send for Circulars

# TRUMAN, ISHAM & HOOKER.

The "Wild Irishman" Tricycle Plow.

Three Sizes: 12-inch.....\$85.00  
14-inch.....87.50  
16-inch.....90.00

Terms: Note payable Jan. 1st, '87, without interest.

Each Plow has a Rolling Coulter and Extra Share.

This Plow is attracting great attention. There is no side draft or pressure on the horse's neck. Will turn a square, clean corner without raising. Don't fail to examine this Plow. Gave great satisfaction last season.

The Fleming Boss Stacker.

Boss Stacker, \$80. Boss Rake, \$50.

The Fleming Boss Stacker and Rake is without doubt the most economical method of stacking hay or straw. The Rake is used instead of Sulky Rake, go-devil or buck. One man on the Rake, and a man and boy with a team, will stack more than 15 men with ordinary implements. It pays to buy this. Don't neglect the opportunity to secure the best implement in the world, at the makers' cost to build.

We have the FINEST CARRIAGE REPOSITORY ON THE PACIFIC COAST. Agents for David Bradley Mfg. Co. A full stock of Plows, Cultivators and Harrows on hand. Also a full line of Extras. Agents for McCormick Mowers, Reapers and Twine Binders, Randolph Headers, and John Dodd's Rake. Send for 1886 Catalogue. Address

The "SUPERIOR" GRAIN DRILL  
BEST DRILL IN THE MARKET.

No Clogging or Chocking Up.

Can be worked in trashy or on ground where other kinds will not.

This is the Cheapest Drill, because it saves an returns more for the investment.

MONARCH HAY PRESS,  
\$600.

Fastest and Best Press on Record!

Hay baled with the Monarch last year brought from \$1 to \$2 per ton more in the market than that baled in other presses.

Glidden's New Pattern "Superior" Barb Wire.

The Latest Improvement in Barb Wire—Made Entirely of Steel.

The strongest, lightest, best, and most easily seen by man and beast. Each ounce in weight makes a difference of \$1 per mile for each strand used. Hence a four-strand fence a mile in length, made from wire weighing 20 ounces per rod, will cost \$12 more than the same length of fence if made from wire weighing 17 ounces per rod. Before you purchase your wire look over these figures. It will pay you to buy the "Superior" or "Acme;" the advantages they possess are many, and the quality is guaranteed.

CLIMAX HAY PRESS.

Weight 2200 lbs. A crew of three men—four can be used to advantage.

Five ropes are used on the bales. Capacity 10 to 15 tons per day. The best press for the money in the world.

Price, \$300.

BUY THE BEST!

THE MILBURN WAGON.

MILBURN HOLLOW IRON AXLE WAGON.

The Lightest, Strongest, and Cheapest Wagon in the World.

WHEELS RUN THROUGH BOILING OIL. BUY NO OTHER.

Forty thousand in use, and only six have been in any way disabled; axles slightly bent—not one broken. True merits lead. Read our Guarantee.

## THE DANIEL BEST IMPROVED Grain Separator

(Known as the Oregon Cleaner)

Has proved itself to be the only  
Cleaner that Successfully Cleans  
the Grain from the  
Thresher.

Every Mill is GUARANTEED and it should be inspected by every intending buyer before purchasing elsewhere.

I also build a Cleaner for Combined Harvesters. Fanning Mills and Warehouse Mills of large capacity.

For further particulars send for ILLUSTRATED CATALOGUE.

**DANIEL BEST,**

Successor to BEST & ALTHOUSE,

513 Fifth Street, Oakland, Cal.

**BURNHAM'S ABIETENE!**

NO COMPOUND, but Nature's Remedy for Rheumatism, Neuralgia, Throat, Lung and Kidney troubles, a Specific for Croup. Every family should have it. Beware of imitation. The genuine article has the name of WM. M. BICKMAN, Druggist, Stockton, on the label.

TWENTY-PAGE EDITION.

SINGLE COPIES, 10 CTS.

#### A New Plum.

We give on this page an engraving of a new plum, which is expected to be of much value at the East, and will therefore interest California growers. Whether it would prove of value here, where we can grow so many varieties which do not succeed at the East, and consequently have a much larger test than they have, is of course a question which can only be determined by growing it in comparison with the other kinds we have. As a new candidate for notice in the horticultural world we give it place in our columns.

The Shippers' Pride plum originated in the State of New York, near Lake Ontario, and from what can be learned, it has stood the coldest Eastern winters without injury. The tree is described as an unusually thrifty grower, sometimes making a growth of over eight feet.

Its productiveness seems to be an established fact, the original tree having never failed to produce a good crop since it was old enough to bear, and some seasons so large as to need support to prevent the branches from breaking. The fruit is of large size, it being no uncommon occurrence to find specimens measuring two inches in diameter each way, as it is nearly round; it is what Mr. Charles Downing called a semi-cling, of a handsome dark purple color, excellent for canning, and an unusually good shipper, arriving at its destination in good order, and keeping for a long time in excellent condition. Some specimens, said to be below the average, were sent to the meeting of the American Pomological Society, at Grand Rapids, Mich., last fall, and elicited much commendation from their large size and handsome appearance. The Shippers' Pride ripens at the East from the first to the middle of September. It seems to combine many if not all of the essential qualities of a market plum. The variety has been propagated for sale by H. S. Anderson, of Union Springs, New York. It has apparently secured the favor of the leading Eastern fruit experts. The late Charles Downing said of the plums: "They are large, showy plums and will no doubt sell well in the market. Promises to be valuable for market and canning."

Speaking of new plums, it is interesting to mention an announcement of a new prune from Shasta county, originating in the yard of W. W. Elmore, of Anderson. We find the following description of it in an exchange:

It is a prune of a sweeter taste than the French or German and ripens three months earlier. Mr. Pettygrove, an experienced fruit-raiser, calls it a mongrel, and accounts for it from a French prune and cherry-plum tree being planted in close proximity, and a seed dropping from one of the trees into the ground germinated and burst forth a hybrid, the fruit taking its flavor from the French prune, and early ripening from the cherry plum. This tree has attracted the attention of many fruit men, and Mr. Elmore has refused a handsome sum of money for it. The fruit, which is now ripe, has been sent below for exhibition.

HOW SPARKS MAKES THE SPARKS FLY.—It is telegraphed from Washington that Land Commissioner Sparks has canceled for fraud during June 153 entries and filings, and held for cancellation 127 entries, embracing in all about 40,000 acres of land. He has also recommended criminal proceedings against 32 persons for timber trespass and 15 civil suits to recover \$145,000, the value of timber stolen by them.

DEATH OF A CALIFORNIA CATTLE KING.—Thomas Hildreth, for over 30 years a prominent cattle dealer and mining operator, died June 29th, at his home in San Jose, of gastric hemorrhage. He was a native of Kentucky, but has resided in San Jose with his family for a score of years. His pioneer associates speak of "Uncle Tom" as a whole-souled, generous man, whose passing away they regard with deep sorrow. His hospitable spirit was indicated by the understanding among all who ever had occasion to visit Dunphy & Hildreth's ranches that "everybody is welcome at Tom Hildreth's camp." Though rough in manner

#### Mission Grapes in Texas.

We find in the *Two Republics*, published in El Paso, Texas, an account of the fruit grown there, in which it is said that the best grape they have there for table use is the old Mission grape, introduced by the San Franciscan monks when the Spaniards first came to this country under Coronado. They have of this grape two kinds, one of light, mottled claret color, and one of a deep blue, covered with a beautiful bloom. They are almost black. The skin is quite thin, and they are juicy and luscious beyond any other grape we have ever

A NEW PLUM—THE SHIPPERS' PRIDE.

he was of kindly heart; no one ever applied to him in vain in time of need, and many deeds of kindness and charity are placed to his credit in the record of his life. He had been ailing for some time, and the worry of business complications probably hastened his death, at the age of 68. He leaves a wife and large family of children.

VITICULTURAL STATISTICS.—The directors of the Grape-Growers' and Wine-Makers' Association have decided to attempt the preparation of a directory which shall include all in the grape industry, and the statistics of their acreage and production. After a general discussion upon the subject, at a meeting in this city on Tuesday, it was resolved to instruct the secretary, Mr. Rixford, to communicate with F. W. Morse, of the State Viticultural Commission, to ascertain just what progress the commission has made in gathering such statistics. Mr. Morse has from many districts full reports, from others partial reports, and from others none at all. It is the intention of the association to co-operate with the commission in gathering the desired information.

tasted, not the least suspicion of the acid taste often found in other varieties. They claim that this is the same as the California Mission grape; but the writer, having eaten them in both places, pronounces the El Paso Mission better on account of warmer soil and to the irrigation water of the Rio Grande, of which he says: "Laden with ammonia it goes on its way, stirring up the sediment and rich decomposed matter; and on its way, passing through belts of gypsum and minerals, it becomes almost a thick paste when at its highest point—during June and July—and it becomes a liquid manure, giving great strength and vigor to the young grape then needing most its fertilizing power."

It is true, we do not have any such sticky streams as that in California; even in slickens times our rivers were hardly as bad as that. The writer says, farther, that this "imparts to the El Paso grape a crispness and juiciness that our California friends can never hope to obtain." That settles it. If there is no use hoping we always give a thing up.

Healdsburg will ship about 2,000,000 pounds of wool this season.

#### Movement Against False Products.

This measure hangs fire in the U. S. Senate and stands a good chance of being smothered. It was telegraphed from Washington on Tuesday that Senator Miller, of New York, who has the bill in charge, would make an effort to bring it up this week but had no idea he would succeed in securing its consideration. Senator Edmunds and others have notified him that there are important constitutional questions involved in the bill and that they will not permit a vote to be reached without at least a week's discussion. As this will be impossible in view of the near approach of adjournment, Senator Miller thinks the friends of the bill will be compelled to wait until the next session of Congress before positive action can be had upon it.

Senator Edmunds' Vermont constituents, who are largely dairymen, have feared his parleying, and wrote him some days ago about what they expected of him. He replied that he did not need to be reminded of his duty to the farming interest, and yet he was getting ready to talk a whole week on the constitutionality of stamping and taxing of bogus butter. Such friends of the farmer are of a sort that has figured too largely in our State and National Legislatures.

It seems that another important measure to California producers is in the same boat with the oleomargarine bill, and that is the enactment to label and tax spurious wines, for which Mr. Wetmore has been laboring at Washington. There is quite a close analogy between the making of bogus butter and bogus wine, and both are full of debasement and abominations. The friends of the genuine product in each case have adopted the same method of attacking the evil, and if Senator Edmunds and his associates have to talk a week on one, they must surely have a week on the other. These questions seem simple enough to common people, and the courts, high and low, have, in the case of oleomargarine at least, pronounced legislation against it to be constitutional. It remains, however, for the microscopic-eyed legislative lawyers to find more in them than outside people can see. It is such things as these that make the people tired.

BOGUS SHORTHORN PEDIGREE.—We have not heard much of late of frauds in shorthorn pedigrees, and we supposed the associations had arranged their safeguards so well that there was little chance for imposition. This is no doubt true, but an occasional intrusion of evil is to be expected in almost any institution. There has been quite a sensation in Detroit, Michigan, over the announcement in the herdbook of the American Shorthorn Breeders' Association that the pedigrees of cattle owned and sold by William B. and Henry Mitchell, prominent private bankers of Detroit, are fraudulent. It is alleged that the Mitchells have furnished false pedigrees of certain shorthorns, the progeny of the cow Airdrie Duchess XI being mentioned. A page of the 30th volume of the American Shorthorn Herdbook just published is devoted to the exposure of the Mitchells, and the pedigrees of many animals owned or sold by them are pronounced fraudulent. A resolution passed by the American Shorthorn Breeders' Association provides that neither of the Mitchells shall ever be allowed to enter another animal on the herdbook of the association. We are not aware that any of the Mitchell stock is on this coast.

## CORRESPONDENCE.

## The Great Central Plateau of the Southwest.

## Its Natural Wealth and Resources.

(Written for the Press by J. G. LEMMON.)

If the reader will examine a late map of the southwestern Territories he will, at a glance, notice a long line of railway running nearly straight across the northern part of Arizona, and extending eastward nearly to the center of New Mexico.

On close inspection this line will be seen to follow along the 35th parallel of north latitude, varying only a few miles north and south of this parallel at any point.

Also it will be seen to span the whole distance between the two great rivers that flow southward out of the Rocky Mountains—the Colorado and Rio Grande—separated on this parallel by just eight degrees of longitude, equaling at this latitude about 50 miles each, making an air-line distance of about 400 miles.

The Railway Guide-book will inform you that the 35th parallel road, despite the sinuosities a railway must make to find the easiest grades, spans this distance by a course of only 560 miles.

The guide-book will also show the newly established town of Needles, on the Colorado river, as the western terminus of this road; also that this town is connected with the farther West by a continuance of the line to Mohave, on the Southern Pacific Railroad from San Francisco to Los Angeles and the southwest.

Also the guide-book will inform you that the larger, more important town of Albuquerque, on the Rio Grande, enjoys the double advantage of being both the eastern terminus of the road described and also of being a central depot of the Atchison, Topeka & Santa Fe road, coming from the northeast on its way down to El Paso and the southwest.

## The Great Central Plateau.

This much the map and guide-book will show, but the most prominent feature of the country is not readily conveyed to the eye by a flat surface like a map. This feature is a high, long and broad plateau occupying this interspace, and over which the railway climbs and descends.

The great plateau is somewhat quadrangular and oblong in shape, the longer diameter being east and west. Its high center remains convex, like a broad sugar loaf, but its sides all around have been abraded and carried away by ages of weathering, the debris conveyed to Southern Arizona and New Mexico and spread over their valleys by the affluents of three great rivers, which almost entirely inclose the plateau.

The Colorado and Rio Grande form the nearly straight west and east boundaries of the plateau respectively, while the grand canyon of the Colorado river, turning abruptly eastward near the northwest corner of Arizona, together with its principal and also deeply-canyoned branch, the San Juan river, bound the irregular northern side. Similarly, but not so deeply, the Gila river, with its affluents, drain the still more irregular southern side.

This plateau is so large and diversified that characteristic names have been applied to the several mesas or benches composing it.

## Mesas and Mountains.

Hualapais and Chino valleys, with the Aubrey and Prescott mesas and a large diversified plain south of them, comprise the western end of the plateau; the San Francisco mesa comprises the great forest on the Arizona divide; east of it, stretching to the continental divide, is the large Colorado mesa with the Moqui and Navajo reservations north and the White mountain reservation south of it; lastly, in Northwestern New Mexico, is the broad continental divide with the Zuni and Mogollon mesa south of that.

The most conspicuous mountain groups rising out of the mesas along the north side of the plateau are, first on the west, the several Hualapais ranges, the Prescott ranges, the Bill Williams group, the San Francisco group with its mountains Agassiz and Humphry over 13,000 feet high—the highest peaks in Arizona—the Sierra Madre on Zuni range on the continental divide, and the San Mateo group, with its Mount Taylor, over 13,000 feet altitude, the loftiest peak in New Mexico.

Another line of groups are the Granite, Superstition, Manizeta, Pinal, White—with its Mounts Thomas and Ord, over 11,000 feet altitude, and the rugged Mogollon mountains remain prominent on the southern slope of the plateau.

## Principal Rivers.

Chief of the rivers originating on this plateau is the Little Colorado, a considerable stream some 250 miles long, which, with its many branches, alternately drains and irrigates the broad central portion between the two divides, cutting for itself at last a deep gorge on the north side through which it debouches into the main Colorado just at the head of the Grand canyon.

Similarly, but on a smaller scale, the Salt river disports itself on the south-central part of the plateau and then empties into the Gila above the Big Bend. Bill Williams and Rio Puerco

are minor streams on the western and eastern ends respectively, each contributing largely to the wealth of the plateau.

## Towns and Settlements.

Several important towns, including the capital, Prescott, are situated on this plateau. The capital and Mineral Park are on the western slope, the former about 50 miles south of the A. & P. R. R., the latter 20 miles north of it.

Similarly situated, on the eastern slope, are St. Johns and the other Mormon settlements, all on the Little Colorado and its branches.

A dozen new and promising towns have sprung up along the line of the railway. Beginning at the west, Kingman is the depot for Mineral Park, Peach Spring for tourists, to the Grand canyon of the Colorado, Ash Fork for Prescott. Williams is an important mountain town. Flagstaff is at a higher elevation than any other town on the plateau, 7000 feet in the great pine forest near the base of the lofty Mt. Agassiz. Winslow is the depot for some of the Mormon settlements, Holbrook for St. Johns and other Mormon settlements, together with several other important and growing towns; Wingate, for the port of that name, and the ancient Indian town of Zuni, while McCarty's station is the radiating point to several Indian pueblos and Mexican towns near the Rio Grande.

A half-dozen military posts have long been established on the plateau, including Fort Whipple near Prescott, the headquarters of the department commander.

## Atlantic &amp; Pacific Railway.

The long, nearly straight thoroughfare described as traversing this plateau from end to end, is the lately constructed and superbly-equipped middle division of the Atlantic & Pacific or Thirty-fifth Parallel railway, in praise of which, and the scenery it reveals, together with the natural wealth and resources it unfolds, much has been written of late, and deservedly, too, for it is one of the most interesting and important routes thus far projected on this continent.

This results from its traversing a region studded with more extreme, diverse, beautiful, grand, curious, wonderful, important and valuable objects than can be combined by a road of like extent through any other part of the globe. And this region is not alone to be penetrated by this road, for already two important feeders have been surveyed, one across the western end of the plateau reaching down southward to Prescott, and thence to Phoenix, in the rich valley of the Salt river, continuing on across the Gila river to connect with the grand trunk of the Southern Pacific at Maricopa; the other traversing the middle portion from Flagstaff through the length of the great forest to Globe City, and making another connection with the Southern Pacific at Wilcox.

Each of the foregoing adjectives applied to the region traversed by the A. & P. R. R. could be substantiated by pages of detailed description, but the requirements of journalism demand of the note-taker brevity and point.

## Extremes and Diversities.

Exceeding diversity results from the great difference of altitude of the several parts of this plateau. Taken as a whole the plateau is inclined on its bed so that its western end is depressed to nearly sea level at the Colorado river, while its center rises to over 7000 feet at two points—the Arizona summit and the Continental divide—descending to about 5000 feet at the eastern end resting on the Rio Grande; and all this extreme of elevation is under the semi-tropic parallel of 35 degrees, thus insuring the widest diversity of flora and fauna.

The low Colorado valley, the hottest region within the limits of the United States, with its burning desert sands yielding their peculiar thorny flora of cacti, yucca and agave, under which lurk noxious reptiles and above which swarm stinging insects, contrasts very strongly with the elevated and delightfully cool great central crown with its gently undulating valleys and hills, all clothed with a wealth of pine, oak and juniper forests and carpeted with beautiful flowers and nutritious grasses, upon which feed graceful quadrupeds and above which float lovely song-birds; while rising here and there from out the evergreen forests like icebergs on the billowy sea, several isolated groups of bald peaks ascend from 12,000 to 13,000 feet in height, so lofty, indeed, as to retain perpetual snow in their northern canyons, once the track of grinding glaciers.

## Beautiful and Grand Scenery.

Most beautiful are the flowers, shrubs and trees; the canyons, water-courses and valleys; the groves, meadows and vistas revealed by this road; while the extensive forests, noble mountains and bristling peaks attain the magnitude of grandeur. Awe-inspiring sublimity reaches its climax on this continent in the Grand canyon of the Colorado, near the great southern bend of which, at Peach Spring, this railroad fortunately passes. This canyon is over 200 miles long. Its walls are from 4000 to 6000 feet high, and irregularly cleft from top to bottom by side canyons that leave segments of rock between them, fashioned into magnificent pyramidal, castellated mountains, zoned about with horizontal, parti-colored strata, from river-washed base to cloud-wreathed summit.

## Curious and Wonderful Objects.

Very wonderful are the roomy, white-furnished limestone caves recently discovered near

Peach Spring and Ash Fork, while still larger and more wonderful ones have been found in the White mountains; the latter abounding in ancient pottery, burial urns, weapons and utensils of curious design and unknown origin.

On the plateau near Chiquita, Colorado, the former traveler over the plains suddenly found himself, without warning, on the very verge of the famous Canyon Diablo, a deep rift in the earth's surface 30 miles long, 222 deep and only 540 feet across, channeled by a deep stream ages ago. This frightful gorge is now spanned by a much-admired iron bridge, over which all trains pass slowly to allow passengers time to gaze into its awful depths.

Most wonderful and puzzling is the petrified forest near Holbrook, trees of which have been measured that were three to four feet in diameter. The cracks and cavities of these trees are filled with masses of lovely polygonal crystals of many hues, being the residue of the silica which was taken up in solution by these trees during a series of dry seasons, ages ago, and thus deposited, after which the celluloid tissue of the heart-wood was filled to repletion, and the trees became solid stone. A company has been incorporated in San Francisco to obtain and manufacture tons of these petrifications into jewelry and all sorts of fancy as well as useful articles.

## Interesting Aborigines.

Most interesting to tourists and important to naturalists are the persons, habits, occupations, surroundings and traditions of the aborigines, many tribes of which are located on this plateau.

These Indian tribes present all degrees of physical condition and mental culture, from the squalid, beggarly Hualapais, huddled under the junipers of the western slope, who hesitate at nothing degrading and criminal, to the high-spirited, stock-raising Navaho, roaming over the upper mesas; or the still more advanced and Christianized, agricultural Pueblo Indians, dwelling in excellent stone houses of extremely ancient origin on the eastern slope.

The Indian topic is so very interesting that the temptation is strong to enlarge upon it at this time, but such amplification may be indulged, perhaps, in a subsequent paper.

## Salubrity of the Climate.

The high elevation of the plateau, the mildness of the summer's heat and the winter's cold, the absence of hot winds and piercing blasts, the presence of balsam-producing trees in the forests, the purity of the mountain springs and streams, all combine to make the sanitary conditions exceedingly good.

Already the region has become a resort for invalids seeking health, and persons afflicted with chills and fever elsewhere lose all symptoms of the malady soon after arriving on the plateau. No malarial districts, even of small extent, have been detected on it, and their presence is believed to be impossible.

Rheumatic and nervous disorders are infrequent, while pulmonary and bilious complaints never originate on the plateau.

The few physicians that strive to make a living here have very large circuits and each has some other business—the sale of drugs, the raising of stock, etc.—connected with his profession. They declare that their practice consists almost entirely of surgery and obstetrics.

## Great Wealth of the Plateau.

Finally, the economic values of the objects developed and brought into commercial relations with other parts of the Union by this new railway are simply past computation.

First may be mentioned the saving of time—and time is often of more worth than money to the tradesman or traveler—insured by a direct thoroughfare between the East and West which is absolutely unmenaced by snow-blockades in winter or sandstorms and washouts in summer. The real wealth of this Mesopotamia region is but fairly discoverable now, not yet fully developed. It consists mainly of several rich mines comprising nearly all the precious metals, already putting out carloads of bullion and hundreds of prospects more or less developed in all the mountain ranges of the plateau; of vast coal fields supposed to be the largest in the world, underlying the north-central part of the plateau, extending also into Utah, while southward they are crossed by the railway at Gallup, where five thick strata crop out and are extensively worked; of wide forests of pine, cedar, fir, juniper, oak, ash and other timber trees, among which already many saw-mills and factories are established, using improved machinery and employing hundreds of workmen; lastly, and perhaps chiefly, of stock-raising, beef-producing and wool-growing facilities, prosecuted for hundreds of years by the pastoral Indians and now being seized upon and improved by the dominant white races.

## Unexcelled Grazing Lands.

It is believed that no other country in the world is possessed of such wealth of grazing lands as are found on this plateau. Nutritious grasses, thick, and often two and three feet high, abound in the valleys and amid the trees of the great forest, while shorter and more tufted, but just as rich and abundant, clothe all the other portions of the plateau at lower levels, especially in the broad juniper belt, which entirely surrounds the great forest, and which, in fact, composes the greater part of the plateau.

## Seeming Drawbacks.

To the traveler on the railway or the thoughtless observer anywhere, there seem to be two

serious drawbacks to the superior excellence of this plateau as a grazing country. One is the presence of *Malpais* rock over large portions; the other is the scarcity of water over most of it. Both these facts, however, are found to be really great advantages to stock-raising and fattening.

*Malpais*—"bad land" or "bad country" in Spanish—is a black or various colored lava, hard and porous, which is found shattered at the surface, and strewn over large areas of the plateau, especially at the center, where, perhaps, it originated in the San Francisco and neighboring mountains. Its presence prevents animals from stampeding or running great distances, but does not hinder slower progress anywhere, especially in the numerous valleys, where it is partially or wholly covered with alluvium.

Large stock-raisers of many years' experience declare that they would not have the *malpais* removed from their ranges for any consideration, for it keeps their animals quietly at home, thus greatly favoring fattening and increase.

The wild, long-bodied and long-legged animals from Texas and similar smooth plains have been made so by the habit of running and stampeding to which they have been subjected all their lives. Brought upon this plateau, their offspring in a few generations become tame and gentle, with short legs, thick bodies and deep chests, while every circumstance favors milk-yielding and fattening processes.

## The Water Supply.

While it is well known that springs and so-called "tanks" or sink-holes in stream-beds are everywhere dispersed at convenient intervals—and of these more can be readily developed by intelligent effort in many places—yet there is at present a comparative scarcity of water.

This scarcity serves a similar purpose as the *malpais*, in keeping animals quietly at home, and hence it greatly diminishes, or entirely obviates, the expenses of herding. An instance was cited to the writer where a stock-raiser in the region easily cares for over 1000 head without assistance.

Stockmen find that one herder can care for five times as many animals in such regions as where water is so abundantly and equally distributed, for the herder has only to visit the watering places for his stock instead of searching over the whole country.

Still, there are certain districts lying idle because they are entirely destitute of water except in winter and midsummer. In these localities enterprising natives are boring artesian wells, and the day is not far distant when the construction of reservoirs in favorable gulches, or the converting of certain canyons and valleys into lakes, will be found a profitable investment of capital.

## The Mild Winters.

As a climax to this matchless array of stock-raising and fattening facilities it only remains to mention the highly favoring, mild, open winters.

All the domestic animals, including sheep, require no special care or provision in winter as regards either food or shelter. At the approach of the first storms the animals not already favorably located roam off into the juniper belt, to feed upon the hitherto untouched grasses, coming back or being driven back in the spring, fat and ready-for market, with seldom the loss of over one per cent.

Let Eastern farmers who have to build barns and then toil three or four months of each year to fill them with hay, then toil another three or four months to feed the hay out to stock, in a freezing atmosphere, let them learn of this glorious outlook on the great central plateau of the Southwest, where millions upon millions of acres of these grazing lands lie all unoccupied and inviting Anglo-saxon enterprise.

Flagstaff, Arizona, June 2, 1886.

## A Nook in Tulare.

EDITORS PRESS:—As you solicit information from all parts of California, I will give you a few notes from this isolated nook in her vast domains. We feel somewhat at a loss how to name this community. It is often designated as Cottonwood, Stone Corral or Cricketville. Now, to settle the matter, or add confusion, I propose to call it Butte Cove, as there are three noted Buttes in the southern part of the valley, standing like sentinels in the level plain. They were spoken of by General Fremont as the Pilot Knobs. I think where we have such noted landmarks we should not be at a loss for a name.

The valley is a cove in the mountains, about 12 miles northeast of Visalia. The soil is quite varied. Near the mountains is what we call dry bog—an intensified adobe, not separating in large chunks like adobe, but crumbling up into fine particles. It is much softer when thoroughly dry than at any other time, and very productive. Quite a large portion of the valley is a sedimentary deposit, caused by the overflow of Dry creek. Between this and the bog land is a red soil, a clayey loam, well adapted to fruit or vines. I think it is the best fig land in the State. This was one of the first places in the southern country where the growing of the cereals was attempted outside of a few moist spots along the rivers, and most of the land has been constantly utilized for that purpose ever since. The valley nestles close up against the high mountains, and consequently gets more rain than the lands out in

the open plain; hence crops are reasonably sure, failures occurring only in excessively dry years. Besides, the heavy northers that are sometimes so trying to crops in the open are shut off by the spurs of the mountain on the north. The land has, as a general thing, been very slovenly cultivated. Most of it is held in large tracts. Fielden Bacon owns about 4000 acres, and there are many other large holders. Much of the dry-bog land has never been plowed, and yet has been yielding from fair to enormous crops most of the time for the last 12 years. Sometimes a cultivator or a harrow is run over it to cover the seed.

The district is but sparsely settled, and little has been done in the way of improvement. We have one store and postoffice, and one flourishing school. The country is deserving of a better fate, as the soil is good, the climate healthful and the scenery unsurpassed. The mountains begin to rise on the eastern side of the valley. For several miles the elevation is a wavy, undulating slope, then more abrupt, presenting huge cliffs and gorges, still rising, rising, till the glacial heights reach the summit of our great Mount Whitney, whose icy brow, reflecting the genial rays of Southern California's sun, crowns her with a sheen of golden glory.

Though so little has been done to develop the latent resources of our valley, still it is not without a demonstration of its great possibilities. Mr. S. Z. Curtis has laid the foundation for as fine a farm as can be found anywhere. His alfalfa fields equal the best. The yield of his fruit trees and vines is abundant and of an excellent quality. He grows plenty of fine strawberries and blackberries to meet the demands of a large ranch where sometimes as many as 20 or 30 men are employed, besides supplying the wants of his neighbors. But most to be admired is his young orange grove, just coming into bearing and producing very fine oranges.

Mr. Baird, also, is planting a large orchard, among which are many orange trees, and several others are beginning such improvements as will make their places more home-like. Good water can be had in any part of the valley at from 6 to 15 feet, and in great abundance. An item worthy of mention is a fig tree standing alone on as dry a spot as can be found in the valley, growing luxuriantly and producing two crops of fine figs each year.

Thus, with such demonstrations of the possibilities at hand, we look forward to the near future when a great change will be produced—when our vast grain-field will be divided up into small holdings and a more diversified system of husbandry will take its place. With such a change we have room for a large and prosperous settlement. The east branch of the 76 canal covers most of the valley, and the Victor colony's canal may be extended to cover it all. Lands are yet cheap and offer good opportunities for home-seekers.

The surveying corps of the Giant Forest R. R. Co. were through the valley last month laying out their road. C. TALBOT.  
Churchill, Tulare Co., Cal.

## POULTRY YARD.

### Poultry and Eggs.

The immense proportions, says the *Mercantile and Exchange Advocate*, to which the poultry and egg product of this country has grown, are at this period worthy of the attention of all who are interested in the food products of the world.

In giving attention to the production of poultry and eggs, it is well to remark the fact, that the entire production is intended for consumption as human food.

And as human food it is of interest to observe that both poultry and eggs are considered food of the highest order.

Having observed that the entire production of poultry and eggs is intended for human food and that of the highest order, the next thing for consideration is whether or not the value and quantity of these poultry products are worthy of any special attention. Possibly some of those elegant speculators in cotton or wheat who imagine that the bare thought given to the value of the eggs or fowls they eat on their tables would disgrace their profession as dealers in the great cotton or wheat products, would open their eyes wide if told that the poultry and egg crop of the United States exceeds in actual value the cotton crop per year by about \$130,000,000, and the wheat crop by over \$50,000,000.

The poultry and egg products of the past year from June 1, 1885, to June 1, 1886, can be placed at the enormous sum of \$563,000,000 with a confident feeling that this estimate, based upon comparative calculations, is not far from being an approximate valuation as near as can be arrived at. Realizing the immense value attached to these products, is it foreign to American ideas that so important an interest on the list of human food products should receive that attention which it is entitled to?

### "Cornpone" for Chicks.

EDITORS PRESS:—Allow me to say to Mrs. E. J. Squires, of Redwood City, that had she fed her incubator-hatched chicks with "cornpone," instead of dry bread, bran, middlings and oatmeal, she would not have lost any

chicks from bowel troubles. I have not been in California very long, but have so far been quite successful in raising chicks. Mix the cornmeal with milk, either sour or sweet, and *bake till done*; and, instead of sweet milk, give them all the water they will drink and keep the vessels clean and replenish them every two or three hours. On this diet, occasionally adding a little meat in the corn-pone (any odd scraps that would perhaps go to the slop-pail), your chicks will thrive, as do the Virginia picaninies on hog and hominy.

KATE MILLIKAN.

Sutter Creek, Amador Co.

## HORTICULTURE.

### On the Santa Clara Foothills.

EDITORS PRESS:—Bordering the eastern side of the Santa Clara valley, in the first foothills, we find a belt of country adapted to the growth and maturity of a great many different kinds of products; fruits, grapes, grain, grass, etc. The climate, as in most portions of our State, is very enjoyable, and health remarkably good. We believe there may be few places in California which more freely admit of the exercise of taste and caprice in the choice of kinds and varieties of plants to be cultivated.

In driving from place to place it would be hard to select special ones to be mentioned in preference to others, as each has its distinguishing merits with reference to beauty of sunny, happy locations for buildings, the water supply and many minor facilities that might be mentioned. Perhaps within this range, however, we find no greater number of good things at one place than we do on the grounds of Dr. A. E. Mintie, of San Francisco, situated about five miles east of San Jose. Enjoying the refreshment afforded by fine shade and good water, we would here pause and look over the place with Mr. N. H. Brundridge, who, with his amiable family, has lived here for the past three years. That which follows is taken from personal observation, together with remarks of Mr. B. founded on his experience.

In this place we have 84 acres orchard and vineyard. The orchard consists principally of Moorpark apricots and French prunes, between 700 and 800 Silver prunes, a few German and other varieties of the prune, and all do remarkably well. Mr. B. informs us that in opposition to the rule in California, the Moorpark apricot is here a success, and generally bears good crops. The trees are well loaded this season. Paper-shell almonds here generally produce good crops season after season. We have some very fine specimens of the English walnut, three of which, now some 10 or 12 years old, were, we understand, planted by the editor of the *RURAL PRESS*. These are remarkably vigorous and now in full bearing. Others, younger, are doing as well.

### Citrus Fruits.

Of orange trees, about a dozen of various kinds, mostly in bearing, are generally in good condition. One of the Navel variety is growing here but not yet in bearing. Of three lemon trees we will particularly mention one of the Lisbon variety, age unknown, supposed to be 10 or 12 years, about 16 feet high, trunk about six inches in diameter at ground, the top beautifully proportioned and spreading. This tree is now "a sight to behold," covered with lemons from the smallest size with bloom just dropped, and up through all stages to the large, ripe and ready for use, and still with an ample supply of young buds and blooms coming on. Mr. B. informs us that this tree is ever thus throughout every day of the year, covered with flowers and fruit in all the various stages of development. In 1884 he kept an account and gathered from this single tree over 100 dozens of lemons in the 12 months. Last year he thinks it was just as full, but no account was kept. This year its productiveness seems as great as ever. This is a remarkably fine-looking tree, and although so burdened with fruit, seems vigorous and still growing. Think of being able to walk out and pluck ripe fruit off of the same tree every day of the year! Mr. M. considers the fruit better for pies and lemonade than the famous Sicily. This is undoubtedly a very profitable variety for at least this locality. The particular conditions of this place may have much to do with the growth and bearing of the Lisbon, yet the facts here mentioned should lead us to experiment with this variety in various parts of California, where the lemon may be profitably grown. Dr. Babb of this neighborhood grows the Sicily lemon, and the prospect seems hopeful of the future.

### Orchard and Vineyard.

Of pears, the Bartlett and the Winter Nelis are the principal varieties, both bearing full and regular crops every year. We understand that pears generally are successfully cultivated in this neighborhood.

Of peaches, the Lemon cling, the Seller cling and the Early Crawford are among the best, and bear well every year since Mr. B.'s residence. Of cherries, the Black Tartarian and Oxheart are the principal varieties grown on this place, and bear well. Wild birds generally get a full share of them.

Orchard trees are 20 feet apart, and Mr. B. utilizes the center of the spaces between rows

running east and west by planting with two rows of Egyptian corn three feet apart. The growing corn is, in summer time, considered of great benefit to the trees, as the shade in heat of day falling on the trunks, protects them from the direct rays of the sun. Last year, in part of the orchard, he used Yellow Dutton corn in the same way. He makes fodder of the corn.

Figs do remarkably well, growing thriftily and bearing large crops.

Of grapes, there are 25 acres, consisting of Zinfandel, Charbono, Cabernet Sauvignon, Black Hamburg, White Chasselas, Muscat and Muscatelle. Crops have never yet failed with Mr. B., and the flavor is excellent.

Up on the hillside, above the houses and barns, a living, natural fountain, during the year, furnishes all the water necessary for the dwelling-house, stables and whatever of irrigation may be needed for flower and kitchen gardens. The orchards and vineyards need no irrigation, as they grow and mature their fruit to a better advantage without it.

### Pisciculture.

A small artificial pond constructed a few feet below the spring is continually supplied with pure, fresh water from the spring by means of iron pipes. This pond is well stocked with carp. A few hundred yards below the house, another and a larger pond has been constructed—large enough for slight boat rowing, and designed to be shaded by a grove of eucalyptus, already planted for that purpose. This will furnish a most delightful retreat for friends, visitors and young people who may wish to take a little time from the cares and toils of life and enjoy society under most charming influences.

Mr. B. expects soon to remove the carp to this lower pond and stock the upper with mountain trout. This arrangement of ponds to be stocked with fish affords a suggestion that might be utilized by a great many persons living on this coast similarly situated, and supplied with an abundance of water for the purpose. In the use of such ponds there need be no loss of water worthy of mention, as the water merely passes through without injury for irrigation purposes. Under favorable conditions, ponds may be constructed during leisure times at no very considerable outlay, and much enjoyment may be afforded families in giving whatever attention to the fish that might be necessary as well as in the consumption of the very fine, wholesome and nutritious food thus to be supplied the table. McD.

Santa Clara Co.

## THE APIARY.

### Sundry Matters.

EDITORS PRESS:—Why is honey not used more in the place of sugar? Even in bee-keepers' families I have seen sugar on the table daily, when honey might have taken its place just as well. During the 16 years in which I have been in the bee business I do not remember of having bought a single pound of sugar for my own use. I use honey as sweetening for my tea and coffee, for stewed fruit, and anywhere else where sweetening is required. If a good article of honey is used, having no strong or pronounced flavor, one can soon become accustomed to it and never miss the sugar. At the present low price for extracted honey it ought to be used in every bee-keeper's house, if only as a matter of economy and to save the expense of sugar.

### Comb Honey vs. Extracted Honey.

Eastern honey dealers complain of not sufficient comb honey in one-pound sections being produced in California. The two-pound California section is not liked. Comb honey in one-pound sections finds a ready sale at fair prices, and will bear the expense of shipment, while extracted honey hangs on the hands of the producer or, if sent to market, hardly pays for the work of extracting. By recent correspondence with a commission dealer in San Francisco I have found that extracted honey, put up in small cans for the retail trade, would not net me the cost of the cans, though I guaranteed the honey to be produced and put up by myself, and to be strictly pure. In view of these facts I am turning my attention to the production of comb honey, and am now melting up hundreds of extracting combs for which I have no further use. The extracted honey, of which I have several tons on hand, with no prospect of sale, is an expense to me in the way of taxes, and only serves as (rather expensive) ballast for my house in this windy locality.

### Heddon's New Hive.

James Heddon, of Dowagiac, Mich., has lately introduced to the bee-keeping public a new hive, which is claimed to have superior advantages over any other hive in existence. The main feature is that the brood chamber is divided horizontally into two equal parts, each having a set of shallow, fixed frames. The frames are held in place by thumb-screws, and the outside cases are interchangeable and reversible. The principal object of this arrangement is to facilitate manipulation by handling hives instead of frames, and thereby save time, which is quite a consideration in a large apiary. To succeed with the hive, a particular system of management must be followed. This is clearly laid down in Mr. Heddon's new book,

which can be obtained from the principal supply dealers.

### Artificial Fertilization.

Among other researches, Professor McLain of the U. S. Apicultural Station, Aurora, Ill., has recently made some valuable experiments upon the artificial fertilization of queen bees. While he claims to have succeeded so far, yet, as a careful experimenter and writer, he wants further time for more extended tests, before placing positive rules and proofs before the public. In the hands of an experienced queen-breeder the operation may prove a success and be of undoubted value, but it is not likely that the ordinary bee-keeper, who works for honey alone, will devote the time and care to this subject which seem to be essential to its accomplishment.

### Foul Brood.

Robert Sproule, of Dublin, Ireland, gives, in the June list number of *Gleanings*, a new process of disinfecting foul-broody hives by steam. The steam is generated from a mixture of carbolic acid and water, and under a low pressure forced into the hive, permeating every part, and, as he claims, thoroughly disinfecting it. The apparatus required is simple and cheap. As the article is too lengthy to be reproduced here, any one interested in the subject is referred to the above number of *Gleanings*, which also gives a very good cut of the disinfecting apparatus and a hive under treatment.

WM. MUTH-RASMUSSEN.

Independence, Cal.

### Honey—Past and Prospective.

EDITORS PRESS:—Last season's crop of honey in this market was well cleaned up by shipments during the freight war to the East. As the season has closed and we are entered on a new one, the following statistics will be of interest. The number of cases received in this market last year compare by months for six years past as follows:

	1885.	1884.	1883.	1882.	1881.	1880.
January...	6,095	88	605	176	1,768	295
February...	1,664	167	393	68	989	22
March.....	2,375	144	34	420	334	128
April.....	1,195	250	200	64	771	44
May.....	889	254	287	213	121	737
June.....	862	690	631	669	202	2,952
July.....	925	2,047	948	1,053	662	2,848
August....	1,185	4,009	2,151	2,613	833	4,883
September.	1,409	6,887	3,177	3,592	1,428	7,027
October....	2,518	10,208	2,446	2,750	1,661	3,322
November..	2,298	5,140	1,253	1,068	998	2,160
December..	2,957	4,381	1,679	1,153	901	2,404
Total.....	23,372	34,265	13,804	14,409	10,668	26,782

The above is the more interesting in going to show the months in which receipts are the largest, and also their fluctuating character. The following statistics of the exports, taken in connection with the receipts, are of peculiar interest, for they show the character of the trade:

Year.	By sea from San Francisco.		By rail from S. F. and Interior.	
	Cases.	Lbs.	Cases.	Lbs.
1885.....	12,151	32,550	1,313	290
1884.....	13,094	167,320	2,352	000
1883.....	6,663	266,400		
1882.....	3,612	527,680		
1881.....	8,849	62,700	378,370	
1880.....	7,890	150,806	861,050	

Receipts in barrels and kegs have been as follows for five years past:

	Bbls.	Kegs	Bbls.	Kegs
1885.....	62	1882.....	291	23
1884.....	485	1881.....	456	84
1883.....	3	1880.....	1,156	126

From January 1, 1886, to June 1st, receipts at this port have been 3867 cases.

There is considerable discussion among dealers regarding the quantity of last year's crop. This is due chiefly to the large quantity of honey received that was carried over from the 1884 crop. As near as can be ascertained, last year's crop was not much, if any, over 1,250,000 pounds, against, in round numbers, 9,000,000 pounds in 1884. Although the crop last year was light, yet prices ruled low owing to the large carry-over from 1884. The prices ruled last season (1885-86) about as follows: Extracted, 3½@5½ cents; very few parcels reached the higher figure. For comb, prices showed a wide range owing to large differences in quality; the range was from 6@14 cents.

This season's crop is estimated at about 5,000,000 pounds and comes in on a bare market with us, but this is offset by liberal stocks at the East and also abroad. Notwithstanding stocks in the demand markets are reported large, yet from all that can be ascertained this season's crop can be worked off to good advantage, as the quality is superior to the crop of 1885-86. The only difficulty in the way of obtaining good prices is a strong selling pressure, and it is the fear of this that restricts large operators and shippers to actual requirements. If a selling pressure sets in, prices must recede, as buyers will take all on the market at figures that will allow a good speculative margin against all possible declines and long holdings before marketed for consumption. J. R. F.

San Francisco.

BEESWAX.—Beeswax is nothing more than the voluntary excretion of the honey bee, like perspiration from the human body. To save time and to enable them to devote all their energies to honest gathering, apiarians now provide these bees with artificial comb, which the latter as readily undertake to fill as though constructed by themselves.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Sonoma Grange Exhibit.

In the report of the last meeting of the Fruit and Grape Growers' Association of Sonoma county, we find the following items:

Mr. McDonald reported, as one of the committee appointed to solicit a donation from the Board of Supervisors toward assisting the Grange to make a display of the products of Sonoma county at the coming fair, that the Supervisors had refused the appeal on the ground that there was no law by which such a donation could be made.

Mr. McDonald commented strongly on the action of the board in the premises, saying that he supposed the supervisors all over the State were controlled by one law, and could not understand how the supervisors of Fresno and Los Angeles counties were able to find such a law when our board could not. He also urged the necessity of making a good display this year.

Mr. Whittaker stated the Grange had already taken steps toward its fall display, and had appointed committees and perfected other arrangements. But the Grange would need all the help that could be got to make a complete exhibit, and if no help was received from individuals, financially, this year would probably be the last year the Grange would undertake to make a creditable exhibit of the county's products. Mr. Whittaker also spoke of the great benefit such a display will be to the county, stating that when Sonoma county made her first exhibit at the State Fair he could have wheeled the balance of her agricultural display from other parts of the State all over the county on a wheelbarrow.

Col. McDonald then stated that Messrs. W. D. Pridham, John Adams, M. L. McDonald and J. H. Drummond had been appointed Commissioners of Sonoma county for the Mechanics' Fair.

Mr. Trowbridge thought that the supervisors were governed by the result of Tulare and Fresno counties, donation, viz: being enjoined by the district-attorneys of those counties from making such appropriations.

## Grange Life and Work.

Bro. J. W. Lang writes for the Grange Bulletin the following appeal to Grange effort:

That which costs but little is really worth but little, and does us but little good. In the Grange we shall receive but little benefit, if we are of little use in it. The most active are the most rewarded. Neglect of duty breeds indifference and does not bring satisfaction. The Patron at heart will renew his strength often by living contact with the Grange and association with the brethren. They who bear the burdens grow still more able to bear; they who take active parts are benefited by the offer.

The true object of life is to be a whole, a noble, a true man or woman; to be useful and fill an honorable place in the procession of life. An honest man is the noblest work of God. A true Patron is not only an honest but an earnest man; a man of use and a man of action. Within our gates there are great opportunities; around our altars there are sacred things; in our ranks are the best of men and women. More are coming and there is ample room for more to come. In Maine there are 64,000 farms. On each there is a farmer and farmer's wife, a possible 128,000 Patrons. If there are on each a son and daughter above 14 years of age, there is yet another possible 128,000 Patrons, or the grand aggregate of 256,000 eligible to membership in our Order. Of these only a small portion—only the pioneers, so to speak—are yet within our gates. Thirteen thousand Patrons to-day form but the advance guard of what might be the great host in the near future. Is not this thought enough to nerve to action every Patron in Maine, to stir the blood and fire the brain with true and well-directed zeal?

Every man and woman has the birthright to use their God-given powers to the best of their ability. It is their duty to raise their condition in life by every laudable means. There is no lack of brains in our ranks, it is only lack of culture and development. The Grange opens the door to a better way and a more enjoyable life. It presents us opportunities we cannot afford to neglect. Happy ought they to be who have sought and gained admission within the gates. To make any farm pay it must be worked. So in the Grange, to make the most of it and of ourselves, we must work. It is work, well directed effort, that tells. The idler will bring home no sheaves at night. The indolent will not prosper. The energetic and the industrious secure the reward, and the hand of the diligent shall bear rule. Opportunities neglected are opportunities lost. We should improve the hour and work while the day lasts.

The true object of the true Patron's life then is to elevate and to educate by the earnest action of each and every member of our Order. Line upon line, precept upon precept, here a little and there a little. There is not one-half of us Patrons that really know the beauties and sublimities of our ritual. Few are familiar with

or appreciative of the grand "Declaration of Principles" of our Order. How very few are really well-posted Patrons in our unwritten work and organic law. To be a good member means to be thoroughly imbued with the spirit of the Grange. It is one thing to be a member of the Order, and another to be a Patron at heart. What grand old nursing fathers and mothers we have had in the Order. How it doeth the heart good, like a medicine, to meet them anywhere, to feel their strong, earnest hearty grasp of the hand; to hear their familiar voices and cheerful tones; to feel the power and inspiration of their presence! With Burns we can truly say:

"That man shall flourish like the trees  
Which by the streamlets grow;  
The fruitful top is spread on high  
And firm the roots below."

"To make a happy fireside chime  
To weans and wife;  
That's the true pathos, and sublime  
Of human life."

Burns sang those sweetest songs of his while following his plow. He drew inspiration from the sod and developed his poetical genius amid the actualities of the farm. Statesmen, philosophers, scientists, jurists, authors, all have recognized the claims of agriculture, and that genius is freshest and will be embalmed longest in the hearts of the people that has the most of nature and the essentials of natural beauty in it. Time will carry longest on its tablets the memory of the truest benefactors of the human family.

At St. Helena Grange, last Saturday, the lecturer, Sister Storey, proposed for discussion the question: "What shall be done with members who forget it is Grange Day?" Quite a lively interest was taken in the debate, some advocating fining absentees, others imposing upon them the penalty of writing an essay; but all agreed that the best plan to induce members to be thoughtful would be to make the meetings so interesting that all members would be sure to remember Grange Day. For the next meeting the Lecturer calls for quotations about men from each member; also ideas from all present on the subject of "Trees and Tree Planting." We think it would be a wise provision for all Granges to have some subject for discussion announced in advance for each meeting.

TEMESCAL GRANGE will hold a harvest feast on Saturday, July 17th, in the hall in I. O. O. F. building, corner of Franklin and Eleventh streets, at 10 o'clock A. M. All Patrons are cordially invited.—NELLIE G. BABCOCK, Secretary.

At the next literary exercises of Sacramento Grange, Mr. D. Lubin will deliver an address on "How to Perpetuate this Republic."

## The First Watermelon.

Judge George A. Nourse remembered the *Expositor* office this morning with the first watermelon of the season, raised on his ranch just east of the city limits.—*Fresno Expositor*, June 30.

A number of crates of watermelons, grown on the ranch of John Spicer, in Yolo county, four miles above the city, were shipped East yesterday. These are the first heard of in this State this season. Spicer has ten acres of melons. As Georgia and other Southern States market great quantities of melons in Northern States before this date, the California melons are not sent so far East.—*Sacramento Bee*, June 30.

F. M. Slater, manager of Rowell, Reed & Pelton's fruit farm, brought to the *Express* office and presented us with the first watermelon of the season, on Wednesday, June 30th. This is the first melon Mr. Slater picked, and the first one ripe, and we thank him for his kindness in presenting us the first. He made a shipment to the San Francisco market to-day. This beats all previous records for early watermelons that we know of.—*Winters Express*.

Which was the earliest?

GAMBLERS FINED.—The movement against pool-sellers in the Eastern States is becoming expensive to the racing associations, which seem to assume the burden of their fines. A dispatch states that the 10 bookmakers arrested for selling pools at Monmouth Park, New Jersey, were fined \$100 each by Judge Walling on July 1st. Counsel for 37 other pool-sellers indicted entered a plea of *non vult contendere*, and arranged that the same sentence be inflicted. The fines and costs of the 47 men amounted to over \$6000, the Monmouth Park Association paying the same.

FOUND.—A souvenir pocket barometer recently lost by one of the publishers of this paper while on a visit to the celebrated petrified forest, near Calistoga, Cal., was found by Miss S. B. Staples, of St. Helena, and duly restored to the owner in a manner worthy of the grateful acknowledgment herewith rendered.

NAPA VALLEY has rarely, if ever, been clothed with so much beauty, at this time of the year, as at present. The vineyards and orchards are looking fine and promising very fair crops. The town of St. Helena is more brisk in a business way than during last season. The whole valley seems prosperous.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

BEETS AND BEET SUGAR.—*Country Merchant*, July 2: From Mr. E. H. Dyer, general manager of the Standard Sugar Refinery at Alameda, we learn that the prospects of beet sugar are encouraging this season. The acreage in beets this year is about 800 acres, which, from present prospects, will, it is thought, average 20 tons to the acre, or an aggregate of 16,000 tons. This is sufficient for a run of about 200 days, with the present working capacity of the factory. The yield of sugar from beets in good condition is about 10 per cent, and assuming the crop to be what indications promise, this will give 3,600,000 pounds of refined white sugar. On this basis, it would require only 50,000 acres of sugar beets to produce a quantity of sugar equal to the imports from the Hawaiian Islands this year, viz., 100,000 tons, which it is thought is about the quantity that will be received from that source. Mr. Dyer thinks the Standard Refinery will start up about the middle of August, and after the campaign is finished it is in contemplation to begin active work in the construction of a new factory, the plans for which are now being perfected. The main building of the new factory is to be 195x84 feet, 2½ stories in height, with a tower in the center 52x32 feet, with a height of 25 feet above the main building. The capacity of the new works will be 300 tons of beets daily, or in refined sugar 60,000 pounds. It is proposed to introduce all the latest improvements in the way of machinery, the plans for which are taken principally from France and Germany, in addition to Mr. Edward F. Dyer's patent for refining, which has proved so valuable in the old factory.

A GLEANER.—*Irving Reporter*, June 26: Inventions will never cease. The latest we have noticed is a gleaner and binder at the shop of Mr. Crowell. It is intended to rake a field after the reaper and gather up and bind the scattered grain. A description of it cannot be well given, and one must see it to know what it is like.

## Contra Costa.

HORSE THIEVES.—*Plateney Gazette*, July 3: Thirteen head of horses and mules belonging to different parties were stolen from Round Valley Tuesday night. No trace of the stolen animals could be found. It has been only two weeks since several head of cattle were driven away from the same valley and they have not yet been found. Round Valley has always been a bonanza for outside horse and cattle thieves.

## Fresno.

AN EXPLODED CYLINDER.—*Republican*, July 2: On Monday afternoon J. D. Reyburn was operating a combined machine in a wheat field about 12 miles east of town, when the horses drawing it were frightened by a hog running out of the grain. The horses started to run, thus increasing the speed of the separator to such an extent that the cylinder exploded, bursting into small pieces. Luckily, no one was injured by the flying bits of metal. Mr. Reyburn was compelled to go to Stockton for a new cylinder, and went down the same night.

THE BEST YIELD.—The apricot crop is unusually light throughout the State this year, but some enormous yields have been reported for individual trees in different sections. Vacaville had the boss tree until last Saturday, when a Fresno colonist came to the front. The Vacaville tree yielded, this season, 1127 pounds of fruit, which cannot be equalled in any other portion of the State outside of the Fresno colonies. Mr. R. S. Voegler, of Cherry avenue, Central Colony, has a tree that yielded 1149 pounds of apricots this year, and they were picked and weighed by responsible parties. At the ruling price of two and a half cents per pound, the fruit from this one tree was worth \$28.72. One hundred and six trees like that one upon an acre of land would be worth more than any 160 acres of grain land in the State.

PROPER PRUNING OF MUSCATS.—*Republican*, July 2: There now seems to be no more doubt about the Chaintre system of pruning being the proper one for the muscats. For this system one long branch is carried from each vine and the end of it tied to a short stake by the next vine. This long branch is then trimmed with spurs, just as the head of a grapevine generally. We will give one instance illustrating the great advantage of this system of pruning. In the muscat vineyard of Prof. Braly, near Fresno, some three or four-year-old vines have this season been put in Chaintre, while the majority immediately around are trimmed to heads in the usual way. The Chaintre pruned vines are now literally loaded with grapes, while those trimmed to heads have very few. In the Chaintre system the canes are not staked high, but run on or near the ground. Accordingly the old way of planting, 8x8, will not do, as it would hardly allow sufficient space for plowing and hauling. We think 6x10 or 12x5 would be proper—at least that is the distance we should select in our own vineyard. But if our vines were already set 8x8, we would not hesitate to put them in Chaintre. The advantages of the system are: 1st, larger crops; 2d, immunity from black knot; 3d, protection from sun-scalding; 4th, better circulation of air.

## Humboldt.

SHEARING.—Garberville Cor. *Ferndale Enterprise*: Most all the sheep in this locality have been sheared; in fact, I believe that all the sheep in this township have been sheared with the exception of two ranches—G. F. Connick's and the sheep on the estate of Alex Robertson, Jr. Sheep sheared very well this spring, averaging about four pounds to the sheep on almost every ranch, and at a few ranches averaged over four pounds.

SHORTHORNS PAT.—We have frequently alluded in the columns of this paper to the fact that it pays to raise thoroughbred stock, even on a small scale. The climate, soil and general conditions prevailing in Humboldt county admirably fit it for the production of the best results in livestock. Our low lands keep green the year round without irrigation, producing the very best natural grasses, and when clover is well seeded, two crops can be cut every year and green feed produced for pasturage six months beside on the same land, by a judicious system of fencing. In this way a few acres will keep quite a herd of thoroughbreds. As an evidence of how well thoroughbred shorthorns sell, we will only have to refer to the sale of the yearling bull "Daniel Webster Second," made last week for \$200 by S. S. Lovren, who owns a grass farm on Mad river. The purchaser was William Forbes of Eel River Island. The price received for this yearling was greater than the profit of nine out of ten of the farmers, most of whom work hard almost every day raising cereals or potatoes, only to find at the end of the year that they have scarcely been able to make both ends meet. Quality, not quantity, is the true secret of profit. A few acres will keep a sufficient number of thoroughbreds to admit of the sale of several head each year, while the product of the mothers in the way of butter and cheese will pay living expenses. As we said before, few farmers net as much as the price of this one yearling, and still they will continue to plod and plow instead of turning their attention to the propagation of thoroughbred livestock. What is said of shorthorns holds good with reference to every class of livestock. We hope to live to see the time when our rich, moist land will only be used to grow grass for feeding the best breeds of livestock.

## Inyo.

UNWELCOME FLOCKS.—*Inyo Independent*: The sheep plague is again upon us in full force. During the past week or two tens of thousands have swarmed into the valley, running everywhere and eating up every green thing not inclosed. Around Big Pine the nuisance is particularly annoying; every mouthful of outside pasturage is being eaten. It is very hard on the settlers that these sheep men should be allowed to bring their flocks into the valley, not only eating up but destroying the pasture, yet not paying one cent of taxes in the county.

## Kern.

ARTESIAN WELLS.—G. A. Raymond, in *San Francisco Bulletin*, July 7: As the well was sunk by men in my employ and by my method, I can give you the actual facts. The well is 415 feet deep and the water all comes from a single flow at the bottom. The casing has an inside diameter of 5½ inches, and the steady flow of water measures 54 inches from the top of casing to the top of the water as it begins to fall back to the ground. Roughly estimated, but well within bounds, the daily flow is over 2,000,000 gallons, sufficient to irrigate from 700 to 1000 acres of land. The water is of the finest quality and unexcelled for all purposes, a peculiarity of the artesian water in the greater part of this belt. The well was not bored by the usual method—in fact, was not bored at all, but was drilled by steam power in a manner much similar to the method employed in drilling oil wells in Pennsylvania and elsewhere. While this is certainly an extraordinary well, there are in Kern county, within a distance of from two to seven miles in various directions from this well, nine other flowing wells of capacities ranging from 1,000,000 to 1,500,000 gallons daily. Besides those, within the same district, within a limit of say 12 miles square, are just 18 other wells that flow from 500,000 to 800,000 gallons daily. It is a well-settled fact, beyond dispute, that this section of Kern county has not only the largest artesian flowing well in the State, but further, has nine other wells that are unequaled in capacity by any others on the coast.

## Lake.

GROWTH OF HOLSTEIN CALF.—*Lakeport Democrat*, July 2: A. G. Platt's Holstein calf was six months old Wednesday, and he brought him to town to weigh him and had the satisfaction of seeing him tip the scales at 441 pounds. At three months old he weighed 247½ pounds. Thus it will be seen that the gain has been about 2½ pounds a day for the last three months, while from its birth the average gain per day has been two pounds. The calf has been running in the pasture and has had nothing but grazing to live on for the last two months. This is a remarkable weight for a calf six months old. Of the ordinary stock of cattle there are not many animals at 18 months old that will beat this weight.

## Los Angeles.

CANTELOUPES.—*Times*, June 29: The *Times* was presented yesterday with some ripe canteloupes, which are rather scarce yet in Southern California at this time of the year. Only one

or two, so far, have been seen in the market. The specimens now at this office were received from J. G. McCallum, of 131 Main street, whose son raised them on his ranch at Palm Valley, four miles south of Seven Palms station, on the Southern Pacific Railroad. The climate of Palm Valley is an exceptional one, some fruits ripening there as much as two months earlier than in any other part of the State. Palm Valley has been reveling in ripe cantaloupes for the last three weeks.

**THE COTTONY CUSHION SCALE.**—Some weeks ago the city council appointed a special committee—Messrs. Breed, Willard and Stearns—to see if the fruit pest inspectors had earned their salaries. The committee has been investigating the matter very carefully, and commends the inspectors for their faithful work, but finds that they have been unable to compete with the scale-bug, which the committee finds is much more numerous than it was last year. The concluding portion of the committee's report follows: If there is any way of destroying these pests we would urge the necessity of taking up arms at once and moving in a body against them. With this end in view, we would recommend, first, that the city attorney draft an ordinance to amend an ordinance governing this matter, in such a way as will enable the inspectors to not only compel the owners of infected trees to commence to clean them, but to prosecute their work to an actual finish. Second, that the police commissioners be requested to appoint sufficient inspectors to do the work thoroughly, and afterward to see that they do it. Third, that the supervisors be requested to appoint more inspectors, and in order to prevent confusion and promote harmony among the inspectors we would suggest that the board of police commissioners and the county board of horticultural commissioners consult together in regard to the districts assigned to the different inspectors.

**COUNTY POMOLOGICAL MEETING.**—Pomona Times, July 3: The Los Angeles Pomological Society met at Anaheim on the 1st inst., and it was quite royally received by the good people of that place; in fact, Anaheim "beat the record" in the way of hospitality and local enthusiasm. Creiger's hall was beautifully decorated with rare flowers and plants, prominent among which was the magnolia bloom, which filled the hall with its sweet-smelling odors. As this is the season of the year in which but little fruit is ripe, the display of fruits was limited, but of oranges, lemons and apricots the display was good. The society was called to order at 2 o'clock P. M., by the president, H. Hamilton; the other officers all being present. The address of welcome, by R. Melrose, of the Anaheim Gazette, was given in that whole-souled style characteristic of genuine good feeling. The address of the president was good, and well received. The music of the Anaheim Cornet Band was excellent, and all enjoyed it. The essays of Mr. Robert McPherson and Mr. Langenberger were excellent, and the discussions interesting. Mrs. Parker also read an essay on market gardening, which was well received. Upon the whole the program was one of the most interesting the society has enjoyed. But the principal feature was a big supper, which was served in the Town hall at 6 o'clock. The accommodation was ample and the provision abundant for both visitors and home folks. All visitors went away well satisfied, and were better pleased with Anaheim than they were before. And another leading feature was a visit to the palatial residence of Mr. Langenberger, after the close of the evening session, by all the prominent members of the society, where an hour or two was spent very pleasantly in sampling the various kinds of wines and enjoying the splendid music furnished by his estimable wife and daughter.

**RABBITS.**—Lancaster News: Jack and cottontail rabbits were, perhaps, never before so numerous as they appear now in this valley. In the neighborhood of grain fields and young orchards and vineyards they are doing a great deal of damage, demonstrating the folly of planting trees or vines without protection by proper fences. There is opportunity for those who enjoy shooting these rodents to make wonderful records of their destructive ability, and in the cool, fresh air of the mornings and evenings, when this game is numerous abroad, enjoy not only the sport but rare health-giving exercise. The city sportsmen who are pining for this sort of pleasure would do well to spend a week or two in this valley, taking care, however, not to mistake antelope and deer or wild horses for rabbits. They are also very fat, especially in the neighborhood of the grain fields, and excellent eating for those who are fond of this kind of flesh. It has been suggested that a rabbit canning factory might be started here with a promise of profit. These quadrupeds have eaten up 40,000 young forest trees for a citizen of Los Angeles, who will take stock in such a cannery.

**PAVILION TO BE BUILT.**—Times, July 2: The Board of Directors of the Sixth District Agricultural Association held a meeting yesterday for the transaction of general business. It was voted that the members of the board procure an eligible situation and proceed to erect a pavilion in the city of Los Angeles. A building about 100 by 150 feet in general dimensions is in contemplation.

Napa.

**SILK CULTURE.**—St. Helena Star: Miss Jane Dodd had the cocoonery at the ranch of Put Robson, near Oakville, this year. She produced

65 pounds of cocoons by the permission to use leaves from the mulberry trees on the Bourn ranch and that of Mr. Weeks. One more contribution to the silk product of Napa valley, which is only in its infancy. We hope to have the pleasure next year of recording many other names of ladies engaged in so important an enterprise.

Sacramento.

**BANANAS.**—Record-Union, July 3: On the grounds of S. H. Gerrish, 1517 G street, in this city, are bananas ripening and being plucked for table use. This is a new class of fruit to be grown in the Sacramento valley, but there is no doubt that the hardy variety of banana grown by Mr. Gerrish can be successfully cultivated here. A specimen of the fruit taken from Mr. Gerrish's plants was sent to this office yesterday. It is of good size, and affords incontestable evidence of the semi-tropical nature of our climate and its certainty of adaptation to the citrus fruits, which are much more hardy. The banana plants grown by Mr. Gerrish have had no protection whatever during the winter season, so-called, and needed none.

San Bernardino.

**FRENCH PRUNES, ETC.**—At Etiwanda, on the Cucamonga slope, says the Press and Horticulturist, A. R. Martin has a 30-acre orchard and vineyard, planted three years ago last spring. His vineyard is carrying all the fruit it ought to, and he recently declined a bona fide offer of \$1000 for his crop of raisin grapes on 10 acres, and we think he did well to not sell. His apricots are young and of course doing but little as yet. It is an off year for deciduous fruits generally, but his peach orchard, mostly of the Golden Cling variety, look very fine, as does also his pear orchard, mostly Bartlett. His French prune orchard although young is making a good showing of fruit, and we believe that this fruit, now being tried in Southern California for the first time, will be, in many localities, one of our leading crops. His young orange and lemon orchards are thrifty but not large enough.

San Diego.

**GREAT IRRIGATION ENTERPRISE.**—Work has commenced on the new reservoir at San Jacinto, San Diego county. The dam will be an immense affair, 250 feet long and 121 feet high. The reservoir will hold 7,000,000,000 gallons and will furnish a flow of 6000 miner's inches for 100 days, which, at the rate of one inch per ten acres, will irrigate 6000 acres of land. The work will cost a quarter of a million.

San Joaquin.

**CASTOR BEANS.**—Sentinel: Mr. James Talmadge, near Lodi, is developing a new industry and showing that his live oak land is capable of producing something besides wheat and barley. He has planted out this season between 30 and 40 acres of castor beans. They are growing finely and promise a fine yield. Mr. Talmadge estimates the yield at from 1500 to 2000 pounds per acre, and at the usual price, four cents, will net him at least \$50 per acre.

Santa Barbara.

**STOCK SHOW.**—Santa Maria Times, June 26: For several weeks past there has been a growing feeling among the owners of stock that some organization should be effected for the purpose of holding a stock fair in this valley this fall. This object was effected last Saturday afternoon, when a number of our citizens met at the Metropolitan hotel and accomplished an organization by electing G. W. Lewis president and M. Thornburg secretary. J. J. Holloway, H. Stowell and W. S. Lierly were appointed a committee on by-laws and order of business, and H. Stowell, T. C. Nance, Dr. Lucas, J. J. Brookshire and Thos. Saulsbury were chosen a committee on program, to which he chairman was added.

Shasta.

**A NATURAL ICEHOUSE.**—Fall River Mail: Sixteen miles from Fall river mills is a remarkable natural ice cave, where unlimited quantities of ice can be packed at all seasons of the year. The opening to this icy cavern is said to be large enough for a two-horse wagon to drive in and load up. Great banks of ice lie heaped up on all sides, and rainbow-hued stalactites hang glittering from the dripping roof. Stupendous stalagmitic ice formations stretch back far out of sight, and frequently, as rays of light are caught by the prismatic icicles dependent from the roof, a wonderfully beautiful effect is produced. The cavern has never been explored, and there is no knowing how extensive this subterranean refrigerator may be. Whenever the people of this valley want ice for any purpose, they visit the cave and get all they want, and there is always plenty left.

Sierra.

**ARTESIAN WELLS.**—Reno Gazette: Although there are over a hundred wells in Sierra Valley, they all continue to flow steadily. In one or two instances neighboring wells seem to have struck the same body of water and cut each other off partially, but the general answer is that numbers do not seem to affect the flow, although there is a difference in different seasons of the year. The farmers are considering the idea of screwing on a cap so as to shut in the flow and save waste, but they are all afraid it will spoil their wells and dare not try it. There are five machines in the valley now, and each one puts down a well a week. Walter Ede has bought a machine of his own and says

he is going to put down 50 wells in a row in his pasture. They will be 200 feet apart, with an irrigating ditch as far as the water will run. John McNair has a fine well, the deepest in the valley. It is over a thousand feet, and it was put down 600 feet in one day, or an inch a minute. Mr. Wittie says the wells will irrigate a great deal more ground than was expected. By careful usage his well wets 25 acres of ground, and he says he would not take \$2000 for it. Most people imagine the flowing well is a new thing in the valley, but it is not so. A little well bored with a hand-auger in 1863 or 1864, by Ebright, on the farm now owned by W. A. Robbins, still flows a small stream, and another was bored about the same time on the H. P. Robbins ranch. W. A. Robbins now has a machine of his own that goes through rocky ground and is putting down his own wells.

Solano.

**FRUIT NOTES.**—Judicion, July 3: The town is full of fruit buyers. We understand that three cents per pound has been offered some of our orchardists for entire crops of peaches. The balance of the apricot crop has been sold for prices far above the expectation of the most sanguine. The fruit shipments on Monday last reached the enormous aggregate of 225,030 pounds. On Tuesday the amount exceeded 231,000 pounds. What will it be a couple of years hence?

Sonoma.

**HESSIAN FLY.**—Petaluma Courier: The Hessian fly has done considerable damage to wheat and barley between Petaluma and the coast. Orton Hubbel, H. P. McCleave, Henry Hall and other prominent farmers in that section, estimate the loss by this pest at from one-half to a quarter of the crops. The late-sown grain is damaged the most.

**WOOL.**—Democrat: The price paid for wool at Healdsburg is 21½ to 22 cents, which prices have been paid for the last few lots that been sold. There is but little remaining unsold.

Stanislaus.

**HARVESTER BURNED.**—Modesto News, July 2: The combined Houser harvester of J. J. Crosseley was burned in Turlock at an early hour Tuesday morning. The machine was valued at \$2200. The fire was caused, undoubtedly, by an incendiary, as the machine was stopped the night before in a bunch of green weeds. The above precaution is all that prevented the field taking fire. The harvester was insured in one of the companies represented by I. L. Grainger for \$1500.

Tehama.

**HORTICULTURAL SOCIETY.**—People's Cause: George Stoll has obtained a number of signatures to a call for a meeting on the 10th of July for the purpose of organizing a horticultural society. A meeting will be held Saturday, the 10th day of July, 1886, at 8 P. M., at the courthouse in Red Bluff, at the time and place to meet for organization.

Tulare.

**BERRY'S LOCOMOTIVE HARVESTER.**—Visalia Times, July 1: Mr. G. S. Berry, of Lewis Creek, is now working a locomotive harvester of his own devising, which is undoubtedly destined to cause a complete revolution in existing methods of grain husbandry. For five years past Mr. Berry has interested himself in the invention of some machine which would do harvest work better than the various implements with which, thus far, farmers have been compelled to gather their crops. But it was not until a few months ago that he discovered the principle by means of which he is now swiftly and inexpensively harvesting his wheat. He occupied himself last winter in perfecting his invention, and it was not until the early part of last week that he was ready to test its efficiency in the field. A week ago last Tuesday he set the machinery in motion, and it worked better than even he had anticipated. It has been running steadily from that day to this. On Tuesday morning Mr. E. Jacob, accompanied by the Times reporter and two gentlemen from Contra Costa county, rode out to Mr. Berry's ranch. The locomotive harvester was running over the field at the rate of a mile and a half an hour. The cumbersome machinery presented a novel appearance as it glided over the ground and turned sharp corners in perfect obedience to its inventor, who sat on a platform and directed its movements by turning a wheel and screw. Shortly after the reporter's arrival on the scene the engine stopped to take on water, and the inquisitive scribe had a good opportunity to examine the details of its construction. It consisted of three distinct parts. In the center was the motive power, comprising a boiler with a Rice straw-burner, a traction locomotive, and a small engine to operate the different parts of the machine. On the right-hand side, facing forward, was a Young separator, connected with the locomotive by knuckle joints, and held in position by one large wheel. On the left-hand side was a Benicia header with a 22-foot knife. The whole thing is so adjusted that friction is reduced to the minimum, and the harvester moves over the ground with very little jolting. It will be readily understood that the machine, consisting as it does of three distinct parts, each of which has some independence of motion, is remarkably well adapted to rough ground, and can move over hog-wallow land with but little jarring. The machine furnishes itself with fuel,

and the fireman, by means of a simple appliance, uses the straw when he needs it, and when the tender is full, lets it discharge itself on the ground. The smoke-stack is unusually high, and the exhaust is so free that there is scarcely any danger of fire. Mr. Berry has arranged a contrivance by which the grain is thrown from the header into the separator without loss, and he claims that his harvester threshes wheat with less waste than does the stationary threshing machine. The crew of the machine consists of six men. There is an engineer, a fireman, a steerer, a header-tender, a separator-tender and a sack-sewer. A seventh man is employed to haul water for the boiler. Mr. Berry says that he can harvest 50 acres of grain per day with his new invention. He is now working on his own land, and as soon as he finishes that he will proceed to cut and thresh 2600 acres of grain on the ranch of E. Jacob at the 18-mile house. Mr. Jacob, who is a good judge of the merits of farming machinery, is enthusiastic about Mr. Berry's invention, and proclaims it to be a perfect success.

**TWO DAYS' HARVESTING.**—Tulare Times: On Thursday and Friday of last week, Thomas Hayes, who has a large ranch near Goshen, headed, threshed and sacked 374 acres of grain. Five headers, ten header wagons and a separator of his own invention were employed in the work, which began at 7 o'clock each morning and lasted until sundown.

**HARVEST WAGES.**—Delta, July 1: The enormous grain crop in this county the present season has necessarily developed an unprecedented demand for harvesters, both skilled and unskilled, and laborers in almost any number can readily find employment in the grain fields at good wages during the next three months. The wages paid are as follows: Engineers and tenders of separators get \$4 per day; forkers, from \$3 to \$3.50 per day; common laborers, \$2 to \$2.50 per day. The days are long, but the work is not severe, with the improved machinery now so universally employed, and the men seem to rather enjoy themselves.

Yolo.

**FRUIT DRYING.**—Winters Express: On Tuesday last we visited the apricot-drying works of E. Russell Morris, and saw a scene of bustle and activity that is rarely seen in our town. About 45 men, women, boys and girls are engaged in the work of cutting, spreading, sulphuring and laying out to dry. The women and girls employed average, in wages, about a dollar a day, and some of the boys and younger ones from 75 cents to a dollar a day. This industry has been a great feature for Winters, and has proven that our boys and girls, when given a show, will work, and that well.

Yuba.

**LEMON.**—The largest lemon ever grown in the Sacramento valley was picked the other day from a tree of the Marysville Notre Dame. It measures 12½ by 15 inches, and weighs one pound and eight ounces.

NEVADA.

**A SHEEP MAN'S BAD LUCK.**—Reno Gazette: Monday a sheep man on the road from Mason valley to California camped near Hank Martin's ranch in Carson valley. The Genoa Courier says he had a band of 3000 sheep and during the night 112 of them died. Tuesday 238 died, making a total of 350. The dead animals were scattered along the road for a distance of three or four miles. The sheep acted like they were poisoned and it is supposed that they fed upon something poisonous that they found in the sagebrush. The owner went out yesterday with a team and a half dozen Indians to haul the dead animals out of the road. The remainder of the band is now in the vicinity of the Walley Springs and is believed to be all right. Perhaps some cattle man had been salting the range as an antidote for blackleg.

WASHINGTON.

**NEW GOOSEBERRY.**—The Payallup Fruit Growers' Association held its alternate meeting at Sumner, on Saturday, the 12th inst., a short session only being held; President W. J. Bowman in the chair. J. M. Ogle, of the Payallup nursery, presented for inspection a branch of his famous new gooseberry. The limb was literally crowded with very large berries, of a beautiful, smooth, transparent and healthy skin, and their freedom from mold, mildew, blight or any disease whatever, elicited the admiration of all present. This new candidate for public favor has been noticed and its merits discussed at several former meetings, and Mr. Ogle was asked its name. He said he had not named it as yet, and requested that, as the subject was under discussion, and having a sample before it, the association relieve him of that delicate task. The request was agreed to and the chair announced that nominations were now in order. Mr. Warren Wood was appointed teller, and after a spirited contest it was decided to christen the new gooseberry Payallup Mammoth. J. M. Ogle states that he has this new gooseberry growing beside the English varieties Crown Bob, White Smith and Champion, and while the Payallup Mammoth was wholly free from the diseases of the three English varieties, the Crown Bob and White Smith had prematurely dropped most of their fruit and the Champion had not escaped. Without doubt those who are seeking a first-class gooseberry will find it in the Payallup Mammoth.

## Patchwork.

[Written by ELLA KIRK JELLIFF.]

A little maiden lowly seated  
Beside her mother's feet  
Looks up with face all flushed and heated—  
A face demure and sweet.

A tiny basket placed beside her  
Is full of patches bright;  
With nicest care she sorts them over,  
Dividing dark from light.

Then neatly joins them one by one,  
With stitches finely made,  
And strives to keep the pattern true  
As piece to piece is laid.

And after many, many days  
She views her work complete,  
And smiles as on the bed she lays  
The patchwork quilt so neat.

O little maiden, lowly seated  
Beside your mother's feet,  
Look up, your fair face flushed and heated,  
Your smile confiding, sweet;

And learn from older lips to know  
How full of thoughts your heart,  
And how, like patches which you've sewn,  
They need the finest art

To cull the brightest and the best,  
And weave them into deeds  
To make you strong and brave and good,  
And fit to meet life's needs.

New York, June 21, 1886.

## Traveling by Team.

[Written for RURAL PRESS by DAGMAR MARIAGER.]

Twenty miles from Purgatory to King's Ferry, along the banks of the Arkansas river, with a tolerable road. Not a very long drive, but the greaseboard had to be brought into service before starting, and the mules' joints, too, had to be oiled by means of the curry-comb; and so, with these and other detentions, we were late in getting under way. Then, again, taking an hour's halt at noon we were late getting into our evening camp, driving up beside King's barn just at dusk.

Another hour, too, had flown as hours can fly only when thoroughly enjoyed. To our happy surprise we had met a little train from the South, in which we found two of our old acquaintances of the Northwest. Strange how friends, rovers of the sparsely settled plains and mountains, will sometimes bolt into each other's presence in the most isolated crannies of the earth. We had driven a mile or two along a gully which in its serpentine course continually cut our road short to the vision. In one of my noisy moods, I was fairly making the rocks ring. I was about to enter upon the fourth and last of "Tycho Brahe's Farewell," a Danish song, while the wagon wheels rattled along over the imbedded rocks, and the pots and pans clattered in the mess-box behind, when a noise ahead and apart from that made by our own two teams, attracted my attention.

"Train coming!" shouted Ida, looking back at me from under the cover of the wagon ahead. I was silent at once, and seemingly innocent of having anything in common with the coyotes that gathered on the promontories at night to give their minstrelsy to the world at large.

A moment later a mule's head formed a silhouette against a bank a hundred yards ahead of us, and the rest of its body gradually came forth in the picture, which kept up its progressive change until three teams were in sight, with their human attendants. The latter stared at us a moment, then two of the men, as if moved by one impulse, shouted:

"Great heavens! How did you three petticoats ever get in here?"

"By way of Purgatory, of course," said Mrs. B., laughing heartily; "where you two rolling stones are heading for, and will probably camp to-night."

One of them, a little partial to me, said he had heard and recognized my voice before we were visible, and my song, seemingly coming from the rocky point that intervened between us, though he was an infidel, had so strangely moved him as to almost convert him to spiritualism against all the armor of his will; and there he found me in all the reality of flesh and blood, with their accompaniments.

The usual gossip of the state of the trade, etc., from the north and south was exchanged. They were from Cimmaron, a New Mexican mining camp, which was trying hard to attract an exodus of scattered ramblers on nothing. Where were we bound for? "Central Texas, to return with a herd of cattle." "Whew-w-w!" Then their hats went up, and the rocks that heaved up in gave back considerable of a shout, and a storm of questions followed.

"Do you two ladies really expect to get

through to Texas alive?" "Why didn't you leave Ida behind, and save her poor little scalp?" "How are you going to make it over the bluffs from King's Ferry to Trinidad—no water, no wood, no nothing but an ugly twisted-up road?" "How do you propose to pull up and let yourselves down the Baton mountains?" "The greasers will gobble your mules while you are eating supper some evening, and that'll be the last of them, and that, too, before you reach Maxwell's ranch." "If the Indians do spare you until you reach the Jornada del Muerta desert, you'll die for water crossing that," etc. Then followed a chat, in which each joined to the confusion of the other. We couldn't talk fast enough, and at last we drove on again, regretting a hundred things we had left unsaid.

The day had been clear and pleasant for the month of January, until near night, when the horizon became hazy and the sky gray, obscuring our day-clock—the sun. The evening was sharp enough for our enjoyment of our campfire, and our hot supper comforting as usual. The lateness of the hour made us delay purchases, probable sales, and the exchange of queries that usually took place as we passed travelers' stations, until morning, excepting the hay Ida bought of the stableman for the two span of mules to grind at during the night, as they stood tied to the outside wheels of our wagons, stationed parallel with each other, and with just enough room between them for our couch. We had no room under our wagon covers for ourselves and blankets in a horizontal position, being pretty well loaded up with the remains of what had lately been a flourishing business, three-fourths of which was a restaurant and the other fourth a general mercantile department. These things were promises of high freight in the direction we were going. They were to leave us by piecemeal on the roadside—one station needed this uncommandable article in its out-of-the-world location, and the next needed that, and we found farther along that we had calculated well. But had our wagon-boxes been empty we should have made our bed just the same on the naked ground, with the sky, in whatever mood, our expansive coverlet. Our wagons would at night have made us the helpless prey of enemies, in case of attack, while the open, low location gave us many securities. Objects are seen and movements noted much more readily, while one's own location is less a certainty to the prowling foe. Indeed, it is a ticklish business, as the average frontier Jehu expresses it, for a two or four-footed enemy to steal into the camp of even one traveler, whose bed is on the bare earth, and whose ears, eyes and wits keep guard, while he sleeps as pleasantly as only one can sleep who the while breathes the refreshing rural breezes as they wind their way over hills, dales and streams from the mountains in the background of the picture he never ceases to enjoy.

The evening meal over, the mules blanketed and given their good-night pat on the neck, and we retired, our usual alertness slumbering with us, for were we not as safe there alone as we should have been with a regiment of soldiers at our command?

"Hello, fellows! Time to get up! Better dig out if you can—got a rousing fire inside."

The words were distinct enough, and near us too, yet they seemed to penetrate an unusual number of blankets, or something else. We awoke to find ourselves warm and comfortable enough, but something, though not heavy enough to distress us, held us in place. We made an effort, however, to "dig out," as the voice advised, and found the task somewhat difficult. We were buried under two feet of snow. The stranger located us by a slight undulation on the snow's surface, and began work for our relief with gloved hands, his only tools. Up to the moment his greeting had been treated with silence, but when our blonde and brunette queens met his eye as he delved into the fluffy white mass, and we arose to shake the snow from our necks and sleeves, he looked as if he had "unearthed" something he hadn't bargained for. Our dismay was mutual.

The snow sufficiently out of our bangs and eyes to take a look around, we discovered that our friend was as young and handsome as he was gallant, and one of the two proprietors of the station. He stood abashed a moment and then exclaimed:

"Good gracious! This is a surprise! I didn't suppose there was a lady this minute nearer than Fort Lyon. But where are the gents, may I ask?"

"We are paddling our own wheeled canoes, sir," said Mrs. B. "Ida, where are you? Ida!" turning to the grave which had all tumbled in again. "Mister, will you help us, please?" and with our triple efforts, Ida, who slept at the foot, was dragged out, feet foremost, from the end of the bed we had occupied.

The gentleman would hear to nothing else, so he took Ida in his arms and started for the station, while we waded on behind and left our mules for the stableman's care and the shelter of the buildings. We were soon convinced that women were not always necessary to clean and orderly and home-like housekeeping, nor to the culinary department. The biscuits, coffee and other good but simple things we enjoyed from the dining table, made our mouths water for more when, a hundred miles farther along, we lost our way at midnight in a blinding storm and had neither habitation nor man to offer us rescue. Dinnerless and supperless we were goaded on to continue the drive into the night, having been refused water by the very uncouth-looking bearded animal keeping the station by

which we intended to pass the night; and we never ate other than hot bread, so had nothing on hand on which to lunch.

We "laid over" at King's Ferry three days, waiting for the mail express to break the road, in the meantime enjoying the hospitality and entertainment of the two landlords, who, unlike the average station-keeper along our route, refused payment on our departure, saying we had involuntarily given them a most agreeable pleasure. We frequently thought of them with sincere gratitude, as we journeyed on, and something our hero said to me the evening before leaving somehow entered into my day-dreams for awhile after with a pleasurable kind of regret. My friend and I had not yet entered far upon our grand mission—things couldn't now be changed, and what it was he said I don't propose to tell.

## "Personal Liberty."

The discussion of the merits and demerits of the liquor traffic is a very one-sided one. Excepting the few sheets published specially in the interest of the trade to circulate among the dealers and drinkers, I have never known a newspaper to advocate the liquor traffic as a public benefit. In such papers of general circulation as have invited discussion and published severe criticisms of the business, I have never yet seen any attempt at defense on the grounds of general usefulness.

We have to depend on the official organs of the trade to learn what argument or advice they offer to their friends. What is there offered as argument often partakes largely of the nature of exhortation urging to united protection of interest. The revenue plan is sometimes used in the only safe way they can use it, which is by a passing furtive allusion calculated to impress the superficial observer with the idea that the revenue is so much clear gain to the country. They make no reference to certain facts which underlie and surround this revenue offering. While the average annual revenue is less than \$54,000,000 the value of material destroyed in manufacture is nearly twice that; the direct cost to consumers fifteen times that, and the indirect cost to the country as much more.

The time of the 180,000 liquor-dealers, worse than wasted, would, if usefully employed, be worth more than the revenue; and allowing the business of each of these dealers to result in waste of time of two other men as loafers, there would be another waste double the value of the revenue. Medical authorities place the annual loss of effective labor through insanity and idiocy, caused by drink, at over \$200,000,000. A moderate estimate of the accounts of the traffic show instead of a gain of \$54,000,000 a loss of over \$130,000,000; and if human life is any consideration, except financially, we might call attention to the fact that, as the work of these 180,000 dealers, we have annually 100,000 drunkards' deaths, from which it would appear that on an average each dealer "kills his man" every 22 months.

But what are all these considerations when brought in contact with a dealer's greed, a drinker's appetite, the liquor revenue, and "personal liberty"? The personal liberty plea is urged with more emphasis than the revenue plea. It is the great shield of protection against all argument. Now there must be reality in that. Personal liberty is a sacred right. We cannot restrain a man from serving his God in his own way without an abridgment of personal liberty. We cannot prevent men from selling or drinking liquor without interfering with personal liberty; cannot hinder a man from killing himself or his neighbor with whiskey or a shot-gun without curtailing personal liberty; cannot prevent his taking his neighbor's property by midnight theft or daylight robbery without restraint of personal liberty.

All men love liberty. Our forefathers fought for it. The criminal overtaken by the officer of the law fights for it when he dares, and runs for it when he gets a chance. It is precious. Reformers advocate it warmly; liquor dealers rely on it; highwaymen, pirates, thieves and pickpockets live by it. It is a great blessing; Satan practices it and loves it, and verily couldn't do without it, especially in business of a questionable kind. Give us personal liberty!—*Thought-ograph in People's Cause.*

INTERIOR TEMPERATURE OF THE EARTH.—The London Times, referring to the deep shaft being sunk near Schladebach by the German Government, with the special object of obtaining reliable data concerning the rate of the earth's increased temperature toward the interior, concludes, from all that has thus far been developed, that the earth's crust cannot be more than about one-ninetieth of its radius. It seems that the plan pursued has been to ascertain the temperature at successive stages by means of a special thermometer, the principle of construction being that as the heat increases the mercury will expand so as to flow over the lip of an open tube, the difference of the overflowing giving the rate of increase of the temperature. At the depth of 1392 metres the temperature indicated 49 degrees Centigrade, or 120 degrees Fahr. If the temperature increases regularly at this rate, the boiling point of water ought to be reached at a depth of 3000 metres, or nearly two miles, and at 45 miles the heat would be that at which platinum melts.

## A Motherly Lecture for the "Girl of Twenty."

[Written for RURAL PRESS by WOMAN OF 4-.]

Having been a constant and attentive reader of your valuable paper for years, I therefore read and was much interested in "Rural Home Notes" Nos. 1 and 2 by "A Girl of Twenty." With the first I was wholly pleased, but a little sorrowful to feel that the writer could see so clearly into the way of life, and yet be only 20 years of age. For, to me, it seems when the mental vision is so clear the capacity for mental suffering must be correspondingly large, and that, without years of care and sorrow to teach us patience and endurance, is always to be deplored.

Next came article No. 2, which I read also, and which made me wish I knew the writer or, at least, her address, so that I might write direct to her, for I have a few little weak criticisms to pass upon No. 2, which, if given publicly through the columns of the RURAL, and shorn of the little "my dears," and "if I were you's," which I should naturally put in if I were speaking or writing directly to her, must necessarily make them sound harsh and unfriendly.

After reading No. 2 I seemed to feel a little out of humor with myself; at least I thought it was myself, yet in a short time I began to attribute it to the piece I had been reading. So I sat down and carefully re-read it, and I thought it must be like a little jarring sound that once troubled our piano. I thought there was some foreign substance lodged upon one of the strings, yet on looking I could find nothing. Then I called a tuner, and he, after a thorough examination, could find nothing; yet the jar remained. Then we moved the piano, and lo! the annoyance was gone; and we found the noise was made by the vibration of some note upon the gas fixture below the floor, which was again transmitted to the piano by some telephonic process, and seemed to emanate from it. So then I concluded the jar was not in the piece, but in my feelings or elsewhere. But after a little more time I began to form my little weak criticisms, and here they begin: No. 2 was amusing and instructive, but lacked the spirit of sweetness which pervaded No. 1, and in its stead a combative, self-assertive spirit prevails, which detracts considerably from the harmony and interest of her writing.

Why older people do not like to hear young people preach, or moralize, is because it is not natural. It is like "fruit out of season," and the young mind capable of it is apt, like the "fruit," to mature imperfectly. The suggestion of a sermon which grew out of the wet wood, and poor fire she had to wrestle with was good, and if she meets any in her "life's great furnace-tending," I hope it will be after age and experience have given her "patience" and "endurance" as a reserve store of kindlings, of a quality that will burn until the moisture of the "wet wood" has all been eliminated, and the whole be united in one fine flame, the glow and warmth of which shall spread brightness and cheerfulness on all around.

Then she speaks of how easily she is amused in the country, in a way which seems to consider it meritorious when it is only a matter of congratulation, that, as her lot is cast in the country, she should have the talent for observing and a capacity to enjoy those things. But the talent of her "friend's" acquaintance for observing the color of the hair and eyes of her gentleman friends (she should not say nor quote the color of every "pair of pants," for she sacrifices elegance of diction to force of expression, a very doubtful gain at best, and something no lady writer should do,) is not to be decried nor depreciated. Suppose she was an artist, a painter of portraits, then the faculty would be invaluable to her. Or, if a man and was a detective, then it would be considered a positive talent.

We are not all made alike, and it is a good thing we are not, or what a monotonous world this would be. I have a friend who cannot bear to hear the wild dove coo, yet paints beautiful pictures, while I, who dearly love to hear the wild dove's song, care very little for pictures, except those painted on the changeless hills and vales and mountains.

And now I must touch upon the much-derided novel-reading which she, in common with many others, seems to hold in such fine scorn. All novels, even the poorest, are nothing more nor less than heart histories written mostly by close students of human nature. And as young girls—to be natural—live more in the affections and emotions than the intellect, they therefore are attracted to the reading which portrays most vividly those sentiments.

If the "Girl of Twenty" was a woman of 40 or 45, as I am, she would see no merit in a child of 11 asking, "Who is the author?" but would rather she would ask, "Where's my jump-ropes?" or "Where's my skates?" or see her riding bareback—and it may be bareheaded—around the field on good old Kate or Nell.

Now, in conclusion, I would say to her, cultivate earnestly charity of thought and expression, for with her capacity for comparing and observing she is in danger of growing sarcastic and acrid in disposition, and thus lay up much unhappiness for herself and do little good beside. To quote from her beloved Tennyson, "He never had a kindly heart, nor cared to better his own kind, who first wrote sarcasm, with no pity in it."

San Francisco.

## How Different People Regard Nature.

[Translated for RURAL PRESS from the German of HANS CHRISTIAN ANDERSEN by PROF. GRANVILLE F. FOSTER.]

Note that the moon is supposed by Andersen to be relating to him the story.

"Along the seaside stretched a magnificent forest of pine and beech trees, so cool and so fragrant. Hundreds of nightingales visited it every spring. Close thereto lay the ocean—the ever-restless and changeable ocean—and between them ran the high road. One carriage after another rolled by. I followed them not. My eye rested alone with pleasure upon a single point. Here lay a huge mass of stones, known in Northern Europe as a giant's grave. Brambles and white thorns grew up between the stones. Here was indeed poetry in nature, but how think you it affected those who traveled by? I will tell you what I saw and heard last evening and you may judge for yourself. First came two wealthy landed proprietors. 'These trees are large and fine,' said one of them. 'Each would furnish ten loads of firewood,' answered the other. 'The coming winter promises to be a severe one; last year we received \$14 a cord for just such wood—' and they rode on. 'The road here is a wretched, miserable one,' remarked another traveler. 'Yes, therefore are these cursed trees in fault,' replied his fellow-traveler. 'Here is no circulation of air, no breath of wind; breezes can reach this spot alone from the sea,' and forth their carriage rolled. And now comes the stagecoach. All the passengers therein are asleep. The postilion blows his horn, but his only thought was: 'How capably I blow this horn; how grandly it echoes through the forest! Its sound must please those who ride within.' Just then came along two 'jolly fellows' galloping on horseback. Youth and champagne quicken their blood, thought I. They observed with a smile the moss-covered hill and the dense forest. 'Here would be a grand place to take Christine, the miller's daughter, for a stroll,' said one of them, and forth they went.

"'Twas a beautiful evening. The very air was loaded with the perfume of flowers and odoriferous shrubs; every breath of air slumbered. The ocean, like a sea of glass, seemed to be a part of the heaven overhead, which spanned the deep valley. A chaise appears; six persons therein; four asleep; the fifth busy in his thoughts, admiring his fashionable summer coat, which fitted him so neatly; the sixth turns toward the coachman and inquires whether there is anything of the curious and remarkable to be observed in yonder heap of stones. 'No,' answered the coachman, 'it is nothing but a heap of stones. There is, however, something remarkable about this forest.' 'And what is that?' 'This I will proceed at once to tell you. Observe how in winter, when the snow is very deep and has obliterated everything, and no pathway can be seen, how these trees might serve me as signs; for by them I can so guide my horses that I am in no danger of driving into the sea; hence you see these trees are remarkable.' Next came a landscape painter. His eye sparkled. He spoke not a word, only whistled. The nightingales burst forth in song, pouring out on the evening air their sweetest and mellowest of notes, drowning entirely his voice. 'Confound this noise!' cried he, and then set to work to examine with his critical eye all the colors and tints in the landscape. Blue, lilac, dark brown. Capital! What a fine picture it will make! Whistling a march from Rossini, he sets about seizing upon the scene, until the picture is so well executed that it reflects the landscape as a mirror does the image of an object. At length comes a poor girl for a few moments' rest; she seats herself upon the giant's grave, her head by her side. She bends her fair, pale countenance attentively toward the forest; her very eyes sparkle with pleasure, she turns toward the sea, looks at the bending heavens above; she clasps her hands in delight, unconsciously repeating the 'Lord's prayer.' She may not have been able fully to analyze the feelings that thrilled her soul, but I venture to assert that years afterward that picture of beauty and loveliness which Nature presented to her gaze that evening floats before her memory, far fairer, far truer, than that which the painter was able to place upon canvas, with all his knowledge and skill, with all his nice discrimination as to colors and tints. She had caught the true secret of beauty. She recognized the spirit of God through the veil of nature. My brains followed her until the morning glow kissed her forehead."

## YOUNG FOLKS' COLUMN.

## Jack and the Birds.

[Written for the RURAL PRESS.]

Jack is a black cat that lives in the city. The other morning, while sprinkling the lawn in front of the house, I noticed Jack going across the street. As I had previously sprinkled there, it was quite muddy in some places, and Jack being a very dainty cat, did not wish to wet his feet, so he took particular pains to go away round the mud on the dry ground. After crossing the street Jack went under a vacant house on that side.

Pretty soon I heard a great commotion among about a dozen English sparrows which were flying around in front of the house under which Jack had run. They seemed to be diving down at something back of the front fence.

Presently Jack came out from behind the fence with a sparrow in his mouth. The bird was squawking as loud as its little lungs would allow. The other birds were after Jack, but he was determined to hold on to his prize.

He came running across the street as fast as his legs could carry him right through the mud which a few minutes before he had been so careful to avoid. As he came through the front gate he ran under the sprinkler and got soaking wet.

He then ran under a rosebush to get away from the birds, but they kept at him until he let the bird which he had in his mouth go.

When the birds had flown away he came out

by. They sprang at the wolf and killed him. You may be sure the little boys thanked the men over and over again. The men went with them till they came out of the forest, then, after thanking the men, Willie and James took their leave and went on their journey homeward. When they reached home their mother was very glad to see them. She told them that she had been worrying about them all the while they were gone. Then they told their mother of their narrow escape, and she kissed them and thanked God for saving her two little boys from the cruel jaws of a wild beast.

Sacramento.

## What He Loses.

EDITORS PRESS:—"If a man worked for \$1.25 per day and paying 50 cents per day for board, should lose a day and pay for his board, how much would he be the loser?" I answer, \$1.25. If a man works for \$1.25 a day and loses a day, he loses \$1.25, for he has got to pay 50 cents whether he works or not.

Redding, Shasta Co.

## GOOD HEALTH.

## Interesting to Beer-drinkers.

A Petaluma correspondent of a cotemporary writes on the subject of beer-drinking and beer manufacture as follows: To begin with, there is not one quart of the manufacture of our breweries in this State that ever reaches the dignified state of beer. The patrons and the

the case may be. Then it becomes capable of imparting whatever benefits a stimulant may be capable of accomplishing, if any. But experience teaches that no stimulant is of any benefit except in actual indisposition, and under the same intelligent guidance that other therapeutic agents are prescribed.

Petaluma, June 15th.

## DOMESTIC ECONOMY.

ENGLISH RHUBARB JAM.—For each pound of rhubarb allow the rind and juice of one small lemon, four bitter almonds, blanched and chopped very fine, and three-quarters of a pound of sugar. If preferred, a few drops of bitter almond essence may be used instead of the chopped almonds. Peel the rhubarb and cut it in pieces an inch long; put the rhubarb and sugar in a deep dish and let both remain 24 hours. Boil the rhubarb and sugar, the finely-minced lemon rind and the almonds until it thickens and then add the lemon juice. Let the jam boil up gain and put in glasses or jars.

WELSH CUSTARDS.—One cup of dry, grated cheese, four eggs, one cup of milk, one teaspoonful of butter, two teaspoonfuls of prepared flour mixed with the milk, bit of soda the size of a pea, half teaspoonful of salt, and a pinch of cayenne. Heat the milk, stirring in the soda, butter, salt and pepper, with the flour wet with a little milk, and pour it scalding hot on the eggs, beaten light in a bowl; add the cheese, beat up for a minute, pour into buttered custard cups and bake in a brisk oven for about twenty minutes. They should be puffy and lightly browned. Serve instantly in the cups, as they soon fall; pass the wafers with them.

FRIED WHOLE POTATOES.—Peel them and boil in salted water; do not let them boil until they are soft. Beat one egg, and have ready some fine cracker crumbs; roll the potato in the egg, and then in the cracker, and fry in butter until a light brown, turning frequently, that the color may be uniform; or the potatoes may be dropped into hot lard. In this case, a cloth should be laid over a plate and the potatoes should be drained for a moment in this before sending them to the table.

TENDERLOIN OF PORK.—The pork should be rubbed with butter and broiled on a hot gridiron. Garnish with slices of lemon and serve with sauce Robert. The sauce is made in this way: Mince an onion fine and fry it brown in butter; add half a cup of vinegar

and half a cup of hot water or stock; boil a few minutes and strain; now add a teaspoonful of brown flour and one of mustard, seasoning with half a teaspoonful of salt and a little white pepper. Boil until it thickens.

DATE SAUCE.—Date sauce, which is very nice with bread puddings, is made by stewing dates in just enough water to cover them; let them simmer for three-quarters of an hour, then if the dates are soft rub them through a colander, beat it until it is light; add water if it is needed to thin it, let it come to a boil. If you have saved the juice of fruit when canning it, use this instead of water to thin the sauce. The juice of currants is especially appetizing.

DELICATE PUFFS.—Stir into half a pint of sifted flour, to which a saltspoonful of salt has been added, one gill of milk. Beat the white of an egg to a stiff froth. Mix the well-beaten yolk with a gill of milk and stir into the batter; add the white of egg and bake in muffin pans in a quick oven.

CLAM BROTH.—Mince 24 hard-shell clams and simmer them for half an hour in a saucepan with a pint of hot water or clam juice, a piece of butter half the size of an egg and a few grains of cayenne pepper. At the end of this time add half a pint of scalded milk and strain before serving.

CARAWAY BISCUIT.—One pound of crushed white sugar, four eggs, one teaspoonful of salt, the rind of one lemon, caraway seed, one pound of flour. Stir all these ingredients well together for one hour, adding the flour last and then forming into cakes.

VEAL TOAST.—One cup of chopped veal, one cup of hot water, one tablespoonful of butter, one teaspoonful of salt and a slight sprinkling of pepper; place on the stove and when quite hot pour over buttered toast.

THE PUZZLED PUSSIES—IT LIVES, IT MOVES! WHAT CAN IT BE?

from under the bush and sat down on the walk with a very thoughtful expression on his face, as much as to say, "Here I am all wet, my feet muddy, and my bird gone. I wonder how it all happened."

San Francisco.

[Jack was undoubtedly filled with wonder and disgust over his experience. Cats as well as people have surprises and things which they cannot understand. We would like to have had a picture of Jack when he came out from under the rosebush, but there was no photographer there to get it. We have, however, a pretty cat picture for our young folks, and we give it on this page.

—EDS. PRESS.]

## A Narrow Escape.

[Written for RURAL PRESS by DOLLY BROOKS, aged 13 years.]

Willie and James Thorn were two little boys nine and ten years of age. James was the older. They were very good boys, and always obeyed their mother, for their father was now dead, and Mrs. Thorn had to work very hard to earn money enough to buy something to eat. She went out most every day to sew for people. One day James and Willie were sent in the forest by their mother to get some wood, for there was none in the house. Our two little boys had to walk quite a distance before they reached the beginning of the forest. They walked through the forest very bravely, not fearing any wild beasts at all. When they had picked up all the wood they could carry they turned for home. But, lo! out sprang a hungry wolf. What were the poor little boys to do? James took hold of Willie's hand and started to run, but the wolf would soon have caught up with them and killed them had it not been for two men who had probably been cutting wood near

manufacturers alike are in too big a hurry for that. It is all drank as sour mash. Let us explain.

Fermentation is the work of an infusorial cryptogam or bacteria. These little creatures make our alcohol in a struggle for existence. They are so small that billions of them occupy a space of half an inch, and in point of multiplication one will develop a million in 24 hours, while one hour is their average life. You must understand that they are a sexless animal. Should the beer-drinker, as a preliminary measure, place his delicate, foamy luxury under a magnifying power of eight or ten thousand diameters he would perhaps postpone the enjoyment of his delicacy to some future time. A vat of barley, undisturbed, might remain until it rotted and it would produce no beer. But stir it up and force the bacteria down in the fluid where they cannot obtain a sufficiency of oxygen upon which to live, they take the sugar and manufacture alcohol from it, and from the alcohol they can abstract enough oxygen to support life.

This is fermentation; but the fermentative process is only in its incipency before all the stuff is drank. The foam on your glass of mash is cryptogamic. Drink it, and you convert your stomach into a vat for the fermentative process. The temperature of the stomach being favorable to their healthiest existence, fermentation continues, developing and disengaging a gas, bloating, weakening and relaxing the intestinal tract; impairing the digestive process, developing an alarming quantity of abnormal fat, weakening all the vital organs, and, finally, with an aldermanic corporeity, the victim steps down and out. And this is a subject that some medical men treat with levity. Thus far, we have not discussed beer, ale, or porter—simply the primary or elementary principle, sour mash.

When this mash has been bottled or barreled from two years and nine months to three years it becomes beer, ale or porter, as

## The Week.

The week has been badly broken up by the  
three national holidays for the celebration, and  
the cessation from business, which was the most  
marked feature of this year's observance, ex-  
tended from Friday night until Tuesday morn-  
ing. It was quite a welcome relief to the  
older people, but a severe tax upon the bad  
small boy to spread one day's firecrackers over  
three days' time, and just as hard for the good  
small boy to have the explosives on hand and  
not let them off on Sunday. However, every  
one survived the strain and returned with re-  
freshed vigor to ordinary work on Tuesday  
morning. The Fourth throughout the State  
was rather quiet this year, the greatest celebra-  
tion being at Monterey, where National and  
State patriotism and traditions were pleasantly  
commingled. In the city and country there  
are many thoughts turned toward the grand  
event of next month, the G. A. R. Encamp-  
ment. In the city and suburban towns great  
efforts are being made to perfectly arrange  
accommodations for the thousands who are  
coming. After that event will come the fairs,  
the political conventions, the election, the  
Legislature—surely the coming months will not  
be dull.

## The Hop Outlook.

We cautioned our readers in our Market Re-  
view last week against reports that "new hops  
were being contracted for at 10c per pound." Buyers  
seemed to think that they might catch  
some growers at low-water mark by circulating  
such reports in the daily papers, but we im-  
agine they found few growers eager to contract  
hops ahead for less than the cost of production.  
The folly of such reports is seen from the fact  
that before the close of the week the buyers  
advanced their contract figures to 15@16c per  
pound, and probably found few ready to sell at  
those figures.

We do not believe, as a rule, in holding on to  
produce too long, but when rates are below the  
cost of production, and especially after a pro-  
longed depression, there are nine chances to one  
that values will advance. There is in all pro-  
duce a tendency toward the normal price, and  
sooner or later it is reached, and perhaps by  
reaction, the market value is carried much  
above it. This is notably the case with hops,  
which, of all agricultural produce, show the  
widest fluctuation from year to year.

Even if there were no reports of disaster to  
growing hops, we should expect a notable im-  
provement in values this year. The acreage  
has been greatly reduced by neglect and by  
plowing up, because of the ruinous experience  
of the last few years. The threatening condi-  
tion of the labor supply last spring, which hap-  
pily has not been realized to the extent pre-  
dicted by the agitators, together with the low  
prices prevailing, led many California hop-  
growers to abandon their fields. In the other  
parts of the United States the low prices ac-  
complished the same result as they invariably  
do. Besides this fact, there comes now the  
report of a most sad condition in the great hop  
districts of New York, as described in the fol-  
lowing dispatch from New York city, dated  
July 6th:

Reports from Otsego, Montgomery and Scho-  
harie counties hop vineyards say that the vines  
are covered with vermin from the top of the  
strings to the bottom of the poles. The honey  
dew is also found wherever the vermin are, and  
this is fully as detrimental. The appearance of  
vermin on the hop vines in the early part of  
July leaves no hope for a crop, and unless some  
sudden and unforeseen change occurs there will  
be few hops to harvest. The leaves attacked  
curl and dry up, and where the hops attempt to  
burr the vine is entirely consumed. Mold fol-  
lows in the hops before they mature, and those  
that do weather this difficulty are lacking in  
lupuline substance. While four to seven cents  
was paid for 1885 hops two weeks ago, 12 and  
15 cents are now offered, and as high as 18  
cents has been paid for old hops during the  
past week.

Another important hop district of New York  
is covered by the following dispatch, describing  
much the same state of affairs as regards the  
growing crop:

Dispatches from special correspondents of the  
*Sentinel* in Otsego county report that the hop  
vines generally throughout that section are cov-  
ered with lice from the bottom of the strings to  
the top of the poles. Honey dew is also found  
wherever the lice are, and this is fully as bad as  
the vermin. The extensive appearance of lice  
in June leaves no hope for the crop, and unless  
some sudden and unforeseen change shall occur,  
there will be no hops to harvest. The leaves  
attacked by the lice curl up and dry, and mold  
follows in the hops before they mature. Reports  
from southern Oneida and Madison counties  
are also to the effect that lice are so numerous  
as to threaten the total destruction of the hop  
crop.

It seems to us that growers can expect  
to realize something this year to com-  
pensate them for the disappointments of the  
last two years; and though we never advise any  
one to refuse a very good thing, we think there  
are good chances to do much better than figures  
which buyers are now talking.

**CHEAP OCEAN FREIGHTS.**—We hardly won-  
der that the English wheat-grower complains  
when foreign wheat is brought across the ocean  
for less than he can move his across his little  
island to market. The *Mark Lane Express*  
says: "When wheat is taken for ballast, who  
can foresee the course of the trade? This has  
been done, even at a premium, from U. S. At-  
lantic ports; and now it is stated that 700 tons  
of Australian wheat have been brought here as  
ballast from an Australian port, for the nomi-  
nal sum of £1, while 6d. per qr. is thought a  
very high freight rate of steamers direct." Seven  
hundred tons of wheat from Australia to  
England for \$5, or less than two-thirds of a cent  
per ton!

## The Coming Fairs.

We have prepared our usual list of coming  
agricultural fairs for the convenience of exhib-  
itors and fair-goers. The prospects for this  
year's exhibitions are, on the whole, excellent,  
and much interest is manifested in preparing  
the leading exhibits. At least two new pavil-  
ions have been finished already—one at Marys-  
ville and one at San Jose—and there may be  
others which we do not now remember. Los  
Angeles is preparing for the erection of a grand  
pavilion, and it is certainly greatly needed.

A number of counties are preparing for the  
county displays at the State and Mechanics'  
Institute Fairs. There are also special efforts  
being made to show produce in San Francisco  
during the Grand Army Encampment. Sonoma  
will be well represented, and Fresno has accom-  
plished an organization for this purpose and ap-  
pointed committees on nearly everything under  
the sun, including a committee to bring down  
a section of a big tree large enough to make a  
pavilion to hold the whole county display.  
Such an undertaking would never be forgotten,  
and would be talked about the world over.

This year's State Fair promises to be un-  
usually good. The directors have shown rather  
a better appreciation of the true producing in-  
terests of the State, and perhaps if there should  
be given a rousing good show of all kinds of  
farm products, the wisdom of making the fairs  
more thoroughly agricultural would become ap-  
parent. Let all who have something good  
send to E. F. Smith, Secretary, at Sacra-  
mento, for the premium list and rules for  
exhibitions, and then do what they can to  
help fill the beautiful building with a dis-  
play which will be true to the greatness  
and resources of the State. As we have fre-  
quently noticed, the county exhibits from sev-  
eral counties will be large and varied, and will  
be worth a journey across a State to examine.

The other fairs in the several counties and  
districts are worthy of local attention, and if  
the district does itself justice interesting mate-  
rial enough will come forward to equip a State  
fair in almost any other State in the Union.  
We have prepared a schedule of the fairs to be  
held in this State this year. The list is not  
complete and if the officers of any fair which  
is omitted will send us the data we will com-  
plete and republish the table from time to time  
until the fairs occur.

Bench Show of S. F. Kennel Club, San Francisco,  
July 27th to 31st.  
Bay District Association, San Francisco, Aug.  
7th to 14th.  
Third District—Butte, Tehama and Colusa coun-  
ties—Chico, Aug. 17th to 23d.  
Fourth District—Sonoma, Marin, Solano and  
Napa counties—Petaluma, Aug. 23d to 28th.  
Seventeenth District—Nevada and Placer coun-  
ties—Glenbrook Park, Aug. 24th to 28th.  
Mechanics' Institute Fair, San Francisco, opens  
Aug. 24th.  
Golden Gate Fair, Oakland, Aug. 30th to  
Sept. 4th.  
Thirteenth District—Sacramento, Yolo, Yuba and  
Sutter counties—Marysville, August 31st to Septem-  
ber 4th.  
Eighth District—El Dorado, Amador, Alpine and  
Mono counties—Placerville, August 31st to Sep-  
tember 4th.  
State Agricultural Society, Sacramento, Septem-  
ber 6th to 18th.  
Oregon State Agricultural Society, Salem, Sep-  
tember 13th to 18th.  
Eleventh District—Plumas, Lassen, Sierra and  
Modoc counties—Greenville, September 20th to 24th.  
Second District—San Joaquin, Calaveras, Tuol-  
umne, Stanislaus, Merced, Mariposa, Fresno, Tu-  
lare and Kern counties—Stockton, Sept. 21st to 25th.  
Ninth District—Del Norte and Humboldt coun-  
ties—Rohnerville, Sept. 21st to 24th.  
Fifth District—San Mateo and Santa Clara coun-  
ties—San Jose, Sept. 27th to Oct. 2d.  
Seventh District—Monterey, Santa Cruz, San Be-  
nito and San Luis Obispo counties—Salinas City,  
Sept. 28th to Oct. 2d.  
Tenth District—Siskiyou, Trinity and Shasta  
counties—Yreka, Sept. 29th to Oct. 2d.  
Nevada State Fair, Reno, Oct. 4th to 9th.  
Sixth District—Los Angeles, Santa Barbara, Ven-  
tura, San Diego, San Bernardino and Inyo coun-  
ties—Los Angeles, Oct. 11th to 16th.  
Santa Barbara Agricultural, October.

**FREIGHT ON FRESNO RAISINS.**—We notice in  
an exchange that Fresno raisin-growers are  
agry because to get their raisins East they  
have to pay \$60 per car local freight to Stock-  
ton in order to get the benefit of overland rates,  
because Stockton is a terminal point and Fresno  
is not. This terminal point business is often a  
great wrong to producers. If there must be  
terminal points, let them be fixed according to  
the produce prevailing in each locality. Fresno  
should certainly be a terminal point on raisins,  
if it is necessary to have any terminals at  
all. This charging local rates to gain a chance  
to pay through rates is wrong.

## Harvest Notes.

The grain-growers of the Sacramento valley  
have been disappointed this summer, for the  
wheat crop is almost everywhere coming short  
of what was looked for early in the season.  
Considerable threshing has been done in Sutter,  
and the *Farmer* reckons that not more than  
half an average will be harvested in that  
county. Reports from various sections of Butte  
agree that the yield at best is only medium,  
and accounts from Solano are equally disap-  
pointing. In Colusa soon after the recent  
norther, an estimate placing the damage to the  
crops at \$2,000,000 was deemed extravagant,  
but last week's *Sun* declares that the loss in  
that county, those two days, was 4,000,000  
bushels of wheat. "We would," he says, "have  
had 11,000,000 bushels. Now 7,000,000 is a  
large estimate of what we will have to sell.  
The loss to the white wheats has averaged from  
60 to 70 per cent, and to the club not less than  
an average of 15 per cent, and some say 20 per  
cent. From every one who was cutting before  
the wind we hear of a vast difference in grain  
cut before and after the wind. There are sacks  
to sell on all sides by people who have pur-  
chased too many. As a rule, men have never  
purchased enough sacks, but now every one  
who bought before the wind, and some who  
bought after, but who did not appreciate the  
full extent of the damage, have sacks to sell.  
The damage was fully as great in Butte, Teha-  
ma, Yolo, part of Sutter and part of Solano.  
We think its influence must have extended  
further south, but people are loth to admit such  
serious damage. It must bring down the price  
of bags."

In the coast counties south of the bay, too,  
we observe that the quantity and quality  
of the wheat fails to meet the hopes of the  
farmers.

The San Joaquin valley seems to have suffer-  
ed less by the winds, as only slight injuries are  
reported.

The barley harvest is turning out fairly, and  
very heavy and plump grain is being secured.  
The late hay regions are turning out well.  
Fruit is being found rather short, and buyers  
for canning and shipping are scouring the State  
for their favorite kinds. Grapes are still look-  
ing very well, and promise a most bountiful  
yield.

Reports of the honey crop so far are rather  
conflicting, but it is apparent that early esti-  
mates were too high. Though some most ex-  
cellent yields are reported, there are many  
others which are disappointing.

**LIVELY LOS ANGELES.**—Los Angeles is ap-  
parently surprising even her most enthusiastic  
advocates by the buoyancy of her real estate  
market. Milton Thomas, of that city, in a  
business letter to this office, throws in the fol-  
lowing interesting statements: "There is a boom  
in Los Angeles real estate values which is won-  
derfully unexpected. At this season of the  
year we usually have a dull time, but the reverse  
is the case, and real estate has advanced 25 to  
50 per cent during the last 60 days. On Fort  
street property has advanced 100 to 200 per  
cent within the last 30 days. The advance  
seems to be healthy, and most purchasers are  
paying down for their purchases." Of agri-  
cultural produce, Mr. Thomas reports field  
crops good, pears a failure, apples almost a fail-  
ure, apricots light, peaches one-quarter of a  
crop, English walnuts light, grapes good and  
the prospect that the next orange crop will be  
light.

**INDIAN WHEAT.**—The exports of Indian  
wheat for the last 10 years, as given in *Dorn-  
busch's List*, will give the reader an idea of the  
quick increase of production. The figures rep-  
resent cents of wheat:

1876-7.....	5,587,000	1881-2.....	19,901,000
1877-8.....	6,373,000	1882-3.....	14,194,000
1878-9.....	1,057,000	1883-4.....	20,956,000
1879-0.....	2,202,000	1884-5.....	15,831,000
1880-1.....	7,444,000	1885-6.....	21,061,000

It is stated that this enormous growth in the  
export of wheat, which is comparatively a new  
trade in India, is the result almost entirely of  
the extension of railways into regions from  
which it was formerly impossible profitably to  
move this cereal for shipment to foreign coun-  
tries. It has been accomplished, too, in the  
face of seriously growing competition in Europe,  
on the part of American, Australian, and River  
Plate wheat producers.

## Murderous Millet.

There is great diversity of opinion in this State concerning the worth or worthlessness of "Evergreen Millet" or "Johnson Grass," or almost any number of aliases which *Sorghum Halapense* sails under. It has been grown in nearly every part of the State from roots distributed by the College of Agriculture or obtained from other sources, and the opinions concerning it are almost as varied as the growers are numerous. A report on forage plants in California which will be issued from the University this fall will show quite fully the record of the plant in this State, and it will be much as has been already indicated by the letters from growers which have appeared in the columns of the *RURAL*.

The plant has proved of value in some cases, and a fearful nuisance in others. Although it has refused to grow in many locations, it has shown itself so persistent in others that it has become a great pest and has encroached upon cultivated land much to the sorrow of the owners. One grower of the plant who would like to see its shadow grow less is Dr. E. N. Foote, of Lockeford, San Joaquin county. He early discerned its quality, but not, unfortunately, until he got it into his ground. His heart warmed to it a little when its roots proved capable of sustaining his hogs when the grasshoppers removed the other vegetation, but now we imagine he has come again to hate it for its shameful aggressiveness. He made the attempt to work it out by cultivating the ground with hoed crops, but the more it is hacked and torn asunder the more it grows, the hoeing merely serving to distribute its roots, each joint of which has in it the full outfit for an independent plant. We imagine the doctor's indignation found forcible words when he saw the remarkable case of vegetable vivisection which we illustrate on this page. He sent us the case and there are so many interested more or less in the deeds of the grass that we had the engraving made. It represents with great accuracy an Early Rose potato, which a root of the millet found in its way and transfixed in the manner shown. On digging the potatoes the spud was thrown up with its murderous stiletto still in the wound. We imagine the doctor will consider potato growing as a poor cure for millet unless he can find a hard-shell variety warranted millet proof. He probably has no desire to grow his potatoes strung along on millet roots like beads on a necklace.

No doubt Dr. Foote is in the field now for a sure cure for millet, and we should not be surprised to find others of our readers in a similar state of mind. Perhaps others can report successful experience in eradicating the plant. If so we would be glad to hear from them. We hope that the plant will not have to be placed alongside of morning-glory as a standing problem in weed murdering.

By the way, we notice that the last issue received of the *Mark Lane Express* has a first-class puff for the plant copied from an Australian paper, and asks: What is this "Johnson grass?" Perhaps our contemporary can get a little light from this paragraph. It may be a good thing in some places, but be very sure not to get it where you do not wish to have it stay.

## Decision on Purity of Milk.

A legal reader of the *RURAL* calls our attention to the following Rhode Island decision, recently handed down, as follows:

## Constitutional Law—Statute Defining Adulteration.

A statute forbidding the sale of adulterated milk provided: "In all prosecutions under this act, if the milk shall be shown upon analysis to contain more than 88 per cent of watery fluids or to contain less than 12 per cent of milk solids, or less than two and one-half per cent of milk fats, it shall be deemed for the purpose of this act to be adulterated." Held, that the provisions were constitutional: *State vs. Groves*, 15 R. I.

The standard set by statute is exceedingly low; ordinary milk, half-skimmed, would thus pass, so no one could complain that it could be unreasonable, except, perhaps, to the consumer. The point of interest in the decision is, of course, in the affirmation of the constitutionality of acts regulating adulteration, and this is what producers of genuine dairy goods are insisting upon. The legal aspects of the claim are getting very satisfactory.

## In San Geronio Pass.

Highland Home, one of the most beautiful and favorably situated health and pleasure resorts of Southern California, is located about 80 miles east of Los Angeles, in the San Geronio pass, San Bernardino county, and about three miles northeast of San Geronio station, on the S. P. R. R.

San Geronio Heights, where the hotel is situated, is about 500 feet above the railroad depot, but the ascent is so gradual that persons do not notice the elevation until they reach their destination and look back over the broad fields stretching away for miles at their feet. The home is owned by the San Geronio Land and Water Co., composed of Messrs. A. H. Judson, D. R. Risley, and E. B. Millar, of Los Angeles. It is built on the site of an old stage station, on

and various other parts of the place where it is needed.

The company own in all about 1800 acres of land, 1400 of which is a rich, sandy loam and is under cultivation. The land yields an abundant harvest under proper cultivation, and the trees and vines which have already been set out look thrifty and well.

Extensive ornamental grounds are being laid out around the hotel in accordance with plans drawn by Mr. A. H. Judson. Outside of the above grounds there have been set out 20 acres of olive trees, 41 acres of vineyard and several acres of apples, pears and peaches. The elevation of the hotel is 3000 feet above the sea level.

The climate is probably almost, if not quite, unsurpassed in the United States for persons suffering with consumption and kindred dis-

HIGHLAND HOME, IN SAN GORONIO PASS.

the route to Arizona, contains all the modern conveniences, and a representative of the *PRESS* who was recently there assures us that under the management of its genial host and hostess, Mr. and Mrs. P. D. Grimes, is a home in fact as well as name. The site chosen was a particularly happy one, lying as it does at the mouth of the lovely canyon of Glen Eyrie and at the base of the foothills of the San Bernardino

eases. On account of its altitude and the close proximity of this locality to the great Mojave desert the air is very dry and highly charged with ozone. Another favorable point is freedom from fogs. A fog is rarely ever seen here, and then only for a short time.

It is a part of the company's plan to furnish places for permanent residence to those who wish to make San Geronio Heights their home.

EARLY ROSE POTATO PIERCED BY ROOT OF EVERGREEN MILLET.

mountains. Spurs from the hills project on either side, giving protection from the wind. In front, the eye looks out over a gently descending slope of some 18,000 acres of fine grain land under cultivation across to the mountains, on the other side of the pass. To the southeast, that grand old mountain, San Jacinto, lifts its snowy head, the top of which tradition says, as mentioned by Helen Hunt in her "Ramona," no one can reach and live. From the hills back of the hotel can be seen the three principal peaks of the San Bernardino mountains—Baldy, San Bernardino and San Jacinto. The canyon of Glen Eyrie, through which runs an ever-living stream of mountain water, as pure as crystal, is about a mile long and through it are thickly scattered large trees of various kinds, making a charming retreat for invalids and those who enjoy wild, picturesque scenery.

The stream of water in the canyon furnishes an abundant and never-failing supply of pure water for the hotel and for irrigation. Water from this stream is conveyed by pipe to a large reservoir, and thence the water is taken by other pipes to a smaller reservoir to the hotel

They have accordingly subdivided a large portion of the tract into lots ranging from one to ten acres.

VACATION.—As the year has closed at the State University, Professor Hilgard has retired for a change of work, which is said to be as good as a rest, to his farm in the lower part of Alameda county. We trust that a few weeks' tussle with weeds and adobe will prove a valuable tonic to him. Work in the University laboratories will be for the most part stopped during the vacation, and matters which can be postponed should be presented when they reopen in September. Matters of pressing importance, such as visitations of plant diseases or insect pests or practical points on which information is needed immediately, may be sent as usual and will be handled as well as possible under the circumstances.

FRUIT TREES AND VINES.—The estimated number of fruit trees in this State is as follows: Total number of trees, 8,000,000, divided as follows: apple, 2,700,000; peach, 1,200,000; pear, 500,000; plum and prune, 600,000; cherry, 400,000; apricot, 500,000; orange, 1,600,000; lime and lemon, 500,000; grape vines in bearing condition, 70,000 acres.

## State Horticultural Society.

The State Horticultural Society met in this city on June 26th, Judge W. C. Blackwood, of Haywards, in the chair. Mr. Gustav Eisen, of Fresno, was proposed for membership.

## Peeled Figs.

The following letter was read:

ROME, ITALY, April 15, 1886.  
Mr. E. J. Wickson, Secretary of California State Horticultural Society: I send you by mail a small sample of Italian figs of the better sort, as found on the hotel table. Perhaps the members of the society may be interested in examining them, as the fig seems to be the coming fruit in California. If not dried up in transit, they should be found very delicate, just the thing for a dessert dish. Sig. Siemoni, Inspector of Forests, tells me that these are of the variety called "Fico Dottato," which is largely cultivated, particularly in Tuscany, and that they were peeled before drying. The peasants are very skillful in peeling them, with their fingers only. The figs are then dried in the sun, upon a roof or other convenient place, sometimes being protected from dust and insects by spreading a thin cloth over them. The film of white sugar on the specimens is the grape-sugar, which is natural to the fruit, and is brought to the surface in drying. Great quantities of figs are cured without peeling, and are eaten within the realm to take the place of, or supplement, breadstuffs. Large shipments are also made to foreign countries, and particularly to Germany. In Germany the poorer qualities are largely used as a substitute for coffee, being cut in small pieces, dried, and treated as coffee usually is, but needing no sweetening. These peeled figs sell in large lots at 30 to 40 centimes per kilogram, or between 3 and 4 cents per pound, with rather a short supply. The unpeeled grades are cheaper. Our landlord, who formerly owned an estate in Tuscany, says that the "Fico Dottato" is a large green fruit, and that the greater part of the crop is eaten fresh. The "Verdini" are smaller, and are dried with skins on. The "San Pieri" are the first to ripen—about the last of June—and are eaten fresh. The names for varieties of figs vary so much in different parts of Italy that our importers of trees will probably get hold of the same thing with several synonyms.  
C. H. DWINELLE.

The figs sent by Mr. Dwinelle had been long delayed by the mails, and had become so tough and dry that their good points could not be perceived. His description was, however, heard with interest.

## Memorial Resolutions.

Mr. W. G. Klee, from the committee, submitted the following:

It is with feelings of deep regret and sorrow that we learn of the sudden death of our late member, Mr. G. N. Milco, stricken down in the prime of his life. His death is a sad loss to the State and to the horticulturist especially. A native of Dalmatia, a country with a climate in many respects similar to California, he saw the vast opportunities the Golden State offered for the introduction of the plants and fruits of Southern Europe, and not a few are the valuable acquisitions for which we must thank him. But it is especially through the introduction of the Dalmatian insect-powder plant that this State will remember him. To his untiring energy it is due that its culture and the manufacture of the buhach was made a success, and the establishment of a new and permanent industry added to the State. It is such undertakings which add wealth to a State, and such examples as his are worthy of the highest praise. In the death of Mr. Milco the State Horticultural Society has lost a most valuable member not to be replaced. As horticulturists we extend our deepest sympathy and condolence to the bereaved family.—W. G. KLEE, JAMES SHINN, Committee.

The resolutions were adopted and the secretary instructed to send copies to the family of the deceased and spread the same upon the minutes of the society.

## New Horticultural Commissioner.

Senator DeLong, from the committee appointed to interview the Governor regarding the appointment of Horticultural Commissioners, reported that a special committee had interviewed the Governor, and the result was the appointment of W. M. Williams on the State Board of Horticulture in place of G. N. Milco of Stockton, deceased, as requested by the society at its last meeting.

## Discussion on Apple Growing.

The discussion on apple growing was opened by Senator DeLong, of Marin county. He thought the discussion naturally divided itself into the ground in which trees should be planted, selection of varieties best to plant, then planting, cultivation and pruning, the best ways to fight fungus, insect pests which attack the body of the tree and the leaves, and those which attack the fruit.

Land for an apple orchard should be rich as possible and free from adobe. It should lie so as to secure good drainage, or be well drained artificially. There should be no standing water to injure the roots or to interfere with thorough cultivation, for the land should be so that it can be worked early, and not be lumpy, but thoroughly pulverized.

In selecting varieties for an apple orchard for market fruit he would take but five or six varieties, and for commercial purposes he would

plant no apple ripening before the end of August. The very early apples have to compete with summer fruits, and generally get the worst of it. Perhaps in certain localities a few early apples will pay.

For an early apple, then, in his experience, he would consider the Gravenstein early enough and would plant no Astracan or Early Harvest. He considered the four best varieties for keeping and shipping to be as follows: Yellow Newtown pippin, Esopus Spitzenberg, White Winter Pearmain and Winesap. The last-named apple, he said, according to his observation, produced and kept well if grown on unirrigated ground, and would stand shipping around the world. He mentioned the Tewkesbury Winter Blush as keeping to June 1st.

In planting out an apple orchard, Mr. DeLong would plant out apple trees 36 feet apart, on the equilateral or quincunx plan and between them place shorter lived trees, apricot, cherry and peach. This will yield some pay for the cultivation until the apple trees need all the ground. The apples, as a rule, will not bear a paying crop until they are seven years of age, while the other fruits will bear in four years, and the trees will not interfere until the apples are 15 years of age. He thought that growing stone fruits on the ground between the trees would not seriously exhaust the ground for the seed fruit like the apple.

Speaking of the insects which infest the apple, he mentioned first the scale insect, which he said could be destroyed by alkaline washes. Sunburn, sap-suck and borers he considered as serious evils as could happen to an apple tree. In getting out a borer he always cut below him. The red spider could be easily killed with weak whale-oil soap, but the red spider's egg will stand almost any kind of application. The canker worm or measuring worm can be obviated by a printer's ink band which traps the wingless moth on her trip up the tree. The caterpillars he fought by placing around the trees bands covered with rancid grease mixed with lard to keep it soft, and then swashed the caterpillars which congregated below the bands. He fought them this way several years until the ichneumon fly came and destroyed them. As for the codlin moth, he was still on the lookout for a perfect cure. He had saved part of his crop with the bands. The 12-spotted diabrotica which eats into the fruit is a hard pest, to handle. Mr. DeLong mentioned also certain fungoid diseases of the leaf which had never done him much harm as yet, and which he had not attempted to fight. Others had reported considerable injury by them.

Speaking in general terms Mr. DeLong said the apple business was a good one if one raises good apples, but the production of inferior is unprofitable. He believed the cooler valley and certain elevated lands best suited to the apple. He thought it quite important that to produce good-keeping apples they should not be irrigated. He considered the Yellow Newtown Pippin the best keeper. He finds the Winesap a good shipper, but affected by a dry rot which is objectionable but does not seem to injure the flavor of the unaffected part of the apple. Picking apples for shipment should be done just when the seeds begin to blacken and when the fruit yields to pressure. If left on until fully ripe, and the seeds all black, it will not keep.

Being asked concerning the shipment of apples to Australia, he said he chose apples fit to pick in September. As to varieties which are rather uncertain to ship such a distance, he mentioned the Gravenstein, the Pennock, and Roxbury Russets as sometimes good and sometimes bad. Of the russets he had 500 boxes go through well one year and 400 spoil the next year.

#### Mr. Williamson's Remarks.

Robert Williamson, of Penryn, being called upon, stated that he agreed with Mr. DeLong in regard to selecting soil and situation for an apple orchard and also in his advice to plant apples far apart and other trees between. Varieties of apple must be selected according to locality and diversity of climate, etc. No one can prescribe the same for all situations, but he thought that in each locality five or six kinds which do best there are enough varieties to plant. He considered early and fall apples profitable in the Sacramento valley and on the foothills up as high as Colfax. In this district it is not possible to raise the best keeping apples; Mock's Late Keeper, Esopus Spitzen-

berg, Ben Davis and Winesap keep best of all, but not well. A profitable apple in the Sacramento valley is the White Astracan, which can be shipped early as far east as Omaha. Alexander, Skinner's seedling and Gravenstein also do well for this trade, the first two being best. He said that in the third week in June his firm paid as high as \$1.40 in Marysville for White Astracan to ship East. They have paid from \$1 to \$1.50 for all they could get early for the last six years. This demand may be limited, but still he thought the present shipments could be largely increased.

Higher up on the mountains—say at "Yankee Jim" and "You Bet" and similar situations—the apples mentioned by Mr. DeLong do well. The Rhode Island Greening, Yellow Bellefleur and Tompkins County King have also paid well. He believed apple-growing would be found profitable everywhere if the right varieties were chosen and properly taken care of.

Speaking of pruning, Mr. Williamson spoke of heading low and shading the trunk. If the limbs do not shade it, it must be done otherwise. He found the borer's parent could be discouraged from laying her eggs by wetting the southwest side of the tree with stinking soapuds, putting it on several times in the season. If the trunk is shaded this is not needed. He also spoke of pruning to prevent over-bearing. He confined pruning mainly to thinning out, and not heading back branches; but this depends much upon the habit of growth of the variety. He would not treat a tree so as to make a bramble bush head.

#### Woolly Aphis, Etc.

Mr. Klee, being asked about the woolly aphis, gave his experience with the use of gas-lime at the University, which has been fully described in the RURAL of May 15, 1886.

Referring to the tent caterpillars, Mr. Williamson said that a little buhach will destroy them at once. Sulphur will kill the red spider and yellow mite. Of all the pests, he considered the woolly aphis the hardest to fight. A recipe, consisting of 20 pounds of quicklime, one gallon of coal oil and 50 gallons of water, to be applied to the roots, has been sent to him as a positive cure for this evil.

James Shinn, of Alameda, was strong in praise of the ladybug as a destroyer of the woolly aphis. He also recommended ashes placed around the base of the tree for the same effect.

Professor Hilgard spoke of the proposition to hold a grand fruit display at Sacramento during the encampment, and remarked the desirability of an immense central fruit exhibition for the benefit of Eastern tourists. He said he considered such an exhibition preferable to a number of small ones throughout the State.

Mr. DeLong urged the use of whitewash on trees as a preventive of injury from the sun's rays.

Judge Blackwood spoke of the codlin moth and its ravages, and recommended the use of a decoction consisting of a gill of Paris green to 40 gallons of water for the destruction of these pests. He denied that the fruit thus produced would be poisoned or injured in the least.

A praparturiens walnut tree was exhibited by John Rock of San Jose, three feet high, which bore fruit.

Two varieties of cherries were exhibited by G. Tozetti, San Leandro. Mr. Coates had a sample of Centennial in glass, and Mr. DeLong made a fine display of cherries in the new patent top glass jar, invented by DeLong & Ashby, and used at the Petaluma Cannery.

After deciding that at the next meeting W. W. Smith, of Vacaville, should read a paper on pear growing, with A. T. Hatch, of Suisun, as alternate, the society adjourned until the last Friday of July.

**NEW ZEALAND FUNGUS.**—A curious trade has sprung up of late years in a peculiar kind of fungus that grows on the trees in the North Island of New Zealand, and which is exported exclusively to China. The uses to which it is applied do not seem to be well known. In 1873 the British authorities at Hongkong said it was "much prized by the Chinese community as a medicine administered in the shape of a decoction to purify the blood, and was also used on fast days with a mixture of vermicelli and bean-curd instead of animal food." Subsequent information shows that it is used in soups as ordinary food, and it is also used as a dye. The exports during the past ten years have grown from £1927 to £18,939, but the increase has not been uniform.

#### Nurserymen's Association.

As stated in last week's RURAL, there was an organization of a Pacific Coast Nurserymen's Association effected immediately after the last meeting of the State Horticultural Society in this city, June 26th.

W. M. Williams, of Fresno, on calling the meeting to order, explained the object of the convention to be the formation of an organization for mutual protection. F. W. Willis was elected temporary secretary. The chair appointed Messrs. Rock, Williamson and Pepper a committee on credentials. Messrs. Fox, Shinn and Eisen were appointed a committee on organization, and Messrs. Rock, Hammond and Cleveland a committee on order of business.

The convention then adjourned until 8 p. m., when it reassembled. It was then resolved that the existing officers be declared permanently elected. The Committee on Order of Business then reported and the report was adopted. The Committee on Credentials reported that only those nurserymen issuing catalogues be admitted to membership, and recommended the following dealers, who were declared elected members: John Rock, of San Jose; Coates & Tool, Napa; W. M. Williams, Fresno; W. H. Pepper, Petaluma; C. W. Reed & Co., Sacramento; D. W. Lewis, Fresno; G. Tozetti, San Leandro; William Coghan, Marysville; A. T. Hatch, Suisun; James Shinn, Niles; R. D. Fox, San Jose; E. Gill, Oakland; California Nursery Company, Niles; Gustav Eisen, Fresno; Isaac Collins, Haywards; A. Cleveland, Alameda; N. P. Harmon, Phoenix; W. R. Strong & Co., Sacramento, and Thomas M. Herin, San Francisco.

Permanent organization on the report of the Organization Committee was urged by James Shinn, of Niles. He argued that as the nursery business is yearly becoming more important, such course was necessary. Other members urged incorporation as the only means of securing satisfactory results, and it was finally resolved that the organization be permanent and should be styled "The Nurserymen's Association of the Pacific Coast."

The chair then appointed as a committee to draft a constitution and by-laws Messrs. Williamson, Shinn, Rock, Coates and Lewis, and instructed the committee to report Saturday at the morning session.

#### Constitution.

At the opening of the second day's session the Committee on Constitution and By-laws reported.

The constitution provides that the association shall embrace only nurserymen, florists and seedmen actively engaged in the propagation of stock. The object of the association shall be to promote the general interests of the members: First—In the cultivation of acquaintance. Second—In an interchange of ideas with others engaged in this avocation. Third—To aid in the protection of our patrons from fraudulent dealings and the injurious results arising therefrom to the members of the association. Fourth—The exchange and sale of stock.

The by-laws provide for the election of officers, the appointment of an Executive Committee and general government of the association. Annual meetings shall be held the last Friday in May; semi-annual meetings shall be called by the Executive Committee. Membership fee was fixed at \$2.50. One section of the constitution occasioned considerable discussion when the question for adoption came up. It was the provision that an inventory of all the stock on hand should be supplied by each member to the secretary for general use of all members. The smaller nurserymen naturally objected to this rule, claiming that it might be injurious to their business. The section was finally adopted, as well as the entire constitution and by-laws as reported.

#### Election of Permanent Officers.

The election of permanent officers was proceeded with and resulted as follows: President, James Shinn, of Niles; Vice-President, W. M. Williams, of Fresno; Secretary, R. D. Fox, of San Jose; Treasurer, John Rock, of San Jose; Executive Committee—James Shinn (ex officio), R. Williams, of Sacramento; Gustav Eisen, of Fresno.

The following names were subscribed to the constitution and by-laws: James Shinn, Niles; W. R. Strong, Sacramento; W. M. Williams, Fresno; William Coghan, Marysville; W. H. Pepper, Petaluma; G. Tozetti, San Leandro; E. Gill, Oakland; Coates & Tool, Napa; Adolph Cleveland, Alameda; W. P. Hammond, Phoenix, Or.; D. W. Davis, Fresno; Gustav Eisen, Fresno; C. W. Reed & Co., Sacramento; Isaac Collins, Haywards; John Rock, San Jose; R. D. Fox, San Jose; California Nursery Co., Niles.

The association adjourned to meet the last Friday in August, after the session of the Horticultural Society.

**THE PETALS OF THE BUTTERCUP** have, as well known, peculiar varnish-like luster. The cause of this has been investigated by Dr. Mobius, who attributes it to a highly refractive yellow oil existing in the epidermic cells, increased by the fact that the layer of cells of the mesophyll is densely filled with minute starch grains.

## THE DAIRY.

### A Grand Jersey.

We are informed that the famous young Jersey bull Ashantee's Sultan 15573 has been purchased by Mr. William Niles, of Los Angeles, Cal. This specimen of the Jersey breed of cattle is greatly admired on account of his fine individuality, and especially because of his royal breeding on every line through his long line of rich ancestors noted for their records as butter producers. He was sired by the famous bull King of Ashantee 6677, for which \$5600 was paid at auction, and \$10,000 has been offered and refused for him since; a son of the world-renowned Coomassie 11874, the winner of the prize at the royal shows on the Island of Jersey for five years in succession, distancing all competitors, and her progeny have been great prize-winners in the show rings on the Island of Jersey; at the English royal shows; also the principal State Fairs in the United States. Coomassie and her grand-daughters and great-grand-daughters have so far made the greatest butter tests on record. Some 37 of Coomassie's descendants have produced from 14 pounds two and a half ounces of butter in seven days, as two-year-old heifers, to 39 pounds 12 ounces as matured cows; and in one instance her grand-daughter, Princess II, tested before a committee, produced 46 pounds 12 ounces of butter in seven days. No family of Jerseys has done better as butter-producers and in the show ring than the Coomassies. Evidence of their actual commercial value has been legitimately shown in the auction ring, when within two years 100 animals of the Coomassie family sold for \$175,-425; an average (including some calves and old cows) of \$1754.25 each.

Through his dam, Young Nightingale, Ashantee's Sultan 15573, is an inbred Sultan, 58, a noted sire and famous prize-winner, and combines the blood of the Sultan and Nightingale families. This blood united with the Coomassie blood makes a combination of good qualities hard to excel. In fact, on every line Ashantee's Sultan's pedigree shows his royal breeding.

### Statistics of Bogus Butter.

Mr. Henderson, of Iowa, made a speech on the artificial butter question the other day, which he withheld for revision and enlargement. It appears in the Record, and contains some statistics of the business which he did not stop to read when on the floor. According to him Kansas City turns out 6000 pounds of oleomargarine daily; Chicago, 100,000 to 200,000 pounds daily, according to different estimates. Of oleo oil, or pure beef fat, 250 tierces a week are made in St. Louis for shipment to Rotterdam; Kansas City makes 200, and Chicago from 1200 to 1500 tierces weekly. Of butterine, St. Louis made 100,000 pounds in the winter, and Kansas City makes 6500 pounds a day. The Standard Butter Company of Boston made last year 148,814 pounds of oleo oil and 180,000 pounds of artificial butter. The Providence Dairy Company of Rhode Island made 1,750,000 pounds of butterine last year. Cincinnati made 766,000 pounds of butterine; Nathan & Co., of New York, made 2,000,000 pounds of butterine the same year. Rardon & Co., of Boston, made 2,740,000 pounds of oleomargarine and 1,158,000 pounds of oleo butter. The Woodlawn Dairy Company, of Pawtucket, R. I., made 931,000 pounds of oleomargarine, and a Pittsburg concern makes 50,000 pounds weekly of oleo oil, mostly exported to Holland. Louisville last year made 100,000 pounds of butterine. The value of butter and cheese exported of late years has ranged from \$10,000,000 in 1872 up to \$16,000,000 in 1881, and then down to \$10,000,000 in 1885 and \$6,000,000 for three-quarters of the current fiscal year. The value of imitation butter and oleo oil reported was \$70,000 in 1876, and it rose to \$4,842,000 in 1884. In 1885 it was \$4,451,000, and for nine months of the current fiscal year it has been \$2,221,399. The imitation butter exports were a little more than 2,000,000 pounds in 1883, and since that time they have rapidly fallen to 362 545 pounds for the three quarters of the current year. The exports of oleo oil jumped from 19,000,000 pounds in 1882 to 37,000,000 pounds each in 1884 and 1885, and fell back to 19,000,000 for the three quarters of the current year.

### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## Standard Sizes for Iron Axles.

Our readers who use wagon gear—and they will comprise nearly all of our subscribers—will be interested in the following letter by R. G. Sneath, of Jersey Farm, which we copy from the *Carriage Journal*:

The subject of iron or steel axles for wagons and carriages would appear anything but a live subject to write about, and yet they are the innocent cause of sad losses, tedious and expensive delays, untold blasphemy and infinite disgust, to the human family. The manufacture of these highly useful articles, under present methods, is, no doubt, criminal, as their use sadly interferes with the progress of mankind. Webster defines crime as "a public wrong," "that which is condemned," etc., and I will try to show wherein the wrong lies, that it may be condemned.

As near as I can learn, there are, perhaps, 40 different sizes of axles in their greatest diameter—say from  $\frac{1}{2}$  inch up to 5 inches; then there is a variation in length of spindle in each size, of from  $\frac{1}{4}$  to 3 inches, giving, say, 11 sizes in length to each size in diameter, or multiply 11 by 40 and you have 440 sizes simply by one maker. Now, estimating the number of makers in the United States and elsewhere, who make our axles, at 100, we should multiply that number by 440, which makes 44,000 different sizes. I do this because I do not know of any two makers that make alike, in fact hardly two axles by the same maker are alike.

Axle boxes not only vary in fitting axles but differ in thickness and taper; some  $\frac{2}{3}$  inch boxes are  $\frac{3}{4}$  inch thick, while others are  $\frac{1}{2}$  inch. Some nuts are  $\frac{1}{2}$  to  $\frac{3}{4}$  larger on the square end than others of the same sized axle, making from three to four different sized wrenches necessary, at times, for a patched-up wagon. In  $\frac{2}{3}$  inch axles I have noticed a difference of  $\frac{1}{4}$  inch in the taper, between the different makers, and also that it was very difficult replacing lost nuts on account of the various sizes.

In new axles, before the boxes are removed, it is quite essential to mark each arm and box in order to return them to their respective places; otherwise you may have trouble, as they are pretty sure not to be alike, and you may get your hind wheel in front.

Extra boxes to fit closely, in case of repairs, are an accidental thing, and in order to be sure that they are not too small, you are pretty sure to order them a size or two too large. The wobbling, however, of wheels thus fixed is neither pleasant nor profitable. Axles are not marked distinctly enough to prevent the wear and tear, dust and grease, from obliterating the maker's name and marks, and the correct measurement of such axles, when well worn by the farmer or teamster, is a matter of great uncertainty and notorious inaccuracy.

Orders for either axles, boxes or nuts, from such a source, will ordinarily have to be duplicated before a fit is obtained, and should such orders come from the mountains, several hundred miles off, the damage by delay—even of a nut being lost—may run up into hundreds and thousands of dollars, especially when a large body of men and horses are waiting the arrival of some special thing in connection with machinery.

The principal reason of serious delays and loss in this respect is that nearly all orders on this coast must come to this city, as there is no stock to speak of carried elsewhere. The next is the difficulty of filling the order after its arrival here. Most of the wagons and carriages in use here are of all conceivable sizes and patterns and come from the Eastern States, and, notwithstanding the great wealth of the wholesale dealers in these articles in this city they are not equal to the task of furnishing 44,000 different kinds of axles and make the business pay. Consequently, the old axles and boxes must be thrown away and new ones take their place, or the orders sent East to be filled, perhaps, by the maker, while the stock of axles here is dwindling down under this process to a point that is not even respectable, and in smaller towns hardly any stock is kept.

Iron boxes that vary in thickness cause a short life to wheels, for, in replacing in one case, the hub must be cut to admit the larger box, and in the other the hub must be filled with something to enable the smaller box to stay in place, and in neither case can the farmer or teamster place the box centrally and securely.

If the boxes were made uniform in inside and outside diameter, and of a standard pattern, upon the principle of a gun and its cartridge, exactly alike of a given size, then any person could replace a broken box without loss of time or money.

If axles, boxes, nuts and wheels were interchangeable like our government's arms, or the mowers, reapers and farming implements of the present day, then a few extras would accommodate a whole neighborhood of farmers. The village blacksmith and the country store could then be persuaded to keep extras, for there would be a profit in it.

In a business I have myself, I employ about 30 wagons. They were picked up from various sources and no two are alike. I soon found myself in trouble in the matter of repairs, and I then adopted one make of axles and one size for each department. Also one size of wheel and one width of tread (five feet to outside of tires), and one width for shafts and poles where attached to the wagons with springs, as well as one size and make of springs. I keep a few springs and axles and extra boxes and wheels,

perhaps a dozen of the latter, so that in painting and tire-setting the wheels can be shifted. And now I have no delay from breaks, as about all my wagons are now up to standard sizes, through repairing.

It may be of general interest to say that I receive about 12,000 pounds of milk daily from Jersey Farm Dairy, San Bruno, Cal., on thoroughbred wagons carrying 6000 pounds at a load, going five miles an hour, on axles  $2\frac{1}{2} \times 2\frac{1}{2} \times 12$ , making 60 miles daily or 22,000 miles annually, or 150,000 made in the last seven years by two wagons that are alternated for repairs. One of the wagons had axles  $2\frac{1}{2} \times 2\frac{1}{2} \times 11\frac{1}{2}$  which were always grinding and heating, and needed oil continuously, notwithstanding any set or gather we gave it, and it was only used while repairing the other. But upon changing the axles to the size and taper of the other, it gave entire satisfaction. I estimate the life or duty of such an axle, loaded and cared for properly, at 50,000 miles; and of the tires, 1x3, at 5400 miles. My experience favors a  $\frac{3}{4}$ -inch taper to 12 inches in length, and in axles  $1\frac{1}{2}$  to  $2\frac{1}{2}$  inches diameter; the length should be about five times the larger diameter, as giving the greatest strength and durability.

I think it would be safe to say that on this coast, with two millions of people, there are at least 1000 stores and places where at least 10 sets of axles with boxes and nuts would be kept, if the business was simplified by the adoption of a few standard sizes, that were uniform and interchangeable. These axles being worth say \$10 per set, would make the stock of 10,000 axles, at \$10, \$100,000. The wholesale stores in this city, and other large towns in the interior, would perhaps carry 5000 axles more, which would figure \$50,000, or \$150,000 worth in all would be carried by the trade over and above what is now carried.

Now, the whole United States having 30 times the population we have, would, if the same ratio is preserved, carry four million five hundred thousand dollars worth in excess of present stock, or with extra boxes and nuts from five to six millions.

I can remember the time when, to get a one-half inch or three-eighth inch nut for a carriage bolt, it was necessary to visit the blacksmith, as no two nuts or bolts were alike, and he would perhaps have to recut the bolt or make a new one, as his screw cutter was unlike anybody's else. But now I venture to say that there is not a farm, store or shop on the coast where a three eighth or one-half inch bolt and nut could not be obtained, either new or second-hand, and so it should be with nuts for ordinary iron axles for farmers; they should be obtainable anywhere.

The enormous growth in the trade of those articles that are manufactured cheaply, on a grand scale, because of their uniformity, interchangeability and general use, can be noted in carriage and machine bolts, guns, pistols and cartridges, clocks and watches, mowers, reapers, sewing machines and many other things.

It is only a few years since every planing mill in this city had a different gauge for flooring, and if a builder obtained flooring from two yards his floors would be spoiled, as the tongue and grooves would not match. Now all are alike.

It seems remarkable to me that in this modern age so large a number of respectable people should be engaged in a calling wherein the public are damaged to the extent of millions of dollars annually through unnecessary delays, while they themselves are ruining their own market for their goods to the extent of millions also, and without having an apparent knowledge of the fact.

There should be a combined effort on the part of all manufacturers, dealers and users to concentrate this business to a few standard sizes that can be agreed upon by the dealers and makers; and hardware dealers are particularly interested in the matter, as the enormous variety of wooden hubs they are now constrained to keep makes their business unprofitable.

Wagon and carriage makers by adopting standard sizes for wheels, especially for those most largely in use, and keeping extra wheels on hand for sale, would, no doubt, find a large demand for wheels that are finished in iron and paint, for emergencies, as thousands are broken every month and people have not time to wait for weeks for the paint to dry on a repaired wheel.

And why not agree at the same time for width of tread and tires and between standards of bolsters, size of king-bolts, distance from doubletree to axles, length of tongues, etc., so that the bodies, racks, breaks, bolsters, tongues, etc., can be interchangeable.

These reflections come from 40 years of actual and active experience, and the figures I have given, as the probable result of a change, I candidly believe to be not far out of the way. I have mentioned this matter to several gentlemen, who have dealt largely in wagon materials for many years, who have universally coincided with me in the belief that this whole business has become intolerable and should be remedied immediately; and that if half a dozen axle manufacturers, or less, should take hold of the matter promptly and advertise thoroughly that their work was interchangeable there would be no difficulty in selling all they could make, rapidly, at better prices even than now.

MERIT will tell; misfit spectacles will ruin your eyesight; judge by comparison. Muller's optical depot, 135 Montgomery St.

## The Credit Foncier.

The Credit Foncier of Sinaloa is a scheme for a co-operative colony, to be planted in Mexico near Topolobampo Bay. The projector of the enterprise is Albert K. Owen, of Chester, Penn.,—a civil engineer, who has made extended surveys for Mexican railroads and written much upon transcontinental short lines. He is of Quaker parentage and a strong practical socialist. In a letter to Minister Romero, he says: "Our colony is a co-partnership of artisans, mechanics, inventors, farmers and other skilled persons, who are not necessarily 'capitalists,' but we unite our 'money,' skill and talent to purchase a tract of land, to build houses, to lay out farms, to erect factories, to buy machinery and to operate the same—agreeing that each member of the co-partnership, firm, company, corporation or colony will be directed and assisted to do that which he or she is most capable of doing and be paid in accordance with the quality and quantity of the work finished."

His plan is to establish a hacienda of 150,000 or 200,000 acres in the neighborhood of Topolobampo Bay, (the Pacific terminus of the proposed American and Mexican Pacific Railway) and there not only raise grain and fruits, sugar and fiber plants, horses and mules, cattle, sheep and goats, poultry, etc., but also grind the wheat and corn, make bread and crackers, can and dry the fruits, spin the wool and cotton, weave cloths and blankets, tan the hides, make the leather into shoes, saddles, etc. and trade in all their surplus products—in short "unite farm, factory, transportation and exchange."

"In the construction and management of these houses, workshops etc.," continues Mr. Owen, "we wish simply the same protection and rights enjoyed by the haciendas in the building and management of their villages, factories, etc. \* \* \* to have a wholesome place where we can live and work, educate ourselves and be useful."

Minister Romero, who had already shown an interest in the scheme and conversed with Mr. Owen regarding it, in his reply refers to his government's desire to promote the immigration of worthy settlers and to the colonization laws, insuring liberal franchises, which have been lately enacted by Mexico; although he was unable to say officially just how warm a welcome Sinaloa would give to a colony introducing so radical novelties, or what substantial and definite encouragements they might depend upon in the way of subsidies and contracts.

A little weekly, edited by Marie and Edward Howland, is published at Hammonton, N. J., to further integral co operation in general, and this enterprise in particular. A late issue informs us that of the proposed 15,000 shares over 10,000 have been taken; that up to April 4th upwards of \$330,000 has been promised for deposit—not counting real estate, &c, offered—and that the persons represented number 2200.

## Inoculating Fruit Trees.

We had a call recently from Mr. W. M. Edgar, of Ione, who wrote his "Cure for Curl Leaf" last May. He is a practical nurseryman and fruit-grower of many years' experience, and has lately devised a method of inoculating trees and vines with a certain preparation, which he claims will be taken up into their sap and prove the death of aphides, scales and borers. Mr. Edgar was just back from a 10-days' tour in Sacramento and Yolo counties, where he had been exemplifying his plan of treatment on orange, peach, apple and pear trees, vines and also roses, at Woodland, Winters and Putah Creek. The effects, he claims, are to be looked for in four to six weeks. He spoke of an old apple tree upon his own place which was fairly white with aphides when he took it in hand. In five weeks from that time every insect was gone—not a vestige of one left. Mr. Edgar is an old Californian and early subscriber for the *RURAL*. He lived in Humboldt and Yolo before settling in Amador; has worked hard and seen the ups and downs of life. He has been at Ione four years, and now has a nursery of about 8000 trees—apples and stone fruit—and 50,000 rooted vines, including Tokay, Muscat, Rose of Peru, Isabella, Zinfandel and many other standard varieties. He feels confident that his process of inoculating diseased trees and vines (on which he has already filed a caveat) will be of great service to the horticulturists.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St. San Francisco, at 6 to 7 per cent and taxes. \*\*

## Fruit Drier on Exhibition.

One of the Meeker Sun Fruit Driers, with all the latest improvements suggested by the experience of last season, is now on exhibition at the factory, 5th and Bryant streets, on and after Monday, Jan. 25th.

As now arranged we consider it much the most perfect and economical of any of the various driers to which the attention of fruit-growers has been called. Its various productions are the perfection of purity and excellence, and at the same time the most economical in cost of production. Fruit-growers are invited to examine and test the drier and the fruit prepared in it. Those using this drier last season realized handsome profits on their fruit.

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.  
TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information. JESSE D. CARR, President.  
EDWIN F. SMITH, Sacramento.

## DIVIDEND NOTICE.

## The German Savings and Loan Society.

For the half year ending June 30, 1886, the Board of Directors of The German Savings and Loan Society has declared a dividend at the rate of four and thirty-two one-hundredths (4 32-100) per cent per annum on term deposits and three and sixty one-hundredths (3 60-100) per cent per annum on ordinary deposits, payable on and after the 1st day of July, 1886. By order.  
GEO. LETTE, Secretary.

## Educational.

## MILLS SEMINARY.

The next term of this well-known Institution will commence on

Wednesday ..... August 4, 1886.

For Circulars giving particulars, address

MRS. C. T. MILLS,  
Mills Seminary P. O., Alameda Co., Cal.

## IRVING INSTITUTE

A SELECT SCHOOL FOR YOUNG LADIES.—The next session will begin Monday, August 2, 1886. For catalogue or information address the Principal, Rev. Edward B. Church, A. M., 1036 Valencia St., San Francisco, Cal.

VAN NESS SEMINARY  
San Francisco, Cal.

## A BOARDING AND DAY SCHOOL

Young Ladies and Children,  
1222 Pine St., San Francisco.

Thorough training in practical studies and accomplishments, and pleasant surroundings, are the principal advantages offered.

Fall Term Opens July 26, 1886.

For Catalogues and particulars, apply to MRS. S. B. GAMBLE, or MRS. E. H. WOOD.

REFERENCES—Rev. W. I. Kip, Bishop of California; Rev. C. O. Tillotson, Santa Cruz; Hon. C. H. Hartson, Napa; John D. Yost, San Francisco; F. A. Hihn, Santa Cruz; E. J. Wilson, Vallejo; Capt. A. D. Wood, San Francisco; Eugene Sherwood, San Francisco.

## Field Seminary for Young Ladies,

1825 Telegraph Avenue,

Oakland, - - - - - California.

Address MRS. R. G. KNOX, Proprietor, or MISS FRANCES A. DEAN, Principal.

THE FIFTEENTH YEAR WILL BEGIN  
Wednesday.....July 28, 1886

## PERRY SEMINARY,

Boarding and Day School,

1625 Telegraph Ave., Oakland, Cal.

MRS. HERMON PERRY, Miss Kate M. Fuller,  
PRINCIPALS.

Next Term will begin Monday, Aug. 2, '86

## MISS BISBEE'S SCHOOL

FOR YOUNG LADIES,

1020 OAK ST., - - OAKLAND,

WILL RE-OPEN

WEDNESDAY, JULY 28th, 1886.

W. E. CHAMBERLAIN, JR.

T. A. ROBINSON.

Returned to new building, former location, 320 Post street, where students have all the advantages of elegant halls, new furniture, first-class facilities, and a full corps of experienced teachers.

LIFE SCHOLARSHIPS.....\$75.

Ladies admitted into all departments. Day and Evening Sessions during the entire year.

Call, or send for CIRCULAR to

CHAMBERLAIN & ROBINSON, Prop's.

## STOCKTON

Telegraph Institute

and

NORMAL SCHOOL.

Open day and evening for

both sexes. Expenses less

than one-half the usual

rates. Excellent board in

private families from \$8 to \$10 per month. Ad-

dress, for College Journal and Circulars,

J. C. BAINBRIDGE, Principal, Stockton, Cal.

Send for Circular

## NAPA COLLEGE,

NAPA CITY, CAL.

Fall Session Will Open July 28, 1886.

Faculty Consists of 12 Members.

OPEN TO BOTH SEXES WITH

Classical, Philosophical, and Scientific Courses leading to the degrees of A. B., B. Ph., and B. S.

Preparatory Department Course in Music, Art, and Elocution.

THE SEVERAL DEPARTMENTS ARE IN CHARGE of teachers of experience and ability, chosen with special reference to their work.

The Commercial Department is well provided with facilities for acquiring a Thorough Practical Business Education.

Delightful climate, pleasant surroundings, with home on grounds where parents may know that their sons and daughters are carefully guarded, and under the direct supervision of the faculty.

For Catalogue or information, address

A. E. LASHFAR, President.

## HOPKINS ACADEMY.

OAKLAND, CAL.

REV. H. E. JEWETT, M. A., - Principal.

SIXTEENTH SCHOOL YEAR begins Tuesday morning, July 27th, 1886. Boarding and Day Scholars received. Send for Catalogue.

California Military Academy, Oakland, Cal.

Special Feature—Commercial Department. Next Term begins July 19, 1886. Send for circular.

COL. W. H. O'BRIEN, Principal.

## BOWEN'S ACADEMY,

BERKELEY, CAL.

First-Class Boarding School for Boys.

Preparatory, Commercial, and Academic Classes.

Preparatory Department, \$30 per school month. Commercial and Academic Department, \$35 per school month. Next Term will begin Monday, August 2, 1886.

## SACKETT SCHOOL,

Oakland, - - - Alameda Co., Cal.

A Preparatory School for Young Men and Boys.

Next Term will commence on Monday, July 19, 1886.

Healthful location, pleasant home, and thorough School. Send for circular.

D. P. SACKETT, Principal.

## TRINITY SCHOOL,

1534 MISSION ST., SAN FRANCISCO.

CHRISTMAS TERM OPEN

Monday.....August 2, 1886

REV. E. B. SPALDING, Rector.

## THE GOLDEN GATE PLUG CLOSET.

The only secure-locking device to keep sewer gas entirely away from dwelling houses.

JOSEPH BUDDE, Manufacturer, 43 Fremont Street, S. F. All kinds of Water Closets, Slop and Waste Hoppers always on hand. Write for information

DRS. E. H. and GEO. C. PARDEE,

DISEASES OF THE

EYE, EAR and THROAT,

526 Montgomery Street,

Hours: 9:30 A. M. to 3:30 P. M.

## THE WHITMAN PERPETUAL HAY PRESS

GUARANTEED SUPERIOR TO ANY OTHER PRESS. NOW MADE BY STEELEY PATENT. BYRON JACKSON, 625 Sixth Street, San Francisco.

## READ THIS:

EL CAJON, CAL., August 1, 1885.

We have pressed 400 tons with our Whitman Hay Press. We have pressed from 8 to 14 tons a day; in grass hay, from 8 to 10 tons per day with ease; we have pressed in grain hay, 8 tons in 6 hours. In grain hay, bales run from 180 to 240 pounds; in grass hay, 125 to 190. We have pressed 190 pounds with 10 feeds, which the Press cannot do, as their feed box is smaller. Our bales are much smoother and more tightly than those made in the Press. We have averaged 15 tons a day, in wild oat hay.

GREGG BROTHERS.

PRICE, \$40.

## "ACME" WHEELED RAKE

Acme STACKER,

The Z. O. 50 P. C.

As shown above, with two rakes like this, \$175. The cheapest stacking outfit. Will stack, from swath, 4 or 50 tons per day.

BYRON JACKSON,

SAN FRANCISCO, CAL.

## SPECIAL OFFER!

GOOD FOR 30 DAYS.

I will ship, in localities where, as yet, I have no agent, one sample No. 2 washer, Pat. Sept. 1, 1885, and "Empire" wringer, for trial, the party to pay for them at wholesale prices; and act as agent, if found satisfactory; if not, return them at my expense.

TAKES THE LEAD. Why? At last, to Perfection. Imitation of hand rubbing the principle. AGENTS WANTED Exclusive Territory. TERMS FREE.

E. W. MELVIN, Proprietor and Manufacturer.

## "CHINESE MUST GO!"

PATENTED Sept. 1, 1885.

It only needs to be seen to be appreciated. See your neighbor's. Try it before buying another.

Office, 612 J St. P. O. Box 312 SACRAMENTO, CAL.

ESTABLISHED 1864.

INCORPORATED 1883.

Collector and Insurance Broker. The undersigned respectfully offers his services in any of the above capacities. Correspondence solicited. Address C. M. RICHARDSON, care "Fraternal Record," No. 252 Market St., San Francisco, Cal.

## Fruit Display for the G. A. R. at Sacramento.

Preparations are under way for a grand display of California fruit during the reception which the Sacramento people will tender to the delegates to the G. A. R. Encampment next month. The Sacramento Bee gives the following report of a recent meeting for arrangement of details of the event:

A meeting of the Committee on Fruit Display on the occasion of the G. A. R. reception, was held last night at W. P. Coleman's office. Present: R. D. Stephens, Wm. Johnston, Jos. Routier, Robert Williamson, Sacramento; A. F. Abbott, Sutter county; K. H. Plate, Natoma; L. W. Buck, Vacaville, and Captain Weinstein, of General Committee.

R. D. Stephens was elected chairman, and J. O. Coleman acted as secretary.

A communication from A. T. Hatch, promising his co-operation and a liberal donation of fruits, and making some valuable suggestions, was read and placed on file.

On motion, L. W. Buck, P. E. Platt and Chairman R. D. Stephens were appointed an Executive Committee on Fruit Display.

On motion, the secretary was instructed to furnish members of the committee with stencils for marking packages.

On motion, each member of the General Committee on Fruit Display will be a committee of one, and be instructed to canvass their respective districts for contributions, and report at the next meeting.

The General Committee on Fruit Display, as at present constituted, is as follows: R. D. Stephens, chairman; A. T. Hatch, Suisun; K. H. Plate, Natoma; Hon. Wm. Johnston, Richmond; P. E. Platt, Sacramento; J. C. Boggs, Newcastle; Hon. J. Routier, Routier's Station; Hon. John Bidwell, Chico; Webster Treat, Davisville; R. B. Blowers, Woodland; Hon. L. W. Buck, Vacaville; Sol. Runyon, Courtland; Hon. Thomas E. Frazer, Placerville; Prof. E. W. Hilgard, Berkeley; A. F. Abbott, Sutter county; James Rutter and Isaac Lea, Florin; S. H. Kerr, Elk Grove; C. P. Wescott, Rocklin; A. C. Gray, W. G. Murphy and Wm. T. McLean, Marysville; A. F. Boardman, Auburn; W. D. West, Stockton; C. H. Smith, Vina; Will S. Green, Colusa; B. R. Hackett, Winters; George Parker, Vacaville; C. M. Price, Oroville.

A general discussion was had as to the best means of making this feature of the proposed reception a grand success, and all agreed that the fruit display should and would be one creditable to the State.

Adjourned until 1 P. M. on July 12th.

## A Few Recent Field Fires.

At Ione, last Saturday week, some workmen were engaged setting up headstones in the Catholic cemetery, when a pot of molten metal was accidentally overturned. The dry grass took fire and the flames spread rapidly, but an alarm was sounded, and presently men, women and children were running to the fire with buckets and wet sacks. A full head of water was on, and hydrants being near at hand the fire was soon under control without much damage being done.

On the 30th ult. four miles southeast of Athol, 300 acres of grain, valued at \$3000, were consumed. The fire was supposed to have been caused by a passing locomotive. No insurance.

A fire started near the railroad track east of Pomona, extended through a field of stubble and burned near Mr. Hill's haystack and house, each of which was saved only by hardest exertions of the family and one or two neighbors.

On the 1st a fire broke out at the threshing machine at work in a field on the Gabilan ranch, probably from a spark from the engine, and consumed about 200 acres of grain standing and in stack. The machine was not much damaged. There was no insurance.

On the 2d a fire on Del Burge's ranch, near Waterloo, destroyed about 100 tons of hay, which was stacked near the house. The house was saved by some trees which stood between it and the haystack.

On the ranch of Frank Tomb, near Marysville, \$50 worth of fencing and some stubble were burnt. The grain sacks were saved by the strenuous efforts of two harvest hands. Careless hunters caused the fire.

Matches dropped in a stubble field on Newbert's place, eight miles east of Marysville, caused a fire which consumed considerable stubble and a feed wagon and burned one horse to death. The fire was prevented from reaching the stacks and threshing outfit in the field by hard work of men in the vicinity.

At Dixon a fire broke out in the stubble near the cemetery. Fortunately, a large number of men were near at hand and the flames were extinguished before they had made much headway. If the north wind had been blowing at the time, the destruction of property might have been terrific. The fire doubtless owed its origin to the carelessness of some cigarette smoker.

Beware of dropping sparks, hot ashes and cigar stubs!

## Eastern Fruit Shipments.

The second special fruit train was sent from Sacramento to the East on June 30th. It consisted of 15 cars sent by Strong & Co., E. T. Earl, Lyon & Curtis, and other members of the California Fruit Growers' Association. The early fruits are in rather small supply, and canners and fruit-shippers seem to be ready to pay such good prices that the Fruit Union is not yet sending train loads.

The following letter concerning the sale of California fruit at the East was lately received at the office of the California Fruit Union in this city:

CHICAGO, June 26, 1886.—A. T. Hatch, Pres. Fruit Union, San Francisco, Cal. DEAR SIR:—Inclosed we hand you duplicate account sales for various lots of fruit, for which we have forwarded account sales and New York draft to the various parties. We trust sales will be found correct and satisfactory. There are no particular changes to note in our market except that we are getting a little better prices to-day for apricots; are selling at from \$1.10 to \$1.25 and \$1.50, and hope first of the week to get them up to \$1.50 and \$1.75. Peaches are selling here at from \$2.00 to \$2.25; we think we will be able to get even higher prices the coming week. Plums are selling at \$2.00 to \$2.25 and occasionally at \$2.50. We are in receipt of a letter to-day, forwarded to us by one of our California friends, in which a certain party tried to figure out the way the grower is getting left by consigning apricots to Chicago to be sold at \$1.00 a box. We have sold apricots at \$1.00 a case, but we had to do it to meet competition; the bulk of our sales will be found considerably above \$1.00. We think the sales we have forwarded to the growers up to the present time cannot fail to be very satisfactory to them. You can rest assured that we will leave no stone unturned that will benefit the California Fruit Union. Some of these parties have an idea that by dropping down the prices in this and other eastern markets, they can make the fruit growers tired of sending fruit so they can buy it for almost nothing, but we think your fruit growers will not be taken in by any such chaff. The parties we speak of sold plums here at \$1.25 to \$1.50 per half crate, when we were selling at \$2.00 to \$2.25, and in some instances at \$2.50; they sold peaches at \$1.00 to \$1.50, when we had no trouble in getting \$2.00. We can at all times get higher prices for stock than any other house in this country; we have the trade; people know when they get goods from us that they get just the fruit we represent it to be; for that reason they favor us with their orders. We have no doubt but that all the growers will be more than satisfied with the results of their shipments when they receive sales. Sales will go forward as promptly as they can be closed out. You understand that it is a difficult matter to make shipments to these eastern cities and get account sales back in a day or two; it takes a little time to close the goods out. Just as fast as sales are forwarded to us we will forward New York draft and account sales to the growers.

Shall be pleased to hear from you soon, and will give your favors prompt and careful attention.

Yours very truly,  
PORTER BROS. COMPANY.

## A Delicious Table Fig.

Mr. Edward Frisbie, of Anderson, Shasta county, brings us a sample of a very fine fig, which is considered by experts to be different from other figs grown in this State. It is a medium-sized fig of a delicate yellowish-green color, very tender, thin skin, sweet and of good flavor. Mr. Frisbie has had this variety for many years, and before going to Shasta county he grew it on his ranch near Vallejo Junction, in Napa county. In 1858 he ordered a lot of fruit trees from the Eastern States and from Europe, and is not sure whence this fig came. One feature of its growth is that the figs become nearly half grown before the foliage puts out. The fig has been cherished by Mr. Frisbie and his family as a very fine fruit, and their guests who had traveled in various parts of the world pronounced it the best fig they had eaten; but it was only recently that they concluded that it was a different variety from those grown by the fig-growers of California. Mr. Pettigrove, of Anderson, has dried some of them for Mr. Blowers and others, and reports that they dry well, and the skin, which, as we have said, is thin, becomes beautifully translucent. Mr. Blowers considers it a different variety from any other in the State. Being thus thoroughly convinced of its desirability, Mr. Frisbie has made arrangements to have trees grown to meet any demand for it which may arise. We consider the fruit well worth the attention of fig-growers.

A. T. DEWEY and family have just returned from a three weeks' season of delightful rest and recreation at Crystal Springs, near St. Helena. No section of the State affords more beautiful scenery or attractive drives for pleasure. The faithful managers of the Rural Health Retreat and many generous-hearted friends met in their pleasant homes in and around St. Helena will long be held in kindly remembrance by their recent visitors.

HE dropped a cigarette by the wayside and the loss was \$25,000 in the burning of Dorsey's wheat field. In lighting a pipe the match fell on the grass and over 1000 acres of wheat on the West Side was consumed last Saturday and Sunday. Is it not about time that there was some law to make smoking and using matches on the public highway a misdemeanor?—*Modesto Herald*.

HOW TO PREVENT GREEN SLIME IN TANKS.—Some one asks how to prevent green slime from collecting on inside walls of a water tank. My tank for several years was troubled the same way and had to be frequently cleaned, and at length I chanced upon what seems, after two years, to be the remedy. It is forcing air through the water. At first the feed-pipe to the tank discharged upon the surface of the water and there was very little disturbance. Then the pipe was changed so as to enter the tank at the bottom, and as the windmill is on slightly higher ground than the tank, the forcing in of the water by the pump carries with it a large amount of air, so that when the tank is filled it boils and bubbles at a great rate. Since that time the tank has been perfectly free from slime, and after two years has not required to be cleaned even once, and a colony of brook fish have kept it free from "wrigglers" of all sorts, and seem to have made fair growth, though fed very unfrequently.—*Country Gentleman*.

LOWELL WAGONS AND BUGGIES.—Readers must have noticed the attractive full-page advertisement of the Lowell Manufacturing Co.'s wagons and buggies in last week's RURAL. The establishment is a new one and should be given a trial. As stated in the advertisement, there is a full descriptive catalogue issued which can be had by addressing Lowell Manufacturing Company, corner San Pablo avenue and Peralta street, Oakland, Cal.

## Windmills.

Horton & Kennedy's Enterprise windmills (advertised elsewhere in this paper) have been in use on the Pacific Coast 16 years. They are perfect regulators, and have given entire satisfaction—many of the oldest (still in use) having cost little or nothing for repairs. Parties desiring the old reliable Enterprise mill, with all the latest improvements and at prices lower than ever before, will do well to address Horton & Kennedy, Livermore, Cal., or Jas. Linforth, 116 Front St., S. F.

## Take a Receipt.

ALWAYS TAKE A RECEIPT from a newspaper agent. Not simply because a few out of many are tricky or careless, but because accidents will sometimes happen to the best of business men. It is a favor due to the publisher that every subscriber shall take a receipt from the agent, or clerk whom they pay. All our receipts have a corresponding stub which agents are accountable for and are required to return.

SWIFT STEAMER.—Efforts have recently been made in Europe to invent small steam craft capable of being propelled at almost express railway train speed. A small vessel for service in the Adriatic is now being constructed by a Prague engineer, the speed of which will, it is alleged, equal that of a fast railway train. This result is expected from an improved screw and a novel method of construction.

## A GOOD PREMIUM!

## WEBSTER'S PRACTICAL

Probably all of our readers have occasion to use a dictionary every day. In some cases words cannot be correctly spelled; in others, the pronunciation is difficult; while in still others the meaning is not understood. This is true, not only of children and of the uneducated, but of many of the more intelligent as well; and every one who attempts to do without Webster's Practical Dictionary attempts to do without one-half of his opportunities for intellectual improvement.

Webster's Practical is an entirely new work by the editors and publishers of Webster's Unabridged and contains more than twice the amount of matter and illustrations ever before offered for the price.

Nearly 1,500 First-Class Illustrations in Webster's Practical.

It also embodies several entirely new features which render it pre-eminent to such a degree that for general reference in every household, it will not pay to use even the best of the older works any more than it would pay to journey across the continent in a lumbering old stage-coach while the numerous advantages of a lightning express are available. Those wishing to see sample pages and learn the particulars in regard to these new features before purchasing, should send their address to S. S. WOOD, Sole Agent.

134½ West 33d St., N. Y.

## SPECIAL OFFERS:

Webster's Practical Dictionary will be sent postpaid as a present to any person who shall send one new subscriber for THIS PAPER, or for any subscription two years in advance.

## TO SUBSCRIBERS

Who will pay ONE YEAR IN ADVANCE for this paper (while this notice appears), and 50 cents extra, we will send the Dictionary postpaid.

For further information ADDRESS THIS OFFICE, 252 MARKET ST., S. F.

CATCHING FISH BY MACHINERY.—A Mr. Robertson, of Stockton, Me., owns a patent on a machine for catching fish, and is having a number of them made in Belfast. The implement consists of a frame on which is mounted a windlass which is geared to a strong spiral spring. The fish-line is wound on the windlass, and leads over a sheave at the end of an arm which extends out-board, and then to the water. The spring being wound up and the line run out, the machine is ready for operation. When the fish bites the pull on the line disengages the spring, and the fish, if he isn't stronger than the machine, is pulled in. When the sinker reaches the end of the arm, a catch which has held the arm in place disengages, and the fish is thrown in-board, and landed on deck. The model works well on land, and the inventor claims that he has given it a practical trial in catching haddock in the bay, and that it works perfectly.

HEAT OF THE GULF STREAM.—It is well understood that Great Britain and other parts of Northwestern Europe owe much to the warming influence of the Gulf Stream. The extent of the effect has been given in the calculations of Dr. James Croll, who has found that the amount of heat conveyed northward in the Atlantic by this stream is equivalent to 77,479,650,000,000,000 foot pounds of energy per day, which is equal to all the heat received by 1,560,935 square miles at the equator, and more heat than conveyed by all the air currents. The heat of the Arctic Seas and North Atlantic would be diminished that much by the stoppage or diversion of the great ocean river.

SALT FOR CORNS.—It is said that if common salt is placed upon corns on the feet and allowed to remain there for two weeks, the troublesome pets will come away without pain.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

E. VAN EVERY, Manager.

A. M. BELT, Assistant Manager.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE STUMPS AND TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

BANDMANN, NIELSEN & CO., General Agents

GIANT POWDER COMPANY, SAN FRANCISCO, CAL.

1886.

1887.

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 7, 1886.

The week's trade in staple produce has been small owing to the adjournment of exchanges from Friday to Tuesday. The prevailing topic of conversation is the lessened yield of wheat over large areas of the State, because of the hot winds. Some information upon this point is given elsewhere in this issue. It seems that the great wheat States of the West are also greatly reducing their yield from the too generous estimates which were early made. A dispatch from Chicago, July 4th, says this week's *Farmer's Review* will have the following: Detailed reports from the spring wheat-growing States, together with actual results from winter wheat harvesting, indicate that the official estimates as to the probable total crop yield will not be realized. Actual injury to crop in Minnesota is already serious, while the average reports from Dakota, Nebraska, Wisconsin and Iowa indicate that many sections have felt the blight and that the average yield has already been considerably lessened.

Rains in Ohio, Indiana and portions of Illinois have delayed harvesting and caused some injury. In 27 counties of Illinois which return reports as to actual results of the wheat harvest, the yield has varied widely from 5 to 18 bushels to the acre. The range of wheat yield is from 10 to 18 bushels. Reports from 11 counties of Minnesota indicate that the present wheat outlook does not promise to exceed one-half to three-fourths of an average, where the full effects of drouth have been felt. In Fairbault, Sherburne and Chippewa counties the outlook is declared to be unusually poor. Reports from Indiana show that the wheat harvest is of excellent quality, though the field will fall short of an average crop. Need of rain for all growing crops is indicated throughout Wisconsin. In Dakota the need of rain is again beginning to be felt throughout the entire Territory. In Hughes and Clay counties the drouth is very severe.

The latest by cable from abroad is as follows: LIVERPOOL, July 7.—WHEAT—Firm, and held higher. California spot lots, 6s 4d@6s 7d; off coast, 3s 6d; just shipped, 3s; nearly due, 3s 6d; cargoes off coast, hardening; on passage, firmer and held higher; Mark Lane Maize, steady; English country markets, firm; French, generally dearer; Wheat in Paris a turn dearer, and Flour dearer. Wheat and Flour on passage to U. K., \$2,425,000 qrs.; quantity on passage to Continent, 670,000 qrs.

## Rapid Advance in Wheat in Chicago.

CHICAGO, July 7.—During the first hour on 'Change there were some wild scenes in wheat puts. August opened at 82½¢, and an avalanche of offerings were brought out, which broke values down a little, but the shorts came out in force, and with almost no stops August advanced to 83½¢. The market was greatly excited. The rapid advance caused the suspension of John W. Rumsey, an old member of the board. The amount involved cannot be yet learned. There has been, within a week, a straight advance in wheat at 8¢ per bushel.

## Foreign Review.

LONDON, July 5.—The *Mark Lane Express* in its review of the British grain trade during the past week says: The brilliant and unbroken fine weather is opportune and is improving the surviving crops. If there is no rain the finest possible samples will be obtained. The trade still favors the buyers. The sales of English wheat during the week were 36,243 quarters at 31s, against 38,837 quarters at 33s 3d during the corresponding period of last year. Flour has been depressed, especially American. Two cargoes of wheat have arrived, nine were sold, four were withdrawn and two remained. Trade forward is almost nominal. At to-day's market wheat and flour were quiet and unchanged.

## London Wool Sales.

LONDON, July 5.—The bidding at the wool sales to-day was animated with improved business. Sales are as follows: Victoria, 2700 bales; scoured, 9½d@10s; greasy, 6d@10s 2d; fleece, 1s@2s 6d. New South Wales, 4600 bales; scoured, 8½d@10s 9d; greasy, 5½d@11½d; fleece, 1rd@1s 4½d. South Australian, 1000 bales; scoured, 7½d@10s 4d; greasy, 6d@11½d. Queensland, 400 bales; scoured, 2½d@10s 5d; greasy, 7½d@10s 2d. Tasmania, 1000 bales; scoured, 11½d@10s 4d; greasy, 6½d@11rd.

## English Wool Markets.

LIVERPOOL, July 6.—Market dull. No business passing in cargoes. Indian shipments large, and unless we have bad weather our market will not respond to American markets for several months.

## Chicago Fruit Market.

CHICAGO, July 6.—California Fruit Union: The weather with us is very hot. Apricots are selling from \$1.65 to \$1.75; plums, from \$2.00 to \$2.50 and what peaches arrive in good order at from \$2.00 to \$2.50, but many arrive in bad order. Figs arrive in such a condition that they are worthless; there is no demand whatever for them. PORTER BROS. CO.

## New York Wheat Market.

NEW YORK, July 4.—Wheat closed ½ cent off—July, 85½¢; August, 86½¢; September, 86½¢; November, 86½¢; December, 86½¢; January, 90½¢; February, 92½¢; May, 95½¢.

## Eastern Wool Markets.

NEW YORK, July 4.—A good business is doing in available stocks, and sellers claim that they could increase the movement if wools were only here to offer. Supplies, however, come forward slowly. More manufacturers than usual are in the market, and every day seems to add to the value of attractive grades. Among sales were 3000 pounds spring California at 21 cents, 10,000 pounds Utah at 27½ cents, 50,000 pounds Oregon at 20 to 21 cents, 50,000 pounds Oregon at 23 cents. The tone of the Philadelphia market is very strong, and desirable new wools are promptly marketed at full and improving prices. Among sales were 115,000 pounds fine and medium Territory at 22 cents, 5000 pounds medium Territory at 23 cents, 10,000 pounds medium

Territory at 22½ cents, 45,000 pounds medium Territory at 24 cents, 10,000 pounds medium Territory at 24½ cents, 21,000 pounds low and medium Territory at 20 cents, 5000 pounds Nevada fine at 19 cents, and 125,000 pounds California on private terms. In the Boston market sales were heavy, and the increase in prices ranged from 1 to 2 cents. The tone of the market is very strong.

BOSTON, July 6.—Wool firm; good demand. Ohio and Pennsylvania X fleeces, 32c; XX and XXX and above, 34@35c; Michigan X fleeces, 32c ½ lb.

## New York Hop Market.

NEW YORK, July 4.—All hands are on the fence awaiting the effect of the weather this week on crops. There is not enough demand to offer a good outlet for the stocks on hand. A sharp rise in prices is expected if there is no improvement in the crop before the 10th inst. Pacific coast crop of 1885, common to choice, 8 to 12 cents.

## Local Market.

BAGS—The syndicate put on a bold face and say they can make bags worth 20c, but they don't want to. The reduced crop should counsel them to be moderate in their views.

BARLEY—Barley is 2½¢ lower per cbl. for the best feed. There is enough feed barley arriving, and there is not much interest in the trade. Old Barley is scarce and firm.

BEANS—There is little change; bayos and pink beans are 10c higher.

CORN—Corn is quiet and unchanged.

DAIRY PRODUCE—Full notes are given below.

EGGS—Ordinary lots of ranch eggs have sold a little cheaper than last week, but fancy have sold higher than quotations.

FEED—Bran is unchanged. Cornmeal is \$1 cheaper per ton. Hay receipts have been small this week. The range is as follows: Alfalfa, \$6@9; barley, \$6@8; oat, \$7@9; wheat, \$9@12 ½ ton; extra choice, do, \$13@14.

FRUIT—Full notes are given below.

HOPS—The market is full of interest and is discussed in other columns of this issue.

OATS—There is no change.

ONIONS—Supplies are small and rates have advanced.

POTATOES—Potatoes have also advanced from 10 to 20 cents per cbl. for the best sorts.

POULTRY AND GAME—There is much difference between ordinary and fancy lots, though all are higher than last week. Venison is again in market in fair supply.

PROVISIONS—Trade is good, and Eastern ham prices have advanced.

VEGETABLES—Descriptive notes are given below.

WHEAT—The local market is firm and considerable sales are being made. Today's sales on call were as follows: Buyer season—200 tons, \$1.31½; 300, \$1.31½; 500, \$1.31½; 300, \$1.31; 300, \$1.30½; 300, \$1.27½; 1700 tons, \$1.28; 500, \$1.27½; 100, \$1.27½; 100, \$1.27½; 300, \$1.27½; 300, \$1.27½; 1400, \$1.21½; 1900, \$1.21½; 3300, \$1.21½; 100, \$1.21½; 300, \$1.21½; 100, \$1.21½; 100, \$1.21½; 200, \$1.21½; 500, \$1.21½; 100, \$1.21½; 100, \$1.21½; 400, \$1.20½; 1000, \$1.20½; 1200, \$1.20½ ½ cbl.

WOOL—There is a good demand, with no notable change in values since last week.

[COMMUNICATED.]

## Market Information.

## Livestock.

Beef cattle, if choice and will cut up without waste, find a ready market at full prices. Butchers prefer paying ½¢ advance for a bullock that will cut up well, even though it be small-sized, and when selling, cattlemen must always take this into consideration. The offerings on the market continue moderate. Shipments of choice beefs to the East continue to be reported, which emphasizes the impression that our market will probably rule higher soon. Mutton and lambs are marked up under stronger holdings in the interior and light supplies near by to draw from. It is now claimed that our market will rule strong until drives are made from the summer pastures. In cows there is nothing new to report. The horse market continues quiet, probably due to the holiday season. There is a continued inquiry for general utility horses and also medium-sized work horses.

The following are to-day's meat prices: Beef—Stall fed 6½¢@7¢ ½ lb; grass fed, extra, 6½¢@6½¢; first quality, 5½¢@6¢; second, 5½¢@5½¢; third, 4½¢@4½¢. Calves, small, 7½¢@8½¢; larger, 6¢@6½¢ ½ lb. Mutton—Ewes, 4½¢; wethers, 4@5c. Lamb—Spring, 6¢@6½¢ ½ lb. Pork—Live hogs on foot, 4¼¢@4½¢ for both grain and dairy fed; 2¼¢@2½¢ for soft; dressed, 6¢@7c for hard, and 4¢@5c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Bags.

The market has shown more strength, owing to lessening offerings by outside holders. It is claimed that all of 9,000,000 bags have been sold this season. This includes sales from the pool and also from the outside. Well-informed parties say there are only 5,000,000 bags not held by the pool, and when these are placed the price will be advanced. Outside holders are selling at 9 to 9½ cts and the pool adheres to 10 cts.

Advices from Colusa report grain bags being offered in that place at 8½ cts by farmers who overbought.

## Cereals.

Crop advices continue to be of an unfavorable character. It is now conceded that the wheat crop on the west side of the San Joaquin will fall short 25 per cent of estimates made the forepart of last month. Some claim that the shortage on previous estimates is all of 33½ per cent. Harvest returns from Colusa, Yolo, Butte, Yuba and Sutter are confirmatory of the shortage reported in last week's RURAL PRESS. Barley is not threshing out so heavily as was thought.

Owing to the past week having only two market days, not much can be said regarding prices here.

Interior advices confirm current reports that an advance is being paid for both wheat and barley over the bids made by buyers here.

A large-sized vessel is loading for New York the barley mentioned in last week's issue. The grade is choice feed and brewing.

European cables the past week report a strong-growing wheat market on the continent, owing to adverse crop reports in France and Germany. In England there is fine growing weather, but advices report it impossible for the crop to be an average.

Eastern advices are confirmatory of a shortage of wheat on former estimates. It is now doubtful if the entire crop of the United States will go over 400,000,000 bushels against an estimate the forepart of last May of 485,000,000 bushels. Corn crop advices at the East are favorable.

Farmers ought to guard against so-called sales on call at the Produce Exchange, for it is claimed that the call board will be used to make producers sell when they should hold.

## Dairy Product.

Choice grades of butter hold to strong prices, but fair to good is in oversupply, necessitating concessions, at times, to effect sales. It is feared that the price of packed butter will rule very low this winter, owing to the low prices ruling West for fresh butter and an increased quantity packed.

Cheese is without change. The demand is slack and stocks are beginning to accumulate more freely. Western advices report a falling market, with surplus in excess of the demand.

Eggs are reported weaker, yet without change in prices. Very choice fresh-laid from well-known shippers fetch 27 to 28 cts.

The market is well supplied with eastern and Salt Lake eggs, but owing to poor quality they are more or less neglected.

The market for hens, roasters and turkey gobblers has ruled exceedingly strong throughout the week. Some extra choice large, fat hens sold at \$8 to \$9.50 a dozen, and large young roosters for roasting fetched on Friday last over \$12 a dozen. Gobblers sold at 20 cts, but they were choice. The general run of the poultry received was only fair to good, and did not fetch much more than was quoted in the daily press. Ducks have been hard to sell, as the Chinamen are too poor to indulge much in such luxuries.

## Vegetables.

Potatoes have ruled steady at firm prices under moderate receipts and a good demand. Stocks are not allowed to accumulate.

Onions ruled strong up to Saturday, when a weaker feeling was noticed, as the party buying for shipment East had his wants met. The market closed weak to-day. Green Peppers are in liberal supply at lower prices. They sell by the box.

Green Okra is in better supply, with some difficulty met in getting over 20 cts a pound.

Summer squash ruled steady up to Tuesday and to-day, when the market was weaker but no lower. Tomatoes are coming in very freely with lower prices ruling. Yesterday it was hard to get over 50 cts a box, unless they were choice.

Cucumbers have ruled weak and lower throughout the week. The pickle factories are buying the small sized, also peppers, small white onions and cauliflower.

Green corn has come in liberally, yet the price for choice kept well up, owing to a good local and shipping demand up north.

## Fruits.

The market for apricots has been advancing each day under strong buying from canners. On Thursday, choice six-inch boxes sold at 80 cts, Friday 85, Saturday 90, Tuesday \$1, and the same to-day. The advance was due to strong competition owing to a leading firm in this city buying about 200 tons at Vacaville, which they sold to canners outside of this city.

The first consignment of large (average weight 12 pounds each) Ice Cream melons was received on Saturday by Thurston & Hartson from F. M. Slater of Vacaville. The same firm received on Tuesday the first consignment of Sweet Water Grapes. One box was from D. Dutton of Vacaville, and two boxes from G. O. Mead of Winters. The melons sold at about 40 cents each, and the grapes at \$1.25 a box.

The receipts of both pears and plums are increasing, and as canners are not in the market, prices are falling. The quality of the bulk received is improving but as yet is far from choice. Choice varieties find a ready market at from \$1 to \$1.50 a box. No Bartlett, except wind-fall, has been received. Currants have advanced steadily until \$4 was reached yesterday for some very choice. The crop is lighter than thought, which coupled with the Eastern and increased canners' demand have kept prices from falling to as low prices as obtained last year.

Peaches have come forward more liberally, causing lower prices. The more choice varieties, when in good condition, sold readily, but inferior were slow and hard to place.

Apples have kept steady with choice Red Astracans selling at \$1.50 to \$1.75 a box, extra slightly higher. Early Harvest sold at from 90 cts to \$1.25 a box. Heavier receipts are looked for commencing with next week. The market closed strong to-day.

Figs have been a drag at lower prices. Some had to be dumped on Thursday and again on Friday.

The first nectarines of the season came in yesterday from P. Fischer, Vacaville. They sold at \$1.75 per box.

Apples closed very strong to-day, but peaches, pears, plums and strawberries, weak and lower. Los Angeles oranges are weak and dull at from \$1.50 to \$1.75 per box; but lemons and limes are higher and stronger.

## Miscellaneous.

The tonnage-movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	327,398	213,861
In port, disengaged.....	30,390	90,858
In port, engaged.....	41,409	19,288
Totals.....	399,197	311,007

The above gives a carrying capacity as follows: 1886, 638,704 short tons; 1885, 497,711 short tons. Increase over last year, 140,993.

The hop market is very active, with higher prices bid. Some contracts were drawn the past week at

15 and 17½ cts for choice new of this year's picking. It is reported that for something extra of this year's picking 20 cts was refused by a grower. Deliveries are to be made as soon as possible after picking. The demand for last year's picking is strong at higher prices. It is claimed that 12½ cts was paid for some that runs from good to choice. The cause of the advance was given in last week's PRESS.

Hams are selling at another advance of ½ ct per pound.

Hay is reported weak, but no lower.

## Wool.

Owing to the past week being broken by a two to three days' business vacation to allow the proper celebration of the Fourth, trading in wools has been lighter. Prices are fairly maintained under strong buying competition, particularly for medium to fine clips that are light and clean, and of fair length and storing staple. Both the European and Eastern markets are higher and active. Stocks are not allowed to accumulate with us, for buyers stand ready to take all desirable clips at full figures, even off grades find ready buyers.

## The Pacific Rural Press.

The Leading Agricultural Home Newspaper  
and standard authority on all branches  
of California Agriculture.

It is the chief medium for the dissemination of information concerning fruit-growing in California.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FRUIT-GROWERS in all parts of the State.

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes: "The greatest praise that could be bestowed on the RURAL PRESS at the late Fruit-Growers' Convention, and which shows, undoubtedly, the well deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

It is a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest. It is handsomely printed and illustrated. It is a 20-page weekly, and is furnished, postage paid, for \$3 per year in advance. Single copies, 10 cents, prepaid.

Established 1870. Yearly subscription \$3. Send for samples. Address,

DEWEY & CO., Publishers,  
No. 252 Market Street, San Francisco.

## Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0 25
- 2.—World's Encyclopedia, 784 pages, 1250 illustrations; (exceedingly valuable).....50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 80 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 10.—March of Empire, by Mallie Stafford.....25
- 11.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.).....05
- 15.—European Vines Described, 63 pages.....05
- 19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
- 23.—Architecture Simplified, 60 pages.....15

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F. Send for any further information desired. Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

## An Easy Binder.

A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to subscribers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JAMES C. HOAG—California.  
J. J. BARTLE—San Joaquin Co.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
GEO. McDOWELL—Santa Clara and Santa Cruz Co's  
J. B. PATCH, Nevada and Utah.  
M. S. PRIME—Shasta Co.  
FRANK W. SMITH—Oregon and Wash. Ter.  
A. CALDERWOOD—Napa Co.

## To Young Men and Young Women.

All competent boys and girls should prepare themselves for usefulness in business if they wish to "step up higher." We have for sale to such, on easy and favorable terms, a scholarship in one of the best business colleges in the U. S. Address this office.

## AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation).

CATALOGUE OF EUROPEAN VINES.—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA.—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL.—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA.—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, \$1. This book is the best general review of California soils, climate and productions in existence.

NILES' STOCK AND POULTRY BOOK.—Pamphlet, giving directions applicable to poultry growing in this State; 120 pages, post-paid for 50 cents.

KENDALL'S TREATISE ON THE HORSE AND DISEASES.—Post-paid for 25 cents.

ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, —

## The March of Empire:

EMBRACING SKETCHES OF

California History Through Three Decades;

Early Times and Scenes; Life in the Mines; Travels by Land and Sea before the Era of Railroads; The East during the Years of the Civil War; Life in the Border States; Crossing the Plains with Ox Teams; Crossing the Plains on the Transcontinental Railway; Progress and Improvement of the Golden State; Resources; etc., by MRS. MALLIE STAFFORD.

The book is 16mo. 189 pages; price in full bound cloth, \$1.25, post free. To subscribers of this paper who pay for this paper one year in advance of date of payment (in substantial flexible cloth), 35 cents. Address this office.

## MUSIC FOR THE PEOPLE.

The following publications, though cheap in price, are reliable, correct, and contain music in sufficient variety to suit all tastes.

The American Collections, although cheap, are not by any means small books, but large, rich and handsome books, so heavy (in a material sense) that we cannot afford to send them post-free, by mail, as we do all other books. The American Collections are mailed for 65 cents each.

## American Ballad Collection.

Only 50 cts. Mailed for 65 cts.

Contains selections from the latest and best English and American songs. Each song has accompaniment for piano. Large book, sheet music size. Only 50 cts.

## American Song and Chorus Collection.

Only 50 cts. Mailed for 65 cts.

Admirable collection of successful, popular songs, with bright choruses. Only 50 cts.

## American Piano Music Collection.

Only 50 cts. Mailed for 65 cts.

Contains the latest favorites for pianoforte. Large book, sheet music size. Only 50 cts.

## American Dance Music Collection.

Only 50 cts. Mailed for 65 cts.

Contains Waltzes, Galops, Quadrilles, etc. Large book, sheet music size. Only 50 cts.

## OLIVER DITSON &amp; CO., Boston.

C. H. DITSON & CO., - 867 Broadway, New York.

## A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address. DEWEY & CO., 252 Market St., S. F.

## THE BEST POTATO DIGGER

THE "MONARCH"

Saves its cost yearly. Guaranteed to dig 500 bushels per day. Special Terms to good agents.

SENT ON TEST TRIAL.

Write for Catalogue and Prices. Sent free. OFFICE AND FACTORY, MONARCH MFG. CO., Carpentersville, Ill.

## Poultry and Stock Book

Niles' new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid, 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

## CHAMBERLIN AUTOMATIC

Machine-Made

## STENCIL PLATES.

We have an arrangement by which we can furnish our readers with Stencil Plates for marking boxes, bales, and sacks of produce, at greatly reduced rates during the continuance of this notice in our columns. Address

DEWEY & CO.,

252 Market St., S. F.

Dewey & Co.'s Scientific Press  
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

FAMOUS  
ENTERPRISE

Self-Regulating  
WINDMILL  
Is recognized as  
THE BEST.

Always gives satisfaction. SIMPLE,  
STRONG and DURABLE in all parts.  
Solid Wrought-iron Crank Shaft with  
DOUBLE BEARINGS for the Crank to  
work in, all turned and run in adjust-  
able babbitted boxes.

Positively Self-Regulating.

With no co springs, or springs of any kind. No little  
rods, joints, levers, or anything of the kind to get out of  
order, as such things do. Mills in use 6 to 12 years in  
good order now, that have never cost one cent for repairs.  
All genuine Enterprise Mills for the Pacific Coast trade  
come only through this agency, and none, whether of  
the old or latest pattern, are genuine except those bear-  
ing the "Enterprise Co." stamp. Look out for this, as  
inferior mills are being offered with testimonials applied  
to them which were given for ours. Prices to suit the  
times. Full particulars free. Best Pumps, Feed Mills,  
etc., kept in stock. Address,

STODDARD  
BARREL CHURN

With Improved Cover Fastening.

The Only Practical Churn for the Dairy.

Awarded First Premium California State Fair, 1885; also  
First Premium Mechanics' Fair, San Francisco, 1884 and 1885,  
over all opposition.

The Stoddard Churn is as great an improvement over the  
cumbersome, leaky, and often sour box churns as the Cream  
Separator is over setting in pans, and this fact is fast becom-  
ing realized, as is proven by the growing demand for them,  
and they are being adopted by our best dairies with the  
most gratifying results. Beware of imitations of the "Stod-  
dard." All interested in dairying will regret if they fail to  
all or address us to investigate these matters.

PRICE LIST.

PATENT  
LIFE-SAVING RESPIRATOR

Entirely Prevents Lead Poisoning  
and Salivation

The most perfect appliance for people engaged in  
Smelting, Dry Crushing, Guano Works,  
Quicksilver Mines, Lead Corroding, Thresh-  
ing and Stock-driving, and all other occupations  
where there is dust, poisonous vapor, or bad odor.

In Feeding Threshing Machines, and simi-  
lar work, they are indispensable, as no foreign substances  
can be inhaled when they are worn.

The Respirators are sold subject to approval after trial,  
and if not satisfactory the price will be refunded. Price,  
\$3.00 each or \$30.00 per dozen. Sent post-paid to any  
address on receipt of price.

## The Woolly Aphis.

We saw something in the University orchard the other day which we never noticed before and have not seen on record, though it may be. In looking for signs of the codlin moth we saw a little woolly substance on the calyx end of the apple, and breaking open the apple found a colony of woolly aphis snugly ensconced in the calyx tube, which was slightly open. The aphis had evidently found a snug harbor here while the ladybirds were scouring the tree and had destroyed all in sight. Of course a colony of aphis thus protected would escape the ladybird, which could not enter the very small opening, nor could it be reached by any spray. We are watching to see whether the tree will be repopled by aphides bred in these covers.

Professor Hilgard gave us the other day a letter which he had just received from the eminent French horticulturist, M. Ch. Joly, Vice-President of the National Horticultural Society of France. He speaks in commendatory terms of the publications of the College of Agriculture, and comments especially upon Bulletin 55 concerning the woolly aphis which was published in the RURAL PRESS of May 15, 1886. Thousands of remedies, he says, are used to get rid of the woolly aphis, but he gives it as his opinion that a remedy must be much as possible an insecticide and a manure as well. It is no doubt true that such a combination is highly desirable, and such, in fact, is the case with most of the remedies now used in this country. The wood ashes used about the root crown of the trees is a valuable manure. Gas lime has some manurial properties and has shown itself to be valuable also as an ameliorator of harsh soils. Lime, which has been often used in this country, has also a tonic effect upon some soils. We have also a number of special applications which are kept secret by those who use them, which are known to have fertilizing constituents.

M. Joly gives this as the treatment which has proved best by long experience in France. First: Scrape off the rough bark during the wet season, and burn all the moss, dead bark, etc., and burn up the scrapings. Second: Make in a barrel a mixture of "black soap," powdered sulphur and lime, with clay in sufficient quantity to make the mixture about as thick as cream. Apply this with a brush on the trunk and larger limbs of the tree; in fact, cover the whole tree with it as far as practicable. The clay acts merely as a medium for holding the other substances together. As the rain follows it will gradually wash off the mixture and will let it fall on the roots and will reach the insect there.

M. Joly urges California apple-growers to try this treatment for the woolly aphis, and assures them they will find it satisfactory. He does not think a perfect cure is to be expected if there are neighboring orchards which are not treated, but the result of the treatment will be clear, bright-barked and vigorous trees. The operation has to be repeated every two or three

years, and will pay in the beneficial effect upon the trees.

We regret M. Joly does not give more definitely what he means by "black soap." If he means such soap as is made at home with grease and lye from wood ashes, such a material would

RAMIE.—There is just now exceptional interest in the extraction of ramie fiber in all parts of the country. New Orleans seems to be a focus for the Southern interest and parties who believe they have the coming ramie machine are urging the growing of the crop and the estab-

THE EDUCATIONAL PROBLEM.

be out of the reach of most people for lack of ashes, for in this country of large orchards and small need of fires the size of the fruit-grower's ash pile bears a very small proportion to the size of his orchard. Perhaps M. Joly will write us more fully as to the alkaline element in his prescription.

AN exhibition of Fresno county products will take place at San Francisco on the occasion of the Mechanics' Fair and Grand Army Encampment next month. A similar exhibition that took place last year was a great success.

lishment of the ramie industry. San Francisco is also attacking the problem, and at least two machines, one working dry fiber and one green, are being run experimentally. The ramie plots at the State University are furnishing the stalks for these experiments. If full success should be reached, ramie growing may be very profitable in this State.

EASTERN shippers at Vacaville are purchasing whole crops of grapes at \$70 to \$100 per ton on the ranch, and whole crops of peaches at \$80 per ton, furnishing boxes.

## Opening of the School Year.

This week the public schools in the bay region have reopened their doors and the too-short vacation is over. According to the daily paper reports, the ferries carried more people on last Sunday than during any single day this season, so great was the rush of people from rural haunts, returning on time to place their children in the schools on Monday morning. The pupils attending private schools have a longer summer rest, but the last of July will gather them in too and the study for another year will begin all around.

The opening of the school year reminded us of the excellent engraving which we have reproduced on this page as appropriate to the season. The picture represents the three great elements in the educational problem—the parent, the schoolmaster and the pupil. Do the young pupils ever think that they are the recipients of the combined sacrifices and exertions of the other two, and properly appreciate the work done for them? Does this little lad in the picture think that these two full-grown men are earnestly discussing some matter which is for his sole benefit? It is, no doubt, well that the children do not burden themselves too much with thoughts of the exact relations of things, else we might have too old heads on young shoulders; but it will do pupils no harm to think occasionally of all that is done to educate them, and conduct themselves accordingly.

We have thought how we could in a few words present the importance of the educational interest of the country. The philosopher, the statesman, the theologian could all give us volumes on this theme; in fact, libraries could be filled with treatises on education. We adopt the usual method of writers, who desire to give, in small compass, that which may provoke much thought, and take recourse to statistics. The report of the United States commissioner of education for 1884 shows that there are in the United States 16,794,402 children of proper age to attend school, and about three-fourths of these are in attendance upon either public or private schools. For the instruction of these children there are about 300,000 teachers employed. The total annual expenditure for educational purposes is over \$104,000,000, and the value of school property is nearly \$250,000,000.

All these large figures show what is being done for the children. It is done cheerfully because in the children lies the hope of the nation. Let each one of our young readers who may be attracted by these statements remember that upon him rests a part of the obligation to prove to history that the nation's hopes are well placed.

SAM, a Merced-river Chinaman, is shipping potatoes by the car load from Merced to El Paso, Texas. He pays \$160 a car freight, and the potatoes in El Paso sell for two cents a pound.

## HORTICULTURE.

## California Fruit at the East.

EDITORS PRESS:—The great and yet unsettled question as to the best methods of picking, packing and shipping our rapidly increasing fruit products should be constantly kept before the people, although many may regard it as supererogation to continue this harping upon this old subject. For one, however, to keep silent who may have witnessed the deplorable condition in which a large portion of our fruit reaches the Eastern markets is simply a dereliction of duty, if he has a proper regard for the whole fruit interests of the Pacific Coast, where so much is involved. My recent trip to the East was largely, it is true, in the special interest of fruit shipments of Southern California, yet I am free to say that I was not altogether unmindful of the welfare of the entire State, and to reduce my observations to practical suggestions, I would say:

First of all, that we want to ship ripe fruit first, last and all the time.

Second, as a rule, greater care should be exercised in taking the fruit from the tree, cutting the stem being undoubtedly the better way, instead of pulling the fruit off.

## Philosophy of Rind-Curing.

Third—All fruit should be allowed time to evaporate the surplus of watery secretions in the rind after picking, before packing for the market. In other words, it should be allowed ample time to sweat. By this process considerable shrinkage occurs, and when packed direct from the tree the rigid, unyielding rind is easily abraded in handling and pressing into packages; and when it is generally understood that it is the oxygen of the air penetrating these little cracks or abrasions of the skin or rind that causes decay, the sweating process will be more generally adopted in preparing all fruits for packing. Too much can scarcely be said upon this point. The cells composing the skin or rind of fruits are constantly distended to their utmost while on the tree by a watery secretion, and hence are ruptured at the slightest contact, or at least by rough handling, and this condition obtains until the fruit is past its prime ripe condition, when it will have lost its rigid texture, and these delicate cell membranes thus having parted with most of their watery secretion, through this natural curing process while yet on the tree, results in a shrinkage of parts, and consequently a collapse of the cell walls, which renders them not only tough in texture, yet plastic to the touch. The sweating, after picking, accomplishes the same as nature has indicated and described above, but in a much more rapid manner by proper management. Fruit thus prepared offers almost absolute immunity against decay caused by improper handling. It is somewhat analogous to dried fruit, i. e., the rind has been permitted to commence the process of drying, by which the inner pulp and juice are nearly hermetically sealed against atmospheric influences. Dried fruit, however much it may be banged about, never decays if kept in a dry and well-ventilated storage.

## Ventilation in Package and Car.

Fourth—Fruit packages should be constructed as open as wire work, if it were possible, so that a free circulation of air would thereby be secured in every direction, affording a continuous escape of all evaporated moisture from the fruit in transit to market. Not only should the small packages that compose the crate be secured separate from each other to insure perfect ventilation, but likewise the crates themselves, and last but not least, the car should then receive such attention in its construction and interior conveniences that the fruit packages can be firmly secured in place with this system of perfectly free and full ventilation, to enable all of the moisture escaping from the fruit to find rapid exit.

The first cherries that reached Chicago from California in May were from half to two-thirds either rotten or so moldy as to render them worthless. The cause of this was unquestionably the moisture thrown off and confined in the almost tight boxes in which they were packed after picking, and in which they were also shipped. After repacking they readily sold from 10 to 15 cents per pound in packages and retailed at 20 to 25 cents. Now, the loss here was simply frightful, and due also to a want of knowledge in handling this fruit under the circumstances. With a schedule of six days to Chicago, for instance, by rail, thoroughly ventilated packages, crates and cars, and these frightful losses can be, in a measure, prevented.

## The Opportunity at the East.

In this connection I wish to remark, what I base upon most diligent inquiry in our different sections of the Eastern States widely separated, that it is practically impossible to overstock those Atlantic city markets with ripe, clean, sweet oranges. Cherries, pears, Muscat grape and other favorite varieties, and possibly peaches and apricots, are laid down there in a wholesome and inviting condition. Our unripe fruit they do not want, nor will it pay to ship fruit to decay en route. The question of production, of course, has long since been fully settled; but

we certainly are most sadly remiss in the handling.

As regards the orange, which claims the attention at present of Southern California producers, we also have many things of vital importance to this special industry yet to learn. To continue to pick and ship the unripe fruit will sooner or later bring curses home to roost to all of those possessed of this unreasonable greed. The few green fruit consumers scattered over the Eastern world are usually possessed of unbridled tongues, and no better advertising medium could well be secured for any unholy purpose; and although Providence and the physician may be easily invoked to allay the mental and physical suffering resulting from this infraction of the arbitrary law of cause and effect, yet its pernicious results can scarcely fail to recross to the Pacific Slope.

During nearly a two months' stay at the East, besides being almost constantly on the move from place to place, afforded me ample opportunity to gauge public sentiment in regard to our oranges as they were then receiving them. I also made it a point to sample them myself at 10 cents apiece, in order to speak from knowledge, and I desire to assure all orange-growers that no unfavorable criticism ever greeted my ears on the quality. In fact, they were sweet and juicy, but occasionally some one would ask where our *sour* oranges grew that came to market in February and March.

As another pointer, I saw carloads of the San Gabriel valley oranges from Duarte to Pasadena (seedlings) sell for \$4.50 to \$7 per box; yet the famed Washington Navel is justly the king of oranges.

Another incident that is quite amusing to note, to say the least, was the great enthusiasm manifested by the retailers and newsboys selling fruits on trains, in crying the orange. To my mind it seemed to enforce the idea that too great a prominence before the public is sometimes a disadvantage, or may be so, and possibly it may be so in the present case. These newsboys, especially, as we all know, come rushing along seeking business with every one, and in offering their oranges the stereotyped cry was: "Here's yer nice, sweet Riverside oranges; two for a quarter." And the laugh comes in on Riverside, in these oranges having such black, smutty faces, while they claim not to grow smutty fruit.

Now, the point is, if Riverside did not grow these most delicious sweet smutty oranges, then some other community was grossly swindled out of the credit so justly their due, and in all of my humble efforts to correct this seeming abuse that the devil might receive his just deserts, I was almost insulted. With all the eloquence of a Demosthenes, I doubt whether it would have availed in convincing those orange-venders that it was the product of the great San Gabriel and Santa Ana valleys. The smut they seemed entirely oblivious about, but the sweet orange was the burden of their unceasing song. It may, therefore, be a question whether too great a notoriety is of enduring advantage even in the orange culture.

Upon the whole, in summing up, California has a grand future before her in fruit culture, but better brain and more science should take the lead, that ways and means are provided to save for a small profit what now is a double loss of production and decay in seeking a market.

O. H. CONGAR.

Pasadena, July 4, 1886.

## Keeping Lemons.

Pertinent to the letter of Dr. Congar, which we publish above, will be some notes of experience in handling lemons by two lemon-growers of California. We give first an item about G. W. Garcelon's practice with lemons, as described by the *Riverside Echo*: Mr. Garcelon has now (June 14th) several hundred boxes of lemons in fine condition, worth about six dollars a box in Chicago. These lemons were picked last December and January. How did he keep them, do you ask? He uses raisin trays, not sweat boxes, to keep them in, picking as soon as large enough (which he thinks is when they will go about 250 to 300 to the box). He lays the tray with cleats up, and places one layer of lemons upon it, placing another tray over them cleats down. Upon that he duplicates the arrangement with one layer of lemons and two trays, and so on. He keeps out both light and air, but finds no planer frame building just right—does not know how an adobe would affect the atmospheric conditions. They keep six months all right, Mr. Garcelon says, and by that time, generally about June or July, the market is sure to be good.

N. W. Blanchard, a large orchardist at Santa Paula, Ventura county, writes under date of June 22d to the *Riverside Press* as follows: I am now shipping by each steamer about 100 boxes, and the lemons have been picked from two to three months. A correspondent of the *San Francisco Bulletin* from Sicily not long ago stated that the lemons picked there in November were kept till March before shipping, while lemons picked in January were only kept three weeks before shipping, and that lemons picked early kept better than lemons picked late. He also stated that lemons were handled very carefully. In regard to this last point I have yet to learn from my experience that such careful handling is necessary. I have purposely bruised lemons to see if they would decay, and have noticed lemons that were out with the pruning shears in gathering and have not yet discovered

that they decayed in consequence in either case. It has generally been thought necessary that in curing lemons they must have air, i. e., some little air circulation. Now comes Mr. Garcelon to the front as one of the most successful men in curing lemons, and he tries to make his lemon-curing house air-tight. Apropos to the sand treatment, a man from Melbourne in my employ tells me that there the lemons are placed about three deep on shelves and dry sawdust poured over them, which settles down and around them, serving the same purpose as sand, perhaps. The important question is to keep lemons from December (I suppose) at Riverside, from January here, till July and August and September. Is not the answer: Pick in season, keep from circulation of air in a cool place, in sand, sawdust, or in tight stove-room in not too large bulk so that one rotten lemon shall not injure others in contact with it?

Another correspondent of the *Riverside Press* gives the following: Some of our lemons were picked in December and some in January. These were at first placed in an adobe room, ill-ventilated, and they decayed some; then removed the lemons, placing them about three deep on shelves, far enough apart to admit free passage of air; building open at each end. We found this to be satisfactory. We have kept some of them to test durance, and believe they will dry up without decay. The lemons that were picked when green proved bitter. Our experience thus far for best results decides us to let them color quite well, if they will do so without getting too large. Size and color are both governing influences.

My lemons that were picked early in the season and were well cured sold in the San Francisco market for two and three times as much net as other shipments were quoted. Sent some East, and the house immediately ordered five times as many as I could furnish.

I am satisfied that if we raise the right varieties and prepare them properly for market, our area for lemon culture is not large enough to meet the demand. Lemons if kept on the trees until, say, the latter part of March and April, thereby attaining large size, will decay very rapidly after being picked.

Ordinary help cannot be trusted to pick. My rules are: Cut carefully from the tree; place in the receiving basket with equal caution; keep dry; do not rub them; assort according to size, and when ready for market pack in a careful manner.

For keeping qualities the Eureka stands first; so-called Lisbon next. The Australian Lisbon is a prolific bearer, but keeping qualities poor. I have only two trees, but they gave me 20 boxes. Age of trees, eight years from bud; tree very thorny. I am planting entirely to Eureka. I consider they have more good points than any other. The only mark I can make against the Eureka is its form, and this will be obviated in a great degree by picking the fruit in the proper season and condition. If I have the true Lisbon, it is a very poor lemon for culinary purposes—too bitter.

## Plum Apricot vs. Black Apricot.

EDITORS PRESS:—Some weeks since you gave a handsome illustration of a fruit called the "Plum apricot," *Prunus Simoni*, if I remember aright. The picture and description strongly reminded the writer of the "Black apricot" which has been for many years in the standard orchard of the University of California, and to some extent propagated by nurserymen and others who have received scions from that source. It would be easy to send specimens of the fruit and foliage of the "Black apricot" to some disinterested gentleman east of the Rocky mountains who has the "Plum apricot" and find out whether the two are synonymous. The ripe fruit should also be submitted to the judgment of the State Horticultural Society. Let the fruit-growers of the State take these simple steps and they will know whether this candidate for their favor is really new and suited to their wants.

Aside from the question of the economic uses of the fruit of the black apricot, it has occurred to me that the tree may prove to be of value as a stock on which to work apricots and allied stone fruits. Its general appearance is that of a tree but little changed from its natural state by cultivation, and the slender twigs suggest suitability for cuttings that would strike root. Here in Europe it is found that the study of stocks to draft upon is of prime importance. We cannot know too much of this subject.

C. H. DWINELLE.

Florence, Italy, May 21, 1886.

PAINT FOR IRON.—A cotemporary throws out the following suggestion: "Required to produce a perfect paint for the preservation of iron and steel. It must have a high mechanical adhesive property, and be composed of material electro-negative to iron and mixed with some tenacious fluid vehicle containing no oxygen, if possible, and not liable to be decomposed by the iron beneath." Inventors would do well to give the subject their consideration.

MILDEW DESTROYER.—Sulphide of potash has proved in our practice all that has been claimed for it by the English press as a destroyer of mildew on roses, chrysanthemums and some other greenhouse plants. A quarter of an ounce dissolved in a gallon of water and thrown on the affected foliage with a fine rosed syringe will wholly destroy the fungus, and the leaves will not be injured.—*Vick's Magazine*.

## POULTRY YARD.

## Warm Weather Suggestions.

EDITORS PRESS:—In all branches of business there are times and seasons for doing some kind or kinds of work to the best advantage, and also some kinds of work can only be done at stated times in the year.

I don't think any farmer will doubt that what I have said will apply to farm work. Now a thought that I would like to have stick in the mind of each one, and all who keep fowls, is that this applies to the poultry business with a double force, and I would urge you to make a study to find out all you can as to how and when to do to the best advantage, for, as you make a success of this, and then apply your wisdom, just so far will your efforts be blessed with the chink of solid coin.

To help in this way let me give a few points that have come up in my own experience which will relate in main to warm weather doings in the poultry yard.

First, while warm dry weather is an important factor in the poultry yard, yet too much of a good thing may do harm, and so, for the health of the chicks (old and young), for July, August, and September, see that a good shade is provided for them in some shape, and do not depend on the roosting coop for shade from the sun.

Let your fowls run in the orchard, and if there is a tree near the coops where the soil is moist and loamy, there you will find the chicks in the heat of the day holding high court. Give your fowls all the room possible during the hot weather; the more you confine them, the less you will get for them, or from them, next fall.

If you have no shade trees or old buildings for their use, then buy some 1x3-inch stuff and some shakes, or in place of the shakes use old grain sacks and make a shade, for shade the chicks must have to prosper. Use your wits about it.

As July, August and September are poor months in which to hatch out chicks, I have never tried but one brood in these months, and that brood learned me this lesson: Never to try to do the like again, if by any possible means I could avoid it; and I think I can, even if I go out of the chicken business. There are several points against hatching in these months. Eggs are not apt to be fertile; the little fellows that come out are weak and seem doubly liable to diseases, and those that live do not seem to grow into good, plump, well-developed fowls, and the pullets will not lay until late in the spring when eggs are way down cheap.

Be careful and not give much, if any, corn or cornmeal during the warm weather, as it is only poison in a mild form to little chicks. It may do for a feed once a week for a change, but should be cooked, or at least soaked, till it will not swell in the crop.

Keep clean water in a cool, shady place, and be sure that it is fresh. There is no brute or fowl, or even one of the human kind, does seem to relish a drink of fresh cool water on a hot day more than a little chick, and they are large drinkers for their size. Give them thick milk if possible, as it seems to be food as well as drink to them. Another great thing in these hot days is to have the coop and runways kept very clean; to make them too clean is not in the power of man or woman. This much you can be sure of: If you don't keep them clean they will drop away on many little legs which you have not seen in the shape of lice and mites.

And, last of all, don't be afraid to use all your powers to keep your fowls in good health and the little fellows growing. Little attentions amount to large dollars in the poultry yard.

E. C. CLAPP.

South Pasadena, Cal.

## Wild Oats for Fowls.

EDITORS PRESS:—An old subscriber wishes to be informed, through the columns of your paper, whether wild oats are beneficial to poultry or otherwise. Let's hear from those of experience whether there is any stiff or briery hulls that would be like barley, or otherwise injurious.

INTERESTED.

Toll House, Fresno Co., Cal.

POULTRY IN FRANCE.—The number of fowls is estimated at 45,000,000, which, valued at 2½ francs each on the average, would amount to 112,500,000 of francs. The number of laying hens is taken at 34,000,000, and taking the number of eggs laid by each at an average of 90 yearly the total production of eggs in France would not fall short of 3,000,000,000, which, at an average of five centimes each, would amount to 150,000,000 francs. Of that number it is calculated that 100,000,000 eggs are hatched, of which 10,000,000 die as young chickens, 10,000,000 serve for reproduction, while 80,000,000 of chickens serve for food, which, valued at 1½ francs each, would represent 120,000,000 francs. To these figures must be added an extra value of 6,000,000 for coupons. Altogether, the value of poultry and eggs produced in France may be taken at 300,000,000 francs, or \$60,000,000.

## THE GARDEN.

## Various Small Fruits and Vegetables.

EDITORS PRESS:—On June 8th we were right in the height of strawberry picking. The crop is rather light this season; average picking about 60 pounds per day from one acre of ground. Varieties are Monarch of the West and Wilson, with a few other varieties on trial, such as Bidwell, Finch and Big Bob. The Wilson for this locality takes the lead, and consequently stands at the head both for market and for canning. Finch comes next; a large, fine, round berry, flavor like our old wild-meadow berry that I used to gather when a boy. Bidwell is a large, long, pointed, irregular-shaped berry too soft for transportation and rather mealy, with a flat, insipid flavor not worth much except as a show berry. Prices this season ranged well up, from 12 to 25 cents per pound.

While speaking of strawberries, perhaps our method of culture, etc., will not come amiss. We prepare our ground by plowing and grading so as to give a fall of about three-eighths of an inch to every 10 feet, and in order to do this I made a level out of 1½x4 inch pine lumber. Take one piece 10 feet long, and on each end put a leg 16 inches long, and in the center of the 10-foot piece put a spirit level. Then to give the fall, tack on the bottom of one of the legs a three-eighth inch block, and when this is set exactly level we have a fall of three-eighths of an inch to every 10 feet. With this instrument we can run a ditch or lay off ground to irrigate around the bend of a hill, or sag, as we choose, and have the desired fall, and as correctly as a surveyor's level will do it.

We mark off our rows 3½ feet apart and set our plants about two feet in the row, so as to work with horse and cultivator. We used to do all with a horse, but we find that we do not stir the ground deep enough the first time going over; so this season early in the spring we went through the patch with spades, and worked the ground up deep, and then followed with the cultivator and found it a decided improvement; the ground takes water better and our berries were larger and finer than when worked with the cultivator alone. The soil being moved to a greater depth gives chance for the roots to spread out, and we have a stronger and finer plant to produce the berries. We (June 19th) have just finished picking this season's crop; average picking about 60 pounds per day of four or five weeks' run, while last season our average was about 80 pounds per day. Thus you see there is a falling off of about 20 pounds per day. This patch contains nearly an acre, and we picked a little over 1240 pounds of berries from it and prices averaged for the whole crop about 12 cents per pound.

## Cauliflower.

I was telling one of my customers a few days ago that I would soon have cauliflower in the market.

"Well, well," said he, "that beats me; who ever heard of cauliflower in the month of June up in these mountains? What variety are they?"

"They are 'Henderson's Early Snowball,' and a sure heading variety; heads are now about five inches across."

Cauliflower likes good rich soil and plenty of water; coarse, long manure answers the purpose for a fertilizer very well. It keeps the ground loose and the water soaks through, and thus the soil is always moist. Our method of growing cauliflower, I presume, is the same as others, with this exception: we set lettuce between every cauliflower at the same time of setting out the plants. As soon as the lettuce is ready to cut, we plant some variety of early beans close to the lettuce, and by the time the lettuce is cut the beans are up; and by this time the cauliflower is ready to cut. We pull the stumps as we cut the cauliflower, and this gives the ground to the coming crop of beans. Thus we raise our three crops on the same ground the same season. This cropping can only be done on a summer crop of cauliflower. For winter cauliflower we have just sowed our seed and got it up about half an inch, and when we set out these plants we shall set Hansen's lettuce between each plant, and in this way we have early lettuce, which sells for a good, fair price when lettuce is scarce in the market.

## Blackberries.

"How do your blackberries look this season?" said one of our neighbors. "Is there going to be a good crop this season?" "Yes, I think that the crop looks well this year. They are now just commencing to turn red, and I think by the 10th of July we will be able to make a small picking."

Said neighbor B. to me a few days ago: "What do you do to make your blackberries so large and fine? You always have such a lot of them. What variety are they? I think I haven't got the right kind; mine do not produce like yours—are not as large and fine." My answer was this, our variety is the Lawton. We go through early in the spring, cut out all the old canes that bore fruit last year and thin them out to three or four canes to the hill; cut back all the laterals to about eight inches. "Well," says Mr. B., "you cut away about half of your crop." Yes, in number,

but we make up in size and quality what we lose in number, and the berries are much finer, and always sure of selling in the market, and they hold their size clear through to the last picking. Then, again, when the young shoots come up and get about four feet high, we go over them and pinch out the center bud; this makes the new growth throw out laterals clear down to the ground, whereas if this pinching out was not done the vines would have but few laterals. "I see, I see," he said; "you diminish the crop in no way by cutting back, and increase in size of fruit by the pinching out of the main shoot when young." That is it, exactly; besides, plenty of water and a light coating of manure help wonderfully.

## Cantaloupes.

Our Montreal green citron cantaloupes are now setting finely and bid fair for a good crop. Cucumbers likewise are setting heavily and are at this present time bringing a fair price in market.

## Beets for Stock.

A great deal has been said in the agricultural papers about beets for stock. We are trying it this season; have sown about one acre; but we failed to get a good stand. I do not think it was on the account of poor seed, but think it was our own fault. After planting we thought that the ground was too dry to bring them up, so we ran our furrows and turned on the water. The result was, the ground got too wet, and before we could get at it to stir the soil it got hard and the seed rotted in the ground. Now, I have sown Swedish turnips, where the beets failed to come, and thus secured a crop on the same ground. This crop we intend to feed out on the place to our milk cows and Essex hogs, as it is all-important to raise as much stock on the place as possible, or as much as the place will carry well, on account of the manure, for, as the old adage goes: "No manure, no corn; no corn, no cattle; no cattle, no manure."

## Starting Seeds.

Mr. Schneider, in the PRESS of July 3d, asks which would be the best way to start celery and cauliflower seeds. My method of starting celery is to prepare a hotbed early in the season, making the soil in the hotbed as fine as possible; soak the seed 48 hours in warm water, then sow over the bed as evenly as possible. Take a block or board and pat down the seed lightly, and then sprinkle sand or fine, well-rotted manure over the bed and firm down gently on the seeds. It takes about three or four weeks for celery seed to come up. The bed must be kept moist all the time, with a fine rose sprinkler. Manure or sand keeps the ground from baking and at the same time acts as a mulch to keep the soil moist.

For winter cauliflower we prepare a bed in the open ground in June or July, by making the soil as fine as possible; sow the seeds and cover with a slight coat of well-rotted manure; keep well wet down, and if the seeds are fresh no trouble will be experienced.

I. L. DICKINSON.

Lone Oak Farm, Sonora, Cal.

## Poor Garden Seeds.

EDITORS PRESS:—I see in last week's issue a piece on gardening. I have bought seed at the store and planted it and the result was it was worth nothing. I planted 300 plants which were bought for cabbage and they turned out to be nothing but plants grown from runout seed. Everything I planted did not make what it was labeled. I had a fine garden laid out, but got badly fooled in seed. In reply to my friend in regard to gardening, I would say to him that if he wants good seed do not buy at the country stores. If he wants to make a success in gardening he must have good, fresh seed, and it is best to buy it direct from firms which have seed farms, and furnish fresh seed true to name.

I sow all my seed in a hotbed. To prepare a hotbed take a large box and fill with manure, set at the south end of a building in the sun. Put four inches of good dirt on top of the manure, and then plant your seed one inch deep, and keep moist until the plants are up; then water every evening. I had splendid success in my plants this year. If my friend will get his seed of a responsible firm I think that he will have success in his garden. Potatoes should be planted in loose soil and about four to five inches deep. Sweet potatoes should be put in a hotbed or in a nice sandy soil to start. I start mine in a hotbed. A. S. C.

Elmira, Solano Co.

[Our correspondent advises planting seed one inch deep. That would not do for all seeds. Depth should be proportional to the size of the seed. An old rule is to plant as deep as four times the diameter of the seed. But depth depends upon moisture, etc.

There is no doubt much poor seed sold at the country stores, and yet it need not be so. If country merchants would take pains to learn the results from the seeds they sell, and then refuse to take any more from a seedhouse which imposed upon them, we should have the wretched business in poor seed and "killed" seed stopped. There is no reason why country

storekeepers should not sell good fresh seed, unless they are careless or their cupidity leads them to listen to the seed drummer who offers the largest discount. Selling poor seed, if it is done carelessly or designedly, is robbery. To guard against loss of time and labor, the planter should buy his seed early and test its germination, as described in the RURAL of July 3d, before he puts it into the ground.—EDS. PRESS.]

## THE FIELD.

## Wheat Crops and Prospective Market.

EDITORS PRESS:—Press telegrams give the *Rural New Yorker* as authority for the statement that this year's wheat crop of the United States is 435,000,000 bushels against 357,000,000 last year. Evidently the estimate is based on returns made at least a fortnight ago, since when fuller information of the damage during the last month to the crop in the West, Northwest and in this State has been received. Even now there are many in this State not willing to accept so large a percentage of damage to the California crop as my returns and those of other persons give. I am not in possession of the *New Yorker's* detailed estimates, therefore cannot state if it takes the bag pool's estimate of our crops or the estimates of conservative and well-informed parties. The bag pool puts the California wheat crop at 60,000,000 bushels before the damage by winds, but well-informed parties only placed it at 45,000,000 and now at 36,000,000. This is quite a difference. But accepting the *New Yorker's* figures as correct and the following is the result:

This year's crop, 435,000,000 bushels, carry-over visible and invisible from the crop of 1885—86, 65,000,000. Total, 500,000,000 bushels.

Last year's crop, 357,000,000 bushels, carry-over visible and invisible from the crop of 1884—85, 155,000,000. Total, 512,000,000.

So this season is entered under the most favorable circumstances with a lessened supply of 12,000,000 bushels. If last season's supply of 512,000,000 bushels was reduced to 65,000,000 bushels at the end of the season, the 50,000,000 supply ought to be reduced to at least 45,000,000 bushels.

This season the consumption for food will be greater, owing to increased population, and for seed there should also be a larger consumption, as the acreage seeded to wheat last fall and spring did not equal that seeded to wheat the preceding fall and spring. The surplus or carry-over is based on the ground that the United States does not export any more this season than the season just closed. If our exports are larger, then the carry-over will be just so much less; and that the exports will be very considerably larger is generally admitted by the best informed statisticians, and if such proves to be the fact, we will have a smaller carry-over in this country than for many years past.

Turning from the country at large to this State and the following is the situation: Total crop 1,400,000 tons, of which there will be required for seed and food 350,000; giving us a surplus for export 1,050,000 short tons. The carry-over from the season of 1885-6 is 75,000 tons, which added to the estimated surplus gives us an exportable surplus of 1,125,000 short tons. Last season the surplus for export was 550,000 short tons; carry-over 325,000. Total, 875,000 tons, against 1,125,000 tons this year. These figures give us an increased surplus this season of 250,000 short tons. Last year at the commencement of the crop season, the tonnage on the way and in port loading and disengaged was 140,000 tons carrying capacity less than at the commencement of this, the present season. Deducting the increased tonnage from the increased crop and there is only 110,000 tons difference between now and then, with the present situation decidedly more favorable for the drawing of more tonnage than last season. This last assertion is based on the failure of the Australasian wheat crop, which has and will continue to set the Australian fleet toward this port for return cargo to England.

Viewing the situation in all its bearings, I fail to discover anything to discourage farmers, but, on the contrary, everything to encourage. Of course, whenever there is a selling pressure buyers will take advantage of it, and get their supplies at as low a figure as possible, but then there does not, at this writing, appear any valid reason for farmers to sacrifice their grain at present low ruling prices. J. B. F.

San Francisco, July 8, 1886.

THE flowering plants known to botanists, says the *New York Independent*, are, in round numbers, about 100,000 species, but it is not improbable that, by the time all the recesses of the earth have been explored, the number will be largely increased, if not, perhaps, doubled. The whole interior of China is, so far, comparatively unknown; and, so far as the borders are occasionally penetrated, continually gives new species.

THE AIR OF THE SEA.—The air of the sea, taken at a great distance from land, or even on the shore and in ports where the wind blows from the open sea, is an almost perfect state of purity.

## FRUIT MARKETING.

## To the Fruit-Growers of California.

EDITORS PRESS:—The California Fruit Union was organized for the purpose of providing means by which the producers of our fruits might dispose of their productions in the Eastern markets to best advantage, thereby relieving the local markets so that local prices would be profitable to the grower, and so that the profits on these products might be saved to the growers instead of going into the pockets of speculators in these articles. The first two ends have been attained—at least the means are at the disposal of the growers. Yet with the opportunities at their disposal many of our fruit-growers fail to avail themselves of them, but continue to sell their fruits to speculators for Eastern shipping. The results to those shippers are generally very profitable; besides, by competing with the shipping producers they reduce the general average account of sales.

We fruit-growers found ourselves at the mercy of a few speculators, who made prices for our goods, and by competition in Eastern markets reduced prices there by glutting the various markets one at a time. To make profits they necessarily had to make low prices here. To avoid such occurrences in the future, we concluded to throw off their yoke and concentrate our products in the hands of a central agency for judicious distribution.

We have the power to do this. Do we intend to use it? If we do, instead of selling to the speculators, we should ship our own goods, on our own account, to our central agency, and reap the profits the speculators otherwise will get, which, on nearly all shipments made this season, when the goods have arrived at their destination in good condition, have been good.

Now, the question arises, will we ship our own goods, or will we sell them to others? Will we make these profits or will we still allow the speculators to have them? The way is open. We have our facilities for the shipping second to none; we have the best house in the United States as our general agent, a house, the reputation of which insures fair dealing with all, highest prices, sure and quick returns. Those who have in the past availed themselves of the services of this house will continue to do so. Is this no inducement to others to try them? We hope it is, and that the coming weeks, months and years will find our fruit-growers using the best facilities at their command for their own welfare. We hope that our union may be what it is intended to be, the great distributor of our products in the Eastern markets, returning satisfactory results to all its members, and incidental benefits to all engaged in like pursuits.

The outflow of apricots through the union has resulted, with few exceptions, very satisfactorily to the producers shipping, while the results on those not shipped the duldest of us can realize, when canners pay in San Francisco 3 to 3½ cents per pound, and at railroad stations 2½ to 3 cents per pound. All we now have to do is to stick to our text, "Concentration and judicious distribution," and our union will be a grand success.

Members will send their fruits in any sized lots, from 10 boxes to 10 carloads, to our manager, L. W. Buck, Sacramento, and it will be taken care of. Trains will be made up just as soon as our members will put their fruit in the cars. Surely, if speculators can buy our fruits and dispose of them profitably to themselves, we, who have the best facilities which it is possible to get, can do so. Or do we prefer to abandon the idea of a union, and place ourselves where we were before we started it?

The prices of our fruits to-day are in a great measure due to the California Fruit Union, and much to the endeavors of the fruit speculators to break it up. While many of our members are directly and indirectly giving aid to a combination of speculators, a few are working steadily and earnestly to frustrate their endeavors to destroy the union. Many members ask why we do not make trains. How can we, when our members sell their fruits to those who are endeavoring to break up our organization?

Where will we land when we have much fruit and no union? Last season there was not such a great quantity of fruit, and no union. What did you get for your fruits? Be careful that too many of you do not trust this great salvation to too few to work out. Those who are working for the union are doing it for the best interests of the fruit-producers, and will do everything in their power to benefit us all. But, for mercy's sake, do not do all you can to aid the speculators in their endeavor to put us where we were last year—simply at their mercy. They have no powder, unless you sell it to them; they will find it necessary to club muskets and retreat as best they can, if those of us who have shipping fruits will stand by and send part of it by the union, and sell the balance to canners and the local trade. Then we will succeed in our endeavor to help ourselves. We pay our money; we take our choice. The future will tell how well we pleased to do for ourselves. "United we stand; divided we fall." Suirun, Cal. A. S. HATCH.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Sacramento Grange.

EDITORS PRESS:—At the meeting of Saturday last, Bro. W. G. Klee, Inspector of Fruit Pests, was present and gave a short outline of his visit among the fruit-growers, and his intention of continuing his visits at various points. He finds plenty of work for a local inspector of pests in this county, and urged the Grange to take some action in having one appointed. He had at that day been at Davisville taking notes, and giving instruction how to conquer the evils that are continuing to spread throughout the State.

Bros. Lufkins, Greer, W. M. Hack, and others, participated in the discussion. The matter was laid over for two weeks to come up under the head of unfinished business, when a more extended discussion by the fruit-growers will take place.

A class will take the fourth degree the fifth Saturday of this month at 10 o'clock A. M. On the same day in the afternoon the Pomona Grange will meet and confer the fifth degree on a class, and all will unite in a harvest feast.

The literary exercises of the Grange will take place the second Saturday of August.

Farmers and fruitmen are very busy. The fruit is good as far as the crops last. The grape crop will be large. G. T. R.

Sacramento, Cal.

## Legal Honor in the Senate.

On June 10th the United States Senate, by a vote of 37 to 11, passed a bill, introduced by Senator Beck of Kentucky, prohibiting Senators and Representatives from being the hired attorneys of railroad corporations on which they are to sit as judges. Senator Hawley, of Connecticut, says the bill was sprung upon the Senate suddenly and stamped through. The general public say that its obvious propriety left the Senators without any ready ground of opposition and without the effrontery to vote against it. Out of the 76 Senators, however, 65 are lawyers, and if the bill becomes law, a large proportion of these who are either permanently retained by the roads or receive large fees from them, will be deprived of a rich source of income. Remember, many of them are employed, at high figures, precisely because their position as legislators enables them to be of service to their clients in matters of legislation, and the whole course of the Senate shows that it has been steadily subservient to these great subsidized corporations, and that any law, however urgently demanded by the interests of the people, if hurtful to those of any of these corporations, can be passed by that body only when the force of public sentiment in its favor becomes irresistible.

On June 22d, therefore, the bill was "reconsidered" by a vote of 31 to 21, and instead of being passed, as the public had a right to expect, was sent to the Committee on the Judiciary, made up entirely of lawyers, most of whom are the hired agents of corporations. Thirteen of the Senators—ten of them Republicans—who originally voted for the bill subsequently voted in favor of putting its fate into the hands of its deadly enemies. Mitchell, of Oregon, wanted to swamp the bill with ridiculous amendments. Evarts, of New York, regarded it as a stigma on the Senate and an insult and reproach to the legal profession, whose members are incapable of subordinating the interests of the public to those of their clients and themselves! Edmunds, of Vermont, thought it required an ideal honesty in Congressmen, such as can only be found in an angel-governed world.

In a body made up almost entirely of lawyers whose *esprit de corps* is notorious, Evarts' appeal was the most powerful, but the federal laws already contain many provisions for prohibiting lawyers in Congress from accepting fees to work for corporations and against the people. By laws passed by the Senate, a Senator is forbidden to take fees for procuring a contract or an office, or for any sort of service on any question which may be brought before him in his official capacity; or to take bribes, or to hold an interest in public contracts, etc. If these are not insults to the Senate or the legal profession, why should the provisions of the Beck bill be so regarded?

All the special pleading of all the lawyers in the Senate, which contains many of the best special pleaders in the country, will not convince the great public that men who, as representatives of the people in the highest legislative body in the nation, are called upon to legislate on the obligations of subsidized railroads to the Government and the people, should have fat fees from those very railroads at the time in their pockets. A question forced on public attention by this discussion is: "Is it right, is it expedient, is it for the public interest that 65 out of our 76 Senators should be lawyers?"—*Rural New Yorker*.

## Stockton Notes.

[Written for RURAL PRESS by Mrs. W. D. N.]

Two sharp midnight shocks of earthquake shook us from June rest into July. The night was still, with its sulphurous beauty of sky and glory of stars, divided by the sun's wide track. It is 18 years since we have had such a shaking. Then, milk was slopped from pans on the racks, gates opened and shut with a bang, and orchard trees bowed to each other, giving poor mortals an awful sense of helplessness, as the earth, that seems so reliable, swayed with pent force.

The just law to protect human life was executed June 29th, quietly, and with all the refinements of our high civilization. Uzza F. French, brought here for trial from Amador county for killing his brother-in-law, nearly three years ago, was hanged, after all efforts to clear him had failed. If a few more were strung up it might clear the papers of the sickening details that load them. Even he could sing "Washed in the Blood of Jesus" and feel that the blood bought pardon and the prayers of Father Brennan made him ready.

The plans of Colonel Myers, the Detroit architect, were accepted, and the courthouse is to be a fine edifice with regard to beauty of architecture, space, ventilation, light and all modern needs. The *Independent*, in a sensible and timely editorial, urges that granite from our foothills, not 60 miles distant, be used, that centuries to come may look upon the building that is to be the pride of our day.

The medical profession has lost one of its most upright and able members, Dr. E. A. Stockton, President of the City Board of Health. A courteous gentleman, fulfilling the duties of home and society cheerfully while struggling with ill health.

The pulpit reminded hearers of the Fourth with its sacred memories and present blessings, and the piff and whizz of boyish firecrackers broke the stillness of Monday. In the country, work went on in the harvest, for people feared fire, and a hard year had closed on them, and hay and wheat and everything a farmer sells is low, and economy—old, homely, almost a stranger—is set up, and her mandates deemed wise, even pleasant.

Most all grain is falling short of expectation, owing to shelling by the norther June 12, when it was in the dough—swelled to the utmost and shelled easier than when ripe. Some fields are badly lodged and twisted, and bother new harvesters. A Houser near here has averaged 20 acres a day.

Peach and Early June apricots do far better here than the Moorpark. The peach crop is very light. Now that it is canning and jelly-making time, I wish to recommend Cornell & Shelton's gummed labels (Birmingham, Conn.) I received the book from the RURAL PRESS office and find it so convenient for pasting on glass, tin or boxes.

Few persons do anything to prevent codlin moth, still early apples were good.

San Joaquin Pomona Grange, No. 3, has decided to compete for premium at the State fair, though fruit is not as good as usual, except grapes. Few fine sheep are kept now to furnish fleeces, because they don't pay. Stockton Grange held a spirited meeting on Saturday, June 10, to help on the Pomona exhibit.

Stockton.

## In Memoriam.

Sister Jane A. Holliday, one of the charter members of Alhambra Grange, has recently passed away, and the Obituary Committee, consisting of E. E. Smith, W. A. Fraser and Mrs. M. B. Lander, speak of her pure, quiet life in these fitting terms:

Again has the angel of death passed over Alhambra Grange, not to gently remind us that he hovers near, but to fold in his icy arms the form of another sister.

On the first day of the month he took one of our younger sisters, and again, ere the month is gone, he calls sister Jane A. Holliday, one of our charter members and second of that substantial 26, who has taken the degree of death—a degree beyond the pale of the subordinate Grange.

From the household has gone a prop; husband, daughters, sons and grandchildren have lost their best friend, and the place that knew her once shall know her no more. Her pure, quiet home-life that reached as well to neighbor and friend, has been one long sermon of patience and fortitude, and has left a fragrance that will follow all of hers, even to generations unborn. In the home is a vacant chair, in the Grange a void, in the neighborhood is a loss; yet over all and through all is a memory that will be lasting and pleasing when the marble slab that marks her resting place has crumbled into dust.

Alhambra Grange has lost a loved and respected sister, and in her sympathy whispered to the saddened household, "Your loss is her gain." She has but taken a higher degree, one given at the call of the Heavenly Master, and waiteth on the other side till, in the Master's own time, this same call cometh to her earth-waiting family and friends.

Valley Grange, also, has been called upon for the first time to mourn the decease of one of its number, John E. Martin. The resolutions—prepared by A. Thurber, D. P. Griffin and Harriette T. Bailey—declare that in his death the Grange loses one of its choicest members, the community one of its best citizens, and his home one of the best of sons and brothers.

HARVEST FEAST.—Temescal Grange will confer the fourth degree, opening at 10 o'clock, Saturday, July 17th. Remarks on a recent visit to Oregon will be expected from Rev. S.

Goodenough, of Santa Clara. Also, speaking by other able Patrons and Matrons. All Patrons are cordially invited, and especially from Eden and other neighboring Granges.

We were in error in stating that Mr. D. Lubin would speak at the next literary exercises of Sacramento Grange. Mr. Lubin has promised the State Grange Committee on Literary Exercises to be ready to address the next meeting of the State Grange on "How to Perpetuate the Republic."

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Fresno.

APPLES.—*Fresno Republican*, July 9: While it is a demonstrated fact that some varieties of apples grow to perfection in this immediate vicinity, it is equally well known that most varieties obtain greater perfection in the foothills than they do in the valley. The probabilities are that in the course of development of the fruit industry the bulk of the apple product in the county will be in the foothills, although there are now but comparatively few produced there. We were shown this week a twig six inches in length from a young apple tree in the orchard of H. Knepper, on Fancher creek, some six or eight miles above the plains. The twig contained some 14 young apples, and was removed with many others because the tree was overloaded. The fruit was thinned out by picking off some of the young fruit, but the tree was so overburdened that many twigs were removed entire. All the apple trees in the orchard are loaded with fruit, and the varieties which are ripening appear to be first quality.

## Humboldt.

FROM SOUTH FORK.—*Cor. Humboldt Standard*: We had the pleasure of a five minutes' talk with Mr. Jacobson, proprietor of the Palace shoe store, Vance block, yesterday, who has just returned from his fine ranch on the South Fork of Eel river. He says feed is splendid in that section, and that the country and stock never looked better than they do this year. Fruit, he thinks, will not be quite so abundant as last year, but the quality will be superior. Grain looks fine and will yield well. Mr. Jacobson owns something near 500 acres of land in this section. It is a very valuable property and is so situated that it must in time greatly increase in value. From Mr. Jacobson we learn that Captain Stinson, well known in Eureka, having formerly lived here, is improving his place at Phillipsville by the erection of a fine barn. Captain Stinson's place is one of the very best on South Fork. The captain has put out a little prune orchard which is coming on very well indeed. The old orchard on the place is one of the largest and most productive in that section. Mr. Jacobson's family remains at South Fork, and he will himself return there in a short time for further recreation.

## Lake.

EDITORS PRESS:—I send you by express a small box of tomatoes grown on the hills, without any water, where two years ago was a waste of rocks, brush and trees. I send you these, as they may be of interest to some people who want homes in California. There are thousands of acres of as good land vacant in this county waiting for some man with a little money and plenty of industry. I planted on the hill, for experiment, where it is very steep, peas, beans, tomatoes and corn, and all are doing or have done well. If I had had better variety of tomatoes for early kind I think I could have been some weeks earlier. Fruit crop—peaches, a half; plums, apples and grapes, very good. — MAURICE KEATINGE, Lower Lake. [The tomatoes duly arrived, have been put to the practical test and prove good enough for anybody.—EDS. PRESS.]

## Los Angeles.

FRUIT SHIPMENTS.—*Anaheim Gazette*: Messrs. H. E. Cornwell and Williamson Dunn, of Los Angeles, connected with the freight department of the California Southern R. R., were in town yesterday. They are offering special inducements to shippers of grapes to patronize their line. They will send through fruit trains of not less than ten carloads, on passenger time, at the rate of \$280 per car to Kansas City and \$300 to Chicago. A less number of cars would pay proportionately more, and a single car attached to passenger trains would cost \$450 to Chicago. Last year's rate was \$600. It will be possible under this reduced rate to get our grapes to Eastern markets at a price which will place them within the reach of the masses, and thus stimulate the demand for them.

## Mendocino.

HOP-GROWERS' ANNUAL MEETING.—*Dispatch*: The Hop-Growers' Association of Mendocino county held its regular annual meeting Saturday, July 3, 1886. When the meeting was first called together there was not a quorum present, but after an adjournment of an hour the association reconvened, found a quorum present, and proceeded to business, L. F. Long, president, presiding. The minutes of the previous annual meeting read and approved, while the minutes of the special meetings were passed over unread. Treasurer McGarvey's annual report was received, and approved as correct, and

Secretary Poage's report was also approved. The election of officers resulted as follows: President, L. F. Long; Vice-President, W. D. White; Treasurer, Robt. McGarvey; Secretary, J. A. Poage; Directors, J. B. McClure, N. Bartlett, T. S. Parsons, Berry Wright, J. E. Johnson, B. Pemberton and A. J. Gibson. Notice having been given at the former annual meeting, by B. Pemberton, that he would offer an amendment to the first article or section of the by-laws, reducing the membership fee from \$5 to \$2.50, it was taken up for action, and the amendment adopted. Notice of an amendment to the by-laws was then given by W. D. White, worded as follows: "Any member of the association who removes from the county, or ceases to be a hop-grower, his name shall be stricken from the roll."

## Placer.

GROWTH OF TREES, ETC.—*Auburn Herald*: R. G. Breckenridge owns—or did until a few days ago, when he sold out to Mr. Olsen, of Sacramento—a beautiful place a little more than a mile south of Auburn. He has a full assortment of trees, vines, etc., many of which are in bearing, and none of which have ever been irrigated in the least, except by the showers of nature. Mr. Breckenridge cultivates thoroughly, and the place is a splendid illustration of the practicability of the theory of cultivation instead of irrigation. The growth of his trees is rank, and those in bearing promise a liberal yield, according to their age, of excellent fruit. To illustrate the thriftiness of his trees and vines, he left with us last Monday some samples of this year's growth. There were peach, pear, apple and plum limbs on which the new wood was from four to six feet long. One rank old blackberry vine was literally loaded with fruit, and another of this year's growth measured between six and seven feet. Every limb left with us shows the highest degree of thrift and vigor. In the hay line Mr. Breckenridge has just harvested a crop, and a bunch of rye grown on his place can be seen at the office which measures eight feet and three inches. This place is above the ditch, and Mr. Breckenridge could not conveniently irrigate if he was disposed to. He, therefore, adopted the cultivation theory from necessity, and the excellent result he is attaining promises to go a long way toward solving the irrigation question so far as the red land of the foothills is concerned.

## Sacramento.

THE FRUIT COMMITTEE.—*Record-Union*, July 13: There was a good attendance of the fruit committee at their meeting held yesterday at 1 P. M., at the office of W. P. Coleman, R. D. Stephens in the chair. Much interest was shown in the success of this branch of the reception. A resolution was adopted requesting the supervisors to make a suitable appropriation for the entertainment of the G. A. R. on August 11th. The following names, previously omitted, were added to the fruit committees at the following places: W. F. Crommiller, Penryn; J. H. Burnham, C. Ecklon, Polson; H. Mette, Mormon Island; Mr. Gillet, Nevada City; Senator Pirschner, Auburn; Senator F. De Long, Novato, Marin county; Mr. Le Franc, San Jose; Arpad Haraszthy, San Francisco; Mr. Portal, San Jose. The meeting adjourned to meet on August 2d, at 1 P. M., at W. P. Coleman's office, 325 J street.

SUN-DRIED APRICOTS.—G. S. Brown, of Vacaville, was in Sacramento yesterday, and exhibited samples of sun-dried apricots, which were very fine. He states that they are worth 17 cents per pound dried, but that even that price does not equal what they brought green this season, as it takes from five to six pounds of the green fruit to make one when dried. The best quality will make a pound of the dried fruit from five of the green, but less choice in quality will require six pounds. Mr. Brown states that the fruit dried nicely in two days, a third day being given after gathered and placed in a shady place.

HOPS.—A Chinese hop-grower on the river sold his crop yesterday for 21½ cents per pound. Last evening it was reported that 25 cents per pound was being offered by buyers. Evidently "hops are hops" again this year, and though the big prices of a few years ago are not looked for, growers will make a nice profit.

## San Bernardino.

GREVILLE ROBUSTA.—*Riverside Echo*: The wonderful flowers of the Grevilla Robusta are now in bloom. They are of a lovely toothed comb-like structure, the teeth or fringes standing up, deep red at the base and yellow at the top. The general effect is rich, rare and delicate in the extreme. They can be seen in front of Dr. Patton's orchard, also A. S. White's and in Mrs. Gilliland's lovely lawn.

## Sierra.

SHEEP.—*Sierra Valley Leader*: Deputy Assessor and Constable Danforth went to the Little Truckee bridge on Friday last to collect the new tax, according to a recent county ordinance, on 3000 head of sheep about to come into the county. The ordinance requires that all sheep not owned in the county shall pay a tax of five cents each to the county. The "gall" of these lower country sheep men is without limit. They bring up their sheep to eat up the pastures that our own ranchers need, and destroy our roads by filling them with stones and debris from the hillsides, and are not even willing to repair the roads they destroy, which the mountain counties have to expend

large amounts of money in the repairing. They destroy the feed and the public highway without paying one cent, either directly or indirectly, into the county treasury; make a fuss because we wish to work our mines, and injure us in that way, and then some come up here and eat up our feed. Our people are getting tired of it, and thus the recent county ordinance.

Solano.

FRUIT SHIPMENTS.—*Judicion*, July 10: During the past ten days there have been forwarded from Vacaville the following fruit shipments: July 1st, 203,540 lbs.; 2d, 202,630; 3d, 216,530; 5th, 82,740; 6th, 224,095; 7th, 228,640; 8th, 175,543; 9th, 198,500; 10th, 195,095; total, 1,727,363 lbs. This is only the beginning of the season, and from the above figures we feel no hesitancy in saying that there can be no question about the grand future in store for Vacaville. The enormous quantities of fruit forwarded daily from this place to points throughout the State, and to Eastern markets, must be conclusive evidence, even to the most obtuse observer, that Vacaville can have no equal in the production of fine fruits. The main street of our village during the past week was thronged with commission merchants, canery agents, representatives of Eastern forwarding firms and local buyers, all bent on the purchase of our fruits. The scene presented reminded one more of a day on 'change, during the halcyon days of the Comstock, than anything else we can liken it to.

TOMATOES.—*Winters Express*, July 9: For the four days past, ending on Wednesday noon, B. R. Sackett & Co. shipped from the Winters depot 2203 boxes of tomatoes, for which they have received good prices all the time—better than they did last year.

APRICOT DRYING.—As an evidence of the good done by the apricot drying we mentioned last week, we herewith give a statement of the number of pounds of apricots bought, the money paid therefor, and the amount paid the hands for cutting, spreading, etc. Number of pounds purchased from the growers, 81,408, for which was paid a cent and a half a pound, or \$1221.12; amount paid for help, a little over \$300. It will be seen from this that over \$1500 have been left in this community.

Tulare.

THE CATTLE SENT OVERLAND.—*Visalia Times*: The *Times* is indebted to D. Markham for a copy of the *Kansas City Journal* of June 15th, which contains the following item of interest concerning a lot of cattle that were shipped from Tulare recently, and which were mentioned in the *Times* of the 10th instant: "The arrival of 23 carloads of California grass-fed cattle in the city, yesterday, marked the opening of a heretofore undeveloped branch of the cattle trade, one which bids fair to develop to large proportions. The cattle were consigned to the Fish & Keck Company, and were the first that have ever been shipped this far East. Notwithstanding the long and tedious journey they appeared in good condition and above the average in weight. They sold for \$4.62½ per hundred and were shipped by G. D. Bliss, of Tulare county, Cal. The cattle from this State are high grade, and it is believed this experiment of shipping them to Kansas City will prove a success." The price mentioned in the above article is for live gross weight, and is equivalent to \$9.25 per hundred according to the California method of selling cattle.

MESQUITE.—Mesquite grass and red clover are excellent forage plants, and they have been successfully grown in this county. H. C. Moore, of the Rancho de Kaweah, who has been experimenting largely in growing grasses, was in town on Monday last and left at the *Times* office a sample bunch of each of the above-named grasses. He sowed 10 pounds of the mesquite grass a year ago last March. It grew to be about two feet high during the season and died, apparently, without going to seed, which caused Mr. Moore to believe that it was not adapted for the soil in this valley. In April last, however, he discovered it growing in the field again, and it has since attained a growth of four feet four inches, and has headed out nicely. It has also scattered over the ranch somewhat. Mr. Moore having found it in places over half a mile distant from where it was sown by him. He says that it will cut a ton and a half to the acre and is a fine fodder, especially for horses. The sample bunch of red clover is three feet in height. It was first sown on this ranch about three years ago, and thrives well on the moist land along the Kaweah river.

NEW WELLS.—General Turnbull, of the Pacific Coast Land Bureau, has just received a dispatch stating that an enormous flow of water had been struck upon the land of M. Spring, in the Tulare valley, of an artesian well. A six-inch pipe being sunk to the depth of 415 feet had penetrated a water-bearing stratum that sent up a column of water nearly five feet above the surface. This is the largest stream yet found in the famous artesian-well belt of Tulare valley, and is close to some of the lands of the Tulare colony.

Ventura.

HONEY.—*EDITORS PRESS*:—Extracting is about over in this county, and the crop does not come up to the estimation formed earlier in the season. The average is about one-half or possibly two-thirds that of 1884. Sumac is just coming into bloom, so that the bees will be able to fill up for winter stores. The quality of the

honey is good. The bee men are inclined to keep the honey in their own hands for the present.—*S., Santa Paula.*

THE NEW FRUIT DRYER.—*Free Press*, July 9: A *Free Press* reporter visited the new fruit dryer of W. T. Coleman & Co., on Santa Clara and Canada streets, yesterday afternoon, and was cordially welcomed by the obliging manager, Mr. Bailey. It did not take long to make a tour of the works for, although extensive, they are all on one floor. There are two dryers, each containing 16 chambers, having a combined capacity of 60 tons of fruit per day. Just now they are handling 24 tons, which is all that is procurable, and the average time of drying is from 10 to 11 hours. If the fruit were better, of course it would require a longer time for its preparation. Entering the works at the south door you come first to an entry, and on the left is a commodious office and to the right a large store-room. Passing then through a low arch, we come into the pitting room where there are now only about 20 pitters at work, utilizing about one-eighth of the available space. The pitters, women and children mostly, are paid by the tray and average \$1.15 per diem each. The dryers are in the center of the building, and are built after the old Smoltz patent improved by Blatchley. Their principle is a current of hot air passing from a furnace on a level with the fruit chambers and carried off by immense exhaust flues on top of the building. By this process only about 10 degrees of heat are lost from the current passing through the entire length of the fruit chambers. The fruit is shipped in sacks to the home house in San Francisco and is there put up in attractive packages best suited to the market demand. All the first-class fruit, however—which will be very little this year—is labeled as coming from Ventura county, and the poorer grades are sold under fancy names. The company have large establishments at various points on the coast and the same plan of shipment is followed at all of them. The dryer will be run during the apricot season, closing about September 1st, and will work to some extent on prunes and figs. Apples and pears, Mr. Bailey says, it will not pay to handle at present market prices.

ARIZONA.

PINK EYE.—*Phoenix Herald*: The pink eye has broken out quite seriously among the horses of the valley. Mr. McCann's stallion, Orphan Boy, is suffering from it badly, and Mr. Wm. Isaac has had two horses down with it. The first symptoms are a general stiffness much like founder. When this is observed the animal should at once be given a purgative and turned out to pasture, when they will generally recover. A few hours' driving or work after the stiffness begins to come on may prove fatal.

NEVADA.

FATTENING CATTLE ON HAY.—*Reno Gazette*, July 12: Farmers East would laugh at a man who would talk about putting fat on cattle in winter with hay, but here it is a regular business. The following statement shows the gain from feeding 133 head for 5 months and 12 days. The cattle left Reno on April 12th. They weighed 1170 gross when they came in October, and would not net half of it because they were not in shape; so the gain is even more than appears in the statement. They were called 585 when they came, and the statement nets them 636 pounds dressed.

OAKLAND, May 8, 1886.

D. C. Wheeler in acct. with Grayson, Owens & Co. Dr. Oct. 30, 1885, to 133 beeves, 76,705 pounds, \$3871.50.

Cr. May 1, 1886, by one steer died, \$29.11, 132 beeves, 83,993 pounds, \$6080.99.

WASHINGTON.

A SHORT HOP CROP.—*TACOMA*, July 9: The hop crop in Washington Territory, as estimated by competent judges, will be about 20 per cent short, caused by slack culture, due to a low market during the early stages of the season. The recent copious rains have done the hops much good, and as the season is late and growers in many cases yet cultivating, it is hoped to bring up the yield to within 15 per cent of last year's crop. About 3000 bales of the incoming crop have been contracted for October delivery, varying in price from nine cents (the lowest) and 25 cents (the highest) paid to-day, and this far the highest for the season. Twenty-two and a half cents has been offered for large quantities and refused, as growers are now disposed to await developments as to the amount of damage to the New York crop, daily reported here. The grade of this year's growth is sure to be good, as a light yield always improves the quality. There is no disease of any kind, and, in fact, never has been in hop plants of this region for the whole period of 17 years in which hops have been grown here. The yield for the Tacoma district, which includes Puyallup valley, will be something near 2,500,000 pounds, and for the whole Territory about 3,000,000 pounds.

A PAINT FOR WOOD OR METALS.—A mixture of zinc white with zinc chloride is found to furnish a paint of great value both for wood and metals, as it becomes very hard, and can be washed and brushed without injury, which qualities are, of course, of prime importance.

PACIFIC COAST WEATHER FOR THE WEEK.

Senatorial Conflict on the Debris Question.

On Tuesday of this week there was a conflict in the United States Senate over the debris question, in which the two senators from California found themselves vigorously opposing each other. We give such information on the matter as is given in the several press dispatches this (Wednesday) morning.

Special Dispatch to the "Morning Call."

WASHINGTON, July 13.—Senators Hearst, Jones, of Nevada, and Ingalls, of Kansas, succeeded to-day, by combined effort, in defeating Senator Stanford's amendment to the river and harbor bill, to prevent dumping debris or slickens in the Sacramento, Feather or San Joaquin rivers and their tributaries. The Senate Commerce Committee struck from the bill the House proviso, which read as follows:

The Secretary of War, if he be not so satisfied, is hereby instructed to institute such legal proceedings as may be necessary to prevent washing, sluicing, dumping or discharging detritus, debris or slickens, caused by or arising from hydraulic mining by water used through pipes and used through nozzles under pressure, into either of said Sacramento and Feather rivers or any of their tributaries, or to such place or situation from which detritus, debris or slickens may be liable to be washed or carried by storms or floods and either of said rivers or tributaries, and he is hereby instructed to use out of said sum as much as may be necessary for said purpose.

Senator Stanford yesterday moved its insertion as an amendment, and debate began yesterday afternoon and lasted nearly three hours to-day.

Further in the bill is a general clause relating to all rivers that Ingalls, in his opposition to Stanford's amendment, claimed would cover the Sacramento, Feather and San Joaquin rivers. This clause, which Ingalls also savagely attacked, provides that it shall be unlawful to dump, discharge or wash, or cause to be dumped, discharged or washed, from any mine or mineral land or bank, tailings, boulders, gravel, clay, earth or debris, into any navigable waters or rivers for the improvement of which Congress has made or may make appropriations, or into any tributary branches or affluents of such waters or rivers. The flimsiness of Ingalls' argument lay in the fact that there is an appropriation of \$210,000 for the improvement of these rivers as soon as the Secretary of War is satisfied that hydraulic mining is stopped, and Stanford's amendment was designed to stop such mining, thereby making the appropriation available.

Hearst had proposed a cunning amendment to Stanford's amendment. It consisted of a few words intended to define hydraulic mining. After the words "by water used through pipes and used through nozzles under pressure," Hearst proposed to insert "directed against mountain sides or natural banks." Under this definition it is claimed that where ground had first been blasted, creating an artificial bank, or where it was desired to wash an old gravel bed, hydraulic mining could be carried on without Government interference.

Senator Stanford apparently did not see through Hearst's amendment, and accepted it. His amendment was then agreed to and a motion was made to strike it out, leaving the bill as originally reported from the committee. On this motion the yeas and nays were called, and it was adopted by a vote of 31 to 19. Hearst and Jones voted in the affirmative, and Stanford in the negative. Mitchell, Stanford and Ingalls took part in the debate, and Welton, McKenna and Markham were interested listeners. Ingalls contended that the proposition to stop hydraulic mining was an unprecedented invasion of private rights. Stanford denied this and stated that hydraulic mining gave a few men the right to despoil property of many farmers, and to injure and destroy 400 miles of navigable waters in the State, and to threaten the navigation of San Francisco, San Pablo and Suisun bays.

Special Dispatch to the "Examiner."

WASHINGTON, July 13.—This has been a field day in the Senate on the River and Harbor bill and has resulted in a victory for California, on which the valley and mountain men can be equally congratulated. To explain the situation it will be necessary to recall that for a number of years the appropriation for the improvement

of the Sacramento and Feather rivers has not been used, owing to a provision in the bill that the Secretary of War should first be satisfied that hydraulic mining on these rivers had ceased. Not understanding the term hydraulic mining as it is understood in California in relation to the "slickens" question, the Secretaries have refused to expend the money even since the hydraulic mining injunction was issued, because, under a strict construction of the term, even quartz mining has been constructed as hydraulic mining, owing to the water used in the milling process. When Senator Hearst appeared in the Senate committee on the River and Harbor bill, he saw that it would be necessary to protect both farming and mining interests to make it acceptable to California, and he induced the committee to modify the limitations on the expenditure on the Sacramento and Feather rivers by inserting the words: "hurtful to navigation," as applied to the kind of hydraulic mining which the Secretary of War must be satisfied is ceased. He then secured the insertion of the amendment which defined hydraulic mining, as understood in the slickens lawsuits. This work was done by Senator Hearst during the time when Senator Stanford was away from Washington. It was done with the co-operation of Senator Jones of Nevada, who is a member of the committee having the bill in charge. The committee amendments secured by Senators Hearst and Jones included the striking out of the clause in the bill which made it the duty of the Secretary of War to institute legal proceedings against almost every class of miners in California. It was therefore a surprise to Senators Hearst and Jones when Senator Stanford in the Senate moved to insert the objectionable clause.

Senator Hearst said that he supposed his colleague understood the committee's amendments were perfectly satisfactory to all interests in California, and hoped that the section as reported by the committee would not be disturbed.

As Senator Stanford insisted upon the reinsertion of the clause, then Senator Hearst prepared an amendment, defining what kind of mining might be proceeded against, following the definition of the court in the famous slickens suits. This amendment was adopted.

Senator Stanford then moved, again, to have the objectionable clause inserted and the motion was lost. All the Democrats and enough Republicans voted with Senator Hearst to keep out the clause. Jones of Nevada, Edmunds of Vermont and Ingalls of Kansas, all Republicans, voted with Hearst.

Stanford took the defeat rather roughly at first, not liking the idea of the new California Democratic Senator winning a single victory in a Republican Senate.

To a reporter who spoke to Senator Hearst about the matter, he said: "I am sure this will meet with Senator Stanford's approval when he understands it. I know already that the amendments I have secured are approved by both the mining and farming interests of California, because I framed them only after thorough discussion with the representatives of both interests. What the valley men want is an expenditure of the appropriation for the improvement of the Sacramento and Feather rivers. This the Secretary of War will proceed to do, when the bill becomes a law, as my amendment, 'hurtful to navigation,' requires him to see that only such mining as has been enjoined shall be stopped. The mining men, on the other hand, are satisfied that the clause which encouraged the blackmailing of quartz mining has been stricken out. Mr. Stanford did not seem to understand that the amendment defining hydraulic mining still remains in the bill. It is in its proper place, 12 pages further on, where it was inserted by the committee at my request."

THE WORLD MUST MOVE.—In 1877, electric lighting by the incandescent system was declared by many to be contrary to scientific principles. The same was said of the use of iron, and later, of steel, in bridge building. The Suez canal was once denounced as a wild and foolish scheme. Less than 50 years ago educated mechanics asserted that steamships could never carry enough coal for a long voyage. Leading ship-builders told us that iron ships could not swim, and when one or two floated it was said that they would not hold together permanently. Rolls for flour making were once hooted and derided. The world will not stand still for any one.

### Revelation.

[By JOHN GREENLEAF WHITTIER.]

"And I went into the Vale of Beavor, and as I went I preached repentance to the people. And one morning, sitting by the fire, a great cloud came over me, and a temptation beset me. And it was said: 'All things come by Nature,' and the Elements and the Stars came over me. And as I sat still and let it alone, a living hope arose in me, and a true Voice which said: 'There is a living God who made all things.' And immediately the cloud and the temptation vanished, and Life rose over all, and my heart was glad, and I praised the Living God."—*Journal of George Fox, 1690.*

Still, as of old, in Beavor's Vale,  
O man of God! our hope and faith  
The Elements and Stars assail,  
And the awed spirit holds its breath,  
Blown over by a wind of death.

Takes Nature thought for such as we,  
What place her human atom fills,  
The weed-drift of her careless sea,  
The mist on her unheeding hills?  
What reck she of our helpless wills?

Strange god of Force, with fear, not love,  
Its trembling worshiper! Can prayer  
Reach the shut ear of Fate, or move  
Unspitting Energy to spare?  
What does the cosmic Vastness care?

In vain to this dread Unconcern  
For the All-Father's love we look;  
In vain, in quest of it, we turn  
The storied leaves of Nature's book,  
The prints her rocky tablets took.

I pray for faith, I long to trust;  
I listen with my heart, and hear  
A Voice without a sound: "Be just,  
Be true, be merciful, revere  
The word within thee: God is near!"

"A light to sky and earth unknown  
Pale as their lights—a mightier force  
Than theirs the powers of Nature own,  
And, to its goal, as at its source,  
His Spirit moves the Universe.

"Believe and trust. Through stars and suns,  
Through all occasions and events,  
His wise, paternal purpose runs:  
The darkness of His providence  
Is star-lit with benign intents."

O joy supreme! I know the Voice  
Like none beside on earth or sea;  
Yea, more, O soul of mine rejoice,  
By all that He requires of me,  
I know what God Himself must be.

No picture to my aid I call,  
I shape no image in my prayer;  
I only know in Him is all  
Of life, light, beauty, everywhere,  
Eternal Goodness here and there!

I know He is, and what He is,  
Whose one great purpose is the good  
Of all. I rest my soul on His  
Immortal Love and Fatherhood,  
And trust Him, as His children should.

Not less than His restraining hand  
Is on our selfish seekings laid,  
And, shorn of words and works, we stand  
Of vain illusions disarrayed,  
The richer for our losses made.

I fear no more. The clouded face  
Of Nature smiles; through all her things  
Of time and space and sense, I trace  
The moving of the Spirit's wings,  
And hear the song of hope she sings.

—Atlantic Monthly.

### In Colorado.

[Written for RURAL PRESS by FANNIE ISABEL SHERRICK.]

Next to California, Colorado is certainly the most beautiful State in the Union. There are many who rank her first; but it seems to me, with all her snow-clad ranges and green valleys, she yet lacks a certain spirituality—that indefinable charm of atmosphere which makes her sister State pre-eminent in the world of beauty.

Among the Rockies are many enchanting pleasure places, with vistas of purple foothills overshadowed by giant mountain peaks, snow-covered the year round; but one sometimes misses the natural luxuriance that clothes the Sierras with verdure to their summits and longs for the cool breath of the redwoods and the tall majesty of these straight-limbed giants.

There is an awful grandeur and sublimity about the Rockies that commands a speechless admiration, rather than that near love which fills the hearts of those who have lived many seasons in California, close to the throbbing pulses of her ocean beaches, and the sacred silence of her wooded mountain temples. Then, too, is the charm of her Spanish missions, their old time bells echoing the chants of medieval days, their picturesque ruins quaintly contrasting the old with the new.

But "comparisons are odious," and let me

tell you something about the beautiful "Queen City of the Plains," though I suppose many of the readers of the PRESS are familiar with it.

The first glimpse the traveler catches of Denver is usually at sunset, after a long day's journey westward over the plains. For some hours he has seen the great ranges darkening the west. The sun illuminates their summits, then sinks behind them, lost to view long before the dusk. To the south a hoary head has lifted itself now and then out of the mists. As the night approaches it grows more vague, and at last the mystic sentinel disappears altogether. It is Pike's Peak, and the tourist gives a little sigh of disappointment as the dim outlines elude his vision. But the flame of the sunset has revealed a newer object of interest, the queen city lying at rest on the plains with her golden spires pointing heavenward, and her white highways reaching to the very portals of those grim, shadowy ranges.

For awhile one is content to look upon this beautiful picture without a thought of all the life that stirs within it, but the illusion is dispelled when at last its peaceful streets are invaded and the train pulls up in the fine stone depot, where all is bustle and confusion, and one is reminded forcibly of the enterprise and activity that has made Colorado what it is.

Denver is a bright city with all the modern improvements. Rows of pretty cottages line the well-shaded streets, and in the wealthier portions of the city mansions of the finest build and beauty mark the outgrowth of Western taste and culture. The business portions equal in pretentious buildings Chicago or St. Louis. What is known as the Tabor block is really a specimen of magnificent architecture, and does credit to the bonanza king who planned it. Whatever Senator Tabor's shortcomings may be, socially or otherwise, he has certainly done much toward the improvement and advancement of Denver.

Socially, Denver is very attractive. Her people are kind-hearted and hospitable, and their entertainments are always of the highest order. The Tabor opera house is considered the most beautiful of any in the State, and it is finished in the most elaborate style. All of the "stars" gravitate there, and the people who patronize it are always sure of good attractions.

Denver is what might be called a thoroughly wide-awake city. Every new idea is eagerly grasped and all improvements speedily appropriated. It was one of the first cities to be lit by electricity.

The most charming spot near Denver is the summer resort called Manitou Springs. No one could "do" Colorado without seeing the points of interest that surround Manitou.

It lies directly at the base of Pike's Peak, in a little valley which narrows into the canyon which is the beginning of the trail up the peak. I have never seen a lovelier nook than Manitou. It just fulfills one's idea of a summer resort, and one who loves nature could not but be happy in such enchanting pleasure-grounds. Near by is the Garden of the Gods, a most unique place with all sorts of fantastic imagery carved by nature in brilliant red sandstone. One can easily imagine the representations of gods and animals in these grotesque formations.

Many people make the ascent of the peak, but as the trip is a somewhat difficult one for those not robust in health, the majority of tourists content themselves with rambles and rides in the vicinity. There are many interesting canyons to explore, one of which leads to the Cave of the Winds and the Grand Caverns. A beautiful carriage drive through the Ute Pass brings one to the entrance of the former.

It would be difficult in so short an article to give even a summary of all the beauties that surround Manitou, it is so rich in all that nature can give of the grand and picturesque. Of course, to a lover of the beautiful like myself nature here is the great attraction, but those who go in search of health as well as pleasure find in the springs a cure for many things. The Soda Springs are nice tasting, and with the addition of a little sweet syrup would be a facsimile of the druggist's much advertised "ice-cold soda."

Manitou has an elevation of over 6000 feet. Though Manitou is the most beautiful town in Colorado, Leadville is certainly the most interesting. It is a fabulous place, and though something of its early wonder and interest has passed away it is still to the eye of the Eastern tourist a most wondrous place. Sprung up almost within a day, it still bears the impress of that sudden rush into life.

In 1878 the site of Leadville was marked by a few wooden shanties inhabited by a few hundred people. In less than a year its population increased to 5000, and before the close of 1879 25,000 people were inhabitants of the new town.

Now it is a thriving city with well-built stores and business houses, comfortable residences and well-kept streets. To look upon its present prosperity and steadily increasing population, one would never imagine that the town was only seven years old. The railroad trains coming and going, the stylish equipages on the streets, the well-dressed people, are more suggestive of a sedately grown Eastern town than of a mushroom mining camp. It is difficult to imagine how short a time has elapsed since the only way to Leadville was a mule trail, and the mad enthusiasts over gold were forced to endure the most terrible hardships before they reached their goal.

The climate of Leadville is rather a trying one, owing to the extreme elevation. As some

wit has remarked, "It has nine months of winter and three months late in the fall." The summers are exceedingly short, and even in the warmest weather the snow peaks so surround the place that one, apparently, by a slight exertion could throw snow-balls at mid-day. However, the sun is quite powerful at noon; and though the nights are frosty even in June, the mid-hours of the day make one seek the shady side of the street.

People with weak lungs find much difficulty in breathing the air of Leadville. The atmosphere is extremely rarefied, and one who desires to visit all the mines finds many a hard climb before him. The mountains in the vicinity seem literally honey-combed with these mines; and though fortunes are not made and lost in a day, as formerly, the yield of the mines is something marvelous. Notwithstanding all the millions that have been taken from the hearts of these mountains, there still remains untold wealth.

One cannot help feeling the wonder of this town so far removed from the rest of civilization and so high among the clouds, yet fraught with the same life, the same interests, that animate the commonplace towns of the older ordinary countries. It is said to be the highest town in America, and it is surely high enough to satisfy even the most ambitious mortals. Its elevation is over 10,000 feet.

Leadville is reached by the Denver & Rio Grande Railway, which is justly termed the scenic route of America. It winds upward through the narrow gorges and canyons, reaching an altitude of 10,000 feet, and one could not imagine a grander ride. It is positively awe-inspiring. I felt like holding my breath when the sturdy engine leaped across the chasms or plunged boldly under the shadow of giant mountain cliffs in a mad race with the headwaters of the Arkansas.

Many grand scenes have I looked upon in this beautiful land of ours, but never one grander than that which greets the startled, wonder-stricken gaze of the tourist who is carried swiftly but surely through the Royal Gorge of the Arkansas.

So high are the rock walls that they seem to shut out the light of heaven, and one looks upward through a semi twilight to the glittering line of azure that marks their summit. White-sprayed falls leap over the cliffs like showers of silver and lose themselves in the foaming stream that dashes through the gorge in an angry grandeur. Wild flowers fringe the rock masses, lifting their pale faces to the narrow cleft of light 2000 feet above. The shadow of centuries seems to hang over the white-walled chasms, and the eloquent voice of the ages seems surging in the river as it forces its way with a determined fury to the calm, shadowless plains beyond the mountains.

But who can describe that which is indescribable? As one stands in the Yosemite bereft of speech, so in this grand canyon the heart feels that which the lips may never express.

Perhaps as a rebuke upon our egotism Nature sometimes strikes us dumb with the wonder of her handiwork.

Denver, June 38th.

### A Trip to Monterey.

[Written for RURAL PRESS by a NATIVE DAUGHTER.]

When we first spoke of going to Monterey on the Fourth—or, more correctly speaking, the Fifth—the distance was an objection raised; then thought we were not very patriotic if we were afraid of a long ride or a little dust. It was quite gloomy when we left home at daylight, as a heavy, chilling fog hung over the valley. After riding a few miles it cleared off and the sun shone out brightly, and our spirits rose accordingly. We crossed the Salinas river, which is shallow, looking unlike the treacherous, booming stream of a few months ago. Although the road was rather heavy, it was pleasant as we wound through the long canyon, coming in sight at last of the beautiful bay and quaint old town of Monterey, around which so much of the history and romance of the early times cling. It looked its best on the pine-fringed hill, with the sparkling bay below, on whose tranquil waters the U. S. revenue cutter *Richard Rush* and many yachts were anchored. On several streets arches with the word "Welcome" were erected, and from every building the flags floated, and each vied with the other in its decoration of flowers and evergreens. The old custom-house, in its holiday garb, seemed a fitting place to raise again the flag where 40 years before it was raised for the first time. My eyes filled with tears as I looked at the gray-haired veterans and pioneers and thought how much we owed to them, and hoped the Native Sons, with their bright eyes and unfurrowed brows, would appreciate their labors, and would not be found wanting, should it be needed to follow in the footsteps of the brave fathers and mothers.

The soldiers, in their bright uniform, the rumbling of the heavy artillery wagons, booming of cannon, the bevy of fair girls who represented our States, the thrilling speeches, the oft-repeated Declaration of Independence interspersed with national songs and music, were things not soon forgotten.

I cannot close until I have added a few words in praise of the Del Monte. We do not wonder Eastern visitors are surprised, seeing it for the first time, for we, who are accustomed to many wonders in this land of sunshine and flowers, cannot fail to find in it new beauties

each time. It seemed as though we would go far before we could find a more lovely spot than the beautiful Del Monte, bathed in golden sunlight, nestling among the stately pines, around whose rugged trunks the ivy and bright-hued flowers cling. Each turn brought new wonders to gladden the eye, until we fain would ask where were finer views, greener grass, or rarer flowers. As I watched the smiling faces of the handsomely-dressed men and women, as they rode or walked at will, and listened to the merry shouts and laughter of the happy children, it seemed a completion to nature's loveliness. What a transformation! A few years ago we strayed amid a wilderness of pines and underbrush gathering cones.

I know not how long we might have lingered, had not the western sun warned us it was time to turn our faces homeward. Remembering it was the land of my birth, my heart was filled with pride, as I repeated those words: "Oh, California's the land for me."

Salinas, Cal.

### What Shall We Women Do?

[Written for RURAL PRESS by "NOW AND THEN."]

My husband is a business man—that is, he is engaged in mercantile pursuits—dependent, like every one similarly situated, upon the patronage of the public. I am a delicate woman, and cannot do my own work as I used to. I for years have had the same China boy—trained him myself; he was just the help that suited me. The strong anti-Chinese feeling on the part of some led us to give up our China boy for fear of the "boycotters." Chung was discharged and a girl sought for. No. 1 applied; did not seem strong. I offered her \$20 per month, same as I paid China boy. A few days' trial convinced her and me that she was not what I wanted. She had undertaken what she had never been taught. I offered to teach her if she would work for less wages. She became indignant and left. I was expecting company from the East and I was anxious for my old China boy to come back until I could get a good girl, but others had employed him.

In the meantime my husband made diligent inquiry for a good girl. At last No. 2 appeared. She wanted to know the exact size of my family; any small children; did we entertain much company; did I send all my washing out. Said she was not very strong, but would try it awhile. My husband had to prepare the kindling and build the fires and then awaken the maid. I really "laughed in my sleeve" over this part of anti-Chinese experience. One morning she pertly inquired why he did not put the teakettle on. Now, be it known unto you, my husband is a very "mild-tempered" man, notwithstanding he is affected with rheumatism. He meekly replied, "Shall I get the breakfast, also? How much do I owe you?" I got the breakfast that morning, and a nice hot dinner for him also. Next day came an intolerable sick headache.

My husband advertised. No. 3 put in her appearance—a bright, rosy-cheeked girl. She could do anything—cook, sweep or do plain sewing. I thought I had a treasure; but she was too fond of the sterner sex. I thought her young and giddy and made a few motherly suggestions about her conduct, etc. But one of the neighbor boys suggested to my husband I had better get rid of her.

Far be it from me to disparage my own sex; but this has been my experience with girls in California. I am not harsh or exacting and pay them promptly, and I only insist upon their doing what they contract to do. I have been forced to get another China boy.

One of our most popular merchants, who has never employed a Chinaman, signed a paper presented by the boycotters not to employ any Chinese, but reserved his mercantile rights. Mr. C. has a fine strawberry patch. He had been burned out and wished to economize and rebuild his fruit-drier. He employed Chinese to help him pick his fruit. The above mentioned merchant wished to handle his fruits on account of their extra quality. A committee of the boycotters waited upon him and threatened to boycott him. Harsh words followed and a bad spirit engendered among hitherto friends. All or nearly all of our potatoes are grown by Chinamen. Shall we boycott the potato dealers, too? Editors are supposed to know a great deal, and I want to know "what we women are to do."

Santa Rosa, Cal.

EXTINCTION OF RACES.—Attention has lately been called to two races of men that must soon become extinct. At the present rate of decrease, the Moors, of New Zealand, now reduced to less than 40,000 from 100,000 in Capt. Cook's day, must have disappeared by the year 2000. The Laplanders are estimated to be 30,000 in number, and are gradually becoming fewer. To the above might be added the North American Indians, who are rapidly growing fewer, and the time is probably not far distant when they will entirely disappear from this continent and the world.

THE FLIGHT OF SWALLOWS.—An experiment was made at Pavia, in Italy, with two swallows, to determine their speed. Two hen birds were taken from their broods, carried to Milan and there released at a given hour. Both made their way back to their nests in 13 minutes, which gave their rate of speed at 87½ miles an hour.

## To the Author of "Patchwork."

[Written for RURAL PRESS by FANNIE H. AVERY.]

O youthful mother, wise and sweet,  
That watched thy pretty little maid,  
As she with face all flushed, yet staid,  
Sat making patchwork at thy feet,

And noted how with earnest brow  
She busied with, and sewed and wrought,  
According to her baby thought,  
The patchwork quilt that's finish'd now.

The song thou wert inspired to write,  
As thou, with a fond mother's eye,  
Didst view the picture thoughtfully,  
And muse upon the charming sight,

Doth lead me to invoke for thee  
A long, and, oh, a happy life,  
To guide, and guard from earthly strife  
The little maiden at thy knee,

And watch her as she puts her deeds  
Together in her own life-work,  
To teach her soul no right to shirk,  
That she may gain the noblest meeds,

San Francisco.

## "Bill Simpson's Darter."

No matter how hard and ugly the truth is, it is more pleasing than the affectation of what is not real. Exposure is certain to follow people who try to go through life behind a mask of false pretenses. We have little sympathy for people like "Bill Simpson's darter." A gentleman traveling from Buffalo to New York city tells the story:

At Albany two ladies, dressed in the extreme of fashion, entered the car. Their manners indicated great affectation and consequent shallowness.

The only unoccupied seat in the car was directly behind a quiet-looking lady, evidently from the country. Her dress was of calico, her bonnet of plain straw, and her gloves were of cotton. She could not, however, have looked neater, and she had a good, honest face.

As the fashionable ladies adjusted their draperies in the unoccupied seat, one of them said to the other: "Don't you think it too bad that there are such poor accommodations in railroad trains now?"

"How—in what way?" asked her companion.

"Why, here we are crowded up in all classes of people, some of them so common. Look at that person in front of us."

"Horrid, isn't she?"

"Perfectly dreadful."

"Looks like a common laborer."

"How annoying to have to come in contact with such people."

"Belongs to some ordinary family. If one could only exclude one's self from such persons when traveling even short distances! I suppose it's horrid in me to say it, but I have all my life had such a repugnance to common laboring people."

The lady in the calico dress must have heard a part of this conversation, but her face was perfectly composed.

At that moment an elderly man in the homespun and home-made garments of a farmer came down the aisle. He stopped before the ladies of fashion, closely scrutinized the features of the one having "such a repugnance to common people," and just as the train stopped at the station, cried out loud enough to be heard by every person in the car:

"Looker hye, hain't you old Bill Simpson's darter? But I know you air 'thout askin'. How de do, anyhow? You don't change a speck. Got the same nose you had when you wor a little gal o' 12 or 15 year, trottin' bar-foot round my old farm in Podunk county."

"Yer mind how I youst ter give yer two bits a day an' yer dinner fer helpin' my younguns dig taters? Ho! ho! ho!"

The young lady had dropped her beaded veil and was nervously biting at her fan, but the old farmer went on heedlessly:

"There's been mighty lucky since then. Your pap went out to Coloraday an' made a bigfortin' thar, an' I hear you live in great style. But Bill Simpson ain't the man ter fergit old frens, an' you tell 'im that you've saw old Jack Billings, what used to give him a-menny a day's work when he was so pore his fam'ly had ter wait till the hens laid 'fore they could hev any breakfast. You kin remember that yerself, I reckon."

"An' ther wa'n't noboddy gladder nor me when yer pap did git rich so suddint, for he was a mighty hard-workin' blacksmith, an' always pore 'cause of bad luck."

"My wife sez she lost an awful good wash woman when yer ma moved, an'—I git off here. Good-by! good-by!"

The meekest, most subdued person on that train during the rest of the trip was "Bill Simpson's darter."

THE BIGGEST BUILDING in the United States will be the City Hall of Philadelphia, now in process of construction. Between \$11,000,000 and \$12,000,000 have been expended upon it since 1872. It is estimated to cover 2800 more square feet than the Capitol at Washington. The tower on the north side will be surmounted by a statue of Penn., and its extreme height when completed will be 535 feet.

## YOUNG FOLKS' COLUMN.

## Little City Chicks.

[Written for the RURAL PRESS by K. S. B.]

As to the care of young chickens in the winter, the necessity of keeping them very warm at night should be remembered. I have just brought one to happy henhood by keeping her near the kitchen stove all day, or in the bright sunshine; by feeding her on cooked cracked wheat, rice and milk (no water), and by keeping the little room made for her in a corner very warm by a tiny kerosene lamp burning all night, beside her shaded bird cage. When she was very young I shut her up under cotton batting, in a paste-board box with holes in it. It was very amusing to see her pick at my shoe or dress buttons, to have her tap at the window for attention, and cluck to me to come, when she found something particularly tempting in the grass. One friend kept her young orphan chicken every night in a covered basket, hung over the bathtub, in which was kept burning a small kerosene lamp; and now he croweth beside my little hen.

[We rather expect our RURAL young folks will laugh at the idea of raising young chickens in such ways. They will understand, of course, that the chicks were orphans picked up in the city streets and were rescued from cats or starvation by tender-hearted people, and evidently they were very grateful for the rescue.—EDS. PRESS.]

## The Young Folks' Club.

[Written for the RURAL PRESS by MRS. J. HILTON.]

I guessed right, Mr. Editor, when I said that surely the RURAL's children tended to the chicks and other birds, for I have received five letters from the dear young folks. I promised a card to the first received, thinking I would send a large card; but as the letters kept coming, I could not bear to disappoint any of them, so I sent handsome cards that could be put in a large letter envelope, to four of them and a tiny paper-covered book to the last one. As the answers are all so good I send them and hope to hear from many more of the dear children, and that they will ask questions as well as answer. The second letter has a question in it,

THE CHILDREN AND THE BIRD.

you will observe. The Club's unanswered questions were:

1st. How many eggs is it best to put under a hen? (K.)

2d. Who has hatched the largest number of eggs from incubators? (Tom.)

3d. Who has the best luck with hens which steal their nests? (E. H.)

4th. What makes my chicks mope about? (F. Wood.)

5th. Who can tell me the best way to care for pigeons? (Polly.)

## The Letters.

Dear Madam: In the RURAL PRESS for June 10th I found the unanswered question from Cally C: "What shall I feed my bird when it is molting?" I think she will find the following to be very good: Boil an egg hard and mix with it a great deal of red pepper; give the bird a fresh egg every morning.—GERALDINE FITZGERALD, Redding, Shasta County, California.

Mrs. J. Hilton: You wanted to know what to give canaries when they are molting? I would give soda crackers and hard-boiled eggs, and I would give asafetida to hens that have eaten too much meat. I would take a rasp and dull the spurs of a fighting rooster to prevent his hurting the other chickens, or cut off his head, but never cut the spurs.—From your little friend, FANNIE CLAPP, Tulare City.

Dear Mrs. Hilton: Tell Dick H. to give his hen a small pill of blue-mass. If X. Y. Z. will take his fighting rooster and trim one wing, he cannot fight

so well. If that does not cure him I would cut off part of his spurs. Can the Young People's Poultry Club tell me what to do for our big dog's lame foot? It looks like it had been burned, but has been sore for two months and don't get better.—HARRY HOPKINS (age 9 years), Santa Barbara.

Mrs. J. Hilton: I go to school, but I will try and answer these questions. I walk a mile to school, and before I go I have to help feed the pigs, calves, chickens, and 23 canaries. Don't you think that is pretty good for a little girl in her twelfth year?

1st. The 1st of July I put in a small pinch of saffron and rusty nails in the water for the birds and keep them until the 1st of September.

2d. For chickens getting sick from eating too much meat, mix up cayenne pepper and cornmeal and make a dough out of it, and feed your hen for two or three days.

3d. When mamma kept fighting roosters she cut the spurs just a little, so as they would not bleed, and it won't injure them.—EDITH M. MEAD, Morro, San Luis Obispo Co.

Mrs. J. Hilton: I send these answers to the questions in the RURAL:

1st. If the canary bird was mine I think I would feed it lots of pepper, cracker and milk, and fish bone. 2d. Give the hen soaked bread and milk.

## DOMESTIC ECONOMY.

## Guava Jelly.

EDITORS PRESS:—A correspondent recently asked for a recipe. When in Nassau, Bahamas, I made delicious guava jelly; stewing the fruit in a little water, taking the inner pulp and seeds for jelly, and the outer, coarse-grained part for marmalade, and following the usual method of making quince jelly and marmalade. The most important item to know about it is that one must use dry brown sugar to obtain the rich, ruby hue—white sugar will give it an amber color.

San Francisco.

K. S. B.

PRESERVED STRAWBERRIES.—A granite or earthen kettle should be used, as it is unsafe to allow fruit to cool in metal. For each pound of carefully plucked fruit, washed and drained, allow one pound of sugar. Clarify the sugar by allowing half a pint of water to each pound of sugar, and boiling until clear, removing all the scum that may arise. After the sugar is clarified, set the kettle off the fire and put in the strawberries with great care, pouring the syrup over the berries. The fruit must not be stirred, as it will suffer. Set the kettle aside until the next day, when it must be set on the range until the contents are hot. When thoroughly hot, set the kettle aside until next morning, when the same process is to be repeated, being careful never to stir. Now the fruit may cool, and when cold put it in jars, being careful that the fruit is covered with syrup.

## TO CLEAN GLASS AND SILVERWARE.

—Eggshells crushed into small bits, and shaken well in decanters three parts filled with cold water, will not only clean them thoroughly, but make the glass look like new. By rubbing with a flannel dipped in the best whiting the brown discoloration may be taken off off cups in which custards have been baked. Again, all of us are aware that emery powder will remove ordinary stains from the white ivory knife handles, and that the luster of morocco leather is restored by varnishing with the white of egg. Nothing, it is said, is better to clean silver with than alcohol or ammonia, finishing with a little whiting on a soft cloth. When putting away the silver tea or coffee pot which is not in use every day, lay a stick across the top under the cover. This will allow fresh air to get in, and prevent the mustiness of the contents familiar to boarding-house sufferers.

TOAST.—Many seem to think they have made toast when they brown the outside of a slice of bread. Have they? The object in making toast is to evaporate all moisture from the bread, and holding a slice over the fire to singe does not accomplish this; it only warms the moisture, making the inside of the bread doughy and decidedly indigestible. The true way of preparing it is to cut the bread into slices a quarter of an inch thick, trim off all crust, put the slices in a pan or plate, place them in the oven—which must not be too hot—take them out when a delicate brown and butter at once.

CHARLOTTE RUSSE.—Dissolve half an ounce of gelatine in half a pint of cold water. Whip a pint of sweet cream to a stiff froth and add to it the whites of two eggs, beaten until they are firm. When the gelatine is dissolved let it come almost to a boiling point and strain it into the egg and cream; sweeten all with four ounces of powdered sugar, and flavor with a dessert-spoonful of vanilla. Beat all together and turn into a mould lined with thin pieces of sponge cake. Set on the ice for three hours and serve.

STEWED STEAK.—Put one pound of tender, thick steak, having a little fat, in a saucepan. Pour over it two cups of boiling water and a finely minced onion, seasoning with salt and pepper. Spread a thick layer of mushrooms on top of the steak; cover the saucepan tight and set it where it will simmer, about two inches above the level of the fire. The saucepan should not be uncovered until the steak is to be removed to the dish. Forty minutes is enough time to cook it to a turn.

TUTTI FRUTTI.—One quart of rich cream, one and one-half ounces of sweet almonds, chopped fine, one-half pound of sugar; freeze and when sufficiently congealed add one-half pound of preserved fruit, with a few white raisins chopped, and finely sliced citron. Cut the fruit small and mix well with the cream. Freeze like ice cream. Keep on ice until required.

ASPARAGUS SOUP.—Boil one bunch of asparagus and one onion until tender, with one tea-spoonful of salt and one of pepper. Pass through a colander and mix with one quart of boiling milk, a little butter and one egg. Serve immediately.

3d. I should cut the spurs of the rooster.—JENNIE ROWELL, Easton, Fresno Co.

[As Mrs. Hilton was so generous as to send gifts to all the little people who wrote letters to her, the editor thinks he should give them a picture, too—so here it is on this page—"The Children and the Bird"—dedicated to the Young Folks' Poultry Club and to every little reader of the RURAL PRESS.]

## Saving.

As go the boy's pennies and dimes, so very likely will go the man's dollars and hundreds, by-and-by. Without having the spirit of a miser, the person accustomed to save has more pleasure in laying up than the spendthrift ever knows.

The way to keep money is to earn it fairly and honestly. Money so obtained is pretty sure to abide by its possessor. But money that is inherited, or that in any way comes in without a fair and just equivalent, is almost certain to go as it came.

Children that have a little money ought to practice saving something. Many boys of today hardly know a higher use for any money that comes into their hands than spending it for some foolish thing as quickly as possible. To such, a lesson of self-denial and economy is important.

## Our Subscription Rates.

OUR SUBSCRIPTION RATES ARE THREE DOLLARS A YEAR, IN  
advance. If continued subscriptions are not prepaid in  
advance, for any reason, TWENTY-FIVE CENTS extra will be  
charged for each year or fraction of a year. No new  
names placed on the list without cash in advance.  
Agents wanted.

N. B.—Subscriptions becoming delinquent after March  
1, 1886, will be charged TWENTY-FIVE CENTS extra—all be-  
fore that FIFTY CENTS.

## Advertising Rates.

	1 Week	1 Month	3 Months	1 Year
Per Line (agate).....	\$ .25	\$ .80	\$ 2.20	\$ 5.00
Half inch (1 square)....	1.00	3.00	8.00	24.00
One inch.....	2.00	5.00	14.00	45.00

Large advertisements at favorable rates. Special or  
reading notices, local advertisements, notices appearing  
in extraordinary type, or in particular parts of the paper,  
at special rates. Four insertions are rated in a month.

Our latest forms go to press Wednesday evening.

Registered at S. F. Post Office as second-class mail matter.

## The Week.

Affairs are quite stirring, aside from the ap-  
proach of the great social event—the coming of  
the Grand Army. The markets have assumed  
an activity somewhat unusual for midsummer.  
Wheat, it is true, has difficulty in moving its  
great bulk; but it seems to be gaining strength.  
Wool has been buoyant for some time and holds  
it well; even in the midst of an exciting politi-  
cal campaign the London wool markets show the  
Britons do not propose to go bare-backed what-  
ever happens to Ireland. Hops are true to  
their name, and are skipping up in a way to de-  
light those whom the aphid and mildew has not  
robbed of them. Fortunately, these evils are  
not prominent in California. Fruit is high and  
promises to remain so, for the crop is rather  
streaked and there is demand from several di-  
rections. There promises to be a good deal of  
money brought into the State this year for vari-  
ous products; but unfortunately, the distribu-  
tion of it will not be so general as we could  
wish. Such is often the case, and those who  
lack must patiently bide their turn.

## The G. A. R. Encampment.

The great event of the year in California is  
rapidly approaching. On Monday, August 2d,  
the various pageants, receptions, exercises and  
excursions of the Twentieth National Encamp-  
ment of the Grand Army of the Republic and the  
National Convention of its associate organiza-  
tion, the Woman's Relief Corps, will begin in  
this city, and until August 12th San Francisco  
and the adjacent towns will be filled with peo-  
ple who meet, not to recall the asperities of the  
war, but to look upon past events through the  
softening medium of the universally beneficent  
results which were attained, and to rejoice to-  
gether over the grand peace and prosperity  
which now bless the whole country.

Preparations have been in progress for months  
to suitably receive and entertain the thousands  
who will arrive from all parts of the Union,  
and there is every indication that the event  
will reflect credit upon the State in all its  
features. There will be many parts of the 10  
days' exercises which will have a general inter-  
est. Those who find joy in the grandeur of the  
parade and in the strains of martial music will  
have their eyes and ears well employed. There  
will be from day to day excursions to various  
cities which have prepared receptions. We ex-  
pect to publish in our next issue the full pro-  
gram for the Encampment, so that our readers  
at a distance may be able to participate in the  
event by attending such demonstrations as they  
may choose.

There will be efforts in several counties to  
give the visitors a condensed view of the coun-  
try, as shown by her products, and we hope all  
who have been appealed to to aid in this matter  
may respond generously. In Sacramento they  
are putting forth such a vigorous and wide-  
reaching effort that it very much looks as  
though the capital city would have two State  
Fairs this year. This is quite characteristic of  
California. Her citizens are disposed to get up  
anything which will please and entertain their  
guests.

## The Coming Wheat Crop.

We suppose everybody has concluded by this  
time that there will not be nearly so much  
wheat harvested in this State this year as the  
early estimates promised. We opposed these  
estimates from the first because we knew the  
gauntlet of unfavorable conditions which the  
crop had to run before it reached the sack, and  
we always conscientiously oppose figures which  
are put forth merely to serve those who have  
grain to buy or sacks to sell, and are mutually  
served by having the impression go out that the  
State is overflowing with wheat. There are a  
few others who like to have big figures because  
they think it looks well for the State, but are  
unmindful that to gratify their taste for the im-  
mense they minister to the interests of specula-  
tors and tend to the ruin of the producers. We  
have declared our faith in such matters before,  
but we cannot resist the opportunity to enforce  
the lesson again.

We judge last week that the Sacramento val-  
ley had more than its share of the hot winds  
which did the injury. It was worse toward the  
northern limits of our great grain region; but it  
was bad enough in the lower counties of the  
San Joaquin valley to accomplish quite a re-  
duction of the general output. One of our read-  
ers at Modesto writes: "The crop is not turn-  
ing out well. One neighbor received 13 bushels  
of wheat where he expected 18, and another 15  
bushels where 20 bushels were expected." This  
is a great reduction. Concerning Stanislaus  
county in general, the Modesto Herald of July  
8th says:

The yield in some localities is fully up to ex-  
pectations; but in others it has fallen short  
almost one-half. In estimating the probable  
yield of the whole county for this season, the  
best informed put it at not over 4,000,000 bush-  
els. Information from the west side is that the  
crop will be the largest ever produced there,  
and but for the winds threshing it out, and the  
two or three destructive fires, it would have  
given the county as large a yield as in 1880.

The reports from the Sacramento valley show  
that the injury previously noted there was not  
exaggerated. The following from Marysville  
by telegraph, July 12th, gives a sad picture:

As the threshing season advances, the fact is  
developed that the norther of June 10-12 did  
much greater damage by shelling out grain than  
was estimated by the farmers. This, together  
with other drawbacks of the season, has re-

duced the yield to less than 50 per cent of an  
average crop in Sutter and Yuba counties.  
This circumstance, in connection with the low  
price of grain, has a depressing effect on the  
farming community and business interests gen-  
erally.

What seems to us the best general statement  
of the total wheat prospect in this State is the  
following from the *Daily Report*, and even this  
we regard as fully as great as the conditions  
will warrant. We consider the figures rather  
over than under-drawn:

The figures of the wheat crop, as given below,  
are based on assessors' returns of acreage seeded  
to wheat, and the average of the yield per acre  
of the farms threshed up to July 5th. As a  
very large number of fields were cut for hay, an  
allowance of five per cent on the total footing  
of each county has been made. Had it not been  
for the hot winds of June 10th, 11th and 12th,  
this year's crop would have been the largest in  
our history, for the grain in many of the fields  
in the largest wheat-growing counties were  
threshed out by the wind so as to make it worse  
than folly to harvest that left. Aside from this,  
many fields were so badly threshed out that  
they did not yield within 25 to 75 per cent of  
what they promised on June 9th. Under these  
circumstances, the State's crop is wonderfully  
large, for it is nearly double that of last  
year.

The yield so computed is as follows:

	Bushels.
Alameda.....	990,000
Amador.....	23,400
Butte.....	1,831,000
Calaveras.....	245,000
Colusa.....	4,650,000
Contra Costa.....	1,490,000
Fresno.....	3,515,000
Kern.....	230,000
Los Angeles.....	3,990,000
Mariposa.....	24,800
Mendocino.....	100,000
Merced.....	1,538,000
Monterey.....	1,250,000
Napa.....	305,000
San Benito.....	710,000
Sacramento.....	855,000
San Bernardino.....	65,000
San Diego.....	350,000
San Joaquin.....	2,695,000
San Luis Obispo.....	1,110,000
San Mateo.....	160,000
Santa Barbara.....	750,000
Santa Clara.....	1,790,000
Santa Cruz.....	375,000
Siskiyou.....	145,400
Solano.....	636,000
Sonoma.....	560,000
Stanislaus.....	3,185,000
Sutter.....	991,000
Tehama.....	1,150,000
Tulare.....	5,890,000
Tuolumne.....	112,000
Ventura.....	340,500
Yolo.....	3,150,000
Yuba.....	320,000
	45,021,200

The unfavorable conditions which affected  
the greater part of the wheat area stopped short  
of Tulare, and a good year with a vast increase  
of development of that county gives it the ban-  
ner for 1886.

Reports from the grain fields in other States  
are discussed by one of our contributors on  
page 55 of this issue. The latest telegrams en-  
force the conclusions of last week as to the fall-  
ing off in the product east of the Rocky mount-  
ains. The following are the dispatches:

WASHINGTON, July 10.—The July report of the  
Agricultural Bureau says: The average condition  
July 1st of winter wheat has declined from 92.7 to  
91.2 and of spring wheat from 95 to 83. The con-  
dition of spring wheat has declined from 98 in June  
to 83, in consequence of high temperature, drying  
winds and lack of rain. In the principal States the  
decline has been: Wisconsin, from 97 to 75; Minne-  
sota, from 98 to 78; Iowa, from 100 to 90; Nebraska,  
from 97 to 83; Dakota, from 99 to 85.

CHICAGO, July 11.—The following crop summary  
will appear in this week's issue of the *Farmers' Re-  
view*: In portions of Dakota, Minnesota, Wisconsin  
and Iowa the injury to the spring wheat has been  
increased, and has embraced a wider area than was  
noted in the detailed reports of the *Review* three  
weeks since, when the great danger which threatened  
the crop from blight was fully outlined. In large  
sections of Dakota, Minnesota and Wisconsin,  
where the fields were visited by light rains at the  
close of this week, the damage to grain was such as  
to prevent any revival of life, and the injury inflicted  
was complete. In the sections where the drought  
was the most severe the yield will not exceed from  
five to eight bushels to the acre.

DEATH OF THE STALLION CESAR.—We regret  
to learn that Cesar, the promising and famous  
young Percheron stallion, died very suddenly of  
apoplexy on the 2d inst., on the farm of his  
owner, Mr. Wm. B. Collier, at Bridgeton, Mis-  
souri. Our readers will, many of them, remem-  
ber Rosa Bonheur's spirited likeness of this  
fine prize-winner, which appeared in the *PRESS*  
of April 4, 1885. In addition to the honors  
won up to that date, he last year took the  
prize for three-year-olds at St. Louis. Mr. Col-  
lier naturally feels saddened, and has our sym-  
pathy in the loss of so noble and valuable a  
creature.

THE Santa Barbara papers incline to the  
opinion that that city must soon become a port  
of entry, and want a custom-house built at the  
earliest convenience of the Government.

## They Come to a Healthy State.

Now that thousands of visitors are starting  
westward for a sojourn in California, it is grati-  
fying to be able to give public assurance that  
the sanitary condition of the State is good, and  
that our guests need not fear contagion of any  
sort. Dr. Tyrrell, Secretary of the State Board  
of Health, in his report for June, refers to the  
accepted principle that the death-rate of a com-  
munity indicates with unfailing certainty its  
sanitary condition, and thence feels justified in  
inferring a highly favorable state of sanitary  
matters in California. The deaths reported  
number 751, in a population estimated at 582,-  
450—a percentage of 1.3 decedents per 1000, a  
smaller percentage than is usually found at this  
season of the year. Although this indicates  
conditions favorable to health at the present  
time, yet, as the summer advances, all sanitary  
officers should see that the water supply is kept  
free from pollution, that everything likely to  
develop disease is removed, and general clean-  
liness adopted.

Reports received from every county in the  
State agree that no serious sickness prevails.  
As might be expected, disorders of the bowels  
are experienced in many places, and if cholera  
had invaded our coast would be the cause of  
serious alarm. They can, however, be largely  
traced to the prevailing summer heat, the un-  
wise consumption of fruit, and it may be an in-  
dication that the water supply of those towns,  
where the disease is common, has become pol-  
luted from surface or sewer drainage. With  
the exception of the prevalence of bowel dis-  
orders, the health of the community is excel-  
lent.

It is often claimed either that sunstroke is  
never known in California or that it is of ex-  
tremely rare occurrence. The latter statement  
is certainly true, and even in the few cases on  
record there may have been sometimes predi-  
posing causes on the part of the victim. For  
example, it may be claimed that there was a  
case of sunstroke last month, and yet the Sec-  
retary of the State Board claims that alcohol  
was the real slayer. In his report of the case,  
Dr. May Gydison, of Salinas City, says that the  
man so stricken "was an apparently stout,  
healthy fellow, but a hard drinker, aged 27 or  
28 years. He went to work in the field in the  
morning feeling quite well. About 10 A. M.  
he complained of great thirst and dizziness, im-  
mediately became unconscious, and died within  
three-quarters of an hour from the time of seiz-  
ure." As sunstroke is very uncommon in Cali-  
fornia, it is of great interest to collect all avail-  
able and undoubted cases, that a record may be  
kept to ascertain whether the affection is only  
an exceptional occurrence, due to the habits of  
the victim, or is taking its place among the  
regular disorders incident to the climate and in-  
dependent of personal habits or pursuits.

As it would not be polite to suppose that any  
of our coming guests are guilty of chronic al-  
coholism, we can quite safely assure them all  
immunity from sunstroke.

## Building Up the City.

San Franciscans are naturally desirous to ex-  
tend the business interests of the metropolis,  
but they often do things which have just the  
opposite effect. The "bag ring," or "bag  
pool," or "bag corner," or whatever aliases the  
undesirable thing goes by, has proved already  
an element to divert trade from San Francisco.  
They grow a very respectable amount of grain  
in Los Angeles county and the growers are  
good business men, too. When they saw the  
bag interest of San Francisco had laid a trap for  
them they concluded not to walk into it, but  
turned about and ordered bags from the East  
and left the San Francisco people with their  
bags on their hands.

Who can blame them? The time has gone  
by when San Francisco can corner the State.  
We rejoice to see the metropolis thrive, be-  
cause we have interest and habitation here; but  
when San Francisco endeavors to take unfair  
advantage of people, we are glad to see them  
assert their independence. Competition be-  
tween San Francisco and other local and East-  
ern points is now more wide and active than  
ever before, and her future will depend much  
upon fair dealing. Things can't be done now  
which were possible when San Francisco was  
off in one corner of the world.

## Experience in Fruit Packing.

We had an item some weeks ago of fruit sent to the Colonies Exposition in London from Australia. Although there was much fruit lost, some arrived in good condition and attracted much attention. We find in our latest received files of the *Adelaide Observer* an interesting account of the materials used in packing the fruit for the long journey and the results therewith. We shall give the points, as it will interest those who are making experiments with preservative packing material in this State.

Various attempts were made from 1862 onward in shipping fresh fruits from South Australia to London. This was before steamers were fitted up with cold storage chambers. Many experiments were made during this early period, of which we note the following: Grapes were first sent to London packed in sawdust; had preserved the shape of the bunches, but they were every one of them fermented and had a most acrid and unpleasant taste. They were absolutely worthless. There was a larger case containing six small boxes, lined with earth, and the inner boxes had the grapes packed in charcoal. They each and all presented the appearance of black bricks, which, on being broken, showed some fossil like remains of grapes. The whole of the grapes were packed in hermetically sealed boxes, and the conclusion arrived at was that the mode of packing should be avoided.

There was another experimental shipment on April 11th with Napoleon pears and grapes in kiln-dried sawdust, but the grapes were no good; the pears, however, were in excellent condition, but tasted of sawdust. Sir Arthur Blyth, commenting thereon, says: "It seems clear that in all fruit shipments sawdust should be avoided."

The conclusion reached seems to be that package in cork dust of a coarse character gives the best chance of success, and that tin-lined or hermetically sealed cases are a mistake.

The fruit sent in cool storage for the recent London Exposition is described as follows:

The fruit sent comprised apples of the following sorts: Stone pippin, French crab, dessert, Dumelow's seedling, golden reinette, Cleopatra pomeroi, scarlet nonpareil, Norfolk Beaufin, strawberry and raspberry pippins and Garibaldi. Pears—Swan egg, glox morceaux, Napoleon, large stewing, winter Nelis and assorted lots; also other fruits, such as water and sweet melons, quinces, grapes, pomegranates, lemons and oranges. There were also raisins, currants, almonds, filberts and walnuts, of course; but the great interest is centered in the fate of the perishable fruits. Each steamer took away over four tons of South Australian fruits and vegetables, and the first shipment was by the *John Elder* on March 8th. The next was by the *Austral* on March 22d, the third by the *Cuzco* on April 5th, the fourth by the *Liguria* on April 19th, and the fifth by the *Iberia* on May 3d. The next shipment will be the last. The principal shippers of fruit through the Colonial and Indian Commission were the Hon. R. D. Ross, Mr. J. F. Pascoe, Mr. Robert Davenport and Mr. T. Hardy. The apples were packed mainly in two different ways. Some were merely placed firmly in the case after a most careful inspection of each apple by a man whose duty it was to see that none were bruised or overripe. Others were placed between layers of dried cedar sawdust, the stuff being put in while the case was being gently shaken, so as to settle the sawdust well down between the apples, layer after layer. Pears were packed in the same way. Cork dust was also tried; but sawdust is considered equally as effective, in spite of previous failures, and not so expensive. Some few cases have been sent with wheat chaff as a packing. A case of grapes packed in wheat chaff was sent to England some time ago from Adelaide, and arrived in excellent condition. It was this success that led to the experiment being tried again.

As we have said, the cable dispatches spoke of the arrival of some of the Australian fruit in good condition. Our contemporary has these advices also, but will await full reports by mail before concluding whether the experiment is, upon the whole, a success or not.

In this connection we may mention an essay recently read by J. F. Torrance before the Nova Scotia Fruit Growers' Association, a copy of which is kindly sent us by Dr. John Strentzel, of Martinez. It seems that Mr. Torrance has secured a patent upon what he calls an "Infusorial Fruit Case." It is a case within a case, an inch space between and the space filled with "infusorial earth," the fruit in the inner case being packed in this same earth, which, it is claimed, resists all decay. Infusorial earth is sometimes called diatomaceous earth, and there

are considerable deposits of it on different parts of this coast. It is light and white and easily reduced to an impalpable powder. We suppose it acts just as does fine dry sand or finely ground gypsum, both of which have been experimented with in this State for fruit keeping. It accomplishes isolation of the fruit, exclusion of germs of decay, and in case any single fruit decays, it absorbs the juices and prevents the spread of decay. It seems to us that infusorial earth would be better than sand, free clay or gypsum, because of its pure white color and the fact that it is so much lighter than the other materials. The Nova Scotia inventor expects great things from the invention in sending fruits and flowers to Great Britain.

## Senator Hearst and Oleomargarine.

We are gratified to see that Senator Hearst has relieved the anxiety of California people. He has been telegraphed several times as on the oleomargarine side. At first we thought it must be a mistake, but the reiteration of the statement made us a little anxious lest through his vote California might give an uncertain sound in defense of the genuine dairy industry. Senator Hearst's letter on the subject is, it is true, a little diplomatic and somewhat on the Delphian oracle style of expression, but we propose to understand it as we wish it, and regard it as a denial that he has any liking for the bogus side of the issue. His letter is as follows:

UNITED STATES SENATE,  
WASHINGTON, D. C., July 1, 1886.

D. D. Shattuck, Esq., San Francisco, Cal.—MY DEAR SIR: In response to your favor of June 21st, permit me to advise you not to be uneasy as to how I will vote on the oleomargarine bill, or any other measure affecting the interest of California.

While the newspapers do many useful services they cannot always be relied upon to know in advance how I, or any other Senator, propose to vote on every measure coming up in the Senate.

My knowledge of the needs of California, my interest in the State and the history of my past life with reference to my attitude toward the welfare of California, should satisfy you that I would not vote contrary to the best interests of the State.

Very truly yours,  
GEORGE HEARST.

From mail advices just received from Washington, it seems that the dairymen's measure won its first step in the Senate. President Reall, under date of July 6th, writes as follows:

The Senate Committee on Agriculture reported our bill Thursday as it passed the House, without amendment. There had been great danger that we would not get enough votes to report it, or that the tax would be reduced to a nominal sum and the licenses changed, as there has been terribly strong pressure brought to bear against us on the committee, but the arguments in favor of the dairymen proved unanswerable. Our own friends on the committee wavered for a time on the amount of tax, but finally yielded their views in behalf of protection for the farmers.

This is our fourth great and successive victory. The first was in securing a unanimous report from the House Committee, the second in passing the bill through the House, the third in having it referred to the Committee on Agriculture when it came to the Senate. Had we failed then the splendid result of yesterday could not have been achieved. Our last victory is no less important than the others.

Of course the great and final issue will come on the passage of the bill by the Senate. We suppose the press dispatches in the daily papers may be expected to bring news of its progress or defeat almost any day. On the other hand, action may be considerably delayed. Certainly everything which can be done by the dairymen to enforce their wishes upon the attention of Senators should be undertaken. It may be worth while to use the telegraph freely and to call meetings in all butter neighborhoods which might telegraph their action. We understand that Governor Stone-man, at the request of some of our city dairy merchants, sent a dispatch favoring the measure to Senator Hearst last week. Mr. Reall suggests as follows:

It is of the first importance that every Senator be convinced of the necessity for this bill. Please, therefore, again write all the Senators urgently, particularly those from the Southern States. Get your friends, including your merchants, lawyers and physicians, to write also. Send in petitions; hold meetings, and adopt resolutions; and, above all, act quickly and at once. It is of the greatest importance that we should succeed, and succeed completely. Insist upon the House Bill with the five-cent tax and full licenses. We must have the House Bill adopted by the Senate without change or amendment. Unless it passes there will be ten times more butterine made next winter than there was last, and the dairy industry ruined. The passage of this bill is of more importance to milk producers, butter and cheese makers and cattle-breeders than anything else.

It is certainly vital that no neglect should now allow the issue to fail. Everything which seems wise should now be done by those interested either in making or eating genuine butter, and should be done quickly.

## Irrigation Development.

We have obtained a copy of Vol. I of the irrigation report of Wm. Hammond Hall, State Engineer, a handsome book of 622 pages, bearing the title "Irrigation Development." The State of California ordered, by legislative enactment, that Mr. Hall's reports should be published by the State printer and sold by the Secretary of State at a trifle over the actual cost of publication; so this volume can be had of Hon. T. L. Thompson, of Sacramento, at \$2.75 per copy, with 25 cents for postage if the book is ordered by mail.

The State Engineer has certainly produced a volume which will yield him much honor and be of lasting service to the State. He proposes to issue his report on irrigation in three large volumes, of which "Irrigation Development" is the first. It treats of the history, customs, laws and administrative systems relating to waters, water-courses and irrigation in France, Italy and Spain. Volume II will be entitled "Irrigation in California," and will treat of water-sheds, precipitation and water supply; lands requiring irrigation, irrigation districts, water rights, riparian interests, works, systems, practice and statistics of irrigation in California. The closing volume of the series will be entitled "The Irrigation Question," and will consider the development of this question in California, the Mexican civil law, the English common law, the Californian customs, the conflicts, the questions, review of irrigation and water-right laws, a system for California. The full report of three volumes will comprise an irrigator's library which should be in every public and school library, and in as many farmers' homes as possible.

Returning to the volume just issued, "Irrigation Development," of the contents of which the following is an outline:

It is an epitome of a special literature and line of data which is, for the most part, inaccessible to all but a very few individuals of those for whom the work has been undertaken and is particularly intended.

There are 22 chapters, of which seven are devoted, each, to France, Italy and Spain, and the first one to the water laws and customs of the Romans, as forming the common foundation for those in the modern countries named. Each chapter is divided into two, three or four parts, according to the matter, and the parts are made up of short articles separately devoted each to a noticeable point or feature.

Within this outline the matter is systematically arranged and written for popular reading by those who take a special interest in the subject. While thus popularized as far as possible, the work is yet cast and built up as one for reference. Accordingly we find each chapter preceded by its table of contents and followed by its list of authorities, and reference preserved throughout the text and subdivisions to the pages of authority. And, finally, there is a very complete table of contents and an extended systematized index, which commend the work as one for reference.

It is especially important that this work of Engineer Hall should be widely and carefully studied now that the irrigation question is paramount in this State. An understanding of the wisdom which has been gained by hundreds of years of study and experience in countries where irrigation has been practiced would do much to clear the minds of all who now seem to think that we should be governed by the law of a country which does not irrigate. Respect for precedent is well enough, but one should seek precedents established under similar conditions to those under which he lives and not under diverse conditions. Mr. Hall's work is an important contribution to the progress of the State.

AN ELECTRICAL TREE has been found in New Guinea by two German explorers. When the explorers reached a spot 12 days distant from the coast they found their compass useless, owing to the presence of a tree which so completely possessed the properties of a highly charged electric battery that one of the travelers was knocked down when he touched it. Analysis showed the tree to consist of almost pure amorphous carbon, and it has been named *elsassia electrica*.

POLAND CHINA RECORD.—We have a note from John Gilmore, of Vinton, Iowa, Secretary American Poland China Record Co., announcing that Vol. 7 will be ready for delivery July 15th. It will be larger than any volume heretofore issued.

## Insuring Live-Stock.

Although there has been something done in insuring the lives of valuable animals, the enterprise has not thus far gained great prominence in the thoughts of breeders. It might be expected that such an undertaking would progress slowly, for we imagine that to secure the statistics upon which risk can be learned with some degree of trustworthiness will require time. However, it may be said that enough has been done to warrant the formation of new companies. The latest we read about is the Central Live Stock Insurance Company, of Indiana, which, according to the *Indiana Farmer*, was recently organized at Indianapolis. It is a stock company, with capital stock of \$100,000, articles for which were filed at the office of the Auditor of State last week. All the members are either importers and breeders of live-stock, or interested in that industry. The president, Hon. Clem Studebaker, is an importer and breeder of cattle, and better known as the head of the great Studebaker Wagon Works, of South Bend, Indiana. The company insures horses and cattle against death from disease and accident.

THE PHYLLOXERA IN AUSTRALIA.—It is about eight years ago, if we remember correctly, since the phylloxera was discovered in the Geelong district and stamped out by thoroughly uprooting and burning the vines. We notice that application is now made by the owners of the land for permission to plant vines again. The phylloxera board recommends that replanting be permitted when the following conditions have been complied with, namely, that the remaining portion of the infected lands be trenched and the vine roots eradicated, and that they shall along with the lands that have been so treated be laid down with grass; that replanting vines be permitted at a distance of not less than 100 yards from the old vineyard sites; that in case of phylloxera again breaking out in the district the whole of the vines be destroyed at the expense of the owner, and that no compensation be allowed by the Government for the loss of such vines. The board also recommends that where the diseased vineyard sites have been laid down with grass no further disturbance of the soil be permitted, unless on recommendation of the board; that after vine-planting has commenced no vine plant, leaf, or cutting, or root of vine, or grapes, be permitted to leave the district till it has been proclaimed clean.

CHINESE FOR PERU.—A recent Chinese graduate of Yale College is said to have made arrangements with the Chinese Six Companies of this city for the colonization of about 10,000 of his countrymen in Peru. He says: "The Government at home favors the project, and it is probable that it will bear a considerable portion of the expense. Peru and Chili are the objective points. The Six Companies are powerful and wealthy bodies. Their interests in this country, as well as the interests of our Government, make it imperative that the friendly commercial relations between this Government and ours shall not be broken or strained, as they promise to be by the complications constantly arising from the presence of so large a number of my countrymen on the Western slope. A way out of the difficulty is now presented. The climate of Northern Chili and Peru is a good one for our people. The soil is rich, but undeveloped, and capable of producing heavily. The whites of that country will not do manual labor, and the natives are naturally a commercial people, and would rather trade and peddle in a small way than anything else. For that reason the Chinese are well received there."

VISIT FROM PROFESSOR HENRY.—W. A. Henry, Professor of Agriculture in the University of Wisconsin, and Director of the State Agricultural Experiment Station, arrived in California about July 1st, on a visit, and for the purpose of informing himself, by observation, on California resources and agriculture. He began his tour of inspection in San Diego, and will, no doubt, take occasion to visit many parts of the State. Prof. Henry is doing excellent work in his home field and indirectly for the general advancement of the agriculture of the country. We trust his visit may be long and pleasant.

## THE VINEYARD.

### Raisin Making.

The following essay, written by Robert McPherson, of Orange, was read before the Pomological Society at its session in Anaheim, July 1st. Owing to the absence of Mr. McPherson in San Francisco, the essay was read by H. S. Knapp. Robert McPherson, of McPherson Bros., is regarded as one of the foremost raisin-makers of the coast, in point of success and volume of fruit packed. The following is the essay:

#### Raisin Grapes.

I need not make an apology for not being prepared to do justice to the subject, as every one acquainted with me knows that I have not the leisure to sit down and take the time that justice to this subject demands. The importance of our raisin industry is such that it should command the careful consideration of the best minds of our country. This importance is felt not only in the fact that it is an industry which may support an immense number of people, but it now has and will have much to do with the health of our whole country. This latter point is well worth the examination and study of the most scientific minds, as the result of their investigation of the subject would be of great benefit, by proving the health-giving properties of our raisin grapes. It is an established fact that where the best raisins are produced there is the best place for people suffering from lung or bronchial affections. It is known, too, that in cases of exhaustion, a handful of raisins will do very much to revive sunken energies; and it is true, too, that where the nervous system has been depressed for a long time, the continued use of raisins will very much improve its tone. There is high authority on this subject, and for the benefit of both producers and consumers this subject should be studied and knowledge acquired should be diffused all over the country. Were this properly understood, the consumption of raisins would be very much greater than at present. Among ourselves and in our own families, if we would put them into more general use, we would more thoroughly realize the benefit. Let any one try them when on a camping trip. A handful of raisins, a piece of bread and a cup of water is relished; and work can be performed on such a diet as easily as upon the diet of animal food. I would not adopt the vegetarian system, but I believe that much benefit would result from a more liberal use of raisins in our diet.

In this essay on the subject of "Raisin Grapes," I do not presume it was intended that I should treat particularly of the different varieties but rather of the characteristics of varieties, and in doing this I shall not pretend to do more than treat lightly of other varieties than the Muscatel, or Muscat of Alexandria, so called.

The varieties included in the list of raisin grapes as cultivated with us here in California are the Muscatel (or Muscat of Alexandria), the Sultana, the White Corinth, Black Corinth and some other varieties not well known and not largely cultivated. The Sultana, White Corinth and Black Corinth are seedless, and the manner of pruning, cultivating and handling differs materially from that of the Muscatel; but as these varieties are not extensively cultivated among us in my section, I will only speak briefly of them, and that more especially as to the manner of pruning, the quantity produced and the profit derived from them. These vines require canes of considerable length to be left, which need to be supported by stakes, growing at the same time, from short spurs, wood for the following year. With us the White Corinth and Black Corinth do not produce in sufficient quantities to make them profitable, though the flavor of the fruit is such that, if it did produce largely, it would be a favorite.

The Sultana is of very recent planting and has not been sufficiently tested here yet to decide whether it will acquire that degree of perfection that it does in some parts of the country where it is grown.

The Muscat of Alexandria, or Muscatel, is considered the raisin grape of the country. It is not only the best grape for raisins, but it is well adapted to shipping and is used to some extent in the manufacture of wine and brandy. It is, with us here in the southern portion of the State, particularly, the favorite, because some of the wine grapes and shipping grapes do not do so well. With us at Orange and vicinity, including Anaheim, Tustin and Santa Ana, and extending up the valley nearly to Los Angeles, it seems to be especially at home. The growth of the vine is abundant and, when the vine has acquired sufficient age, it produces annually a good quantity of fruit. On the higher and warmer lands the fruit ripens considerably earlier, giving it an advantage in the curing, as at that time we have the long, warm days for drying, and the nights are shorter and with much less fog.

In growing the Muscat of Alexandria, during the first years of its cultivation, we found that we were making a mistake in its pruning—that is, pruning it with too few buds, the result being that the growth of the wood was too heavy, causing the fruit to drop from the stem. This falling of the fruit was so extensive that, in the earlier years of the raisin business here, it was considered somewhat of an uncertainty whether

the vineyards would set heavy enough to produce profitable crops. As time rolled on, however, we discovered the fact that the vine must not be pruned too closely; that we must leave a sufficient number of spurs, containing a sufficient number of buds, so that the canes will not make such excessive growth as to produce this dropping of the fruit. We find that, in the earlier years of the vineyards, this dropping of fruit is much greater than it is after the vines have acquired some considerable age. This is proven by the fact that, in all our oldest vineyards, the quantity of fruit produced varies very little from year to year, while that of the younger vines is uncertain, making a difference, one year with another, of 30 or 40 per cent.

In leaving spurs on the vines for the production of fruit, it is a matter of considerable importance what length they are to be grown, as it is a fact that the bud nearest the stock is the bud that produces the finest fruit, and that the one following may produce a larger quantity of fruit on the stem, but yet not so good in quality, and as we go farther from the stock the fruit deteriorates in quality; and while our section of the country has done much in the past to keep up the quality of the grape manufactured, we are arriving at a time when we may go to the opposite extreme. Vineyardists, finding that, by more liberal pruning the quantity is increased, the tendency to-day is that many will prune so liberally that the quality of the fruit will be materially affected. The true policy would be to prune so that the quality is kept up, even if the quantity is not so great.

There is another important point to be observed in the pruning of our vineyards for raisins, and that is to keep the vine low, as it is a fact that our finest fruit comes from the lowest vines. It may be that in localities that require much summer irrigation the heads should be kept up to protect the fruit from dampness caused by irrigating the ground; but, with us at Orange, we have no necessity for irrigating our vineyards in summer, consequently the surface of the ground is sufficiently dry anywhere on the warmer lands, even if the fruit lay entirely upon the ground. On the lowlands this would not be safe, yet the heads should be kept no higher than is necessary to keep the fruit from the effects of the moist soil and escaping evaporation from the same.

I know of no better rule to give a vineyardist not well up in the knowledge of pruning, in regard to the number of buds to leave, than this: Whenever the vine produces canes of large size (for instance, the size of the thumb) it should next year carry a greater number of canes. The canes should not grow much larger than the little finger, as the fruit does not set on the stem when the wood grows too heavy.

#### Suckering and Summer Pruning.

None of us need to be told of the necessity of suckering, as we call it, which consists of taking off the canes that grow under the ground and the canes growing on old wood, or better expressed, we leave the canes that have grown on one-year-old wood which has itself grown on one-year-old wood. Of course, we find it necessary sometimes to leave some of those canes growing in blind bud that we may balance the vine, as we should strive to make the spurs of our vines form the framework of an imaginary basket.

There is yet considerable difference of opinion about the necessity of summer pruning. There is a necessity to do some clipping (not pinching, as some would advocate, for it is too slow), but that is on those canes that are inclined to run out laterally, covering the surface of the ground, and making late cultivation, which is necessary to secure good fruit, an impossibility. These may even require a second cutting, which, like the first, should be done before the cane grows woody or before the cane carries so much sap that the cutting of the cane may throw too much sap where it has not been, and where it is not needed. The cutting of canes that have advanced too far often causes a shock to the vine that seriously affects it to its detriment.

#### Sulphuring.

At the present time one who wants to consider himself an authority on sulphuring should not say anything, as there are so many different opinions on the time and number of applications, and where it should be put. I do not have any authority to say that grapes should be sulphured before the flowering or opening of the blossom, but I can say that until I commenced the use of sulphur I could get no good fruit on account of mildew; but by the use of sulphur I have never failed to produce large and perfect fruit, and I always apply the sulphur before the opening of the blossom. I am satisfied also that sulphuring in the open blossom will effectually prevent mildew; and I have met those of the opinion, and very well founded, too, that it is the time to sulphur, advancing the theory that *couleur* is brought about by insects, and that the sulphur is an insecticide, and hence the benefit. I have met many of that opinion, but, on examination, I have never yet seen sufficient evidence to cause me to believe that such was the case. I am more inclined to believe that the minute insects and flies are attracted by the decomposition of the blossom and fruit, and that the webs seen there so frequently are put there for the purpose of catching the flies and insects that gather around this decomposition. I consider *couleur* as being caused more by changes and conditions of atmosphere than any other cause. Any con-

siderable variation of temperature between day and night produces this result. This can be noticed in sections where the fruit does not stay on, and is especially noticeable where the Muscat is planted on coarse sand, which heats up considerably during the middle of the day and becomes very cold during the night. This class of land does not produce Muscat grapes in such quantities as land not subject to these conditions. It must not be understood that our gravel soils come under this head, as they do not cool off to such an extent, as many a person has discovered by sleeping upon them on a cold night. The manner of applying the sulphur the second time also differs a great deal, some throwing it in handfuls upon the fruit, leaves or anywhere except where it should be. While scientists may say that we should not throw sulphur on the ground—that the ground will absorb it—I say that we can throw it on the ground and pass through the vineyard and feel that it is not all being absorbed, as the air becomes well filled with the sulphur vapor, so much so that it will effectually destroy the fungoid growth when it has taken a pretty strong hold. I have seen a crop saved by throwing the sulphur on the ground, when the owner thought it was ruined. My reason for favoring this method is that, if the fruit is of considerable size, the sulphur should not be thrown on it. I have seen the fruit so strongly impregnated with sulphur at the time of packing to ship fresh that some men could not endure the strong vapor that was escaping from it at the time. The quality of the fruit for raisins is affected, and it really impairs its value in the market. It is much better to avoid this error by scattering the sulphur on the ground when applied the second time. I do not believe that there is danger of mildew even with one application, except for the second crop.

#### Kind of Sulphur.

We have our choice between the native and the French sulphur. We have used the California product except two years, and find that from 15 to 20 pounds per acre will actually prevent this growth, and I see no reason why we should use the foreign product. The gross sulphur can, with sublimation, contain the useful material, and I see no necessity of going to the expense of preparing the native sulphur and removing this gross material from it, as, if we apply it before the opening of the blossom, it does not harm the vine; and especially is this the case in the second application when it is thrown on the ground.

#### Approaching Maturity.

Having now treated in a very crude and disjointed manner of the conditions of the vine previous to the ripening of the fruit, I will touch briefly on the treatment of the grape as it approaches maturity. We have read frequently that on the low-headed vines of Spain the growers dig the dirt away from the stock, that the fruit may hang around it. This I have heard contradicted by what I consider better authority. Our present superintendent, Mr. E. B. Willis, spent considerable time among the vineyards of Spain, visiting the principal vineyards around Malaga, Valencia, Denia, Alacante and throughout the Granada district. He says that, while there may be individual growers who pursue this course, yet most of the producers of the best raisins raise the soil in little mounds around the vine to support the grapes. This preserves the clusters in better shape and renders them much less liable to injury in packing. While we cannot afford to expend so much labor on the growing crops of grapes as the Malaga people do, on account of the great difference in the cost of labor (ours costing four or five times as much as theirs), we can afford to pay proper attention to a few facts. When we see one vine growing an unusual amount of fruit, while its neighbor, eight feet away, appears much stronger, growing a larger amount of wood, we must remember that the roots of the stronger vine are thrown out so as to take away from the weaker one a part of its support (for in common ground they grow out roots several times the distance allowed them), and we should relieve the vine of its surplus fruit, else it will not mature properly. The growers of grapes at Malaga do much more than this. They clip the imperfect fruit from the stem while growing, and thus they secure more perfect clusters. Our grapes do not ripen as early as those of Malaga; hence, those who lose any time after the fruit is ripe lose a good deal, for it requires much more time and trouble to cure raisins that ripen two weeks out of season. While 12 days will suffice for curing early fruit, it often requires three times that period to accomplish the same result later. The later fruit will often carry only 10 per cent of saccharine matter, while rich, sweet, early fruit contains as high as 27 per cent.

Our method of drying by the use of trays is very convenient; but there is no question at all but that the raisin can be cured more perfectly upon the ground if the place selected is free from dust. If the ground is used there is need of a protection of some kind. In raisins dried upon the ground, we find some with the skins perfectly smooth on one side and the seeds settled down near it, having the appearance of rot, the air not penetrating between the tray and the skin so as to cure the fruit on all sides equally.

It is unnecessary to give at length any method of drying, as we all understand that pretty well now. The greatest difference between us now is that we do not all understand when the grape will do to lay down, as we call

it. I do not know that I can tell any one not experienced what that time is. The grape should have taken on its amber color, the seed its natural appearance, and generally the stem will show by its drying up near the cane, and it should contain sugar enough so that the sense of taste will tell us; or if we have a saccharometer and the sugar is measured, it should contain 22 per cent or thereabouts. If the fruit is grown on ground not rich enough to make this amount, that fact would inevitably show itself by the raisin not being plump, the grooves would be deep and few, the corresponding ridges sharp and the raisin would be imperfect and acid. If the fruit is over-ripe, then the raisin will be dark and lose some of its richness, but nevertheless will be sweet and will fill the requirements of a good product; the grooves will be numerous and shallow; the ridges correspondingly rounded and the raisin will have a plump body. It will be pliant and, if pressed, will to some extent resume its shape; and when the fruit is picked just right it is more amber and its flavor richer.

#### The Points of a Good Raisin.

The character of the raisin is made up of a number of points, which are about as follows as regards importance: On layers—size, flavor, bloom, plumpness, thickness of skin, size of seeds, proximity of berries to each other on the stem and color of the stem. No fruit is expected to possess the most favorable side of all these characteristics, but no grape can lay claim to superiority that has few of them. Many locations can produce raisins of good flavor, but the large bloomy fruit with small seeds and thin skin will outsell them, and that really is what determines which is superior. Some of those points can be improved upon, as: bloom is kept on by careful handling; plumpness is secured by picking the fruit when fully ripe; size, by correct pruning, good cultivation and irrigation, if necessary; flavor, by giving the vine all it requires as the fruit is growing. No raisin can attain to perfection if it lacks anything that its nature calls for; as, for instance, a climate suited to its delicate power of resistance during its growing period. If the climate is too severe it will adapt itself to such condition by thickening the skin and growing harder and more seeds. If any material of the soil is too full and abundant, either in vegetable or mineral matter, the flavor is affected. Too much moisture in the soil stimulates wood growth and fills the fruit with water that has to be dried away, leaving the raisin thin and uninviting in appearance.

The method of handling the grape from the vine to the raisin is too thoroughly understood to need more than a passing mention. I have almost entirely left that out of this paper, but will refer briefly to the manner of handling the fruit when taken from the drying-beds. The process called sweating is simply evening the cured fruit. It is not equalizing separate stems cured in different degrees of perfection, but the dried fruit upon the same stem. If a stem is not cured it should not be taken up from the tray or from the ground, but when a portion of the stem is wholly cured and some part is not, then sweating is necessary in order that one part of a cluster may assist in curing the balance of it, which suggests that we do not know how much curing is done by the escape of moisture through the stems. If the weather in curing is not extra hot or dry, but little sweating is needed, but if hastened by extreme heat or hot weather, then the unevenness is greater and the fruit will require more time to equalize. If the fruit is taken up too green, it may sour, or sugar as we call it. In early times they used to tell us that our raisins were not so good as others because they did not sugar, but that complaint is never heard now, as this sugaring is only too frequently observed on account of fruit being taken up too green.

Right here it may be mentioned that we are putting 20 pounds of fruit into too close quarters. If our boxes should be made half an inch higher, with other dimensions the same, we would find that our fruit would keep very much better. Last year we increased the size of our boxes one-quarter of an inch, and will this year add still another quarter of an inch. The manufacturers of boxes do not like this, as it does not admit of the working up into raisin boxes of remnants, not to say refuse stock. The time has come when we must insist upon good lumber for these boxes, as it has much to do with the price realized. We should not only have good boxes, but they should be kept clean and neat, as the purchaser will suspect fruit of any brand which he finds in a dirty or slovenly-kept package.

#### Style of Packing.

The style of packing now generally adopted is to carefully hide the stems, though that style is often criticised. It does the party making these criticisms very much good and makes him feel that he has discovered something that no one else has. The fact is that the present style of packing was adopted after very severe criticisms on the very style of packing which is now advocated in some quarters; that is, that the stems should be packed one above the other so that they show the exact quality of the fruit, size of the stem, and so forth, as they appear in the box. I notice that one of our San Francisco houses, in writing upon this subject lately, sustains the present style of packing, hiding the stems. Certainly a box so packed presents a much more inviting appearance than one packed so that the stems show.

#### Manner of Grading.

Perhaps no two packing houses in the State

grade exactly the same, and no one can present himself as authority on this subject; but the style adopted by us is: London Layers, layers and two grades of Loose Muscatel, with one now and then of a higher grade which we term Dehesa. It is claimed by some that we should have but one grade of layers, which should be London Layers, and that all not packed in layers should be taken from the stems and graded in a Loose Muscatel, making two grades, which they would do by using a mill for assorting, as it is perfectly honest in its work.

## Facing.

It is becoming common to face Loose Muscatels, by which is meant laying the top of a box over with raisins in some design—straight rows, circles, or the form of some object, adding a coat of about 12½ cents per box, but making the fruit present a much more attractive appearance and sell for enough more in the market to pay for the extra work, besides the satisfaction of feeling that the goods are placed upon the market in a more creditable shape.

I cannot close this essay without making some little apology for the crude condition in which I am compelled to present it. The press of important business has rendered it impossible for me to prepare it as I should have liked, but I submit it in the hope that you will take this fact into consideration and be lenient in your judgment of its merits.

## National Temperance Instruction.

The following is the text of a bill which passed the Senate, unanimously, was adopted in the House by a vote of 203 to 8, and was signed by the President May 21st:

## A Bill

To provide for the study of the nature of alcoholic drinks and narcotics, and of their effects upon the human system, in connection with the several divisions of the subject of physiology and hygiene, by the pupils in the public schools of the Territories and of the District of Columbia, and in the Military and Naval Academies, and Indian and colored schools in the Territories of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled,

That the nature of alcoholic drinks and narcotics, and special instruction as to their effects upon the human system, in connection with the several divisions of the subject of physiology and hygiene, shall be included in the branches of study taught in the common or public schools, and in the Military and Naval Schools, and shall be studied and taught as thoroughly and in the same manner as other like required branches are in said schools, by the use of text books in the hands of pupils where other branches are thus studied in said schools, and by all pupils in said schools throughout the Territories, in the Military and Naval Academies of the United States, and in the District of Columbia, and in all Indian and colored schools in the Territories of the United States.

Section 2. That it shall be the duty of the proper officers in control of any school described in the foregoing section to enforce the provisions of this act; and any such officer, school director, committee, superintendent or teacher who shall refuse or neglect to comply with the requirements of this act, or shall neglect or fail to make proper provisions for the instruction required, and in the manner specified by the first section of this act, for all pupils in each and every school in his jurisdiction, shall be removed from office, and the vacancy filled as in other cases.

Section 3. That no certificate shall be granted to any person to teach in the public schools of the District of Columbia or Territories after the first day of January, Anno Domini eighteen hundred and eighty-eight, who has not passed a satisfactory examination in physiology and hygiene, with special reference to the nature and effects of alcoholic drinks and other narcotics upon the human system.

Section 4. That this act shall take effect on its passage.

UNCLE SAM NOT TO PAY FOR THE DRINKS.—On the 2d instant, the House being in Committee of the Whole, the General Deficiency bill was read for amendments. The clause making an appropriation of \$363 for the deficiency in the expense account of the Board of Visitors to the Naval Academy in June, 1885, having been reached, Barnes of Missouri sent to the Clerk's desk and had read a voucher submitted by the disbursing officer at Annapolis giving an itemized statement of the expenses incurred. The Clerk read a long list of eatables and drinkables, including turtles, spring chickens, old chickens, eggs, squash, beer, cognac, Santa Cruz rum and apollinaris. Dingley of Maine offered an amendment providing that none of this sum or other appropriation made by Congress for the expenses of the Board of Visitors shall be used to pay for intoxicating liquors. The amendment was adopted—79 to 49.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we look positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## GOOD HEALTH.

## Food.

Our bodies are made of what we eat.

An article to be suitable for food must contain at least one of the elementary substances of which the body consists, and this must be capable of a ready separation from all other elements. The latter, if not poisonous, will be rejected from the system without harm.

The best kinds of food are such as contain the most of the bodily elements. Milk contains all, and is hence a perfect food.

A proper diet is such a combination of articles as together furnish all the elements in due proportion, while at the same time these articles please the taste and gratify our love of variety. Starvation would result in time if a single one of these elements were lacking. Not only must muscle, bone, etc., be provided for, but, still more, brain, nerve and every secretion.

The modern fancy for the whitest bread is at fault, for such bread is deficient in the elements that make brain, nerves and bones. Hence the tendency to nervous diseases, dyspepsia and decaying teeth. Absence of vegetable food gives rise to scurvy; the too exclusive use of animal food to gout.

But food must be digested. For this no less than five digestive fluids are secreted by appropriate glands—saliva, for starch and sugar; gastric juice, for flesh, fish, eggs, etc; bile and pancreatic juice, for fat, the latter also aiding in the digestion of starch; and the intestinal secretions, to complete the process. A deficiency in any one of these results in some form of dyspepsia.

The digested food must pass from the intestines into the circulation. Hence myriads of hungry mouths seize it from the former and pour it through countless minute vessels, which constantly unite and form larger, into the right side of the heart. Should these vessels be closed up by inflammation the body would waste away, however good the appetite and vigorous the digestion.

This imperfect blood does not, however, yet go into the full circulation, but passes round through the lungs with the venous blood and then into the left side of the heart, whence it is sent out into the arteries a pure fluid, rich in every element.

But the process of nutrition is not yet finished. Those sleepless workers, the ultimate cells, whether of brain, or bone, or muscle, or membrane, throwing off each moment the waste debris, take from the same arterial fluid each what it needs.—*Ex.*

INOCULABILITY OF YELLOW FEVER.—The Brazilian doctor whose discoveries in inoculation for yellow fever were recently alluded to in this column, according to the *London Lancet*, seems to have a rival in Havana. The *Lancet* says: Dr. Carlos Finlay, of Havana, has published the results of several experiments he has made on the inoculability of yellow fever. He performed the operation, or rather got it performed for him, by mosquitoes, which he caused first to sting a patient suffering from yellow fever and shortly afterward a healthy person who was to be (with his own consent, of course) the subject of the experiment. He found that the disease was only inoculable from the third to the sixth day. When two mosquitoes were employed, so that a double dose was given, the symptoms of the experimental disease were somewhat more severe than when only a single mosquito was used. Of 11 cases of inoculation, six were efficacious, one doubtful and four negative. The period of incubation varied from 5 to 14 days; the symptoms consisted of headache, pyrexia, injection, with sometimes an icteric tint of the conjunctiva, and in some cases albuminuria. The fever lasted, as in the ordinary form, from 5 to 21 days. The author believes that this method of producing artificial yellow fever will ultimately be found very valuable as a prophylactic against the natural and dangerous form of the disease.

STRANGELY POISONOUS LIZARDS.—The heloderma is the only poisonous lizard in the world, as far as known, and is confined to Mexico, Lower California and Arizona. The common name is the Gila monster. The poison comes from poison glands and the teeth are channeled to accelerate its passage into the wound. Brandy and whisky are generally antidotes to rattlesnake poison, but fail in the case of a bite from this reptile. The poison of the heloderma is entirely different from that of a snake. The latter kills by paralyzing the respiratory center, while the poison of the Gila monster paralyzes the heart. Experiments have been made showing that subcutaneous injections cause no local injury, while the action of the heart was seriously affected, becoming slowly contracted, while the spinal cord is paralyzed.—*Salt Lake Tribune.*

IMAGINARY ILLS.—A Philadelphia physician says that a great deal of what passes for heart disease is only mild dyspepsia; that nervousness commonly is bad temper, and that two-thirds of so-called malaria is nothing but laziness. Imagination, he says, is responsible for a multitude of ills; and he gives, as an instance, the case of a clergyman, who, after preaching a sermon, would take a teaspoonful of sweetened water and doze off like a babe, under the impression that it was a *bona fide* sedative.

## Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$11).....\$0 25
- 2.—World's Cyclopaedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the Rural Press, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 10.—March of Empire, by Mallie Stafford.....25
- 11.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 14.—Dewey's Patent Newspaper Fileholder (18 to 36 in.).....05
- 15.—European Vines Described, 68 pages.....05
- 19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
- 23.—Architecture Simplified, 60 pages.....15

Beautiful Poetic Review, entertaining and instructive, 35 pages (a handsome and pleasing present).....25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F. Send for any further information desired. Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
J. J. BARTLETT—San Joaquin Co.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
GEO. McDOWELL—Santa Clara and Santa Cruz Co's  
J. B. PATCH, Nevada and Utah.  
M. S. PRIME—Shasta Co.  
FRANK W. SMITH—Oregon and Wash. Ter.  
A. CALDERWOOD—Napa Co.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$500 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

## Fruit Drier on Exhibition.

One of the Meeker Sun Fruit Driers, with all the latest improvements suggested by the experience of last season, is now on exhibition at the factory, 5th and Bryant streets, on and after Monday, Jan. 25th.

As now arranged we consider it much the most perfect and economical of any of the various driers to which the attention of fruit-growers has been called. Its various productions are the perfection of purity and excellence, and at the same time the most economical in cost of production. Fruit-growers are invited to examine and test the drier and the fruit prepared in it. Those using this drier last season realized handsome profits on their fruit.

## Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all throat and lung affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send, free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Power's Block, Rochester, N. Y.

## Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; postage, 10 cents. Postpaid to subscribers of this paper, 60 cents. Send for illustrated circular. Agents wanted.

ARTIFICIAL WHALEBONE.—The scarcity of whales is seriously felt in reducing the supply of whalebone, which has advanced several times its price of a few years ago. To meet this deficiency several substitutes have recently been introduced; the latest is a mode of producing a substitute for the quills of geese and turkeys. A factory has recently been put in operation in Michigan to furnish the article.

WHAT NATURAL GAS HAS DONE.—Since the introduction of natural gas into Pittsburg, Pa., the output of the mills and factories has been increased 20 per cent, a large number of new plants have been erected, and nearly 10,000 additional men have been given employment.

## About Obtaining Patents.

## Patents are Virtually Contracts.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, in order that it may afford him complete protection for his invention during the life of his patent.

## Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive, for the small sum of \$5 for the examination, a verbal or written report showing definitely wherein his invention has been anticipated, thereby saving him further expense and perhaps much time, anxiety, etc.

To avoid all needless delay, however, and secure patents at the earliest moment practicable, inventors will do well to forward a model, drawing or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with \$15 as a first in payment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately and forwarded to the inventor for his signature. When he receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps.] When the patent is allowed the inventor will be duly notified, and on sending the final Government fee of \$20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretense of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give up a case so long as there is a chance of obtaining a patent. The Agency charge, including drawings, rarely exceeds \$40, and for this we do all we can without appealing the case.

## Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are more satisfactory to the Patent Office than the old cumbersome system of storing up an immense bulk of countless models.

Drawings or sketches, sufficient to illustrate the invention clearly, with a description that will enable us to make a full set of perfect drawings for the Patent Office, is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sale had it been skillfully, completely and artistically portrayed. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken to have the invention fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

## Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & CO. has edited and published the MINING AND SCIENTIFIC PRESS continuously since 1860, a period of 26 years. Few agents, who are still engaged in the business, have had so long-extended practice in patent soliciting. The members of the firm give personal attention to the applications entrusted to their care; and their familiarity with inventions and with local affairs in the Pacific States and Territories, enables them to understand the wants of inventors on this coast more readily and thoroughly, as we believe, than any other agents in America. Thus there is saved a great deal of the time which ordinarily—when distant agents are employed—is wasted in preliminary writing back and forth.

The happy-combination of long business experience together, and wide connections, has placed our firm in a position unquestionably most fortunate for affording inventors prompt and reliable advice, and the best facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention, in one or more of our influential and reliable newspapers, affording just the circulation best calculated to widely inform the class of readers especially interested in the subject of his invention.

## Caveats.

A caveat is a confidential communication made to the Patent Office, and is thereon filed with its secret archives. The privilege secured under a caveat is, that it entitles the inventor to receive notice, for a period of one year, of any application for a patent subsequently filed, which is adjudged to be novel and is likely to interfere with the invention described in the caveat, and the inventor is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from \$10 to \$25. The Government fee is \$10 additional.

To enable us to prepare caveat papers, we require only a sketch and description of the invention.

## Rejected Applications.

Inventors who have rejected cases (prepared either by themselves or for them by other agents) and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors doing business with us will be notified of the state of their application in the Patent Office whenever it is possible for us to furnish such information.

## DEWEY &amp; CO.

Patent Solicitors, Office of SCIENTIFIC PRESS, 252 Market St. Elevator entrance, No. 12 Front St., S. F.  
GEO. H. STRONG. W. E. EWER. A. T. DEWEY.

## Educational.

## MILLS SEMINARY.

The next term of this well-known Institution will commence on

Wednesday.....August 4, 1886.

For Circulars giving particulars, address

MRS. C. T. MILLS,  
Mills Seminary P. O., Alameda Co., Cal.

## IRVING INSTITUTE

A SELECT SCHOOL FOR YOUNG LADIES.—The next session will begin Monday, August 2, 1886. For catalogue or information address the Principal, Rev. EDWARD B. CHURCH, A. M., 1036 Valencia St., San Francisco, Cal.

VAN NESS SEMINARY  
San Francisco, Cal.

## A BOARDING AND DAY SCHOOL

—FOR—

Young Ladies and Children,  
1222 Pine St., San Francisco.

Thorough training in practical studies and accomplishments, and pleasant surroundings, are the principal advantages offered.

Fall Term Opens July 26, 1886.

For Catalogues and particulars, apply to MRS. S. B. GAMBLE, or MRS. E. H. WOOD.

REFERENCES.—Rt. Rev. W. I. Kip, Bishop of California; Rev. C. O. Tillotson, Santa Cruz; Hon. C. H. Hartson, Napa; John D. Yost, San Francisco; F. A. Hinn, Santa Cruz; E. J. Wilson, Vallejo; Capt. A. D. Wood, San Francisco; Eugene Sherwood, San Francisco.

## California Military Academy, Oakland, Cal.

Special Feature—Commercial Department. Next Term begins July 19, 1886. Send for circular.  
COL. W. H. O'BRIEN, Principal.

## PERRY SEMINARY,

Boarding and Day School,

1625 Telegraph Ave., Oakland, Cal.

MRS. HERMON PERRY, MISS KATE M. FULLER,  
PRINCIPALS.

Next Term will begin Monday, Aug. 2, '86

## MISS BISBEE'S SCHOOL

FOR YOUNG LADIES,

1020 OAK ST., - - OAKLAND,

WILL RE-OPEN

WEDNESDAY, JULY 28th, 1886.

## BOWENS ACADEMY,

BERKELEY, CAL.

First-Class Boarding School for Boys.

Preparatory, Commercial, and Academic Classes. Preparatory Department, \$30 per school month. Commercial and Academic Department, \$85 per school month. Next Term will begin Monday, August 2, 1886. Send for Circular.  
T. STEWART BOWENS, A. B., T. C. D., Principal.

## TRINITY SCHOOL,

1534 MISSION ST., SAN FRANCISCO.

CHRISTMAS TERM OPENS

Monday.....August 2, 1886

REV. E. B. SPALDING, Rector.

**HEALD'S BUSINESS COLLEGE,**  
24 Post St. S. F.  
Send for Circular.

## NAPA COLLEGE,

NAPA CITY, CAL.

Fall Session Will Open July 28, 1886.

Faculty Consists of 12 Members.

OPEN TO BOTH SEXES WITH

Classical, Philosophical, and Scientific Courses leading to the degrees of A. B., B. Ph., and B. S.

Preparatory Department Course in Music, Art, and Elocution.

THE SEVERAL DEPARTMENTS ARE IN CHARGE of teachers of experience and ability, chosen with special reference to their work.

The Commercial Department is well provided with facilities for acquiring a THOROUGH PRACTICAL BUSINESS EDUCATION.

Delightful climate, pleasant surroundings, with home on grounds where parents may know that their sons and daughters are carefully guarded, and under the direct supervision of the faculty.

For Catalogue or information, address

A. E. LASHER, President.

## HOPKINS ACADEMY.

OAKLAND, CAL.

REV. H. E. JEWETT, M. A., - Principal.

SIXTEENTH SCHOOL YEAR begins Tuesday morning, July 27th, 1886. Boarding and Day Scholars received. Send for Catalogue.

## SACKETT SCHOOL,

Oakland, - - - Alameda Co., Cal.

A Preparatory School for Young Men and Boys.

Next Term will commence on Monday, July 19, 1886.

Healthful location, pleasant home, and thorough School. Send for circular.

D. P. SACKETT, Principal.

## STOCKTON

Business Telegraph Institute and

NORMAL SCHOOL.

Open day and evening for both sexes. Expenses less than one-half the usual rates. Excellent board in private families from \$8 to \$10 per month. Address, for College Journal and Circulars, J. C. BAINBRIDGE, Principal, Stockton, Cal.

BROWNE'S  
SQUIRREL and GOPHER  
SMOKER.

\$100 Reward to any one who will produce one of equal merit at the same expense.

It is the Cheapest,

By more than one-half, of any other in the market.

EVERY ONE GUARANTEED, or money refunded. I am in every way responsible. Refer you to the Editor of this paper.

Circular mailed free to any address.

State, County and Shop Rights for Sale.

Address

F. E. BROWNE,

Los Angeles, Cal.

Patented March 23, 1886.

## A MAGIC CURE

—FOR—

Rheumatism, Neuralgia, Pneumonia, Paralysis, Asthma, Sciatica, Gout, Lumbago, and Deafness.

Everybody should have it.

G. G. BURNETT, Ag't

327 Montgomery St., S. F.

Price, \$1.00. Sold by all Drug

gists. Call and see

DR. CHAS. ROWELL

Office - 426 Kearny St.

San Francisco.

## VETERINARY SURGEON,

Late Veterinary Inspector of Cattle for the State of Kentucky.

Operative Surgery and Treatment of Chronic Lameness Specialties.

DR. S. B. SWIFT, - - San Jose, Cal.

## PINK EYE and DISTEMPER.

A Sure and Cheap Cure for Pink Eye and Distemper will be sent on receipt of 25 cents. Address

E. E. LOCKWOOD,

P. O. Box 86, Riverside,  
San Bernardino Co., Cal.

JULIUS WEYAND, breeder of pure-blooded Angora Goats, Little Stony, Colusa Co., Cal.

## THE WHITMAN PERPETUAL HAY PRESS

Write for Circular. I am Agent for this Press  
BYRON JACKSON,  
Manufacturer of  
HAY STACKERS, PAKES, THRESHERS, WINDMILLS, PUMPS, HARROWS, ETC.  
625 Sixth Street, San Francisco.

## READ THIS:

EL CAJON, CAL., August 1, 1885.

We have pressed 400 tons with our Whitman Hay Press. We have pressed from 8 to 14 tons a day; in grass hay, from 8 to 10 tons per day with ease; we have pressed in grain hay, 8 tons in 6 hours. In grain hay, bales run from 180 to 240 pounds; in grass hay, 125 to 190. We have pressed 190 pounds with 10 feeds, which the \* \* \* Press cannot do, as their feed box is smaller. Our bales are much smoother and more tightly than those made in the \* \* \* Press. We have averaged 15 tons a day in wild cut hay.

GREGG BROTHERS.

PRICE, \$40.

"ACME" WHEELED The Z. O. 50 P. C.

RAKE

Acme STACKER,

As shown above, with two rakes like this, \$175. The cheapest stacking outfit. Will stack, from swath, 49 or 50 tons per day.

BYRON JACKSON,

SAN FRANCISCO, CAL.

## ATTENTION, OLD HUNTERS!

## THE SLOTTERBEK SHOOTING SPECTACLES,

THE SIMPLEST, MOST PRACTICAL, AND BEST SHOOTING SPECTACLES EVER INVENTED. Indorsed by Capt. A. H. B'gardus, Champion of the world, and the best shots on this Coast, and by old hunters generally. Makes open-sighted rifle shooting more rapid and accurate than any globe or peep-sight ever invented. Price, \$2.00 per pair. Discount to the trade. Descriptive Circular, with Testimonials, free.

SLOTTERBEK & MCGRANEY, Lakeport, Cal.

—THE—  
MONARCH PRESS.

Puts 10 Tons in a Box Car.

Bales from 10 to 15 tons per day.

Any young man can earn more on an investment of \$600 in this press than can be earned in expending \$2000 for any other machine.

Sold on Easy Payments. Address

TRUMAN, ISHAM & HOOKER,  
SAN FRANCISCO, CAL.

WE SELL:

BALING ROPE,  
STEEL BALING TIES,  
BALING WIRE

AND THE CELEBRATED

HOLLOW IRON AXLE WAGONS.

These are unquestionably the BEST MADE and FASTEST Perpetual Presses, and are guaranteed superior to all others.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.

TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions:

To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President.

EDWIN F. SMITH, Sacramento.

## SEEDLINGS!

We will furnish all who desire first-class (Imported) French Seedling stocks of

PEAR, PLUM, CHERRY, Etc.,

For next season's planting, at the lowest possible rates.

All orders should be sent in by August 1st to insure early shipments. Correspondence solicited. Address

C. W. REED & CO.,

Box 161. Sacramento, Cal.

## The Latest Fashions.

## Ladies' Costume.

FIG. 1.—Since lace can now be obtained in all fashionable colors, and in inexpensive as well as costly varieties, the exclusiveness in which it has hitherto been kept has been entered by La Mode, and its use for and upon summer costumes has now become general. It is usually arranged over contrasting silk, satin or surah, and flouncings deep enough for full draperies are obtainable. The costume here illustrated is particularly elegant for lace, and is developed in black lace over colored silk, the lace being Kursheedt's Standard *Matelasse* Spanish *guipure* in flouncing, net and edging, the edging being used for trimming the neck and sleeves. The skirt is shaped so as to hang well over a long or short bustle, or without a bustle, and is of the popular four-gored style. A *balayuse* or fine knife-plaiting of the silk is the only decoration added to the skirt. The draperies are of the flouncing, and are so uniquely arranged that the scalloped edge of the lace is visible at all the loose edges. The front-drapery is laid in deep plaits at the belt and falls in straight folds to the edge of the skirt at the right side. At the left edge it also falls to about the same depth, and three up-turning plaits drape it at this edge, some distance in front of which and below the belt it is caught up in three loose plaits and caught to the skirt below an over-falling fullness, this draping raising it high in a very picturesque fashion. Below these loopings the drapery is caught together, and this completes the draping. At the back the drapery is deep and very full, and is arranged in two seamed *bourous* loops and in many overlapping plaits at the belt, the disposal causing the right side to fall in handsome *jabot* folds. The drapery overlaps the front-drapery at the right side, and several tackings are made to the skirt to retain it in permanent elegance.

The basque is of net over silk, and is superbly fitted by single bust-darts, under-arm and side-

Fig. 3. Ladies' Bonnet.

back gores and a curving center-seam; the side-back seams being left open below the waist-line, and a triple box-plait underfolded at the end of the center seam. Its fronts open in cutaway jacket style over a pouch or Fedora vest of the silk arranged upon smooth fitting vest-sections of lining that close down the center with button-holes and buttons and are attached to the fronts along the bust darts and above the darts. The vest is gathered at the top and bottom, bound at the bottom and under-faced at the top. The right front is extended in a narrow strap at the neck and fastened to the left front under a rosette-bow of ribbon, above which the ends of the standing collar meet. The collar is overlaid with a downward-turning row of lace edging. The sleeves are in coat shape and are shortened slightly; they are trimmed with revers-like cuffs of the silk and frills of the lace edging.

Wool, cotton and silk laces are equally stylish for such costumes, and the silk may be of any preferred hue. Black laces over black or colored silks are very elegant, and white and cream laces are beautiful for afternoon and evening wear. Tissues in all colors are also handsome over silk, and tulle in black and in light and delicate colors is used for very *recherche* costumes, and may be embroidered, studded with beads or perfectly plain. All varieties of seasonable dress goods are adapted to the mode, which in soft wool textures and summer silks is particularly beautiful.

The hat is a frame covered with silk, which is overlaid with the lace net. It is trimmed with ribbon and fancy plumeage.

## Girls' Dress.

FIG. 2.—White nainsook was chosen for the dress in this instance, and fine Italian lace is used for trimming. In front it has a yoke top and a full lower part, while at the back it shows the Princess effect. The material is here tucked for the yoke, and a frill of lace trims the yoke along the lower and arm's-eye edges. A narrow band finishes the neck, and inside it is sewed a frill of lace. The lower part of the

FIG. 1. LADIES' COSTUME.

front is gathered across the center of the top, and a cluster of shirrings is made at the waist-line and secured to a stay arranged under them.

A long dart removes all fullness under the arms, rendering the adjustment smooth and clinging; and the seams joining the front and back come

FIG. 2. GIRLS' DRESS.

quite far to the back and are prettily curved. The closing is made at the back with button-holes and buttons the full depth of the body, which reaches only a little below the hips, the requisite length being made by a full skirt portion, which is gathered to the lower edge. A broad belt section, pointed at the ends and curved prettily at the top and bottom, crosses the front a little beyond the darts, and its ends overlap and join the gathered ends of wide sashes, which are arranged in an immense bow at the back. The belt section is piped at all its edges and trimmed with a ruffle of lace. A piping and a ruffle of deeper lace trim the wrists of the coat-sleeves.

All kinds of cotton textures, including sateens, cambrics, ginghams, mulls, India and Swiss muslins, nainsooks, lawns, etc., also soft woollens, such as serges, nun's-veilings, summer flannels, etc., will be much used for such dresses. The yoke may be of tucked or embroidered material or of lace net, and the sashes may be of ribbon. Embroidery or lace may be ruffled on the skirt or it may be applied in one or several rows.

The pretty hat is simply trimmed with a scarf of crepe and ostrich plumeage.

## Ladies' Bonnet.

FIG. 3.—A *capote* with a tolerably broad brim is here shown. The crown is of black Spanish lace laid over white silk, while the brim is of fine black braid outlined with jet beads. In front are loops of black grosgrain and a rich cluster of flowers, consisting of white chrysanthemums, white roses and maidenhair ferns. This trims the bonnet elaborately, giving it an essentially dressy air. The ties are of black ribbon and start from among the flowers, come down each side and are caught in the usual way. If the ties prove uncomfortable in warm weather, a bridle of black lace could be substituted for them; and it would be quite in harmony with the decorations of the bonnet.

## Ladies' Hat.

FIG. 4.—This hat is decidedly suggestive of a poke bonnet and is of yellow straw. The broad

Fig. 4. Ladies' Hat.

brim is underfaced with dark green velvet, and a short distance from the edge is outlined with small yellow pearl beads. Grosgrain ribbon of the new green shade forms the chief decoration. It encircles the crown and is arranged in a four-looped bow just in front. At the back a band of it is drawn to one side of the crown, and terminates in a series of loops just where a cascade of Spanish lace begins, the latter coming down the crown close to the front and forming a unique and simple decoration. Any color preferred may be used instead of the green, which is particularly effective on the yellow straw.

**SHOOTING SPECTACLES.**—We call attention to the illustrated advertisement in this issue of the "Slotterbeck shooting spectacles," for which a patent was obtained through Dewey & Co.'s agency. By reference to the engraving in the advertisement, it will be seen that a diaphragm is placed in the corner of the glass through which one usually looks in taking aim. The object of this diaphragm is to arrest the stray rays of light which tend to blur the sights, and allows only a pure and direct ray to enter through the small hole, and thus offers a distinct image on the retina of the eye. It makes the sights and object aimed at very distinct; can be used on a bright day with no blur, and gives a large field of vision. Aim can be taken very quickly with them, as they are always in proper position. They also relieve the eye and enable one to shoot longer without weariness. The diaphragm does not interfere with the seeing qualities of the glasses, so they may be used for general purposes, reading, as well as hunting. The diaphragm acts as a distant glass, combined with reading glasses, makes a reading and distant spectacle in one. The manufacturers issue a circular giving many testimonials from excellent authorities.

The total value of all property in Sutter county, as shown by the assessment roll for 1886, is \$7,715,428. Of this amount \$6,442,157 is the value of all real estate, and \$1,273,271 the value of all personal property.

**WORKER FOUNDATION.**—In Mr. Muth-Rasmussen's article in the *RURAL* of June 26th, the types say "wooden foundation" in one place. It should read "worker foundation."

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### POULTRY.

**ALHAMBRA POULTRY YARDS**, J. J. Jones, Prop'r, Martinez, Cal., importer and breeder of the finest strains Wyandottes, P. Rocks, Langshans, Houdans, Crevecoeurs, W. Leghorns, L. Brahmas, Bronze Turkeys.

**E. C. CLAPP**, South Pasadena, Cal. Light Brahmas, Plymouth Rocks and Silver Spangled Hamburgs. Fowls and Eggs. Ex. and P. O. Money Order offices, Pasadena.

**JAS. T. BROWN**, 18 Georgia St., Los Angeles, Cal. Breeder of Thoroughbred Poultry of the leading varieties. Send for circular and price list.

**O. J. ALBEE**, Santa Clara, Cal., breeder of Langshans, Partridge Cochins, Pedigreed Scotch Collies, W. C. B. Polish, Wyandottes, B. Leghorns, B. B. R. G. Bantams.

**T. D. MORRIS**, Sonoma, Cal. Tuolouse and Embden Geese, Bronze and W. Holland Turkeys, and all leading varieties of Thoroughbred Poultry.

**CHOICE LAND AND WATER FOWLS** for sale at all times of all the most popular and profitable varieties. Please inclose stamp for new circular and price list to R. G. Head, Napa, Cal.

## CLEAR YOUR LAND WITH JUDSON POWDER.

**RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE**, by practical experience, found that the **JUDSON POWDER** especially; is the best adapted to REMOVE STUMPS AND TREES.

**FROM 5 TO 20 POUNDS OF THIS POWDER** will always bring any sized stump or tree with roots clear out of the ground. The **EXPENSE IS LESS THAN ONE-HALF** the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

**BANDMANN, NIELSEN & CO., General Agents**  
**GIANT POWDER COMPANY,**  
SAN FRANCISCO, CAL.

## Calf Feeders

AND  
**WEANERS**

For Rearing Stock by Hand.

Both Proved Successful and Indispensable.

**Funk's Calf Nipple** is just as important for calves as the nursing bottle is for children. The saliva fluid is necessary for proper digestion of the food, and without the Nipple the calf drinks too fast, takes the milk in bulk and causes bloating, scours and indigestion. The Feeder was invented to raise better calves with less trouble. No air swallowed, no fingers chewed, no ears sucked. It teaches the calf to feed from the pail without assistance. The Nipple always connects with the milk and the calf will soon wean itself. Price, 75 cents; post-paid, 85 cts.

## Rice's Patent Calf Weaner,

AND SUCKING-COW MUZZLE,

Prevents Calves and Cows Sucking Themselves or Each Other.

Habits most injurious to the animal and costly to the owner. It is no hindrance to either eating or drinking, does the animal no injury, has been thoroughly tested, is used and endorsed by the best stock raisers in the United States and England, approved of by the Royal Society for the Prevention of Cruelty to Animals, and acknowledged by all to be the best thing ever made for the purpose.

PRICES.—For Calves, 50 cents; post-paid, 55 cents. Yearlings, 75 cents; post-paid, 80 cents. Full-grown animals, \$1.00; post-paid, \$1.12.

## TEBBETS' IMPROVED MILK TUBE,

Has proved an entire success, for the relief and permanent cure of Garget, or stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Farmers are well aware that cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the Spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the result of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal. We guarantee them to be made of **CORRUGATED**. A single tube answers for an entire herd, and is cheap insurance against loss. Price, 75 cents each, post-paid.

## Edson's Cream Tester.

A DAIRYMAN'S PRACTICAL INVENTION.

Consists of a frame holding six glass tubes graduated at the sides of the glass so as to show the per cent of cream in freshly drawn milk. The frames are substantially made of wood, carefully graduated, and the glasses easily removed for cleaning. Actual tests prove that common or grade cows give equally as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to have common stock do this, they must be bred from deep and rich milkers, the bull as well as the heifer, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise bulls from. It is calculated that 30 pounds of milk will make one pound of butter, but instances have been known where 12 pounds made one of butter, thus showing that it is not the cow that gives the largest flow of milk that produces the most butter. It should be our aim to get a large flow of very rich milk. How should we do this? By testing our milk, and only keeping and raising stock from cows that give not less than 15 per cent, and it would be better to say 20 per cent of cream. By this method, you would soon have a dairy of cows that would be a pleasure as well as a profit to you. Price of Testers, \$1.00 each; Large Size, \$2.00. Address

**G. G. WICKSON & CO., 38 California St., San Francisco.**

## MERY'S IMPROVED PIONEER BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT!

This Mill has been in use on this Coast for 5 years, TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 200 of them in use in California, Nevada & Oregon.

It is the most economical and durable Feed Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

I thank the public for the kind patronage received thus far, and hope for a continuance of the same.

**M. L. MERY, CHICO IRON WORKS, Chico, Cal.**

## Headquarters for all Varieties of FANCY CHICKENS,

DUCKS, TURKEYS, GEESE, PEACOCKS, Etc.

Publisher of "Niles' Pacific Coast Poultry and Stock Book," a new book on subjects connected with successful poultry and stock raising on the Pacific Coast. Price, 50 cents, post-paid. Inclose stamp for information.

ALSO BREEDER OF

**Jersey & Holstein Cattle, and Hogs.**

Address, **WILLIAM NILES**, Los Angeles, Cal.

## INCUBATORS.

### THE PACIFIC INCUBATOR!

Awarded the Gold Medal at the State Fair, Sacramento, and at the Mechanics' Institute Fair of 1885 as the best machine made. It will hatch any kind of Eggs better than a Hen.

Send Stamp for Illustrated Circular to **GEORGE B. BAYLEY**, Manufacturer, 1317 Castro St., Oakland, Cal.

N. B.—A large line of Poultry Appliances, such as Wire Netting, Bone Mills, Chopping Machines, etc., for sale at the lowest rates. The Pacific Coast Poultryers' Hand Book and Guide; price 40c.

The Halsted Incubator Co. 1011 Broadway, Oakland, - - Cal. Price from \$20 up. Model Brooder from \$5 up. Thoroughbred Poultry and Eggs. Send for new Circulars containing much valuable information.

## SHEEP AND SHEEPWASH.

Recommended by Professors Hilgard, Cooke, etc.  
**Powdered Potash & Caustic Soda**

KILLS GOPHERS, INSECTS, Etc.  
Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to **T. W. JACKSON & CO.**, 304 California St., S. F.

Calvert's Carbolic  
**SHEEP WASH**  
\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. **T. W. JACKSON**, S. F., Sole Agent for Pacific Coast.

## THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

CHOICE  
**BUCKS and EWES**  
FOR SALE.

ORDERS PROMPTLY FILLED. Address  
**FRANK BULLARD**, Woodland, Cal.

## THOROUGHbred SPANISH MERINO SHEEP.

200 HEAD OF RAMS.  
Bred from Imports from the leading registered flocks of Vermont, offered at prices reduced to suit the times. The finest lot of Rams on the Pacific Coast. Ewes in lots to suit. **E. W. WOOLSEY & SON**, Fulton, Sonoma Co., Cal.

## LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to  
**\$1.25**  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip. It is superior to all Dips and Dressings for Scabs in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

**FALKNER, BELL & CO.,**  
San Francisco, Cal.

### FOR SALE.

## 40 head SPANISH MERINO BUCKS

Bred by Mr. J. H. Srobringer. Sired by his Imported Vermont Registered Buck, and out of his premium flock of breeding ewes.

TERMS REASONABLE.

ADDRESS

**MILO KNOX**,  
Haywards, Alameda Co., Cal.

## San Diego County! El Cajon Rancho!

16,500 acres, known as the Jarvis Tract, situated 13 miles from San Diego, surrounded by high hills, protected from winds and fogs—the most equable climate in the world—rich soil and lovely surroundings. Will be offered as a whole or in subdivisions, from 10 acres upward, at prices according to desirability, from \$10 to \$75 per acre, part cash, balance on time. The wonderful Raisins and Olives grown in this valley command the admiration of every one. Water from 6 to 12 feet. No irrigation, and Fruit and Raisins cured by solar heat. All the Semi-Tropical Fruits raised to perfection.

Also 1000 acres, the Smith Tract, adjoining, now in grain.

G. W. FRINK, General Manager Pacific Coast Land Bureau.

618 Market St., opp. Palace Hotel, and 15 & 17 Post St., San Francisco.

DR. JOSEPH JARVIS,  
Riverside, California.

San Diego, California.

## The American Churn

Excels in the art of Churning, Washing, Salting and Working Butter.

THE AMERICAN IS PERFECTLY CYLINDRICAL IN FORM, leaving no possible opportunity for cream to stick to corners (as is invariably the case with other than round churns); thus works easily, rapidly, and will not make streaked butter. There is no partially churned cream mixed with the butter to make it streaked or impair its keeping quality. The dasher follows the radius of churn body loosely while the blades give the cream a rapid counter-current to and fro movement, agitating the cream thoroughly and making granular gilt-edge butter in from 2 to 10 minutes.

TRY AN AMERICAN CHURN.

We Guarantee Satisfaction.

And will send on trial to responsible parties

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 14, 1886.

There is much of interest in the produce markets, as our long reports below will indicate. We give full information from local and distant points.

To-day's cable on wheat is not quite so encouraging.

LIVERPOOL, July 14.—WHEAT—Weaker. California spot lots, 65 5d to 68 8d; off coast, 25 9d; just shipped, 33s 6d; nearly due, 33s 6d; cargoes off coast and on passage, steady; quantity on passage to continent, 580,000 qrs.; Wheat and Flour on passage to U. K., 2,200,000 qrs.; weather in England, fine.

## Foreign Review.

LONDON, July 12.—The *Mark Lane Express* in its review of the British grain trade for the past week says: The weather is fine, favoring blossoming. Wheat trade is firmer. Sales of English wheat during the week were 29,821 quarters at 30s 9d, against 28,491 quarters at 33s 8d during the corresponding period of last year. Flour is very dull. There were 13 arrivals of wheat cargoes; 4 were sold and 3 withdrawn. There was almost nothing doing in trade forward. At to-day's market, wheat and flour were steady and prices unchanged.

## London Wool Market.

LONDON, July 10.—The following is a detailed statement of the wool sales to-day: Victoria—1600 bales, scoured, 10d@1s 8d; do locks and pieces, 9 1/2 d@1s 3 1/2 d; greasy, 6d@1s; do locks and pieces, 6 1/2 d@9d. New South Wales—4600 bales, scoured, 9d@1s 4d; do locks and pieces, 8d@1s 3 1/2 d; greasy, 7d@1s 1d; do locks and pieces, 5 1/2 d@8d; fleeces, 1s@1s 4d. South Australia—1200 bales, scoured, 9 1/2 d@1s 6 1/2 d; do locks and pieces, 9d@1s 3d; greasy, 6d@9d; do locks and pieces, 5 1/2 d@9d. Queensland—500 bales, scoured, 7 1/2 d@1s 7d; do locks and pieces, 1 1/2 d@1s 3d; greasy, 6d@8 1/2 d; do locks and pieces, 3d@9 1/2 d; fleeces, 1s@1s 4d. New Zealand—3400 bales, scoured, 10d@1s 2d; do locks and pieces, 8 1/2 d@1s 6d; greasy, 5d@1s 1d; do locks and pieces, 3 1/2 d@9d. Swan River—800 bales, scoured, 10d@1s 4 1/2 d; do locks and pieces, 10d@1s 1 1/2 d; greasy, 6 1/2 d@7d; do locks and pieces, 4 1/2 d@6 1/2 d. Tasmania—1100 bales, greasy, 10d@1s 3d; do locks and pieces, 3 1/2 d@10 1/2 d; fleece, 1 1/2 d@1s 1d. The sales aggregated 13,200 bales. There was a full attendance and prices were extremely firm.

LONDON, July 13.—At the wool sales yesterday there was a good attendance. The market was active and prices firm. Following are the sales in detail: Victoria—Sales, 3800 bales; scoured, 1s@1s 8d; do locks and pieces, 9 1/2 d@1s 3 1/2 d; greasy, 6d@1s; do locks and pieces, 6 1/2 d@9d. New South Wales—Sales, 2100 bales; scoured, 9d@1s 4d; do locks and pieces, 8d@1s 3 1/2 d; greasy, 7d@1s 1d; do locks and pieces, 5 1/2 d@8d. South Australia—Sales, 400 bales; scoured, 9d@1s 6 1/2 d; do locks and pieces, 9d@1s 3d; greasy, 6d@9d; do locks and pieces, 5 1/2 d@9d. Queensland—Sales, 200 bales; scoured, 9 1/2 d@1s 7d; do locks and pieces, 1 1/2 d@1s 3d; greasy, 6d@8 1/2 d; do locks and pieces, 3d@9 1/2 d. New Zealand—Sales, 600 bales; scoured, 10d@1s 1 1/2 d; do locks and pieces, 8 1/2 d@1s; greasy, 5d@1s 1d; do locks and pieces, 3 1/2 d@9 1/2 d.

## London Agricultural Seed Trade.

[Reported by JOHN SHAW & SONS, Seed Merchants.]

MONDAY, June 28, 1886.

Messrs. John Shaw & Sons, seed merchants, of 37 Mark Lane, E. C., write that the seed market, as usual at this season, was thinly attended, and in fact, presented quite a holiday appearance. Cloverseed of all descriptions consequently exhibit no change in value. No business of importance has as yet passed in new French Trifolium; buyers require lower rates before they will operate. The demand for mustard and rapeseed continues small, on former terms. Less money is taken for hemp seed; but canary remains without alteration. There is a firmer feeling for feeding linseed.

## New York Wheat Market.

NEW YORK, July 11.—The wheat market ended firm, a shade under the best points, but 3/4@5/8 cents above Friday's final quotations, as follows: August, 88 1/2 cents; September, 89 1/2; October, 90 1/2; November, 91 1/2; December, 92 1/2; and January, 93 1/2.

## New York Hop Market.

NEW YORK, July 9.—There is intense excitement in the hop market here, over the reported condition of the crops. California dealers are jubilant, believing that they see an opportunity of placing Pacific Coast hops on the market on more favorable terms. At first many dealers were inclined to regard the reports as exaggerated, believing they were made for the purpose of raising prices. Later dispatches have fully confirmed the first reports, however, and it is believed if one-third of the crop is harvested this year, growers may consider themselves well off. Sales at 18@19c are already reported, and predictions are made of 25c at the end of the week. Unless evil falls to the lot of English or German growers, or those of the Pacific Coast, the failure of the New York crop will not create a famine.

UTICA (N. Y.), July 9.—Reports from Montgomery county to the *Herald* show that the hop crop in that county will be almost a total failure. Many growers say that it will not pay to pick the vines. They are confident that good hops will command 25c or more.

NEW YORK, July 11.—There is no abatement in the strong tone of the market. Hops of good flavor and body are virtually held out of the market, although there is a brisk demand for them. Other grades, except decidedly poor stock, are selling in a moderate way at full prices. No change in the weather has taken place that would improve the crop prospects in this State to the slightest degree, and dealers are already beginning to look to the Pacific Coast for choice goods of 1886 growth. Brewers are somewhat anxious buyers, but dealers outbid them as a rule, and, as a consequence, values generally slip away before brewers make up their minds what to do. Private cables quote American

hops at 56@57 shillings, as to quality, but state that English hops are no higher in view of the favorable appearance of the home crop. The Pacific Coast crop of 1885, common to choice, 15 to 20 cents.

NEW YORK, July 13.—A strong speculative movement is still visible in the hop market, and prices have rapidly advanced. Brewers who but a fortnight ago would not purchase at 15c, are now paying 23@25c in the interior.

NEW YORK, July 14.—The upward movement in hops is still progressing. Brewers yesterday paid 25@28c for the best quality of State. Private cablegrams from London state that American in that market has risen to 78s per cwt. against 45s not long since. Some contracts for Pacific Coast hops of the 1886 crop have been made on the basis of 27 1/2 c delivered here.

## Eastern Wool Markets.

NEW YORK, July 9.—Wool is fairly active and firm. Domestic fleeces, 27@36c @ 1b; pulled, 14@33c; Texas, 9@22c.

PHILADELPHIA, July 9.—Wool is firm with light stocks. Ohio, Pennsylvania and West Virginia, 34@37c @ 1b; New York, Michigan, Indiana and Western fine X and XX, 30@32; washed combing and delaine, 34@38c; tub-washed, 35@38c; medium unwashed combing and delaine, 27@28c; coarse do, 27@28c; Valley Oregon, medium, 24@25c.

BOSTON, July 9.—Wool is strong and higher. Ohio and Pennsylvania fleeces, 33@37 1/2 c @ 1b; Michigan and Wisconsin X and above, 32@33 1/2 c; Michigan No. 1, 35@36 1/2 c; Ohio delaine, fine, 36@37c; unwashed wools, 20@27c; pulled, 27@40c.

NEW YORK, July 11.—There has been little change in the market. Owners are apparently indifferent about doing business except at the advance many of them can now obtain. Buyers complain of the full and increasing cost, but those who can use wool soon are investing when they can find a suitable assortment. Manufacturers are now generally represented in the market, and the improvement in prices seems to have come to stay. Boston dealers are giving more attention to selling than to buying, but manufacturers are not free buyers at quotations and are generally cautious. The business last week, however, was heavy, with prices marked up on some descriptions. Among the sales were 512,000 pounds California spring and Oregon at 23 to 23 1/2 cents. The Philadelphia market is very strong, with an upward tendency. Some sales show an improvement of one-half to 1 cent over last week, but generally the market is not that much higher. Holders are indifferent about realizing except at full prices. Among the sales were 150,000 pounds California at 21 to 22 1/2 cents; 200,000 pounds territory fine medium at 23 cents; 20,000 pounds Nevada fine at 20 cents; 4000 pounds territory medium at 24 cents; 2000 pounds territory medium at 25 cents, and 7000 pounds territory medium at 23 cents.

NEW YORK, July 13.—Wool is in good demand and prices are firm. Domestic fleeces are quoted at 27@36c; pulled wools, 14@33c; Texas, 9@22c.

## Chicago Fruit Market.

[By telegraph to the Fruit Union.]

CHICAGO, July 13.—Early Crawford Peaches are selling at \$2.00, \$2.25, and \$2.50. Fountainbleau grapes selling slow at \$2.25 and \$2.50. Hale's early peaches arriving in poor condition, and selling at \$1.50, \$1.75, and \$2.00. Plums selling for from \$2.00 to \$2.50. Bartlett Pears selling for \$3.50, \$3.75, and \$4.00. Apricots arrive in very bad condition—the weather being very warm and muggy, makes it very hard on fruit.

PORTER BROS. CO.

## Local Markets.

BAGS—The latest on bags come by telegraph this afternoon, as follows:

NEW YORK, July 14.—“The only feature of freight shipments to the Pacific Coast just now,” said a railroad man to your correspondent this morning, “is the enormous quantity of bagging going forward. It has been represented to us that a syndicate was formed in San Francisco for the purpose of locking up all bagging material in California in view of the unprecedented wheat crop. They have evidently exhausted the supply out there, for hundreds of tons are being shipped from the East, and if I am not mistaken, bagging is being imported from England and Scotland at a very low cost, for the purpose of breaking the syndicate above mentioned. The Union Pacific road alone has now 250 tons bagging or about 25 carloads en route to Portland, Or.”

CORN—Corn is scarce and higher.

DAIRY PRODUCE—The market is not over strong, but quotations are unchanged.

BARLEY—Barley is advancing. To-day's call sales were as follows: Buyer 1886, after August 1st, 200 tons, 89 1/2 c; 200, 89 1/2 c. Seller 1886, 200 tons, 83c; 200, 83 1/2 c; 400, 83 1/2 c; 200, 83 1/2 c per cwt.

FEED—Hay is arriving in large quantities and is lower at the following range: Alfalfa, \$6@9; barley, \$5@8; oat, \$7@9; wheat, \$6@12, 50 @ 100.

FRUIT—Full notes are given below and prices in our table.

HOPS—Hops have been reported as contracted up to 27 1/2 c per lb.

OATS—Oats have taken a sharp advance and holders are firm. Prices have been quoted up to \$1.70 for the best.

WHEAT—Wheat is a shade higher with a moderate trade. To-day's call sales were: Buyer season—200 tons, \$1.32; 1300, \$1.32 1/2; 2100, \$1.32 1/2. Buyer 1886—300 tons, \$1.28 1/2; 200, \$1.28 1/2. Seller 1886—100 tons, \$1.21 1/2; 1500, \$1.22; 2000, \$1.22 1/2. Buyer 1886—400 tons, \$1.28 1/2. Seller 1886—2000 tons, \$1.22 1/2 cwt.

WOOL—Wool is still advancing as shown below.

[COMMUNICATED.]

## Market Information.

## Cereals.

It is now authoritatively stated that the India wheat crop is over 38,000,000 bushels below last year's crop. The acreage seeded to wheat in England is below last year's acreage, while owing to cold weather in May and June the crop is from two to three weeks backward.

The visible supply of wheat at the East July 1st

was 35,464,480 bushels, against 48,196,667 at like date in 1884.

That the exaggerated crop report of this State did much to depress and lower the market abroad is shown by the following from the *London Miller*: “California is America's weakness in the wheat world, and is so especially at the present time.” As shown in an article in the *RURAL PRESS* of a recent date, the exaggerated report was made to advance the prices of bags so the pool could unload at high prices; but farmers not buying forced outside holders to sell, and the result is lower prices for farmers.

On July 1st the visible supply of wheat in the United States and Canada with the amount afloat, at that date, amounted to 52,323,665 bushels, against 64,962,625 at the like time in 1885.

On page 55 of this issue is a communication on the wheat crop and prospects in the United States and also in California.

Heavy shipments of wheat to Europe continue to be reported from the Atlantic seaports. The last three weeks in June they aggregated 7,611,612 bushels against 3,808,503 for the like time last year.

Oats have been advancing at a rapid rate under light stocks, light receipts and a good demand. Old choice feed has sold up to \$1.60, and some say even more. New oats have fetched \$1.30. Receipts of the latter are light.

Barley gained strength until an advance of from 2 1/2 to 5 cents per cental was established. The market closed strong with speculators, consumers and shippers buying.

Rye continues to rule dull, with sellers asking \$1.15 for good to choice.

The advance noted last week of one shilling per quarter for wheat cargoes for prompt shipment was maintained up to Saturday, when a decline of 6d was reported by private cables and confirmed by Beerbohn on Monday. Monday's and Tuesday's private cables gave a firm market, with 1d per cental advance in Liverpool spot. To-day's report quotes holders at an advance.

Our wheat market has ruled very strong throughout the week at from \$1.22 1/2 to \$1.25 per cental for No. 1 shipping, with one or two sales of straight lots of strictly No. 1 favorably situated at over \$1.25. Holders, as a rule, are very indifferent, and only advanced bids tempt them to sell, and then only in small lots. There are many farmers whose necessities compel them to sell, and these buyers take the advantage, if possible.

The following shows last year's crop of this State by reducing flour to wheat, on the theory that three centals of wheat make one barrel of flour:

	Tons.
Exports of flour July 1, '85, to July 1, '86, 1,096,693 bbls., equal to.....	164,504
Exports of wheat, like time.....	567,016
“ “ flour by rail.....	12,500
Total exports.....	744,020
Consumption, food and seed.....	350,000
Carried over July 1, 1886.....	77,973
Total.....	1,171,993
Deduct.....	Tons.
Flour from Oregon, 98,670 bbls.....	14,800
Wheat “.....	66,998
Total Oregon.....	81,798
Stock carried over July 1, '85.....	279,765
Total crop of 1885.....	810,430

## Vegetables.

Owing to their early maturing and superior quality over other kinds not fully ripe, Early Rose potatoes are in good demand for both shipping and home trade, and with only moderate receipts prices appreciated until extra choice fetched \$1.25 on the wharf in boxes. While choice sold at \$1.25, poor sold as low as 60 cts per 100 lbs. Garnet Chilis and Peerless remained steady but firm, with now and then sales at over 1 ct a pound from first hands.

Red onions have ruled weak throughout the week with some difficulty in getting over 50 cts on the wharf, but silverskins were strong at an advance; choice fetched 80 cts, and even 90 cts on the wharf.

Green okra, green peppers, cucumbers and tomatoes under free receipts have moved slow at lower prices. Rhubarb also sold for less money. The market closed heavy.

String beans and Summer squash have ruled steady. Receipts about equal the demand.

## Fruits.

The first consignment of whortleberries were sent in by Z. M. Biglow of Occidental to Thurston & Horton, and sold at 12 1/2 cts a pound. The first consignment of huckleberries came from L. Patterson, Occidental, to Eveleth & Nash, and sold at 20 cts a pound.

Blackberries sold to-day at \$3.50 to \$5.00 a chest. Watermelons and canteloupes come in sparingly and, consequently, these warm days, fetch good prices.

Figs, which were a drug for all of two weeks, suddenly started up on Thursday last, and on Monday sold as high as 90 cts for choice in large boxes. Yesterday they were weaker and to-day slightly lower.

Under lessening available supplies and strong demand, apricots steadily advanced until \$1.25 was readily obtained yesterday. Canners paid this price. The market was very strong to-day at full prices.

Choice apples and pears have been and continue to be very scarce. When received they fetch high figures; apples up to \$2.25 on the wharf. Pears might go very nearly as high, but this I cannot positively affirm, as no choice has sought this market yet. The market is quick for all coming in, at from 60 cts to \$1.50 per box for poor to good pears, and 50 cts to \$2 and \$2.25 for poor cooking to choice eating apples.

Peaches have commanded full prices throughout the week, with Early Crawfords selling on the wharf at \$1 to \$1.25 a basket, and in some instances even higher. Common varieties had a wide range from 60 to 90 cts, and in some instances at over \$1. The supply seeking this market is less than last year, and consequently prices hold up well.

Currants are going out, with receipts light and prices higher. The advance this week has been fully \$1 a chest. The range of the market is \$4.50

to \$5, with sales in a retail way up to \$6. The high prices curtail consumption.

Strawberries and blackberries have held to steady but low prices, but now and then sell up to \$7 a chest. But raspberries fluctuated. On Monday they sold at from \$9 to \$12 a chest, yesterday, \$2 lower, and to-day still lower.

Grapes coming in are poor, and, therefore, do not command attention; but as large quantities of empty boxes for packing are being sent to growers, it is quite possible that heavy receipts will begin to come forward next week.

Plums have ruled fairly steady, but at times concessions had to be made to clean up consignments.

## Dairy Product.

Fair to good butter is in oversupply, necessitating concessions to effect sales, which lessens the demand for choice to gilt-edged, compelling the lowering of the latter, so as to keep the market well in hand. There is a very light call for pickled and packed.

Cheese is held firm by dealers advising light shipments. Stocks, under light receipts, have been reduced, but as the supply to come forward is very heavy, with the East sending in considerable, dealers are slow in attempting other advances, for if prices get too high, we will be flooded by heavy shipments of Western cheese.

Eggs have ruled weak under heavy supplies from the East. The price of fair to good is lower, but strictly choice near-by ranch eggs command 24 to 25 cts, with jobbing sales from stores at a slight advance. The consumptive demand runs chiefly on the cheaper kinds, and therefore drags down choice.

Poultry has ruled very strong, owing to light receipts and strong competition in buying, by reason of a larger consumption. It is thought by dealers that farmers are holding back fowls under the impression that prices will be higher next month when the G. A. R. meets. If all hold back and send in, their prices will be apt to rule low in August.

## Bags.

The persistent efforts of the *RURAL PRESS* to break the bag pool is shown in continued sales of Calcutta bags by outside holders at from 8 to 9 cts. On Tuesday an auction sale of 134,000 Calcutta bags was held, and the following cash sales made: 25,000@77.75; 45,000@77.60 and 10,000 local make \$7.70. The balance was withdrawn, as the bidding was slow and lifeless.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	325,355	203,005
In port, disengaged.....	30,022	103,924
In port, engaged.....	41,516	17,788
Totals.....	396,893	324,717

The above gives a carrying capacity as follows: 1886, 634,932 short tons; 1885, 518,547 short tons. Increase over last year, 116,385.

Hams and Bacon were advanced the past week 1/2 ct a pound.

There is a strong selling pressure on honey, which causes buyers to be timid and bid down.

Hay has ruled steadier, with a strong tone for choice to extra choice.

Wheat charters are weak and lower. An iron vessel on spot was taken to load wheat at 34s U. K. Havre or Antwerp, which is 1s lower than the last spot charter.

Sterling exchange is lower, which is against wheat bills.

Another drop in silver this week. The price now is 43 13-16d per ounce. The decline allows English wheat buyers to pay for their purchases in India just so much less.

## Livestock.

Beef cattle are strong at an advance, with bullocks that cut to advantage given the preference. Mutton and Lambs are very strong at last week's advance. A persistent effort is being made to depress Hogs, but with Hams and Bacon advancing, are liable to prove a failure. The offerings in the market are not heavy. The horse market is unchanged, although there appears to be more inquiry for single footers and also general utility horses—the latter to match.

Another advance in Mutton and Sheep is liable to take place next week. The following are to-day's meat prices: Beef—Stall fed 7 1/4 @ 7 1/2 c @ 1b; grass fed, extra, 6 1/2 @ 7c; first quality, 6 1/4 @ 6 1/2 c; second, 5 1/2 @ 6c; third, 4 1/2 @ 5 1/4 c. Calves, small, 8 @ 9c; larger, 6 1/2 @ 7 1/2 c; @ 1b. Mutton—Ewes, 4 1/2 c; wethers, 4 @ 5c. Lamb—Spring, 6 @ 6 1/2 c @ 1b. Pork—Live hogs on foot, 4 @ 4 1/2 c for both grain and dairy fed; 2 1/2 @ 2 3/4 c for soft; dressed, 6 @ 7c for hard, and 4 @ 5c for soft. Grass-fed stock sold on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

The *Grocer and Country Merchant* of July 9 contains the following sale of livestock for the week as follows: San Francisco Stock Yards.—793 cattle (large); fat, \$36.50; 836 cattle (medium); good condition, \$32.00; 784 calves, \$37.50, \$4.25, \$8.00, \$12.50, \$14.75; 5870 sheep, \$2.00, \$2.25, \$2.50, \$3.00, \$3.25; 3118 lambs, \$1.25, \$1.50, \$1.65, \$1.75, \$2.00, \$2.75; 2346 hogs, 3c, 3 1/2 c, 3 3/4 c, 4c. Oakland Stock Yards.—241 cattle (large; fine condition), \$35.50; 156 cattle (medium; fine condition), \$31.75; 218 calves, \$3.50, \$4.50, \$5.00, \$6.00, \$8.00, \$10.00, \$14.50; 949 sheep, \$1.75, \$2.00, \$2.25, \$2.50, \$3.00, \$3.25; 520 lambs, \$1.25, \$1.50, \$2.00, \$2.25; 245 hogs, 3c, 3 1/2 c, 3 3/4 c, 4c.

## Hops.

The market has had quite a boom, although it is now quiet. A parcel of No. 1, of 1885, not choice, was sold last week at 12 1/2 cts and on Monday resold at 17 1/2 cts. It is said that a parcel of choice '85 was sold the same day at 20 cts for shipping to the East. New crop has been contracted up to 25 cts for choice. Growers are now slow in naming a figure, fearing that buyers will pick them up. Over half the crop is said to be sold and contracts drawn.

## Wool.

The market is very strong, at still higher prices. Sales of choice Oregon have been made at 27 cts and choice Northern California at 25 to 26 cts. Other grades are proportionately higher. The stock on hand is well cleaned up, with all received quickly taken by buyers.

San Francisco, July 14, 1886.

J. R. F.

**CANALS VS. RAILROADS.**—A general but erroneous notion that the day of canals has passed, that they have been superseded by railroads, is vigorously combated by Horatio Seymour, Jr., in a pamphlet called "The Canal Age." He shows that railways never have carried freight as cheaply as canals, and probably never can; that the Erie canal, far from being a tax, is a profitable investment for the State; that Germany, Austria, Russia, England and other countries are rapidly extending their canal systems; and that in the extent of our water routes this country is relatively far behind Europe. Thus, France is engaged on four great waterways, for which \$200,000,000 have been appropriated, and which will cost much more; Germany and Russia are constructing a canal from the Baltic to the North sea; England is making canals from London to Liverpool and Bristol, and from Manchester to Liverpool; while Canada is spending \$1,000,000 to improve the Welland canal.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING JULY 6, 1886.

344,892.—ROCK DRILL—C. O. Barlow, S. F.	
344,896.—TRIGGER ATTACHMENT FOR DOUBLE GUNS—C. E. Burgans, Oakland, Cal.	
344,950.—DISK SEEDER—B. C. Dorsey, Portersville, Cal.

 Sixth District—Los Angeles, Santa Barbara, Ventura, San Diego, San Bernardino and Inyo counties—Los Angeles, Oct. 11th to 16th.  
 Santa Barbara Agricultural, October 5th to 8th.

## Boys and Girls' Aid Society.

We have received from E. T. Dooley, superintendent, a circular showing the work of the last year and alluding to the needs of the institution. The society rescues homeless, neglected or abused children of California; receives "juvenile offenders" (by legal commitment or otherwise) who are in danger of being imprisoned; provides for such until suitable homes or employment and oversight are found for them, and continues a systematic attention to their condition and treatment. The society has now moved to the new building of which we recently gave an engraving in the RURAL, and which was donated by James G. Fair and Charles Crocker. It is beautifully situated, nearly opposite main entrance of Golden Gate Park. Mr. Dooley says the new building has only enlarged the opportunities; current expenses are increased thereby and must be met. He asks contributions of money, clothing, etc. During the last year they have received and placed in good homes 323 children; 6650 garments were given; 15,334 lodgings furnished and 49,168 meals given.

## Take a Receipt.

ALWAYS TAKE A RECEIPT from a newspaper agent. Not simply because a few out of many are tricky or careless, but because accidents will sometimes happen to the best of business men. It is a favor due to the publisher that every subscriber shall take a receipt from the agent, or clerk whom they pay. All our receipts have a corresponding stub which agents are accountable for and are required to return.

MULLER'S success dates over a quarter century. Optical Depot of the Pacific Coast, 135 Montgomery St., near Bush.

PARTIES VISITING SAN FRANCISCO WILL FIND first-class accommodations much under hotel rates at 1018 Sutter St.; private family. MRS. A. M. TIRRELL.

## To Young Men and Young Women.

All competent boys and girls should prepare themselves for usefulness in business if they wish to "step up higher." We have for sale to such, on easy and favorable terms, a scholarship in one of the best business colleges in the U. S. Address this office.

## FRUIT FOR EASTERN SHIPMENT

SAN FRANCISCO, July 13, 1886.

## MEMBERS CALIFORNIA FRUIT UNION:

Send your Fruits for Eastern shipment in lots of 10 boxes, or more, to GENERAL MANAGER L. W. BUCK, at Sacramento, Cal., who will see to forwarding it direct in car lots to our agents. Our Union has shipped 64 cars of Fruit to date. We can run trains as soon as you will furnish the Fruit. The machinery is all in working order. All that is now needed is the Fruit from each one.

A. T. HATCH, President.

OFFICE CALIFORNIA FRUIT UNION, 507 Montgomery St., S. F.

## A Fine Shorthorn.

We give on this page a good portrait of a very beautiful and well-bred Shorthorn cow, Roxanna's Rose 2d, owned by W. P. Higinbotham, Manhattan, Kansas. She is the offspring of a blend of the blood of the celebrated Red Rose family of Young Marys with the even more famed Josephines. Imported Josephine was a very fine show cow and a successful prize winner. She was purchased in 1836 of her breeder, Mr. Jonas Whitaker, of Grunhome, Yorkshire, England, by Felix Renick, of Ohio, when less than one year old, and imported to Ohio in that year, where she remained his property as long as she lived. The pedigree of this noted cow excites the admiration of the most fastidious admirer of Collings and Bates' most fashionable blood—for it is only the concentration of the blood of Favorite (252).

The sire of the noted cow Josephine—Norfolk (2377)—was sired by the famous Red Rose bull 24 Hubback (1423), which Mr. Bates used so freely upon his Duchesses, and doubled him upon some of his best. 2d Hubback was full of the blood of Favorite (252). Norfolk's dam was the produce of a full brother and sister, and all of the crosses in them for several generations each way were Favorite's sons and grandsons, and then the pedigree finally ends with Favorite (252) and Hubback (319), for direct crosses to still increase the depth of in and in-breeding, and that too of as good blood as is recorded in the English herdbooks. Imported Josephine's descendants were owned and bred for a number of years by the distinguished breeders, James and Abram Renick, and by these gentlemen greatly prized for individual merit, they being possessed of fine form, good style and robust constitution.

The intervening sire's dams between Josephine and Roxanna's Rose 2d were nearly all bred by the Hamiltons, of Flat Creek, and the Renicks. Her sire was Rose Duke 2d, of Clark's Young Mary tribe, got by 4th Duke of Geneva 7931 (the sire of the \$12,000 2d Duke of Oneida and the \$10,000 7th Duke of Oneida), out of Red Rose 5th by Duke of Argyll 5539; Red Rose 2d (vol. 14) by Clarendon 2634; Red Rose by Pearl 2012, etc. He was bred by B. F. Van Meter. Roxanna's Rose 2d, as shown in the engraving, is described as presenting the form and outline of what all would concede to be a thoroughly good Shorthorn cow. She weighs, in good condition, about 1500 pounds, is a regular breeder, easy keeper, and of an unusually gentle disposition.

GRASSHOPPERS have made their appearance in the Umpqua valley, Oregon.

## Potash From the Eucalyptus.

It may be that some of our readers may desire to stop the eucalyptus from killing their trees and set them to work killing bugs. This may be done by chopping them down and turning them into potash, or rather extracting the potash from their cremation. Baron Von Mueller, Government Botanist of Victoria, states that the woods of the Casuarinas, or she-

mass represents crude potash, more or less impure, according to the nature of the wood employed. A final heating in rough furnaces is needed to expel sulphur combinations, water and empyreumatic substances; also to decompose coloring principles. Thus pearl ash is obtained. Pure carbonate of potassa in crude potash varies from 40 to 80 per cent.

Of course there are few people in this State who would be in a situation to make commercial potash, and those who desire to extract the

## Fine Cuthbert Raspberries.

Mr. W. O. Emerson recently brought us in a beautiful sample of Cuthbert raspberries grown at Haywards, in the garden of the late George F. Crowell, now carried on by his widow. Mr. Emerson called it "a good average box." We found the fruit no less delicious in the eating than it was superb in appearance.

Learning that Mr. E. was a stepson of Mr.

Crowell, and personally interested in caring for the berries, we were glad to catch some notes of his experience in their cultivation. The original plants were obtained in 1880. They must, of course, have plenty of water, and are found to do better if set in an orchard, alternating with or in double rows between the trees. This arrangement gives the shade which is desirable to insure the finest growth, that is, not too rapid. Mr. Emerson runs a ditch between the rows, and wets them thoroughly twice in the season.

The bushes were formerly mulched with old stablemanure; but this has not been used for two years past. There have been some signs of insect depredation on the leaves this spring for the first time. Mr. E. has not yet satisfied himself whether these are due to slugs from adjoining pear trees or to some other source. The only insect he considers dangerous to the raspberry is the currant borer, which likes to begin in the roots and follow the pith up the canes, cleaning it out as he goes. But the

irrigating already mentioned seems enough to keep this nuisance away.

The canes have made as much as nine feet in a season. Such luxuriant shooters, however, are cut back in February to about four feet. The season's growth usually gives a crop, so that they may be said to yield semi-annually. For the sake of seeing what they were capable of, as to continuance in bearing, a little patch near the house was kept last year. From this, on heavy adobe, untrimmed, uncultivated and unirrigated, they had fruit at Thanksgiving, at Christmas and on Washington's birthday.

For firmness and size, as well as duration of crop, the Cuthbert raspberry is unsurpassed. Unlike the Antwerp, they bear travel excellently and are reshipped by San Francisco commission men to the interior of the State. As evidence of their acknowledged superiority Mr. Emerson cited the fact that in the middle of June, when ordinary berries were bringing but 30 or 40 cents, these commanded 50 to 60 cents a drawer. In packing for market he has not been much given to "capping," but has preferred to let the top layers fairly indicate the quality throughout.

SHORTHORN COW ROXANNA'S ROSE 2d, OWNED BY WM. P. HIGINBOTHAM, MANHATTAN, KAN.

oaks, as well as those of the black or silver wattle, are somewhat richer than the wood of the British oak, but far richer than the ordinary pine woods. The stems of the Victorian blue gum and the so-called swamp tea-tree (*Melaleuca ericifolia*) yield about as much potash as European beech. The foliage of the blue gum proved particularly rich in this alkali.

In case some of our readers may desire to experiment with the derivation of alkali from any waste wood they have at hand, we give Baron Von Mueller's prescription, as follows:

The wood, bark, branches and foliage are burnt in pits sunk three feet or four feet in the ground; the incineration is continued until the pit is almost filled with ashes. Young branches and leaves are usually much richer in potash than the stem wood; hence, they should not be rejected. The ashes thus obtained are placed in tubs or casks on straw over a false bottom. Cold water, in moderate quantities, is poured over the ashes, and the first strong potash liquid removed for evaporation in flat iron vessels, while the weaker fluid is used for the lixivation of fresh ashes. While the evaporation proceeds, fresh portions of strong liquid are added until the concentrated boiling fluid assumes a rather thicker consistency. At last, with mild heat and final constant stirring, the whole is evaporated to dryness. This dried

alkali to use in fruit tree washes have but to reduce the trees to ashes and then leach out the lye, being careful to learn by experiment not to apply it too strong.

TULARE WHEAT.—Mr. T. Bacigalupi, one day last week, showed us a bunch of Propo wheat, of which he was pardonably proud, as a sample of what grows in his fields west of Tipton. The heads varied from 6 to 9½ inches in length. Mr. B. has been running a 12-mile ditch from the junction of Tule river and Elk bayou to lands owned by himself, Thomas Creighton and others nearer the lake. The capacity he states to be 600 cubic feet per second during the irrigating season—say from January 1st to August 1st. Land on the line of this ditch can be had for from \$12 to \$25 per acre. The soil there is mostly a dark alluvium, highly productive, on which alfalfa, wheat and various deciduous fruits have thriven finely.

At the recent picking of the ostriches on the farm near Norwalk, 50 pounds of feathers were obtained, worth \$160 per pound, or \$8000 for the pick. The birds are picked once in about six to seven months, and are doing well.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Sierra Madre.

EDITORS PRESS:—Along the foothills of the Sierra Madre, in the San Gabriel valley, lies one of the most charming little towns in all Southern California. Five years ago it was part of the famous Santa Anita ranch, owned by E. J. Baldwin. At that time the value of foothill lands had not been demonstrated, and Mr. Baldwin sold to N. C. Carter 1100 acres of foothill land, together with one-half the water of the little Santa Anita canyon. The land for the most part was covered with large oak trees. Mr. Carter at once proceeded to lay out avenues and to pipe the water over the place, and placed it on sale in 5, 10 and 20-acre lots. The beautiful and healthful situation of the place attracted buyers at once, and improvements began. Thousands of sturdy oaks that had held undisputed possession of the soil for centuries and had dropped their leaves on it from year to year, making it rich and fertile, found that they themselves must drop before the axe of civilization and improvement, and give place to the succulent orange and to the varied kinds of delicious fruit. Some of these oaks, however, were spared to grace and shelter the home site and for the avenue. With what contempt they looked down upon the diminutive apricot, peach, orange, and the host of other trees (so called) that were taking the places of their fallen comrades, and to this day they show their contempt for them by hindering their growth if located within the reach of their influence. How hard it has been to subdue this place and make it productive can be told very eloquently by many of the writer's acquaintances, and in the years that have passed since then, acre after acre has felt the stirring influence of the plow and has received into its bosom the roots of thousands of productive trees and beautiful plants. This has been going on steadily and quietly; the waiting has sometimes been discouraging, but at last the harvest is here and the fruit has appeared, and Sierra Madre furnishes this year an abundance of fruit to the market, with the promise of a large increase.

The fruit industry here, however, is menaced by one great danger. I will attempt to describe it. One and a half miles to the west of it and on the same altitude is the world-known Sierra Madre villa; joining it on the south is the previously-mentioned Santa Anita ranch. These are objective points to the great mass of tourists in this country. Traveling from one to the other brings Sierra Madre in the direct line of travel. Its entrancing beauty has captivated many, and they want to stay; they want to buy, not a ranch but a home. This desire is helped along by the enterprising spirit of the community, for their first care was to build a schoolhouse, a very common-looking affair at the first, and with hardly enough of a school population to warrant it; but both have grown, and at the present writing a fine school costing \$3000, on a spacious lot nicely ornamented, graces the town and requires the services of two teachers, which it has. A steady church service was obtained. First it took the form of a Sunday-school; then an occasional sermon from some minister or other; then ministers of the different denominations, alternating, gave it steady preaching service. To Miss Fanny Hawks belongs the honor of the first church building. She gave a lot to the Episcopal church for the purpose of a building, and through her untiring efforts, in which she was aided both at home and abroad, a fine church stands to the credit of that denomination. The Rev. Mr. Trew is its rector. Direct postoffice communication also was obtained, and a store. There is also a church organized by the Congregational denomination, and the Sunday-school is in a flourishing condition. Then, conspicuous by its absence, is the saloon. Long may it be hindered from asserting itself at Sierra Madre.

The literary tastes of the people here have made the want of a public library felt. The public-spirited Miss F. Hawks generously offered to donate a lot for the building. Mr. Abbot Kinney, whose home is two miles west of here on the foothills, feeling his interests identical with this place, took it under his fostering care with an offer of a donation of \$500 on certain conditions. Mrs. Ross, whose husband was a respected citizen of this place, but died before he had accomplished the improvements he contemplated here, desirous of erecting some fitting monument to his memory, saw in this project a most practical way, and offered to donate a lot and \$1000 for the purpose, the building to be called the "Sierra Madre Library, erected to the memory of R. E. Ross." Mr. Kinney was seen, and advised its acceptance and offered a generous subscription to it. A meeting was called, and the offer accepted. At the meeting Mrs. Ross doubled her original offer, making a gift of \$2000 and one acre of the most advantageously situated land in the town. The citizens of the place, as far as could be got at that time, responded most nobly to the effort, and this library will start out with a building costing \$3000. What has been done and is being done by the residents of this place, added to its great natural beauty and healthfulness, will make it impossible for holders of 10, 20, and 40-acre

lots to hold them against the pressure for building lots. Already some have yielded, and the surveyor has come and lots have been sold. So, Mr. Editor, if you don't receive a box of fine Navel oranges from here next picking, make up your mind that there is not one ranch left large enough on this place to produce it.

Another menace to the future of fruit raising here is the ease of getting to it and from it to the outside world. The L. A. & S. G. V. R. R. brings it in direct communication with Los Angeles, 15 miles distant. The stage has gone its last trip; verily the world does move. OTTO.

Sierra Madre.

## Napa County Notes.

EDITORS PRESS:—This month is a very busy one with the farmers of Napa county, and most of the daylight hours are utilized. Haying was long since finished, but much work is now being done by stackers and by balers, for the hay crop was unusually heavy and considerable time will elapse before it is all cared for. The first consignments of the crop sold in our local markets for \$10 per ton, baled, but within a fortnight thereafter the price for a No. 1 article had dropped to \$7 per ton, and it now stands at about that figure. Farmers who can do so will store their hay in permanent or improvised barns, hoping for a rise in prices by next spring.

## Alfalfa.

"Sow more alfalfa on your moist land," says a neighbor. "When once it is well rooted it requires little attention, yields two or three cuttings per season, besides a considerable amount of pasture; and you can well afford to sell the hay \$3 or \$4 per ton cheaper than your oat or wheat hay, for it costs as much or more than the difference mentioned. Plow and seed your land to the cultivated grains."

Heretofore, one great enemy of alfalfa fields in this valley has been the gopher. The cost of trapping these rodents was considerable in large fields, but now that "gopher smokers" have come into use, fields are readily, effectually, and at small cost, cleared of the pest. Where fields are subject to overflow in the spring, gophers can make but little headway. Very few fields of alfalfa are irrigated in this county.

## The Harvest.

Threshers are busy in our barley, wheat and oat fields. On account of the ravages of the Hessian fly, very little wheat was raised in the lower Napa valley this year. The yield of barley per acre is fair, some fields producing 20 bags per acre, heavy, plump grain. Oats have done well, though the aggregate acreage is comparatively small. Corn, of which there is quite a large acreage, looks remarkably well, is growing fast, and will evidently yield well. Some fields are already tasseling.

## Fruit.

Fruit is rapidly ripening, and much that has in years gone by been sent to San Francisco or to the evaporators will, this season, be sold to the local cannery. At this institution, which is now an assured success, quite a large amount of fruit, of good assortment, will be canned this season. At present a large force is busy putting up apricots and other fruit.

## Making the County Known.

Committees have been appointed to make arrangements to entertain those delegations of the G. A. R. expected to visit this valley next month, and the visitors will receive a genuine Californian reception. No doubt there will be a large display of the products of our soil, and our Eastern friends will return to their homes with many pleasing and lasting impressions of Napa county. "How did you learn of Napa and its beauties?" a tourist from the East was recently asked. "By one of your real estate advertising papers," he answered, "and the half has not been told." It has been the endeavor of those interested in the welfare of the county to understate its beauties and resources rather than overrate them, thinking—rightly, too—that it is far better to happily disappoint our visitors than otherwise.

The population of the entire county is annually increasing, and real estate often changes hands. Subdivisions of the larger farms find ready purchasers, and yet in the near future many more will follow. One result of the subdivision of farms is better cultivation and increased profits. This is especially noticeable in the upper Napa valley, now almost one solid vineyard from Yountville northward. Ten years will bring the lower portion of the valley to a position second to no section of the State. In this locality more attention is paid to orcharding than in any other portion of the county, and interest in this pursuit will increase.

An increased interest in the development of the county, especially of the large and very productive Berryessa valley and the smaller ones of Chilis, Pope and Conn, will result from the completion, in whole or in part, of the railroad now building, to connect with the Napa Valley Railroad at Rutherford, thence running through portions of the valleys named to Lake county. Earnest efforts are being made to complete this road at an early date. Not only will this county be benefited by this new road, but Lake will awake to new life and increased prosperity. For that county this road means increase of popu-

lation, rapid development of resources, far better facilities for marketing produce than ever before enjoyed, and a continual increase in taxable valuation. The same remarks will apply to the northeast portion of this county. The road has been waited for long and anxiously, and now that it is an assured fact, new life pervades places heretofore quite isolated.

Napa, July 11th.

## HORTICULTURE.

## Summer Washes for Fruit Trees.

The State Inspector of Fruit Pests, W. G. Klee, has just issued Bulletin No. 3 of the State Board of Horticulture. It is divided into two parts—first relating to the cactus ladybug, a beneficial insect as already mentioned in the PRESS; and second, on "Summer Washes." The second part we give in full as follows:

Attention has been drawn to the usefulness of the ladybug and other insects, and to the advisability of protecting them as much as possible. And here, let it be stated, that we believe no less in the usefulness and the absolute necessity of winter washes as well as summer washes for infested orchards, especially the latter for young, growing orchards, not yet in bearing. The numerous summer washes used by different parties nearly all contain more or less whale-oil soap and owe a great deal of their efficacy to this compound. Sulphur, perhaps, comes second in general use, and a little soda, or potash lye, is often added. Kerosene is being constantly used in various combinations, and if rightly prepared and applied is an excellent insecticide, particularly in soap emulsions; yet we would not advise those unaccustomed to it to use it, as too often, through a little oversight of the workmen, much damage may be done. Buchach, in combination with glycerine diluted with water, has been found a good wash for certain insects, especially the saw-fly larva and pear slugs. Phenyl and pyroligneous acids have also been used, but they, as well as many others too numerous to mention, seem too costly. In recommending a rather different wash, that has been used in somewhat different proportions by some Sacramento fruit-growers, on the suggestion of Matthew Cooke, it should be understood that in order to be effective it must be thoroughly applied. And it is only by thorough and repeated applications, persistently kept up, that good results can be obtained, otherwise there may be failure. And if any one has tried any given remedy to his entire satisfaction and has become familiar with its workings, it would be advisable to hold fast to that until some other remedy, clearly more economical and equally efficient, be found. The changing about from one thing to another, before any one given remedy has been thoroughly tested, is only of too common occurrence, and has been the cause of many bad results.

The wash we recommend is very simple, and comparatively easily prepared. Dissolve 30 pounds whale-oil soap (80 per cent soap, at the most costing five cents per pound) in 60 gallons of water, by heating the two together thoroughly. Boil three pounds of lye (American concentrated lye is what we have used) with six pounds of sulphur and a couple of gallons of water. When thoroughly dissolved, it is a dark-brown liquid (chemically sulphide of soda). Mix the two, the soap and the sulphide of soda, well, and allow them to boil for about half an hour, then add about 90 gallons of water the mixture, and it is ready for use. Apply it warm, at about 130° Fahrenheit, by means of a spray pump. Used warm its effect is better, and less material is required than when cold. We have found this wash effectual in destroying the following insect pests:

Olive, or black scale, *Lecanium oleae*; laurel scale, *Lecanium Persea*; white pear scale, *Aspidiotus rapae*; pernicious scale, *Aspidiotus perniciosus*; cottony cushion scale, *Icerya purchasi*; pear slug, *Selandria cerasi* (here killing eggs and larva); aphides of all kinds.

In fact, judging from the effects on these insects, we believe it will destroy all kinds of scale insects infesting trees, if used during the summer.

## Effect on Fungus Life.

As a destroyer of fungus life we have found it excellent, and believe it will effect a sure cure of different mildews, as well as for the black pear fungus. The exact time for application will vary somewhat, according to the variety of trees and severity of the blight. An application of the compound was made to the trees in the experimental orchard of the College of Agriculture, the present season, with great success. Among the great varieties of pears, many were more and more subject to the black fungus, and the disease seemed to extend gradually to all varieties. They were all more or less affected this spring, but the application of the wash checked it immediately. All the pears are now perfectly smooth, instead of being smutty and cracked. Last year was an unfavorable one for the development of the fungus, but varieties worthless, even through fungus, are perfect now. For all pears not attacked by fungus previous to the time of the fruit setting, the application can be made any time after the setting, as long as the fruit is growing, but, of course, the sooner it is done the better. As regards the

Winter Nelia, which seems to be attacked at the time of blooming, and generally is what might be termed the secondary stage of the disease, the stage in which branches as well as foliage are affected, the spraying should be given during the early part of the summer, and again shortly before their blooming. A very similar fungus, if not identical with the pear fungus, is spreading in our best apple regions, attacking the white Winter pearmain and yellow Newton pippin, few varieties being totally exempt from it. So serious is this trouble that I have seen fine young apple orchards for several seasons almost barren, or the crop almost worthless. Judging from the good effect of the wash on the pear trees, we would recommend it to be tried thoroughly, by spraying in the summer and in the early spring, at the same period suggested for the Winter Nelia.

Finally, this mixture will be found equally as efficient as the so-called codlin moth wash, to kill the larva of the codlin moth. It seems also to act as a preventive against the same in the case of later broods. It is quite as effectual as any of the other whale-oil soap washes, if, indeed, they are very reliable remedies. As to this latter point, we have not facts enough to prove anything very definitely yet, but we hope to collect a sufficient number this season, whereby we can arrive at some conclusions.

W. G. KLEE.

Inspector of Fruit Pests.

## The Orange Crop of Florida.

EDITORS PRESS:—In a recent editorial the Jacksonville Times Union, the leading paper of the State, collated some figures in relation to the coming orange crop, which were obtained in reply to circular letters sent out by its agricultural editor. The figures of these estimates range from 25 to 75 per cent of a full crop in different counties, the larger figures generally being given for the southern counties of the "orange belt." This county, which is very nearly, if not quite, the northern limit of successful orange culture, returns an estimate of 25 per cent, and it is about right for Lawtey groves at any rate. This will give something like a half crop for the whole State, or about 600,000 boxes of a bushel each.

A decided check has been given to orange planting in the northern part of the "orange belt," and a corresponding impetus imparted to diversified fruit-growing and truck farming; to strawberries, early peaches, Japan persimmons, early Irish potatoes, cabbages, watermelons, etc. This will, in the end, be a great benefit to Florida.

It is amusing to see how secretly some of these proud orange planters, who have about used up their Northern money, are going about to get ready to plant strawberries. "Well, yes, I'm going to put out a few," in reply to a question, generally means from two to four acres.

It is estimated that 50 acres of strawberries will be set at this point this fall. Last year there were about 20. The sum total shipped North was 21,735 quarts, which netted the growers 22 cents a quart for the entire season. The highest price received was \$1.50 a quart; the lowest, eight cents net.

One grower with whom I am well acquainted received a little over \$700, clear of all expenses whatever, for his labor on his strawberry crop. This he estimated at 100 days, thus receiving seven dollars a day for his personal labor. He had about two and a half acres, on which were about 48,000 plants. He shipped North only 5304 quarts before the price fell too low to warrant further consignments. Thousands of quarts rotted on his vines. Visiting his beds one day, in company with a party of gentlemen, we found, according to the unanimous opinion, fully 2000 quarts in sight. All these rotted, and many more afterward.

The unaccountable caprices of the cold in its effects on the trees illustrates the Scripture, "The one shall be taken and the other left." The injuries inflicted were of two kinds—first, those caused by the wind in the tops; second, those caused by the frost proper upon the bark, generally within a foot or six inches of the ground. There is a certain amount of regularity observable in the first kind; but the second are phenomenal for the absence of all laws governing their occurrence. A patch of "scalded" bark is liable to be found on any side of any tree.

There are two facts which show that the effects of the frost originally extended only bark deep and did not reach the wood. In my grove a considerable number of very thrifty trees had patches of bark frozen, generally only one on a tree, and the frozen place puffed out in a little blister, but remained air-tight, and new bark formed underneath, so that there is no scar. The second fact occurred on one tree only. Last spring, as soon as I discovered that a few trees had rings of bark frozen completely around them, I banked them up with earth a foot deep, as an experiment. Not long ago, in looking at them, on this one tree I found new roots starting out into the bank at least six inches above the old collar-roots, and the singular thing was, these new roots started right out from the wood which had been completely decorticated by the frost.

It is pathetic to see how roughly some planters use their unfortunate trees. At the time when they needed the tenderest care they

treated them as if they were to blame for their troubles.

A vast amount of good money was offered on the altar of incensation, and ascended to heaven in flame and smoke. Your correspondent had the high honor of burning a \$100 brush-pile. But the trees, when properly helped, are working mightily to recoup these losses. There are some in my grove which have gorgeous shoots on them, a few which I know are over seven feet long already. The winds and the rains make wreck of these fine fellows, beating their heads pitifully in the sand, unless they are tied up.

The great freeze taught us several things. One is, that the greater part of the soil immediately about Lawley is sufficiently adapted to oranges to make them a safe investment. But even this favored spot, which only extends three or four miles east of the railroad (westward there has not been sufficient experiment to determine), has belts and patches on which no orange tree ought to be set hereafter. But happily, the Le Conte pear and the Japanese persimmon are flourishing and fruitful in places where the orange is a proven and pronounced failure. Happily, also, the strawberry will do well everywhere, as soon as the soil has been sunned and seasoned. S. P.

Lawley, Bradford Co., Fla.

### Notes on Fruit Dryers.

EDITORS PRESS:—As I saw some time ago a letter in the PRESS soliciting information in regard to the use of sulphur in bleaching fruit for drying, I have been thinking that I might add a little in that direction, as I have had some experience. In the first place, many do not understand its use, and they had better leave it alone, as it will ruin their trade and give a worthless article to the consumer. I saw fruit on exhibition at the fair in Sacramento last fall that had been sulphured so much that it looked blue. I would not purchase such an article for any price, and no one need be surprised if the Eastern people are of the same opinion. The want of better methods in handling our dried fruits is apparent, still there are some who produce a good article, and they get well paid for it.

The process of evaporating fruit by artificial means takes the lead, but there are many that are not able financially to build such appliances as are in use, but have to resort to the aid of the sun. To such the use of sulphuring is of more importance, as the sun has a tendency to blacken fruit when drying more than in a dry-house. Chemistry teaches that when fruit is cut and exposed to the air, the oxygen in the air commences to destroy it, and to arrest that decomposition, sulphur is applied. It is concerning the wrong use of sulphur that I wish to call attention in the first place, as the fruit business has many novices (like the writer) and they are all anxious to succeed, and, of course, there is nothing left undone by a man of energy to attain the highest possible results in his calling.

When he picks his fruit and cuts it and puts it out to the sun, and it turns black and stays so, and thereby injures its sale, he begins to cast about him for a remedy. He reads in some paper that sulphur will bleach it out. So, without consulting any one that has had experience, he builds himself a box big enough to hold his trays and gets an iron pot and builds a fire in it, throws his sulphur in, shuts it up, and feels in his heart that success is his; but when his fruit is put on the market he is surprised that it grades so low. He will continue to be surprised under such a "hit-or-miss" management. He would do better if he put the sulphur in a strong iron pot and put it on a stove and melt it till a foam forms on top as you stir it, and then take rags, stripped up two inches wide and two or three feet long (made from any kind of cotton cloth or sacks; old sacks are as good as anything), dip them in the sulphur, holding on to one end, and dip one-half at a time, and then hold them straight till they stiffen up so as to keep them straight. Be careful of getting the sulphur afire, as you might have trouble, and don't let it get cool; the hotter the better, so that it does not ignite. I don't know how high a temperature it will stand before it will catch fire. I have never had any trouble with it, however, and I used a pot last summer which I found (when I was nearly through dipping) had a crack clear across the bottom, and the sulphur oozed out and burned while it was over the fire. That may or may not be careless, I am not prepared to say, but I don't care to repeat it. If the sulphur is too cool, too much of it will adhere to the cloth.

Having these sulphur strips, you are prepared to do the bleaching properly. In the first place, there can be no rule to go by in regard to the quantity to be used; everything depends on the condition of the fruit. That which is very ripe requires fully twice as much as that which is just ripe. When the fruit is being prepared, it can be readily seen which is the ripest by its commencing to color up as soon as it is cut. To avoid building two sulphuring boxes I would put the ripest fruit in the bottom, as I think the bleaching is a little more thorough there, because the gas is generated in the bottom first and has to rise. Leave a space of at least a foot between the fire and the first tray.

The box should be made perfectly tight, so

as to hold the gas, and the fruit should not be left in too long. As soon as the fire is out, the door should be opened, or as soon as the fruit is bleached enough, and that is when it is brought back to its natural color. When it is bleached more than that it is too much, and that can be told by the ashy whiteness it presents. One of the sulphur strips, two inches by two feet, is enough for 10 trays of fruit just ripe, and more for overripe. Your eye must be your judge; if you find by opening the box that it is still colored, put more under it till it is all right. Set the strip afire at one end and it will burn gradually, and the sulphur will all be converted into sulphurous gas, which leaves no trace of itself afterward. Of course it is necessary to have earth or gravel in the bottom to burn the rags on. Of course the fruit should be put on the trays rind side down. As for the size of the sulphuring box, build according to your wants. A box that will hold 10 trays will keep eight or ten men at work cutting if kept going all the time.

I can say I am not entirely satisfied with this article, and if any one will take the matter up and discuss it more thoroughly, I would be pleased. I have only given the result of my experience. J. R. SPRINGER.

Woodland, Cal.

### Apple and Olive.

EDITORS PRESS:—Frank Bray, of Santa Clara, thinks that too much importance cannot be attached to the matter of pruning apple trees. That after a limb has grown say two inches in diameter, it cannot be cut off without killing the tree. The tree may linger along for a few years, but will do no good and will generally die soon. Whatever pruning is deemed necessary should be done during the first or at least the second year of growth, and the younger the better.

The same remarks apply to the apricot. Of those of his apricots from which he cut off large limbs, five out of six are gone. He has two remarkably fine apricot trees, now 24 or 25 years old, which have never been pruned in this way. They are vigorous and full of fruit—the variety not known. He is opposed to indiscriminate pruning and is practicing, it would seem with good success, no pruning at all.

Mr. B. has been experimenting on the propagation of olives by cuttings, and has succeeded admirably. The best-sized cuttings are an inch or more in diameter. Both ends should be waxed over. Very moist or very dry ground should be avoided. The method of placing perpendicularly, with lower end extending some 8 or 10 inches below surface into the cold ground, is condemned. To secure good results, lay down horizontally three inches below surface. They will thus sprout vigorously and grow right off. Those who wish to grow olives from cuttings should try this method, at least on a limited scale, and, from what Mr. B. says, look for good results. McD.

Santa Clara Co.

## THE DAIRY.

### Treatment of Milk Fever.

The London *Field* has an article on this deplorable disease, from which we quote the following:

Dropping after calving is a very fatal disorder, and no kind of treatment has been found to act with uniform benefit in all cases. When the disease is observed in the first stage, before the cow has dropped, tincture of aconite, in doses of 20 drops in half a pail of water, given three times in the course of 12 hours, has acted very effectually in allaying fever and preventing the further progress of the disease. It is usual to give a purgative dose of Epsom salts to a cow immediately after calving, and it would be a good practice to follow this at once with a few doses of aconite, certainly for all cows which have calved twice before. Bleeding is advised by some practitioners, and there is no doubt that the operation would be beneficial in the early stage of the fever, particularly in the cases of cows in good condition; and in the same circumstances a full dose of purgative medicine may be given at once, to be followed by small doses of tincture of aconite, as directed. When dropping has actually occurred, the treatment becomes much more complicated and difficult and the stock-owner will find it the best plan to put the sick beast in the care of a veterinary surgeon. If veterinary aid is not within reach, something must be done; but the chances of success are few indeed. First, attention must be directed to the cow's position, and, by the aid of trusses of straw, she must be propped up and made as comfortable as circumstances will permit; and in giving fluids, care should be taken to find out if the cow can swallow; otherwise the medicine may run down the wind-pipe and suffocate the patient. If the power to swallow is lost or much impaired, the stomach-pump must be employed. Stimulants are usually given, and the aromatic spirit of ammonia is a very good agent for the purpose; or, as a domestic remedy, whisky, in doses of four to six ounces, in an equal quantity of water, may be given instead.

A stream of cold water, applied to the spine from the poll to the loins, is a method of treatment which has been used with great success in

France; and a still more novel plan of cure has recently come under our notice—the injection into the uterus of a solution of carbolic acid in 50 parts of water. It happens, however, unfortunately, that the method which succeeds in a few cases fails in others, and the breeder has yet to deplore that there is no certain cure for an affection which does serious damage to his dairy stock.

Means of preventing milk fever are almost as varied as the means of cure. Some breeders assert that milking right up to the time of calving is certain to afford security; others advocate low diet and purgatives a short time before parturition; and others advise that after the third calf the cow should be fattened for the butcher. This system promises the best results, but would in many cases involve inconvenience and loss where pedigree stock are concerned.

### Another Holstein Record.

EDITORS PRESS:—As so much is now being said regarding the value of the various breeds of dairy cows for butter, we will mention a recent test of our Holstein-Friesian cow, Mottled Beauty, No. 2828. She was five years old January 5th last. She dropped her last calf June 9th. She had been fed no grain of any kind for over a year. On the 12th we commenced feeding very little grain, the amount being increased daily until her test commenced on the 15th, when she was fed 3½ pounds per feed three times per day. Her test was for one week, June 15th to 21st, inclusive, and during the time her feed was gradually increased until, at the close of the trial, she was eating 6½ pounds at a feed three times per day, in addition to good pasture. The feed was composed of two-fifths wheat bran, two-fifths oatmeal, one-fifth peameal. She made 21 lbs., 13 ozs. of very fine butter, which was weighed after being thoroughly washed and drained and before salting. For the whole time her average was a pound of butter to 18 36-100 pounds of milk. When we consider that this cow had no previous preparation of any kind, we feel well pleased with the result. We wish all Holstein-Friesian breeders would test their cows for butter and give the result through the PRESS, with the feed given. We think the results would show the Holstein-Friesians to be very superior for butter.

SMITHS, POWELL & LAMB.  
Syracuse, N. Y.

### A Humboldt Dairyman's Views on Cows.

H. S. Woods gives the *Ferndale Enterprise* his opinions on desirable dairy cows, as follows:

As some of our dairymen have given their views regarding dairy cows, and as I have had 40 years' experience in dairying, I will contribute my mite with the rest. First, the Jerseys have the best butter record of any known breed, but there are poor ones among them as well as other breeds, and the young stock are too scrubby and not salable for beef. Therefore I quit breeding them. The shorthorns are, many of them, excellent milkers, and when one is not good it is ready sale to the butcher. The Herefords are coming to the front as beef cattle, but they are nothing extra for the dairy. The Holsteins are the greatest milkers in the world, but their milk is too thin. For cheese there is none to equal them. For beef they are not as good as the Durhams or Herefords. I prefer a cow that will make two pounds of butter a day from 30 pounds of milk to one that gives 60 pounds of milk for the same amount of butter. The best cows I have ever tried or seen for the dairy, and for beef, are the red polls (or red muleys); they are just what the dairymen of Humboldt want. Being hornless they are nicer to handle. We can fill a stable without their injuring one another. Twenty of them can lie under a shed in a stormy night and take comfort, when three or four with horns would monopolize the whole thing. With a stableful loose, there is no danger. They have been bred for the dairy in England for more than a hundred years, and will give milk the year round. Those that have visited the herds of red muleys in England say it is a rare thing to see a dry cow among them any time of the year, and the steers compete with the shorthorns at the fat stock show. In the *National Stock Journal* there is an account of a herd of red polled cows in Illinois that tested from 18 to 28 per cent cream. Our cows in this county don't average 15 per cent. The dairymen here have not taken the pains to raise good butter cows that they have in the older States. I have bought about 60 cows in four years, and many of them would not make butter enough in a year to pay for their keeping. I don't like to work for nothing and board myself, so all such cows go to the butcher. It is worth \$20 a year to keep a cow in this valley, and I have two or three now that we have just tested, and find they will not make that amount of butter. It is poor policy to keep such cows and raise heifers from them, when a person can get a cream-tester for a dollar that will tell them at once whether a cow is worth keeping. Much depends upon the quality of grass. On Bear River ridge, from the native grasses, 18 pounds of milk made a

pound of butter, and with the same cows in the valley it takes 24 pounds to a pound of butter. I think it would be a good thing for this county if the directors of the Agricultural Society would offer premiums on muleys the same as grades, to encourage the raising of them. Last winter I wanted to buy 15 cows, and thought I would buy all the muleys I could find. I succeeded in getting a few by paying 40 per cent more for them than they asked for horned cows, and gave it up. The best muleys I found I could not buy for \$75 a head, while equally good-looking cows with horns I could buy for \$40. Now, I would ask, if they are no better, why do they hold them so high? We see directions in the papers to prevent young calves' horns from growing. One says burn them down close and it will kill them; another says dissect them out. It is all bosh. I will give any one \$100 who will tell me how to prevent a young calf's horns from growing without injuring the calf. If I could do it I would never raise another with horns. In a domesticated state, they have no need of them. Give a drunken man a revolver, and he will frequently do some mischief, when without the revolver he would be harmless. So with a cow. Give her horns, and she will frequently do harm, when without them she would have been docile.

## THE STOCK YARD.

### Santa Cruz Stock Farms.

EDITORS PRESS:—F. W. Scofield, near the coast two miles west of Santa Cruz, has thoroughbred Duroc or Jersey Red swine. At the time of my visit he had a few extra fine sow pigs one month old. They were of fine size, very healthy and active and real beauties. He has some of the same stock full grown and some only partly grown, and all showing extra fine qualities as to size, form, color and many other good points. The limbs are large and flesh appears to be solid. Mr. S. says pigs of the Duroc can be made to weigh, at 12 months old, some 400 or 500 pounds.

Martin Kinsley, on the coast three miles east of Santa Cruz, has tried various kinds of swine—the Berkshire, Poland China, Chester White and Essex. He says that with him white hogs "skin crack." That at this place the white spots of black hogs often do the same. He attributes this defect to climatic influences. He prefers the Essex to any other variety he has thus far tried, and regards it as the easiest kept and with least expense. So thrifty is it that it will fatten even on grass. Mr. K. has quite a variety of stock. His sheep are the Southdown and are pronounced to be healthy, very productive and profitable. For mutton it is regarded as the best. In fact, this is the only variety that he could raise with profit.

F. J. Laird, of Davenport, up the coast 15 miles from Santa Cruz, takes much pride in the production of fine stock. His young thoroughbred, shorthorn, Durham bull, Duke of Orleans, three years old, weighs 1850 pounds, very active, of deep red color with some white in face, very small head, very heavy in shoulders, brisket and hind quarters. He has a seven-months-old, thoroughbred, Poland China boar pig, of deep black color, with some white in face and on feet; first class. Mr. Laird has a fine advantage in pasture lands clothed with rich and abundant grass, kept green by the mists of the ocean so near at hand. The coast lands along here furnish most nutritious pasturage for dairying purposes, and many well-supplied and productive dairy farms are seen for the 20 miles we traveled up the coast.

G. McD.  
Santa Cruz Co., Cal.

### The Mohair Industry.

EDITORS PRESS:—I would respectfully inform Mr. Bailey and your readers generally that my statement concerning Mr. Bailey's premium goats had no malice connected with it. If the statement is "false," as Mr. Bailey declares it to be, it was easy enough to fall into the error, for the rumor is not only prevalent all over this county, but if I remember rightly, one of the premium goats bore the name, "Mariposa Chief"—certainly an odd name for the "Herald of Monterey." If the gentleman will give my article a more careful perusal, he cannot fail to perceive that my desire is to call attention to the latent advantages of this county for the production of mohair, which has hitherto, in a great measure, been overlooked, and not to detract from his celebrity as a breeder.

MARTIN KIRBY (73).

Darrah, Mariposa Co., Cal.

### The Coming Goat Ranch.

EDITORS PRESS:—In your issue of April 17, 1886, under the head of "The Mohair Industry," the statement is made by Mr. Martin Kirby that "the model mohair goat ranch of the future" in California is not even started as yet. Would you be so kind as to allow me to ask him, through the PRESS, if he will describe the model mohair goat ranch of the future in California?

MRS. M. E. CONGDON.  
Mariposa, Cal.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Farmers' Conference Meeting.

A joint meeting of members of Eden and Temescal Granges was held (during an intermission of the Grange session) at Oakland last Saturday. A. T. Dewey was elected chairman and H. G. Babcock secretary. The call of members of Enterprise Grange for a farmers' convention, to meet at Sacramento, August 5th, was discussed. A motion by Judge Blackwood prevailed that three members of Eden and three of Temescal Grange be elected as delegates to represent this meeting in the convention—called by members of Enterprise Grange—with authority to withdraw, if in their judgment they think best, and with power to fill out the delegation or any vacancies. Judge Blackwood, O. Dennis and J. Chester, members of Eden Grange, and Messrs. Kelsey, Sewell and Dewey, of Temescal Grange, were elected delegates.

The subject of irrigation was ably discussed by Messrs. Blackwood, Russell, Kelsey, Frink, Adams and Goodenough.

A proposition was made, but not voted on, to request the Executive Committee of the State Grange to hold a meeting at Sacramento during the extra session of the Legislature, and invite all other Granges to send in views or plans for the distribution of the irrigating waters of the State. Mr. Adams offered resolutions which he asked for time to reduce. Mr. Adams has since furnished the following for publication:

## Grange Resolutions on Irrigation.

WHEREAS, The question of irrigation is assuming a magnitude of such immense proportions as to induce the Governor of the State to call an extra session of the Legislature to solve the problem, if possible; therefore be it

Resolved, That it is the opinion of this convention that the State should inaugurate a general system of irrigation, wherever it is necessary and practical, within the State, to be wholly under the control of the State and not in the interests of either the appropriators or the riparianists, but entirely in the interests of the irrigator.

Resolved, That to enable the State to put in force the above resolution, it may acquire by purchase or by right of eminent domain, any or all of the water of the various lakes and running streams, when necessary for irrigation; provided that in no case shall water be taken from streams so as to interfere with the navigation thereof.

Resolved, That to enable the State to reimburse itself for the indebtedness incurred in carrying out these resolutions, the irrigated portion of the State shall be divided into irrigation districts, and when the system of works for irrigation are completed in a district a tax may be levied to keep the works in repair and to pay a sum equal to 4 per cent on the cost of said irrigation works in said district; provided that at the end of 20 years from the completion of the system in a district an annual tax may be levied on lands benefited thereby, to gradually extinguish the debt incurred by the State in perfecting the system of irrigation.

The following resolutions were passed at the last meeting of Plymouth Grange:

Resolved, That we are in favor of the State taking control of all the innavigable waters of the State and passing laws for the equitable distribution of the same for agricultural purposes.

Resolved, That we oppose the monopoly of water in any form, and that an equitable distribution of the waters of the State is indispensable to the progress and development of the resources of the same.

And Magnolia Grange, at its regular session on the 10th, discussed and indorsed the report of Eden Grange's Committee on Irrigation.

**HARVEST FEAST.**—Last Saturday was a pleasant day in Oakland, and Temescal Grange meeting proved a very interesting session. The third and fourth degrees were conferred upon Mr. Kelsey, a young farmer of Merced county, and a recent graduate of the State University. Several Granges were represented from abroad, and a goodly number of the members of Eden Grange were present, and added largely to the interest and success of the meeting. It was very much regretted that there were not still more members of the Granges mentioned present to enjoy the pleasures and benefits of the occasion.

Remarks for the Good of the Order were made by Brothers A. Adams, Joel Russell, O. Dennis, W. C. Blackwood, Buell, Rev. S. Goodenough, L. Frink, E. Kelsey and son, A. T. Dewey, and Sisters M. A. Sheldon, C. E. Kinney, Smith, W. C. Blackwood, S. H. Dewey, N. E. Babcock, R. Dennis, Jessie Weed and others. The labors of the day closed late, and some unfinished business was laid over for the next meeting, which occurs Saturday evening, August 7th.

**MRS. L. M. NICHOLAS**, of Magnolia Grange, who recently passed from earthly life, is spoken of in memorial resolutions by her late associates as a most earnest, conscientious and faithful member, whose devotion to the Order was such that she often attended when it was almost beyond her power.

**SCHOOL BOARD.**—We notice by the Modesto News that Bro. V. E. Bangs and John York have been chosen members of the county board of education. Bro. Bangs is an experienced educator and a firm friend of educational interests, and has served his county well in these matters.

## AGRICULTURAL NOTES

## CALIFORNIA.

## Alameda.

**WHOLESALE HOUSE-HAULING.**—Livermore Herald, July 15: Geo. O. Stanley has begun the work of moving all his farm buildings to a central point on North avenue, near Almon Weymouth's. They will then be nearly in the middle of his 1500-acre ranch, and directly on the main road. Almon Weymouth will have charge of the work, which will be the most extensive building-moving operation ever conducted in this valley. There are three farm-houses, one being among the largest and best in the valley, four large barns, one grain warehouse, two tank outfits and numerous sheds and other outhouses. The distance is about a mile from either of the present establishments.

**GALLOWAY CATTLE.**—Haywards Journal, July 17: On the Cook ranch are 100 head. Major Wiley has one particular graded Galloway calf, only five months old, which kicks the beam at 560 pounds. Another eight months old weighs 820 pounds. The greatest gainer in flesh was one that increased 169 pounds in 30 days. The average increase a day, however, is about three pounds.

**AGED BEARERS.**—The Neilson place, originally owned by Clayton Winton, can boast of some of the oldest fruit trees in this valley. Almost covering Mr. Neilson's residence are three monster fig trees—there were originally seven, but four were cut down to make room for the house—that were planted by Mr. Winton in 1853. They are giants, and no mistake, and bear three crops of figs every year. We were also shown a number of prune and one cherry tree planted at the same time—just 33 years ago—that are flourishing and bear a good crop every year. This goes to show the age fruit trees will attain, and the chances are these will yet outlive the rising generation.

## Contra Costa.

**STOCK POISONED.**—Antioch Ledger, July 17: On Tuesday night two cows, one belonging to F. W. Peters and the other to Jas. Nolan, died from the effects of some kind of poison. It is supposed to be wild parsnip, a rank weed growing in the pasture below town where the stock has been running. Those having cows have taken them out as a measure of precaution.

## El Dorado.

**MESQUITE GRASS.**—Republican, July 15: Last week J. P. Cleese brought into our office a bunch of mesquite which measured five feet eight inches, and said he did not select the tallest grass, either. It stood so thick and heavy on the ground that when a swath was made the fallen grass had to be raked aside before another swath could be cut. Although fully headed out and rather too ripe for hay, the stocks of the sample shown us were soft and apparently tender. It is said this grass makes good forage for cattle and horses, and they like it exceedingly.

## Fresno.

**TO STOP STOCK-STEALING.**—Expositor, July 14: The stock-raisers on Upper King's river have issued a call for a meeting, to take place August 7th, for the purpose of organizing a stock-raisers' protective association. The object particularly in view is to put a stop to stock-stealing, a malady that has been very fatal to their business for some time past.

**DIDN'T SUIT HIS LIVER.**—Last week a man applied for work at the office of one of our downtown merchants, telling a tale of starvation, want, destitute family, etc. The tender passions of the aforesaid merchant being aroused by the piteous recital, he gave the man a quarter and a letter to a prominent vineyardist east of town. It being Saturday afternoon, the searcher after work walked out to the vineyard, arriving there just about supper time. He was given his supper and the way he put himself outside the edibles was a caution. Next day being Sunday, the man had no work to do but eat three square meals. Monday morning he ate again as though he had fears of the near futurity of a famine. After finishing his breakfast, the "starved" laboring man edged toward the door with the remark that "he kalkulated hard work didn't suit his liver and he thought he would walk to town." Well, he didn't walk, he ran, in fact, he ran a Maud S gait, with the foreman after him with a pitchfork helping him along for a mile. Any Saturday afternoon applications for work will be received with suspicion at that ranch in future.

## Humboldt.

**GLANDERS.**—Ferndale Enterprise, July 17: Messrs. Pine, Rolloy and Hall, the committee appointed by the supervisors to look after glandered horses, were in Ferndale on Monday. Mr. Pine informs us that about 30 cases have been found in the county, some of which were exceedingly bad. The committee is keeping up a diligent search.

**FINE GOOSEBERRIES.**—Standard, July 17: We have frequently mentioned in these columns the superior adaptability of this region for growing berries of every description. Yesterday we were shown a small branch cut from a gooseberry bush in the garden of Mr. Richard Sweasey, on G street, not more than five inches long, upon which were 11 gooseberries, any one of which was an inch in diameter, and some even larger. This branch was only a sample of the

whole bush. The berries were perfect and ripe, without blemish of any kind. We have never seen anything to approximate to it, and do not believe the world can beat it.

**A THRIVING REGION.**—H. L. Ford says that the spring wool clip in that section was excellent. The farmers on the South Fork have raised good crops, and the fruit is unusually fine. Mr. Chadbourne, who has a fine orchard, has peaches now ripe which for size and flavor can hardly be surpassed in the State.

## Los Angeles.

**POLICE AFTER THE SCALE.**—Times, July 13: Council met in regular session yesterday. Special committee on fruit pests reported that at a joint meeting of the committee, the police commissioners, the county commissioners and city inspectors, it was decided, without dissent, to recommend to council the appointment of three additional inspectors, on the understanding that the county commissioners also appoint three more inspectors for the city district; that police commissioners be authorized to appoint a chief inspector from among the then 12 inspectors, who shall act under direction of the police commissioners; and that three of the inspectors shall be allowed \$15 each per month for keeping their horses. The police commissioners indorsed this report. Inspector Mulard's report for June, and Inspector Badham's report, were also inclosed. Report was adopted. As to the alleged defectiveness of the present statute, City Attorney McKinley showed that there was no trouble with the ordinance. It provides that cleaning of orchards must not only be begun, but also completed. Failure to clean is a misdemeanor, even without notice. The trouble has been that the inspectors have made no attempt to prosecute under the ordinance. If they had made complaint when parties failed to clean up, the guilty parties would have been duly punished.

## Merced.

**BIG THRESHING.**—Free Lance, July 9: J. W. Spader's outfit threshed 2063 sacks of grain at the Marshall ranch, in Merced county, Wednesday, June 30 h. of which 1233 were barley, and the balance, 830 sacks, wheat. There may have been bigger day's runs made this season, but we have yet to hear from them.

## Napa.

**BUGS AND ACACIAS.**—Register: Miss Darling is having the acacia trees in the seminary grounds cut down and destroyed, because of the presence on them of the scale bug. The acacia seems to be a breeder of these pests and to prevent their spread this summary course is pursued.

## Nevada.

**CATTLE POISONED.**—Independent: Russell & Bradley of Elko sold 1300 head of cattle to the Promontory Cattle Company, and lost over 50 head from poison and drought while driving the band from their ranges to Promontory. Of 1600 head of cattle, which were being driven east by Keogh Bros., 300 head died from eating poisonous weeds.

## Sacramento.

**GLANDERED HORSES.**—Record Union, July 14: An item to the effect that horses afflicted with glanders come to the city every morning, hauling vegetables to the early market, attracted the attention of Dr. Cutler, appointed by the supervisors to inspect horses afflicted with that disease, and yesterday morning between four and five o'clock he visited the market at Third and J streets, and found that the information was correct. Both horses of a team owned by a Chinaman, who has a ranch below the city, were found to be badly afflicted, and some other horses had the disease in its earlier stages. He had the Chinaman drive to the station-house, and Health Officer Atkinson was summoned. It was decided that both horses ought to be killed—one, that was very far gone, should certainly be killed at once. Local officer Carter Jackson was instructed to go to the Chinaman's ranch and attend to the matter. The horse that was suffering most was shot and buried; the other survives until the Celestial has a chance to replace his team.

**AN EXTENSIVE CUCUMBER.**—Bee, July 14: Sam Blair exhibited in the Bee office this morning a specimen of cucumber grown in his garden at Twenty-sixth and K streets, that for monstrosity takes the prize. It is what is known as the "snake cucumber," and looks like a large green serpent, being three feet four inches in length and about two inches in diameter. It would appear to contain in its area colic enough to last a family of half a dozen for a week.

## San Bernardino.

**IRRIGATING RAISIN GRAPES.**—Ontario Record, July 14: Wm. McBain, the Etiwanda packer, was in Ontario, Saturday, looking up the prospects for the raisin crop, with a view of buying in the sweat boxes. He accounts for the great diversity of results here on the ground of a failure to irrigate properly. He advocates a heavy irrigation soon after pruning to keep the vines back so that the fog will not blight the blossoms, another irrigation when the grapes are set and a third when about half grown. The good crop on some vineyards here and the very light crop on others would indicate that we have something yet to learn in dealing with the Muscat.

**PRECOCIOUS DATE PALM.**—W. B. Chaffey has a date palm on the grounds of his residence on

A street, set out two years ago, which is now in bloom. This we believe is an unheard-of occurrence, as the date palm doesn't usually bloom until about five years old. All who will take the trouble to examine the palm can satisfy themselves that it has a cluster of flowers just opening. The blossoms began to appear just after a heavy irrigation. We suppose this freak must be counted as one of the results of the marvelous fertility of Ontario soil.

**ARLINGTON FRUIT.**—Valley Echo, July 15: Early apples and peaches ripened last week, which is nearly five weeks later than the same varieties ripened last season. Late plums are now ripe, but the crop, like that of apples and peaches, is a light one. Flemish Beauty pear trees are full of fruit, which seems to be the only variety this season which has a full crop.

**ORANGE-LEMONS.**—Press and Horticulturist, July 17: Colonel W. R. Tolles, of San Bernardino, sent to this office three orange-lemons, which are very peculiar. They look like oranges but taste like lemons, only, if anything, the acid is stronger and the flavor not so pleasant. The fruit appears to have good keeping qualities, as it is in a perfect state of preservation, having been picked four months. This fruit may yet develop into something very valuable, but its flavor seems at present to be against it.

**RIVERSIDE APRICOTS.**—The crop of apricots now being gathered is much larger than at first supposed. Dr. J. Jarvis will dry about 125 tons of fresh fruit. F. R. Hall buys enough at \$1 75 per hundred pounds to enable him to dry 100 tons. The Crawford Company is buying and shipping to Colton, to can, a considerable portion, and many growers are drying on a small scale. It is probable that the crop will reach 500 tons.

## San Diego.

**HORTICULTURAL FAIR.**—Union, July 15: The Horticultural Society held a meeting with President Asher in the chair and a fair representation of members present. It was decided to hold the county fair on October 6, 7 and 8. The question then arose as to the feasibility of combining a live-stock show with the exhibit of fruits, and after a warm debate it was agreed that the society lacked the means to make a success of this double exhibition, and the idea was abandoned for this season. The Executive Committee, consisting of Messrs. Asher, Swain, High, Chapin and McLure, were given full power to act in the matter of making permanent arrangements for holding the fair. The committee then held an informal meeting to discuss the advisability of getting grounds and erecting a building in this city in which to hold their fairs in the future. It was agreed among them that it could be done, and after the coming fair steps are to be taken in that direction.

## San Joaquin.

**WATERMELONS.**—Lodi Sentinel, July 17: E. McIntire & Son shipped the first carload of melons from Lodi on the 9th instant. Mr. McIntire informs us that his crop is the finest he ever saw. Many of his melons now measure 24 inches in circumference and 20 inches in length. Up to the end of this week there have been probably 15 cars shipped to the city. One or two shippers have crated quite a large quantity of melons for shipment direct to Los Angeles. Two weeks hence watermelon will be king in Lodi; from 10 to 20 carloads will be shipped daily during the harvest.

**MELON PEST.**—On Monday one of our largest melon-raisers informed us that a pest, in the form of little black and blue bugs, has come on the vines and threatens to destroy the entire crop unless they are killed or driven away. Mr. McIntire has tried sulphur and thinks it good. Every field in the vicinity is infested with them, and in one day's time every pound of sulphur in Lodi was bought up and carried out to the melon fields. The bugs are about the size of a pin head. The black one is a regular jumper and goes at his work like an old acclimated hopper; the other is the same size, blue in color, and crawls about his labor leisurely. Our State bug-catchers should be advised of this pest. They might be able to classify the little wretches and tell us what species or order they belong to; that would be some satisfaction, even if they had no remedy.

## San Luis Obispo.

**HOLSTEIN CALF.**—Tribune, July 16: The seven-months-old bull calf of E. W. Steele's imported Holstein cow, Anna Duytra, was weighed on the 8th inst. and turned the scales at 775 pounds. The increase during the last month was not equal to the usual monthly increase, but he is going forward at the present, and under favorable circumstances will add his hundred pounds monthly for some time to come. The calf has not been forced by any extra attention or patent or scientific food, but has had all the milk he would drink and all the hay he would eat. The Holstein herd of Mr. Steele is doing exceedingly well, and in every way satisfactory. His premium cow, Anna Duytra, has given an average of over 50 pounds of milk a day since December 9th last.

## Santa Barbara.

**INSECT PESTS.**—There was an active discussion on the scale bug and its destroyers, some new theories being advanced. The water remedy is declared a failure by Mr. D'Urban. Mr. Holden has found the ladybug to be an exterminator of the iceria. Mrs. Delaney suggested a trial of an infusion of the fishberry, which is

a certain destroyer of insect life. Mr. Ellwood Cooper introduced Mr. Lelong, of Los Angeles, who has a new bug-destroyer which he proposes to make win the \$1000 prize offered for the best remedy for the white scale. Mr. Lelong claims that he can kill the cottony-cushion without injury to tree, fruit or person handling the poison, and at a cost of from eight to ten cents per tree. He has examined the principal orchards in Santa Barbara and found but few of the white scale. Carpinteria, he says, is quite free from them. Mr. Cooper stated that the kerosene emulsion was the only effectual remedy he has so far tried, but it costs from 50 to 60 cents per tree. He hopes that the new remedy will be all that its originator claims.

**HORTICULTURAL MEETING.**—*Press*, July 15: Despite the long distance from town, a large and merry party gathered in the cool shades of Tecolote canyon at yesterday's horticultural meeting. The spot chosen was about 300 yards above the residence of Mr. Harold Sturges, in a grove of spreading sycamores.

**CROP REPORTS.**—Messrs. Hogue and Cadwell, of Carpinteria, and Bliss and Holden, of Goleta, from the committees on fruits, made a discouraging report. Citrus trees have made a slender crop. Deciduous fruits throughout the county will only yield about one-fifth of the usual crop. Walnuts will bear about an eighth of a crop. Grapes are badly affected with mildew; raspberries are short, currants doing badly, but blackberries in good condition. The report was indorsed by all fruit-growers present as quite true about the crop all over the county. Mr. Cooper reported the olive crop as also suffering the same as deciduous fruits. He advanced a theory accounting for the walnut crop failure. His trees bore heavily in places where protected from wind. He accounts for the walnut failure by the hard north wind in mid April and the following cold spell. Such a thing had not happened before for 16 years. He thinks all our fruit orchards will in time be surrounded by forest trees to protect them from the north winds.

**COUNTY FAIR.**—*Independent*: Our county fair opens on the 5th of October. The grounds are being put in good condition, and the Agricultural Society are already commencing to outline their work. Unanimity of action seems to prevail throughout the county, and by all working together there will be such a showing as was never witnessed in Santa Barbara before.

**MELON SHRUB.**—*Santa Maria Times*, July 17: On Saturday last we spent an hour in W. H. Findley's place in the Arroyo Grande bottom. His trees are loaded with fruit and comprise every variety raised on this coast. Of rare varieties he has the Japanese persimmon, melon shrub and liquorice root. The melon shrub is fruiting this season and is probably the only one in bearing in this section of the State. It produces a melon about the size of an orange which has an agreeable lemon taste. He has succeeded in propagating the plant from the original shrub and has quite a number that will bear next year.

#### Santa Clara.

**BLENHEIM APRICOTS.**—*Los Gatos News*, July 16: Mr. L. Hill has the finest apricot orchard in this section; that is, it has the best fruit. His Blenheims are large, evenly ripened and of good flavor. Those who contemplate setting apricots should examine his orchard and see what this variety will do. We will state that Mr. Hill cultivates very thoroughly. He is disposing of this crop at a very good price.

#### Solano.

**WELL TRAVELED 'COTS.**—*W. E. Fry* writes to *Judicion* from Williamsport, Penn., July 8: I am a dealer in fruits and berries. I have been handling apricots, and in one of the boxes I found your fruit circular. I have been buying my fruits in Philadelphia, the parties there having bought them in Chicago. On opening the boxes I found the fruit all right and in good condition. The circular stated that the fruit was from the ranch of L. W. and F. H. Buck, at Vacaville, Solano county, Cal. So you can let them know how far their fruit has come, and the condition in which it arrived.

**FRUIT SHIPMENTS** from Vacaville for the week ending 17th inst. footed up 515,817 pounds. The heaviest day's load was the 14th, 112,640 pounds. On the same day, says the *Winters Express*, G. W. Thissell shipped five and a half tons of dried apricots to San Francisco, a sample of which he left at this office. They were fine, just as natural in color as the fresh fruit, and not dried too much. Mr. Thissell got 18 cents per pound for the apricots. They will go to the Eastern markets.

**PROFITS IN HORTICULTURE.**—*Vacaville Reporter*, July 15: To prove that our orchardists and vegetable-raisers are making money this season, we produce some statistics: M. Fox has taken from 35 acres in fruit and vegetables—only part in bearing—\$3000 clear of all expenses; Dr. Cargill from 39 acres in vegetables, raised among young trees, has cleared \$2000; Mrs. R. Schroder rented her place for \$1500 cash, which has been paid, besides netting at least \$1000 clear to the parties who had the place; A. J. Lyon from 125 plum trees realized \$222, from 25 trees of another variety \$100 clear, and from 150 apricot trees about \$400. He has contracted his entire peach crop to Strong & Co., Sacramento, at 80 cents for 44-inch boxes (boxes furnished). Mrs. M. Jagger sold this year from 400 six-year-old trees over 2000 boxes of apricots—netting about \$1500 from less than four acres. H. and W.

Brinck had on about 25 acres of apricots 100 tons of fruit, which they sold at 2½ cents per pound—they picking the fruit, everything else furnished. They also sold their crop of early peaches at six cents per pound net, and their late varieties of peaches and entire grape crop at 55 cents per crate of 20 pounds each, crates and packers furnished. F. B. McKevitt has just finished shipping his apricots from six acres of five-year-old trees and four acres of four-year-old trees, the net profit on which is \$3000. These are no exceptional cases produced for sugar-coating, as we know that all our fruit and vegetable-raisers are doing extra well.

#### Sonoma.

**NO GLANDERS IN THE COUNTY.**—*Humboldt Standard*, July 17: The following acknowledgment has been made by the Board of Supervisors of Sonoma county: "A communication having been received from the Honorable Board of Supervisors of Humboldt county, read by the clerk at the morning session, asking this board to co-operate with it in the extirpation of the loathsome disease of glanders, Mr. Coulter moved that the clerk be directed to acknowledge the receipt of the communication, and say that the board has no knowledge of the existence of such disease among the horses of this county, and should the disease make its appearance among the horses of this county, every power of this board will be exerted for its extirpation. So ordered."

#### Tehama.

**CLEAN ORCHARD.**—*Red Bluff Sentinel*, July 10: E. Croizer completed pruning Gen. N. P. Chipman's orchard a few days since and found it in excellent condition, and entirely free from insect pests. This speaks well for Tehama county, because there are but few counties in the State where fruit is grown to any considerable extent that the trees are not infested with several kinds of fruit pests. The General has 1000 three-year-old and 1000 two-year-old apricot, 4000 prunes, one and two-year-old, and 2500 bearing peach trees. There are also 500 other trees—pear, apple, etc., bearing fruit this year. There are 15 acres of vineyard, 10,200 bearing vines, comprising Muscat, Malaga, Muscatel and Zinfandel. The vines are full of grapes and the quality promises to be very good.

**TRUE SUNSTROKE.**—*People's Cause*, July 17: A man named Leslie, who was bucking straw on J. S. Cone's ranch, fell insensible yesterday afternoon, at about 3 o'clock, from sunstroke. Soon after sundown he was placed in a wagon and brought to town, arriving at the county hospital at about half-past 9 o'clock, where he was placed under treatment. He, however, remained unconscious, and died about two hours afterward. Dr. Fife, the county physician, informs us that he seems to have been a temperate man and that it was undoubtedly a veritable case of sunstroke, due to excessive heat and exertion, and not occasioned by intemperate habits. This is only the fourth fatal case reported this season in the State—one or more of the other cases being partly due to the excessive use of stimulants. Considering the severe exertion necessarily required of harvest hands, it is only surprising that cases of sunstroke are not of more frequent occurrence.

#### Yolo.

**GRASSHOPPERS.**—*Democrat*, July 15: Samuel Hiller brought in a number of fig leaves the other day to show the destruction wrought by grasshoppers. Only the framework of the large leaves remains. Mr. Hiller says the hoppers have attacked everything green on his place, including both trees and vines. The clover fields of Mr. Reynolds, which join his, are literally alive with grasshoppers. They made their appearance about two weeks since.

#### Tulare.

**WIND THRESHED WHEAT.**—*Times*, July 15: Edward McCauley, who farms a portion of Mrs. Eaton's ranch about 10 miles west of town, finished heading 700 acres of Sonora wheat on Friday last. The crop was headed with a 10-foot header in 34 days. Mr. Blaine says that it was the cleanest field of wheat he has seen in the county, a stalk of barley or oats being rarely found in it, and there were but very few alkali weeds to be seen. The yield was not large—about 5000 sacks. He says that while heading there he had occasion frequently to get down in the field to oil the machine and noticed on the ground a great deal of wheat which had been whipped out by the wind. Jas. Carlisle is farming 1400 acres of land on the same ranch. The damage done to his crop by the wind is about two sacks per acre. Bacon and Edmiston have been running their Houser harvester in the Sand creek country for several weeks. They have also harvested some grain in Stokes valley and also at the Cottonwoods. Mr. Bacon says the yield is falling short about a fourth on the estimate made earlier in the season. At the ranch of Mr. Wroughton on Sand creek 200 acres were harvested—180 acres of wheat and 20 acres of barley. The yield was 830 sacks of wheat and 180 sacks of barley. The wind damaged this crop considerably, the ground being double seeded from the effects of it. Three hundred and fifty acres of wheat in Stokes valley belonging to the Boyd family yielded seven sacks to the acre. Their barley and oats yielded 10 sacks to the acre. Two hundred acres of barley at the Cottonwoods belonging to Mr. Bacon and Allan Edmiston yielded 10 sacks to the acre. The grain in this section is well filled out and

of good quality, but there are only two grains to the mesh where there should be three and four. Sixteen miles north of Visalia, near Smith's mountain, Mrs. W. J. Crow farmed this season two sections of land that belong to her father, L. Haas. The crop is now being harvested. It is Sonora wheat and is yielding 13 sacks to the acre. This is the heaviest yield reported to the *Times* thus far.

#### NEVADA.

**SMALL FRUITS.**—*Reno Gazette*, July 16: Dr. George R. Hutchinson brought into the *Gazette* office this morning some of the largest and most delicate-tasting raspberries that the reporter ever saw. They are of the "Superb" variety, which originated in Miami county, Ohio. The doctor is making a specialty of small fruits, and has demonstrated that Nevada can produce not only as large but as delicate berries as California. He claims that Nevada can discount California in both flavor and color. He has seven varieties of raspberries, five of strawberries, two of blackberries and dewberries, a number of currants and gooseberries, and a large variety of apples, pears, peaches, plums and cherries. All are now growing on what was 12 years ago a sagebrush waste. Experiments in Washoe valley and other sections have established the fact that both the soil and climate of Nevada are especially adapted to fruit growing.

**BLOODED OR COMMON STOCK.**—*Reno Gazette*, July 14: Some years ago W. J. Marsh, the Mason valley cattle breeder, had a thoroughbred Durham cow. Through an oversight she became with calf by a scrub bull, and the calf was sold for \$35. A half-sister to this calf was sired by a thoroughbred bull, and when three years old sold for \$500. The difference in favor of thoroughbred stock can be easily figured out.

#### WASHINGTON.

**CROPS AND PROGRESS.**—*EDITORS PRESS*:—The crops in this upper country are going to be very light. On the 1st of May the prospect for a bountiful harvest was never better, but the continued dry weather from the middle of April to the 20th of June will make the yield fully one-half less than it was last year. The Palouse branch of the Northern Pacific Railroad is now nearing completion. The track is already laid some 20 miles. The grading is being done rapidly, and is to be finished so that the balance of the track can be laid within the next 30 days. The road extends from Marshall, on the trunk line, to Palouse City, passing through Spangle, Rosalia and Belmont, and tapping the richest part of Eastern Washington north of Snake river. The citizens of Spangle and surrounding country had a booming time the 5th of July on the strength of their independence, and because they are so centrally located. It isn't claimed that the place is the center of the universe, but it comes so near it that the railroad passes through the center of the corporate limits; and while the outlying villages, like Rockford, Cheney and Spokane Falls, are dividing their variances and splitting up their communities over the county seat question, Spangle goes in unanimously for a "whole cherry," and the talk is now of having the capital moved over here as soon as Washington is admitted into the Union. Farmers would be truly happy over the grand prospect and increase the size of their fields right away if they could get a fair price for grain; but wheat is only 38 cents a bushel here, and that doesn't pay for cultivating the ground. The best of land can still be had at \$10 an acre, but will quickly advance in value when the time comes that there will be a profit in raising wheat.—*GEORGE FELLOWS, Spangle.*

**EVAPORATED APRICOTS.**—We have received a sample of apricots dried by Mr. James Marshall, of Vacaville, in the Acme Steam-Heat Evaporator. They have a fine, bright color, and the substance of the fruit seems to be preserved in a jelly form, with all its natural flavor and richness. An article of such superior quality should find a ready market. The manufacturers of the "Acme" claim that it will produce from five to seven per cent more dried fruit than can be obtained by any other process. This, and absolute safety from fire, are very strong points which should at least be carefully considered by fruit-growers.

**FRUIT-DRYER BURNED.**—*W. T. Coleman & Co.*'s fruit-dryer at San Buenaventura, an account of which appeared in our Agricultural Notes last week, was burned to the ground on the 15th. The fire originated in the north furnace. The establishment cost about \$5000 and was insured, but for what amount we are not now informed. There were about four tons of dried fruit and nearly the same quantity of green fruit on hand, all of which is a total loss. Thirty-five or 40 hands are thrown out of employment.

**ORANGE-CLIPPER.**—We learn from the Pasadena Union that Dr. Congar has made another invention for the benefit of fruit-growers—this time an orange clipper, being a pair of shears with short blades, so curved as to cut the stem within the projection of the orange. Clipping is absolutely necessary now, as the pulling off of the fruit is found to unquestionably injure it, and no prudent grower will hereafter take chances of loss in that way. The doctor has just received a model and hopes to have them made so as to sell them for a dollar apiece.

#### Grand Army Festivities.

The coming campfire of the Grand Army of the Republic, which takes place in San Francisco from August 2d to August 12th, will be an enjoyable occasion, not only to the comrades but to the general public. Great preparations are being made for the festivities. An immense arch is being built on Market street, near Kearny, and 80 blocks of streets will be handsomely decorated on the route of the procession. Large numbers of people will come from the interior to the city on the occasion, and thousands are coming from the East, also. San Francisco will be in holiday attire for a couple of weeks. It is a good time for those who can leave their homes to make a visit to the city. The committee having the affair in charge have laid out an elaborate programme of entertainment for the visitors, and the neighboring cities and towns will do their share also. Altogether, the occasion will be a very enjoyable one for citizens and visitors. In next week's *RURAL* we shall have more to say on the subject, and give the programme thus far arranged.

**DEATH OF MRS. EDWARD FRISBIE.**—Mrs. Phoebe A. Frisbie, wife of Mr. Edward Frisbie, of Anderson, Shasta Co., died in this city, on July 17th. Mrs. Frisbie was a native of New York, and something over 58 years of age. She was a person of more than ordinary character, possessed of a well-balanced and highly cultivated mind, and lived and died a model Christian woman, wife and mother, respected and beloved by all with whom she came in contact. Her life has been one of much and varied vicissitudes, both in city and country. She formerly resided in Vallejo, but of late years has been a resident of Anderson, in the northern part of the State. She was the mother of a large, grown-up family, which she ever fondly held together by love and force of character. Her last days were attended with much bodily suffering, which she ever bore with true Christian fortitude, and finally passed peacefully away in the presence of her husband and other members of her family. Her funeral was attended at Vallejo, July 19th, by a large circle of relatives and friends. Previous to her residence in Shasta county, Mrs. Frisbie was a highly esteemed member of Vallejo Grange. There are few whose departure from life can be so deeply and sincerely deplored by the survivors.

**THE WORLD'S WOOL INDUSTRY.**—It appears from careful statistical information that the number of sheep in Europe is steadily decreasing. In Belgium, Hungary, Germany and Austria the decrease is large. There is also a small decrease in France, but there is a large increase in Italy and a small improvement in Russia. In Australia and New Zealand there was the large increase from 59,000,000 to over 80,000,000 during the 10 years preceding 1884. In the United States, during that time, there was also an important increase, but there has been a decrease since. Our imports of wool increased from 344,000,000 pounds in 1874 to over 519,000,000 in 1884. Quite a large per cent of our imported wool is re-exported. In 1884 the amount of wool manufactured in this country was 357,000,000 pounds. That figure, however, includes all the wool that was reworked as shoddy and mungo, as the amount of wool manufactured is estimated by the goods turned out, and not by the wool as it goes to the mill. The cotton and silk which goes into woollen goods is also counted as wool.

**THE WOOL-GROWING INDUSTRY.**—The exportation of unwashed wool from the Argentine Republic last year was to the value of \$32,000,000. Wool growing in that country is rapidly increasing in importance, while here it has been so hampered that as an American industry it is rapidly going to decay.

**SAN FRANCISCO AND THE STATE.**—This city is growing much faster, in proportion, than the State at large, as the following statistics of the growth of population abundantly show:

	STATE.	CITY.
1880	379,994	66,892
1870	590,247	149,473
1860	864,694	283,059

The fruit and vine products of Santa Clara county are to be shown at the New Horticultural hall, at San Jose, throughout the second week of August. We gratefully acknowledge the receipt of a complimentary ticket to this, the second annual exhibit.

The directors of the San Joaquin District Fair propose having a pavilion display at the next fair. The old Hauser harvester manufacturing building will probably be used as a pavilion.

### Where Do You Live?

I know a man, and his name was Horner,  
Who used to live on Grumble Corner—  
Grumble Corner in Cross-Patch Town—  
And he was never seen without a frown.  
He grumbled at this, he grumbled at that;  
He growled at the dog, he growled at the cat;  
He grumbled at morning, he grumbled at night;  
And to grumble and growl were his chief delight.

He grumbled so much at his wife that she  
Began to grumble as well as he;  
And all the children, wherever they went,  
Reflected their parents' discontent.  
If the sky was dark and betokened rain,  
Then Mr. Horner was sure to complain;  
And if there was never a cloud about,  
He'd grumble because of a threatened drought.

His meals were never to suit his taste;  
He grumbled at having to eat in haste;  
The bread was poor, or the meat was tough,  
Or else he hadn't had half enough.  
No matter how hard his wife might try  
To please her husband, with scornful eye  
He'd look around, and then, with a scowl  
At something or other, begin to growl.

One day as I loitered along the street,  
My old acquaintance I chanced to meet,  
Whose face was without the look of care  
And the ugly frown that it used to wear.  
"I may be mistaken, perhaps," I said,  
As, after saluting, I turned my head;  
"But it is, and it isn't, the Mr. Horner  
Who lived for so long on Grumble Corner."

I met him next day, and I met him again,  
In melting weather and pouring rain,  
When stocks were up and when stocks were down;  
But a smile somehow had replaced the frown.  
It puzzled me much; and so, one day,  
I seized his hand in a friendly way,  
And said: "Mr. Horner, I'd like to know  
What can have happened to change you so?"

He laughed a laugh that was good to hear,  
For it told of a conscience calm and clear;  
And he said, with none of the old-time drawl:  
"Why, I've changed my residence, that is all."  
"Changed your residence?" "Yes," said Horner,  
"It wasn't healthy on Grumble Corner,  
And so I moved. 'Twas a change complete,  
And you'll find me now on THANKSGIVING STREET."

Now, every day as I move along  
The streets so filled with the busy throng,  
I watch each face, and can always tell  
Where men and women and children dwell;  
And many a discontented mourner  
Is spending his days on Grumble Corner,  
Sour and sad, whom I long to entreat  
To take a house on THANKSGIVING STREET.

—Josephine Pollard.

### Vacation at Pacific Grove.

[Written for RURAL PRESS by L.]

Away from the hot white glare of summer  
skies, away from the dazzling sweep of yellow  
stubble-fields, away from the ranch with its  
long days of toil—ah, what a contrast between  
San Benito valley, at this season, and Pacific  
Grove. What vigor pervades one's frame with  
each inspiration of the delicious air, damp from  
ocean's dewy lips, and fragrant with the breath  
of pines; but more invigorating than this is the  
intellectual feast of the C. L. S. Assembly.  
We would that every rural housewife might  
step from the clatter of kettles and stove-lids,  
the baking of bread and boiling of meat for hun-  
gry hay balers and headers, into the Chautauqua  
Assembly; no one needs the change more; no  
one would more highly appreciate its benefits.  
This is our fourth year of attendance, and of it  
we have had but four days; but the memory of  
even these will brighten many days of toil.  
We have traveled in Italy with Dr. Spinning;  
have visited the Indians with Prof. and Mrs.  
Lemmon; heard such eulogy of Robert Brown-  
ing that we feel we may find him in truth the  
husband of our favorite poet; have listened to  
Dr. Stratton's eloquence—thoughts so high, yet  
given in language so clear we all may grasp  
them; but we will not try to report, not only  
because we feel our incompetence but because  
we hope our worthy secretary, Mrs. Field, will  
want all this news for the use of her fertile pen  
in a report to the RURAL. How her kind heart  
loves the "country folk," especially its maidens  
and its mothers.

To-day is the last of our session, to-morrow  
comes the sad flitting, although the good-byes  
are softened by the thought of next year's re-  
turn. Few of the many are friends in the  
usual acceptance of the term, still in the inter-  
est of true culture, in the love for and longing  
to help one another, we feel that from the high-  
est to the most lowly, all the assembly members  
are friends.

Our place of meeting is a plain wooden build-  
ing, but transformed into a perfect bower of  
beauty with its garlands, trailing vines and  
flowers that nowhere are so perfect as in this  
favored clime. I stole into the deserted hall  
this evening, and as I lingered amid this beauty  
—being, like our "Girl of Twenty," fond of draw-  
ing lessons from all about me—this thought

came to me: Yes, these flowers are beautiful,  
but it is all owing to the conditions of their  
growth. Our flowers in the heated interior are  
not like these, and yet they are the same spec-  
ies, governed by the same laws, capable of the  
same perfection; 'tis but the circumstances that  
differ. So it is with mind; it is almost impos-  
sible to estimate how much one owes to one's  
surroundings, and how little to anything of  
superiority within one's self; hence, may we not  
only receive inspiration from the rare loveli-  
ness of these flowers, but as we contrast them  
with those of less favored regions, learn too a  
sweet lesson of charity? Yet, while our benevo-  
lence thus receives new impetus, it were well  
that we forget not the more beautiful lesson  
the dusty leaves and sun-parched blossoms of  
the plains would teach us, that of noble, un-  
complaining endeavor to make the most of cir-  
cumstances given in obtaining to the highest  
possible perfection of life's mission of growth.

The future of Pacific Grove is almost beyond  
the spirit of prophecy to foretell. It is beauti-  
ful now, but its infancy is nothing compared  
with what the years shall surely bring. No  
place on the coast has such natural advantages  
or so readily seconds man's improving touch.  
Witness Del Monte, its charms like nothing so  
much as the castles and enchanted groves of  
childhood's fairy land.

You will go with us this afternoon to Cyprus  
point. Leaving the grand stand, our horse's  
feet beat loudly upon the cement road, smooth  
as a floor, as we enter a pine avenue reaching  
before us straight as a line, a mile away. A  
turn in the road reveals pretty little vistas to  
right and left. Here we have a glimpse of the  
great sand domes, glistening like snow, and  
here is quite a clearing where once a mill stood;  
but now we see the trim beds and bright green  
of "John's" vegetable patch. Here a road  
branches off to Moss Beach, and we hear the  
mighty roll of breakers upon its waste of sand.  
Now the shade grows more dense, and in its  
damp air the moss hangs from the trees in most  
delicate lacework. We snatch a yard or two  
as we ride on.

Suddenly the forest is left behind and we come  
out upon a knoll bereft of every kind of ver-  
dure; not a shrub, not a blade of grass; just in  
front is Seal rock, its top black with hundreds  
of birds, and beyond the broad sweep of the  
Pacific. The remainder of our road lies almost  
at the feet of the blue waters. Reaching the  
point, we drive out upon the bold promontory,  
nor can we tell, no matter how often we may  
come, the mood in which we may find old ocean  
here. To-day it seems like a soul lashed to  
frenzy by passion and remorse, as the great  
waves, beating against the gray rocks, dash the  
spray high above the bluff, and anon sinks back  
in dark whirlpools of grief and low sobbings  
of despair, to be met by another burst of wrath.  
To-morrow its deep calm seems to speak of vic-  
tory, of struggles that have

"Ranged the scale of passions till the soul  
Is deep, and wide, and soft with sympathy."

We feel that the power and might are still  
there, but obedient to a blessed peace.

We turn aside and find ourselves in the grand  
old cypress grove, that ancient congregation of  
priests who, "bearded and hoar, with voices  
sad and prophetic," have grown old in their  
vigils; for hundreds of years they have chanted  
their masses and whispered to each other the  
tales of the hungry deep caught from the blue  
waves that mutter secrets to the cliffs below.  
Oh! how we enjoy this hour amid the shadows,  
the sunlight falling upon us through the moss-  
grown trees with a subdued and pleasant light.  
To-morrow we must go to Point Lobos. We  
will pass through the old town, and make a long  
ascent from which we descend into a quiet val-  
ley; now we are again upon a height where the  
vision which bursts upon our sight is one to  
make even the quietest lips vocal with delight.  
Peaceful little dales there are, with little farms  
green as emeralds in their setting of brown  
hills; dark pine forests moaning in harmony  
with the restless roar of the waves—on, on, to  
where the blue of earth is not discernible from  
the blue of heaven, save by the glittering sheen  
painted by the sunlight upon the ocean's heaving  
breast. Entranced we ride, until suddenly our  
road seems to dip into the blue waves of Carmel  
bay, and just beyond stands Point Lobos, a  
rocky promontory jutting into the sea. Its  
ascent is considered quite a feat, whose ample  
reward is the grand view obtainable from its  
summit. The climb we accomplish, nor fail to  
realize ere we place its granite boulders be-  
neath our feet that it is quite an undertaking.  
We carve our names upon the solitary cypress  
that "grand, gloomy and peculiar, sits upon his  
throne like sceptered monarch wrapped in the  
solitude of his own magnificence." The view is  
lost, as over us hangs a veil of mist whose gray  
folds shut us in.

Verily, the delights of Monterey are endless,  
of which who can better testify than one who has  
enjoyed not only its principal but minor charms,  
as happy child, "poetic maiden," wife and  
mother? May its blue waves chant an anthem  
of peace and rest to the ears of old age.

But stay! We cannot close without a word  
for our RURAL, whose wisdom and friendly  
cheer have made it a welcome guest at our house  
for 13 years. It has watched its roof tree root,  
branch and blossom; seen the bachelor's cabin  
enlarge to the proportions of home, and  
watched the babies grow, until now two bright-  
eyed little maidens look with pleased anticipa-  
tion for next week's "Young Folks' Column."  
Long live the RURAL!  
Pacific Grove.

### Work of American Women.

From a very exhaustive article by May  
Wright Sewell, on the exhibit of women's work  
at the recent New Orleans Exhibition, we ex-  
cerpt the following paragraphs:

According to the United States census of  
1880, the number of our women then engaged in  
registered occupations was 2,647,157, and the  
number of occupations among which these were  
distributed was 218. The work done and being  
done by these millions of women in these hun-  
dreds of occupations was suggested rather than  
shown at New Orleans; more forcibly suggested,  
perhaps, in the displays in the main building  
and in the State exhibits than by those in the  
women's department. In the former, one found  
only the serious work of women side by side with  
the serious work of men; in the latter, one found  
the products of amateurs rather than of profes-  
sionals, the fruit of woman's leisure rather than  
of her toil; or, more justly, one found here the  
fruit of her leisure side by side with the fruit of  
her toil, and preponderating over it.

The first factories of America were in the  
kitchens and chambers of homes where the  
spinning, dyeing, weaving, tailoring, millinery  
work, boot and shoe making, etc., were wholly  
or mainly done. When, therefore,

#### Factories were Eliminated

From dwelling-houses and consolidated, women  
soon re-entered them; but having lost individual  
proprietaryship, they usually resumed manufac-  
turing as subordinates. The number of women  
registered by the census of 1880 in "manufac-  
turing and mechanical industries" was 631,909.  
The marvelous displays made by many of the  
large manufacturing firms, while representing  
the enterprise, generalship, executive force and  
inventive genius of men, presented the actual  
work of as many women as men—in many in-  
stances, of more.

The last census assigned 594,510 women to  
agriculture. A much larger proportion of the  
women in agriculture are owners and proprie-  
tresses than of the women in manufactures. The  
agricultural exhibits entered in the names of  
women were proportionately numerous, and  
held many surprises for the observer. In the  
State exhibits of Nebraska, Dakota, Minnesota,  
Iowa, California, Colorado, Florida, Mississippi,  
Louisiana, Tennessee and New Hampshire  
were very notable entries by women. No finer  
cereals; no sweeter, better grown, better cured  
hay, grass and clover; no larger vegetables; no  
more tempting fruits; no whiter, cleaner cot-  
ton; no longer wools; no finer mohairs, were to  
be seen than those from the farms, plantations  
and ranches owned, superintended and, in some  
cases,

#### Exclusively Worked by Women.

From Pennsylvania, California, Florida and  
North Carolina were sent the results of women's  
experiments in silk culture. Exhibits showing  
every stage in the process, from the egg to the  
exquisite fabric, were made. Silk culture has  
been attempted in most of the States with a  
success which warrants the belief that it will  
ultimately rank among the productive interests  
of our country.

Deducting the number of domestic servants  
from the number of women registered in 1880  
in "Personal and Professional Services," we  
find 422,385 women distributed among the pro-  
fessions and other occupations not included un-  
der agriculture, trade and transportation, man-  
ufacturing, mechanical and mining industries.  
In this number are women following scientific  
pursuits. One's ideas of women's activity in  
science were much enlarged by a careful sur-  
vey of the exposition. Several State exhibits  
contained classified lists of native animals and  
plants prepared by women. In some instances  
the lists were illustrated by herbariums and by  
cases of animals, birds, insects and fishes, in-  
dicative of woman's scientific attainments and  
of her skill in taxidermy. The Pacific Slope di-  
vision of the woman's department was rich in  
botanical exhibits. These included very com-  
plete collections of Pacific Coast ferns, marine  
cryptogams, and California lichens and mosses.  
All of these were scientifically named and de-  
scribed. Kentucky showed prepared drugs and  
medicines from the School of Pharmacy for  
Women. The woman's scientific department  
exhibited many applications of chemistry to do-  
mestic science. Here were samples of food  
tested to show adulterations; samples of silk  
tested to reveal foreign fiber; here was "the  
housekeeper's laboratory"—a box containing  
phials of chemicals, measuring glasses, and di-  
rections for numerous tests desirable in house-  
hold economy. Most of the science exhibits,  
excepting in pharmacy, botany, and zoology,  
were

#### Entered by New England Women.

In art, the best work shown by women was  
in the decorative and illustrative orders. The  
New York, Philadelphia and Cincinnati schools  
of technical design, the art department of  
Spring Garden Institute, the Cincinnati Pottery  
Company, and scores of less famous institu-  
tions, were represented by the work of women  
students. These exhibits included studies from  
nature, followed by conventional designs for  
carpets, wall-papers, friezes, tapestries, tiles,  
stained glass, etc., accompanied in many cases  
by fabrics in which these designs had been re-  
produced; elegant examples of wood carving,  
potteries, decorated china, moldings, artistic  
embroideries, and hammered metals. The  
number, size and variety of these displays in-  
dicate that the furnishing and interior decora-

tion of dwellings will soon be in the hands of  
women. Collections of the original designs  
made by women for illustrations, cards and  
calendar publishers. In some cases these were ac-  
companied by the original drawings, and by  
the engravings or chromos, the pictures in their  
latest, as well as in their earliest, phases being  
women's work.

### About Novel-reading.

[Written for the RURAL PRESS by F. A.]

In the March number of the *Chautauquan* I  
came upon some remarks in regard to reading  
that pleased me much, and I shall preface my  
own views about the reading of novels with  
those expressed by the editor of that magazine.

"Reading," he says, "has two objects—the  
lower one is amusement and the higher one is  
instruction. \* \* \* Some persons never or  
seldom read except for entertainment or amuse-  
ment. The idea of having some solid gain for  
their reading does not occur to them. Fiction  
exists—an immense amount of it—to furnish a  
time-killing recreation. There are said to be  
persons who consume three novels a week. The  
novel is not a thousandth part as bad as the  
novel habit. There are plenty of good  
novels, but one a month is a very large sup-  
ply—probably an overdose—for a well-orga-  
nized mind. One a year would probably be a  
safer prescription. The world is full of inter-  
esting facts. Knowledge abounds and grows.  
A man or woman with a mind wants this  
knowledge, as much of it as time and means  
will permit."

And again: "What do they (people) mean  
when they ask for easy and entertaining read-  
ing? Do they regard life as a picnic and the  
mind as a music-box to play with? Have they  
seriously reflected on the deadening effect of  
easy reading? One ought to get a discipline  
out of a book. \* \* \* Fiction kills the appe-  
tite for wisdom and it gives nothing in its  
place. The reader has had the pleasure, the  
emotional experience, of the reading, but not-  
ing of any value is left over. Useful reading  
requires brain work. We cannot expect to  
acquire knowledge without patient attention  
and careful thinking. The habit will be grad-  
ually formed of reading for profit, and then  
such reading will become a pleasure. But it  
will be a very different sort of pleasure from  
that of swallowing fiction."

The most pernicious result of indiscriminate  
novel-reading is well known: it engenders a  
mawkish sentimentality and unfits young peo-  
ple for the practicabilities of life. As the poet  
said:

"Life is real, life is earnest."

Facts are what is needed, not fiction. Who  
would be willing, to speak metaphorically, to  
live entirely on cake? It is bread that gives  
strength and vigor: cake does very well for  
dessert; but who would want the dessert alone?  
True, the children might, but children never  
know what is best for them.

Another bad result of such reading is that it  
enervates the mind, and makes it torpid and  
listless. The owner of such a mind is more  
dead than alive. It is the amount of thinking  
we do that is the measure of our intellectual  
life. In Carlyle's "Life of Sterling" is to be  
found a splendid pen-picture of Coleridge. The  
habit possessed by this poet of delivering him-  
self in monologue is dwelt on and Carlyle ex-  
claims vehemently and humorously against  
having to sit, as he expresses himself, "like a  
bucket and be pumped into." Novel-reading  
produces passivity; what we want is just the  
opposite. But I must not be understood to  
decry fiction altogether. To put it  
trite, there are novels and novels, and some  
(I can count the authors of them on my ten  
fingers) I consider it very essential to read.  
What I deprecate is the reading of novels the  
contents of which may at once be inferred by  
the sensational and high-flown titles that belong  
to them.

In the first quotation above given, the writer  
believes one novel a year should be enough.  
To many this may seem too much of an extreme,  
but persons of intellectual caliber will judge  
differently. Fiction, even at its best, does not  
satisfy the hunger that is experienced by minds  
that have come to the realization of how much  
there is to learn. I find in one of my note-books  
something I copied from the autobiography of  
the great but unfortunate painter, R. B. Hay-  
don, apropos to this point. It is as follows:  
"What a vast quantity of knowledge I am ig-  
norant of—astronomy, natural history, botany,  
navigation, etc., etc. I shrink within myself  
when I think of all I do not know."

If young people were early taught to read bi-  
ography and autobiography there would be little  
danger, it seems to me, of the "novel habit"  
gaining a foothold in their minds. In the pages  
of the lives of great men—poets, painters, au-  
thors, statesmen, and others—is to be found an  
incentive to great and noble action that cannot  
be found in the work of even the greatest nov-  
elist, and for the best of reasons: because in  
the former we have the life, heart and brain  
experience of living men and women; in the  
latter, merely an ideal conception. To be sure,  
a high ideal even in fiction has its merit, but  
put beside actual experience it seems tame in-  
deed. The contemplation of the lives of great  
spirits in whatsoever department of life will, as  
Thomas Carlyle says, inspire the reader "to  
lofty emulation, cheering the solitary thoughts  
with hope, and teach him to struggle, to en-  
dure, to conquer difficulties."

## Agriculture a Fraud.

The following "modern fraud" is from the Cincinnati Times:

The basest fraud on earth is agriculture. The deadliest *ignis fatuus* that ever glittered to beguile and dazzled to betray is agriculture. I speak with feeling on this subject, for I've been glittered and beguiled, and dazzled and destroyed by this same arch deceiver.

She has made me a thousand promises and broken every one of them.

She has promised me early potatoes, and the rain has drowned them; late potatoes, and the drouth has withered them.

She has promised cherries, and the curculio has stung them, and they contain living things, uncomely to the eye and unsavory to the taste.

She has promised strawberries, and the young chickens have devoured them, and the eye cannot see them.

No wonder that Cain killed his brother. He was a tiller of the ground. The wonder is that he did not kill his father, and then weep because he had not a grandfather to kill. No doubt, his Early Rose potatoes, for which he paid Adam \$7 a barrel, had been cut down by bugs from the headwaters of the Euphrates; his Pennsylvania wheat had been winter-killed and was not worth cutting; his Norway oats had gone to straw, and would not yield five pecks per acre, and his black Spanish watermelons had been stolen by boys who had pulled up the vines, broken down his patent picket-fence, and written scurrilous doggerel all over his back gate. No wonder he felt mad when he saw Abel whistling along with his French merinos worth \$8 a head, and wool going up every day. No wonder he wanted to kill somebody, and thought he would practice on Abel.

And Noah's getting drunk was not at all surprising. He had become a husbandman, and drowned his sorrows in the "flowing bowl."

The fact is, agriculture would demoralize a saint. I was almost a saint when I went into it. I'm a demon now. I'm in war with everything. I fight myself out of bed at 4 o'clock, when all my better nature tells me to lie till 7. I fight myself into the garden to work like a brute when reason and instinct tell me to stay in the house and enjoy myself like a man. I fight the pigs, the chickens, the moles, the birds, the bugs, the worms—everything in which is the breath of life. I fight the docks, the burdocks, the mulleins, the thistles, the grapes, the weeds, the roots—the whole vegetable kingdom. I fight the heat, the frost, the rain, the hail—in short, I fight the universe, and get whipped in every battle.

HE SAW HIS FATHER.—"Father," he began, after taking the old man out back of the barn, "your years are many."

"Yes, my son."

"You have toiled early and late, and by the sweat of your brow you have amassed this big farm."

"That's so, William."

"It has pained me more than I can tell to see you, at your age, troubling yourself with the cares of life. Father, your declining years should be spent in the old arm-chair in the chimney corner."

"Yes, William, they should."

"Now, father, being you are old and feeble and helpless, give me a deed of the farm and you and mother live out your few remaining years with me and Sally."

"William," said the old man as he pushed back his sleeves, "I think I see the drift of them remarks. When I'm ready to start for the poor-house I'll play the fool and hand over the deed, William!"

"Yes, sir."

"In order to dispel any delusion on your part that I'm old and feeble and helpless, I'm going to knock down half an acre of corn stalks with your heels."

And when the convention finally adjourned, William crawled to the nearest haystack and cautiously whispered to himself:

"And Sally was to broach the same thing to me at the same time! I wonder if she is mortally injured or only crippled for life."

RENTING DRESSES.—While chatting with the proprietor of a well-known Long Branch hotel the other day, I remarked that I could already see signs of the coming summer exodus. He laughed and said: "Well, my dear boy, I fear that the more signs you see the less visitors we'll have. I have just dropped on to one or two of the latest wrinkles of those people who pose as swell summer tourists on excessively small incomes. A dressmaker whom my wife went to see to-day told her that she had a great variety of dresses for the summer season, which she would hire out on reasonable terms, and change for others once a week. Now, ain't that an idea? You see, Miss de Smith can go to Long Branch with seven morning and seven evening dresses, and after a week she secures another fourteen, and can bloom out in an entirely new set for the following week. All these costumes are made upon a sliding scale basis, with big seams and wide flounces, which facilitate their being changed to fit many sizes. You see that with four sets of dresses the customer can change them from one watering-place to another, and thus serve four people simultaneously, giving each a constant succession of new toilets. For about \$25 a week the girls can have the use of a wardrobe that cannot be duplicated under \$2000. Think of that for American enterprise!"—Baltimore American.

## YOUNG HOLKS' COLUMN.

## The Fairy Sunbeams.

[Written for RURAL PRESS by THEODORA HOLLY.]

It had been foggy several days, but one perfect morn the sun arose above the horizon in all its glory, and the bright little sunbeams were glad to be free again. They went into the country where sunbeams love most to dwell. Here they frolicked with the water-nymphs, danced on the green-sward, kissed the dew off the flowers, and rode on the butterflies; and they delighted in the songs of the birds.

Joy, Cheerfulness and Merry-Heart were always together; they were fast friends, and on this day they were in the best of humor. They strayed away from the other sunbeams, as was their wont, and entered a flower garden. "Oh! what a delicious perfume," cried Joy, seating herself on her pet blush-rose. "I think the rose is the very sweetest of all flowers." "I love my pale lily the best," said Cheerfulness, peeping out of a calla-lily, "if she does lack perfume." "Oh, look at my bright-faced darlings," said Merry-Heart. "are they not the sweetest of all?"

After they had called on all the flowers they went into the forest. While wandering by a winding brook, Merry-Heart, spying some ferns, said: "Come, let us play at see-saw," and they all joined in the sport until they were weary. Then they bathed in a shallow pool. "How refreshing," said Joy, and then they joined hands and lightly danced around a sweet-scented bed of violets, and then they braided wreaths and crowned the naiads.

"Come," said Cheerfulness, "we must not forget our friends in the city." They bade adieu to the forest and they mounted the backs of three beautiful butterflies. Joy rode on a rich maroon butterfly, spotted with purple and gold, Cheerfulness rode on a creamy white one, and Merry-Heart on a gorgeous yellow butterfly, spotted with all the colors of the rainbow. They were a pretty sight as they rode away with their shining crowns of gold and their floating golden robes. They left the forest dark behind them. They were soon there, for you know that sunbeams can travel at the rate of thirteen millions of miles a minute.

They went to the hospital. "Oh, what a gloomy place this is," said Merry-Heart. "How I do pity the little children shut up in these black walls." "If it were not for us," said Cheerfulness, "it would be gloomy all the day long."

"Oh, here are the dear little sunbeams," cried the children as they entered, and they put out their thin little hands to catch them; but the sunbeams were too quick for them and they played hide-and-seek with the children for hours. The sunbeams made that grim old hospital so bright that you would not have known it, and even the children's hair seemed to turn golden and their eyes sparkled, and the color came into their cheeks and their laughter rang out, for where the sunbeams are it is always gay.

The children said, "Oh, that the sunbeams could always live with us." But at least Cheerfulness said, "Look yonder; the sun is setting and we must join our comrade sunbeams on their journey to other lands;" and as they slowly departed they softly kissed the children's hands, lips and hair. "We will come again," they murmured. On their way Merry-Heart lingered behind to chat a few moments with a water nymph that lived in a fountain, and told it of the beautiful country, of the sweet flowers and murmuring brooks, and a city sparrow lit on a bough near by to listen.

Woodland, Cal.

## The Oriole.

[Written for RURAL PRESS by H. R. C.]

The oriole is a very beautiful bird, especially the male, which is black and yellow. The nest of the oriole is swung up in a tree like a small basket. It is generally made of dry grass. When the nest is done it looks very pretty. The oriole lays four eggs. It does great damage in the orchard by eating fruit, and papa has to poison fruit every year for the orioles and other birds. Please excuse all my mistakes, for I am a little boy eight years old.

Poway, Cal.

[This certainly is a very nice little article. Eds. Press.]

A PECULIAR FAMILY.—The Santa Rosa Democrat says that a lady recently came to that city from the East, bringing with her a pet canary which was setting on five eggs. On arriving at Omaha one of the dainty little shells was rent asunder, and forth came an addition to the little mother's family. After the good work had commenced it continued, and as the lady and her little bird family were whirled westward over prairie, mountain and plain the little birds kept hatching, one in each State, as they passed through Nebraska, Wyoming, Utah, Nevada and California, the last bird hatching at Sacramento. She has named each of her little feathered pets after the States they were born in.

WHAT A QUEER KITTEN.—The Auburn Republican tells this funny story: L. N. Lothrop, who lives a mile below Newcastle, had a little

black-and-tan not long ago which gave birth to a litter of puppies. About the same time the family cat dragged into the house a litter of kittens. The mother of the puppies died, and, being anxious to rear one of the dogs, Mr. Lothrop sacrificed the kittens and presented the cat with a pup. The cat accepted the situation and has nursed the dog until it is bigger than herself. Every day she lays before it an offering of mice and gophers.

## GOOD HEALTH.

ADVANTAGES OF LOW CEILINGS.—Rooms with low ceilings, or with ceilings even with the window-tops, says the *Popular Science Monthly*, are more readily and completely ventilated than those with high ceilings. The leakage of air which is always going on keeps all parts of the air in motion in such rooms; whereas, if the ceiling is higher, only the lower part of the air is moved, and an inverted lake of foul and hot air is left floating in the space above the window-tops. To have the currents of fresh air circulating only in the lower parts of the room, while the upper portion of the air is left unaffected, is really the worst way of ventilating, for the stagnant atmospheric lake under the ceiling—although motionless—keeps actively at work under the law of the diffusion of gases, fouling the fresh currents circulating beneath it. With low ceilings and high windows no such accumulation of air is possible, for the whole height of the room is swept by the currents as the dust of the floor is swept with a broom. Low ceilings have also the advantage of enabling the rooms to be warmed with less expenditure of heat and less cost for fuel. The above does not agree with the generally accepted idea of the height of rooms in dwellings, but the authority is good and well worthy of consideration by persons about to build.

ICED DRINKS IN DYSPESIA.—And now a few words as to the beverages to be taken. Americans are a dyspeptic people; they drink much iced water at meals; ergo, iced drinks at meal-times are bad. They may be when carried to excess; this is not denied. But iced drinks are not the cause of the widespread dyspepsia in the United States. There are other potent factors in action. Iced drinks are very grateful to the thirsty, but too much indulgence therein produces a torturing thirst, as the person who indulges in eating snow in the Arctic regions discovers quickly. Just as snowballing causes the hands first to feel cold and then to glow with heat if continued, so the constant application of an iced fluid to the fauces, at first grateful, become a source of intense discomfort; for the blood-vessels are first contracted and ultimately paralyzed, and then the fauces glow with warm blood, like the skin of the snow-baller's hands. Iced fluids are not desirable for dyspeptics, to say the least of it. Ordinarily at dinner the iced pudding is followed by a glass of liquor—"to correct it." A certain temperature is requisite for digestion, and too much cold is undesirable.—From Dr. J. M. Fothergill's "Indigestion and Bilio-sness."

THE POISON OF THE SCORPION.—Apparently no very complete exhaustive analyses of the poison of the scorpion have yet been made. The best on record are those by Jousset, presented to the French Academy in 1870 and published in the *Comptes Rendus* of that year. He gives no definite statement of the chemical constitution of the venom, but does state the mode of its action upon the blood, by which in severe cases it causes death. It affects the red corpuscles, paralyzing them so that they cohere one to another, thus becoming agglutinated until they are unable to pass through the capillaries, and may cause fatal obstruction. So far as known, there is no chemical antidote which can neutralize the poison, but inasmuch as, like all animal poisons, the action on the nerve force, or in other words, the vital force, is in the nature of depression, a remedy which stimulates that force temporarily is plainly indicated. Alcohol is always available for that purpose, and being easily obtained, is perhaps more serviceable than any other. Bromide of potassium is of high value, but can be used safely only by the physician himself.

IMAGINARY ILLS.—A Philadelphia physician says that a great deal of what passes for heart disease is only mild dyspepsia, that nervousness commonly is bad temper, and that two-thirds of the so-called malaria is nothing but laziness. Imagination, he says, is responsible for a multitude of ills, and he gives as an instance the case of a clergyman who after preaching a sermon would take a teaspoonful of sweetened water and doze off like a babe, under the impression that it was a *bona fide* sedative.

INSANITY IN CHINA.—With a population of about 300,000,000, China has not a single insane asylum. Is this indicative of freedom from insanity in China or of the proverbial indifference of that race to the sufferings of its individuals? In this State we believe that the proportion of insane among the Chinese is nearly as great as among other nationalities.

COMPULSORY REVACCINATION of the soldiers was established by the German Government 11 years ago, and since then not a single death from smallpox has occurred in the German army.

## DOMESTIC ECONOMY.

FISH PUDDING.—A fish pudding easily made and nice is prepared with one can of salmon, two eggs, one cup of bread crumbs, one tablespoonful of melted butter, minced pickled cucumber and pepper and salt to taste. Turn the fish in a colander to drain off all the liquor, which is to be kept for the sauce. Then break the fish in pieces with a fork, removing all the bones; mix it thoroughly with the eggs, seasoning and melted butter. Put the mixture in a buttered pudding mold and set it, tightly covered, in a pan of boiling water to cook for one hour. For the sauce put one ounce of butter in a saucepan on the fire; when melted stir in a teaspoonful of cornstarch mixed with a little water; add slowly a cup of boiling water and stir until it is rather thick. Add the beaten yolk of an egg, the liquor from the can, a teaspoonful each of minced pickled cucumber and parsley, pepper and salt to taste, and let all boil once. Serve with the pudding.

STRAWBERRY VINEGAR.—For this purpose select the freshest, full-flavored fruit, and see that it is fully ripe. Hull the berries, place them in wide-mouthed glass jars, and pour over them the best white wine vinegar, allowing one quart for each pound of the berries. Then cover the jars tightly, and let them stand for three days; then drain the vinegar off, refill the jars with fresh berries and pour the vinegar back over them. When it has stood as before, three days, repeat the process for the third time; then drain off the vinegar, straining it through a muslin bag; now measure it, pour it into an enameled saucepan, and for each pint of it add one pound of broken or crushed white sugar. Stir the sugar until nearly dissolved and then set the saucepan on the fire, where the contents may boil very gently for five minutes. Then pour the liquor into another vessel, and, after standing 10 minutes, skim it well, when it may be bottled and set away for use.

THE WAY TO CLARIFY SOUP.—Just before the soup boils the scum that has risen to the top during the process of heating should be carefully removed; a little cold water poured in will assist the particles that compose the scum to rise. After the soup has been boiled it should be strained; this may be repeated; then, if the soup is not as clear as you would like to have it, mix one egg and its broken shell with a teacupful of cold water, then to this add about a teacupful of the hot soup, then stir it all into the boiling soup; let it boil up well, then set the kettle upon the back part of the stove, and when somewhat cool, strain it.

LEG OF MUTTON WITH CAPER SAUCE.—Wash with vinegar, peeling off as much of the tough outer skin as will come away easily; boil 12 minutes to the pound in a pot of hot salted water; take out, wipe all over with a clean cloth and rub with butter. For the sauce, take out a large cupful of the liquor half an hour before the meat is done; set the vessel containing this in cold water, to throw up the fat; skim carefully, strain into a saucepan, bring to a boil, stir in a great spoonful of butter rubbed in as much flour. When it has cooked three minutes add two teaspoonsful of capers.

TO CRYSTALLIZE FRUIT.—Pick out the finest of any kind of fruit, leave in the stones; beat the whites of three eggs to a stiff froth; lay the fruit in the beaten egg, with the stems upward; drain and beat the part that drips off again; select them out one by one, and dip them into a cup of finely-powdered sugar. Cover a pan with a sheet of fine paper, place the fruit on it, and set it in a cool oven. When the icing on the fruit becomes firm, pile them on a dish and set them in a cool place.

RICE PUDDING.—One-half cupful rice, one and one-half pints milk, one-half cupful sugar, large pinch of salt, one tablespoonful lemon rind chopped fine. Put rice, washed and picked, sugar, salt and milk in quart pudding dish. Bake in moderate oven two hours, stirring frequently first one and a quarter hours, then permit it to finish cooking, with light-colored cream, disturbing it no more. Eat cold with cream.

COTTAGE PUDDING.—Either of the following will be found good: 1. Two cups of flour, two teaspoonsful of baking powder, one cup of sugar, one tablespoonful of butter melted, one cup of milk and the grated rind of a lemon. Bake in a good oven and serve hot, with sauce. 2. One pint of flour, two teaspoonsful of baking powder, two cups of sugar, one cup of butter, one cup of milk and two eggs. Serve hot, with a hard sauce.

COFFEE CAKE.—One cup of brown sugar, one cup of butter, one-half cup of molasses, one cup of strong, cold coffee, one teaspoonful of soda, two teaspoonsful of cinnamon, one teaspoonful of cloves, one cup of raisins or currants and five cups of sifted flour. Add the fruit last, rubbed in a little of the flour. Bake about one hour.

LEMON CREAM.—Peel three lemons and squeeze out the juice into one quart of milk. Add the peel, cut in pieces, and cover the mixture for a few hours; then add six eggs, well beaten, and one pint of water, well sweetened. Strain and simmer over a gentle fire till it thickens. Serve very cold.

## The Week.

As the time draws near for the arrival of our  
veteran visitors, the notes of preparation, both  
in San Francisco and outlying towns, are heard  
in ever-loudening chorus. The skirmish-line of  
the friendly invading army has already crossed  
our borders.

The fervid solar heats of last week have  
abated somewhat and been followed by un-  
wonted summer showers—refreshing, yet not  
wholly welcome to the hay-farmers in various  
portions of California and Nevada.

But the political mercury is mounting fast  
among the hurriedly-gathered legislators and  
lobby at Sacramento, and cannot be expected  
to pause below fever heat. As we write, Wed-  
nesday afternoon, matters have hardly begun  
to take form at the capitol, and it is too early  
to venture any confident prediction as to the  
results of this sudden session. We hope, how-  
ever, that amid all the clash of interests at this  
important juncture, cool judgments and wise  
counsels will prevail.

## Government Aid to Agriculture.

It does not appear that the Government is  
ready to advance agricultural experimentation  
in the different States as has been asked, for we  
do not hear of the progress of the experiment sta-  
tion bill as was expected. It may be that it  
will come up later, but the session must be ap-  
proaching its end.

The agricultural appropriation bill which we  
find in our Eastern exchanges, provides for  
considerable extension in the work of the De-  
partment of Agriculture, and equips it for in-  
vestigation in several special directions which  
certainly need careful study. We propose to  
describe as briefly as possible the work which  
is to be provided for:

First, there has been established a pomologi-  
cal division with a pomologist at \$2000 per  
year, and for the collection and dissemination  
of pomological information, \$3000; in all, \$5,-  
000.

Second, the entomological appropriation is  
increased to \$20,000, and it is charged with con-  
sidering also the subject of economic ornithology.

Third, an appropriation of \$10,000 is made for  
collecting and disseminating information relat-  
ing to silk-culture, for purchasing and distribut-  
ing silkworm eggs, and for conducting, at some  
point in the District of Columbia, experiments  
with automatic machinery for reeling silk from  
the cocoon; also, for the encouragement and de-  
velopment of the culture of raising raw silk,  
\$5000, to be expended under the direction of  
the Woman's Silk Culture Association of the  
United States, located at Philadelphia, and to  
be paid directly to said association.

Fourth, an appropriation of \$100,000 to pur-  
chase the best sugar machine, to conduct ex-  
periments in sugar making; all the machinery,  
if possible, to be made in this country.

Fifth, appropriating \$100,000 for establish-  
ing a bureau of animal industry. The com-  
missioner of agriculture is authorized to use  
any part of this sum he may deem necessary or  
expedient, and in such manner as he may think  
best, to prevent the spread of pleuro-pneumonia,  
and for this purpose to employ as many  
persons as he may deem necessary, and to ex-  
pend any part of this sum in the purchase of  
diseased animals whenever, in his judgment, it  
is essential to prevent the spread of pleuro-  
pneumonia from one State into another. Thirty  
thousand dollars are appropriated for the estab-  
lishment of quarantine stations, and to provide  
proper shelter for and care of such neat cattle  
as are imported, at such ports as may be deemed  
necessary.

Other appropriations, mainly in extending  
work already under way, are as follows:

The appropriation for the division of agricul-  
tural statistics, for collecting foreign and do-  
mestic statistics and compiling special reports,  
was increased from \$55,000 to \$70,000. For in-  
vestigation upon the subject of forestry, and  
the collection of valuable tree seeds and plants,  
\$7000 is appropriated, and \$1000 for the pur-  
chase for the library of books and other publi-  
cations relating to forestry.

Two thousand dollars is appropriated for the  
distribution of the tea plants now on the Gov-  
ernment tea farm in South Carolina, or such  
number of them as are in proper condition for  
transplanting, with the understanding that the  
experiments in tea-growing are to cease, and  
that the place is to be disposed of.

One hundred thousand dollars is appropriated  
for the purchase and distribution of seeds, trees,  
shrubs, vines, cuttings and plants—two-thirds  
of them to be distributed by members of Con-  
gress, the other third by the commissioner. It  
is also provided that the commissioner shall re-  
port the place, quantity and price of seeds  
purchased, from whom purchased and the day  
of purchase.

**BOGUS BUTTER FACTORY SHUT UP.**—The  
creamery at New Hampton, Orange county,  
N. Y., which was rented last spring by France  
& Co., and equipped with machinery for work-  
ing over and improving the quality of rancid  
butter, under a patent process, has suspended  
operations. It was the intention of the lessees  
to manufacture oleo oil into imitation butter; it  
is thought that the announced purpose of work-  
ing over inferior butter was only a pretense to  
divert public attention from the real nature of  
the business. Those who advance this theory  
explain that the sudden suspension of operations  
was due to the vigilance of the State Dairy De-  
partment, who paid frequent visits to the  
creamery.—*Telegram to Associated Press, 20th.*

It is said that more grain has been burned in  
Merced county this season than in the previous  
20 years put together.

## The Wheat Crops Abroad.

We are giving considerable space to wheat  
matters, but it is just the time of the year when  
such information is of most service to our read-  
ers, and this year it seems more than usually ad-  
visable that our grain-growers should know  
what is the condition of crops in all parts of the  
world. Our advices are by mail up to the last  
of June. H. Kains Jackson writes to the London  
*Farmer* as follows:

The agricultural outlook is by no means so  
favorable as the state of the market would ap-  
pear to infer. The weather in England has be-  
come very unseasonable. On the night of the  
16th the thermometer fell to 34° on the grass,  
and the air since then has been so chilly by day,  
as well as by night, that fires have made their  
reappearance, and residents in cities have diffi-  
culty in believing that it is midsummer, and not  
the later autumn or very early spring. This  
sort of weather will not bring on the already  
backward wheat, neither will it stimulate a  
healthy, vigorous growth in any cereal.

Mr. Jackson thinks there may possibly be a  
surplus of wheat this year and says: "It is  
the good promise of the American yield which  
continues to dominate the market." But, since  
he wrote, the crop outlook has much changed  
for the worse in this country, and if his opinion  
was based upon the early estimates, he will have  
a chance to modify it upon later returns. The  
facts looking in this direction have already ap-  
peared in our columns.

On the continent there promises to be some  
reduction in the yield. Russia, we notice, may  
have a considerable reduction this year. In  
France the wheat plant passed through the  
stages of earing and flowering in unfavorable  
conditions; and while the stalk has perceptibly  
lengthened the ear remains short, and the crop  
will be deficient in weight.

In Germany there has been much complaint  
of drouth. It is generally understood that  
Australia cuts no figure in the wheat supply  
this year, except it may be as a buyer.

Since the foregoing was prepared we find in  
the *Mark Lane Express* of June 28th a para-  
graph which presents the situation in a nut-  
shell:

There is every reason to expect that the year  
1886 will have to be counted among the lean  
years—thus making an addition to a black list  
long enough already as far as this country is  
concerned. More than this, I fear it will be a  
lean year for the world as a whole. Certainly  
the world's wheat crop will be much below the  
average. In England, France, Holland, Den-  
mark and South Russia there can scarcely be a  
doubt upon the subject. In America, where  
prospects a little time back were described as  
full of promise, the winter and spring wheat  
crops together will probably be barely an  
average, if not considerably below, as may be  
judged from a report in another column. The  
spring wheat crop has suffered seriously in  
some States, and the winter crop had previously  
been discounted from a "bumper" crop to an  
average one. Reports published last week from  
India show that the wheat crop there is much  
smaller than that of last year, and it is well  
known that the Australian, New Zealand, and  
South American crops were extensively de-  
ficient. Will the price of wheat rise, then? It  
ought to have risen long ago, if the probabilities  
of future supplies had ruled the markets. But  
many of us thought there would be a rise in the  
spring, and we were wrong; so I will not ven-  
ture upon a prophecy on my last occasion of  
writing in these columns. One thing seems  
certain—namely, that the yield likely to be ob-  
tained here and in many other European coun-  
tries at current prices would be ruinous to ex-  
tensive growers.

## Death of D. M. Osborne.

Fast, indeed, the pioneers of the present era  
of advancement of agricultural machinery are  
passing away. They have done a great work  
and very many of them have lived to see the  
vast enterprises which have grown from the  
small beginnings of their early lives. Such a  
one was D. M. Osborne, who passed away on  
Tuesday, July 6th, at his home in Auburn, New  
York. Thousands of farmers on this coast will  
hear of his death with deep regret, for his  
name has entered much into their thought, and  
no doubt many had formed his personal ac-  
quaintance, for he made two visits to this coast  
in the upbuilding of his business here.

David Munson Osborne was born in Rye, New  
York, in 1822, and consequently had passed the  
scriptural limit of active human existence. We  
have not space for a full sketch of his life nor  
mention of his many honors and successes. He  
was a farmer's son and the support of the fam-

ily was early placed upon him by the death of his  
father. After a few years of farm work he en-  
tered a hardware store as clerk, and became,  
finally, sole proprietor. In 1853 he began his  
career as a manufacturer of harvesting ma-  
chinery, and for a third of a century his en-  
terprise has grown until his firm's work is known  
and his offices are established in all parts of  
the world.

Mr. Osborne enjoyed the honor and full con-  
fidence of his fellow-citizens in Auburn, and  
was twice Mayor of the city and their repre-  
sentative in important political conventions.  
He had no time for political office aside from  
the Mayoralty and declined all such honors.  
He gave, however, much of his time and means  
to the support of educational and charitable  
societies. He was a fellow-workman among his  
men, and always considered and ministered to  
their interests as well as cared for his own. One  
of his workmen seemed to express the general  
sentiment when he said of Mr. Osborne: "We  
older workmen loved him as a brother; the  
younger among us revered him as a father."

## The Exceptional Weather.

King David said in his haste: "All men are  
liars." We imagine the many Eastern people  
who are now in California, and who have been  
told so many times that there are no thunder  
storms and no sunstrokes in this State, must  
have reached the same conclusion as did the  
old King of Israel, but rather more deliberately  
than he did. It is something of a strain upon  
our reputation for truth to say that there is no  
dangerous prostration from heat, except in the  
case of chronic alcoholists, and then before the  
week is out to have a heat wave pass over the  
State and prostrate half a dozen or so, all of  
whom cannot certainly be believed to be intem-  
perate. So with thunder and lightning; they, of  
course, do play around the mountainous por-  
tions of the State more or less; but this year  
the electrical phenomena have appeared in  
places where the records show no precedent for  
it. For example, San Francisco was treated on  
the morning of Friday last to peal after peal of  
thunder and vivid flashes of lightning, the play  
of the elements lasting for about two and one-  
half hours, with rain falling heavily at inter-  
vals. Similar phenomena have appeared over  
the State during the last few weeks. The elec-  
trical displays have come after very warm  
spells, and have cleared and cooled the air after  
the accepted Eastern fashion. In one or two  
cases, we believe, the lightning has shivered  
trees and ignited buildings.

But the heat of last week proved a much  
more serious matter than the lightning. Aside  
from the several cases of dangerous prostration  
there was occasioned general discomfort and  
loss of time, for it was so hot in the interior  
that all who could sat listlessly in the shade  
and refrained from taking out their horses for  
road or field work. We give a few of the high  
marks reached by the mercury (in the shade),  
according to the dispatches to the associated  
press and notes in our country exchanges:

	Deg.

Orange, Los Angeles Co.....	106
San Diego, San Diego Co.....	81
Fort Yuma, Arizona.....	108

These figures are not presented as exact  
records. There is so much difference in ther-  
mometers and in conditions governing their  
exposure, etc., that picked-up records are  
subject to wide variation. The reports show,  
however, that there was an unusual heat spread  
over a great area.

There has been some damage done to grapes  
and to orchard fruits by the torrid heat, but  
it is too soon to measure its extent. It is  
probable now that the weather has spent its  
force and will be moderate during the great  
events of next month.

### The Red-Spotted Black Ladybug.

We alluded recently to the fact that Mr. W. G. Klee, State Inspector of Fruit Pests, had made some very interesting observations upon an insect which is very beneficial because of its appetite for scale pests—the cactus ladybug—*Chilocorus Cacti*. We stated also that Mr. Klee was preparing an illustrated bulletin which would give his observations on this insect and other important matters. We have just received an advance print of Mr. Klee's publication. On another page of this issue will be found that portion of it relating to "summer washes," an exceedingly important subject, concerning which Mr. Klee writes from long experience, gained during his care of the trees in the University orchard at Berkeley, his own trees on the Santa Cruz mountains, and his wide observation of the work of others. We have watched his results very closely and can fully approve his conclusions.

The other matter which we would present to our readers is the illustrated description of the beneficial insect, which we hope many will be able to find upon their scale-infested trees. The following is Mr. Klee's description, in which will be found allusions to the engravings on this page:

#### The Cactus Ladybug.

It seems very desirable that all fruit-growers should become fully acquainted with the predaceous insects, which must be considered their friends, as it is through their agency that all the worst pests are kept in check, and what naturalists term the "balance of nature" is preserved. Unfortunately by the propagation of certain trees, the food plants of these insects, pests often increase to an alarming extent, and generally so fast that their enemies are far from being able to cope with them. Such has been the case in California for the last few years, and without washing and spraying of the trees with antidotes, many orchards would have been totally destroyed. Gradually, it seems, however, that the law of nature is asserting itself, and parasites and predaceous insects are making their appearance in vast numbers. The Ichneumon flies are making war on the scales and on many other insects. Of the more conspicuous insects, the Syrphus flies have been very numerous; this season their green, blind larva having, apparently, totally annihilated the aphids in the plum orchards, formerly badly infested. The ladybugs have kept them company, and have also destroyed vast numbers of woolly aphids and grain aphids, appearing in many instances, as it seemed, at the eleventh hour, just in time to save the latter from destruction. The lace-winged flies (*Chrysopa*), so conspicuous by their large, delicate wings and large, lustrous eyes, have appeared in vast numbers, and their larvæ have made havoc with the scale insects. But, perhaps, the most striking acquisition in this line is the so-called "Cactus ladybug," the *Chilocorus Cacti*, whose principal food is the various scale insects.

Some four weeks ago, when in the town of Santa Cruz, I found the *Chilocorus* feeding on the Olive scale (*Lecanium oleæ*) on trees badly infested. At Los Gatos they were noticed by me, at Mr. Yocco's place, feeding on soft Orange scale. However, the most striking case presented to me was in the Willows, at San Jose, where Mr. Newhall, the nurseryman, directed my attention to it. We found at an old orchard five large pear trees, which, by the rough appearance of the bark, clearly showed that they had been once badly affected by scale—in this case by *Aspidiotus perniciosus*. In patches all over the trunk could be seen the mature insect, with its black, shiny body and two conspicuous red spots, and numerous pupæ still partly covered with the black, soft spines of the larval skin. No live scale could be found, and the last two years' growth was clean and smooth. It was stated to me that the orchard had not been washed for three years, which seemed to point strongly to the conclusion that at least the final subjugation of the scale was due to the ladybug.

Another case in question, the orchard of Messrs. Winton and Webster, in Castro valley, near Haywards, Alameda county. A number of plum trees were some years ago found to be badly infested with *Aspidiotus perniciosus*, and from them spread to the currant bushes close by, which previously were badly infested with another species of scale, and by the united efforts of those pests a good many were killed. The plum trees were sprayed with a strong solution of lye, which, although killing most scales, did not kill them all. The currant bushes were not sprayed, but, although showing by the thick coating of dry scales that they had been once fearfully infested, no live scale could be seen on them, while the trees were absolutely clean. In looking around on the trees I found a number of larvæ of *Chilocorus*, as well as mature beetles; and on the currant bushes I found quite a number. On the whole, all evidence indicated that here, also, the ladybugs had been instrumental in killing the scale bugs.

In view of these personal observations, and from the reports of similar experience by different parties in other parts of the State of the good work by this species, or, perhaps, by the

closely allied species, the twice-stabbed ladybug, *Chilocorus bivulneris*, we have caused a colored cut of the insect to be made, which is here appended. These cuts show the insect in various stages. They are partly borrowed from Professor Comstock's report to Professor Riley, where he described this species, having found it to be a native of this coast.

The larva is shown magnified at *a*; it is black, crossed by a light yellow band about the middle, and is armed with many soft, long and branching spines. The pupa, also magnified, at

THE CACTUS LADY-BUG.—*Chilocorus Cacti*, Linn.

*b*, in the figure, is formed within the larval skin, which splits open along the back sufficiently to show the inclosed chrysalis, which is black, with a few scattered tufts of hairs. The beetle, which is seen magnified at *c*, and of the natural size at *d*, is of a shining black color, with a red spot on each wing case, much resembling the *C. bivulneris*, mentioned above.

We have found a few of these insects in our garden at Berkeley upon an orange tree badly infested with the black scale. We shall be glad to have our readers examine their trees and report to us if they find it, as we would like to know how widely it is distributed in this State.

### The Stockton Fair.

We understand that especial effort is to be made this year to extend the exhibit of farm products at the San Joaquin valley fair, which will be held in Stockton, September 21 to 25. The excellence of the Stockton fairs from a turf point of view has always been recognized, and the stock show has been fair, but there has been a deficiency in field and fruit products and domestic materials because there has been no pavilion. We are informed that this year there will be provision for an indoor display of such exhibits, and we trust the interest among producers and manufacturers will be so great, and the display so fine, that a pavilion worthy of the rich San Joaquin district may be secured next year even if this year's provision should be of a temporary character. Every city of the size of Stockton should have a grand industrial building which would accommodate the fairs, and be very useful for other grand display occasions. San Jose and Marysville have fitted themselves this year. Stockton does not generally let other cities outstrip her in any commendable enterprise. Let all who believe the work of the fair society should be extended in this direction rally their exhibits this year and show how imperatively such an edifice is needed, and it will be forthcoming.

We understand that the live-stock features of the coming fair will be extended, and that the premium list, which will be issued in a week or two, will show inducements for breeders to bring out their best animals. We have no doubt that the secretary, J. M. La Rue, of Stockton, would be glad to furnish all information to any one who feels disposed to aid the enterprise by making exhibits this year.

WHAT ARE PRISONS FOR?—At the conference of Charities and Corrections, lately held in St. Paul, a paper by General Brinkerhoff, of Ohio, embodied such principles of prison reform as are now recognized by leading penologists. The dominant idea in the creation of prisons should be the protection of society by the reformation or permanent detention of prisoners. Vengeance is not tenable under the Christian dispensation, and experience has shown that it is not effective. In the reformation of prisoners one of the requirements is an indeterminate sentence, under which criminals are sent to prison, as to a moral hospital, from which they are not to be discharged until they are cured.

### The Extra Session and the Irrigation Question.

The call of Gov. Stoneman for the extra session of the Legislature, which has just commenced at Sacramento, for the purpose of effecting more definite legislation in regard to matters of irrigation, and to refer to the voters such amendments to the Constitution of the State as may be thought necessary to secure to the people a more direct and perfect right to the use of flowing water for irrigation purposes, has proven something of a surprise to all, and precipitated a discussion which might otherwise have been much prolonged, and, perhaps, largely mixed up with other and irrelevant matters. Under this call the question of irrigation will be made to stand out by itself, unmixed and unbiased by any other issue. This, perhaps, is well; the only objection which can be urged against the call is the unexpectedly hurried manner in which the question must be met, and the fact that it must be largely acted upon and influenced by men who were selected a long time ago, and at a time when the questions at issue presented quite a different phase from that under which they are now being considered. In the form which the discussion has now assumed, the first question to be decided by the Legislature will be:

Shall California Have Water For Irrigation or Not?

The Supreme Court says she cannot have it without a change in the Constitution. If that decision is to stand it will be equivalent to an abandonment of nearly all the improvements and property valuations of the State, whether derived from mining or agriculture; but as the people are almost unanimous in their opposition to that decision, they will surely find some way to reverse the same and save the State from the disaster and ruin which the effectual carrying out thereof would involve. The Legislature will undoubtedly reserve the waters of the State for beneficial use to their greatest possibilities. It cannot permit the English common-law doctrine, giving the riparian owner a right to the flow of water in its natural channel upon and over his land, even though he makes no beneficial use thereof. Imperative necessity in this State, a necessity unknown to the country which gave birth to such a law, compels the recognition here of an entirely different ruling with regard to the use of flowing water. A law enacted for the regulation of a rainfall of 80 inches cannot be made applicable to regions where the rainfall is short of 12 inches. Instead of requiring the waters of this State to run in the low beds of rivers to sink into the ground or flow uselessly into the sea, the Legislature will most surely enact

#### Some Law of Appropriation

By which the running waters may be taken out of their natural beds and so conducted over our great valleys and extended plains and foothills that those otherwise arid regions will be clothed with cultivated verdure and made to teem with an industrious and thriving population, such as cannot fail to build up on these Pacific shores an empire which shall lead in prosperity, health and intelligence all other empires of industry, wealth and mind. Irrigation is the very life of California. It is a matter in which every man, woman and child is either directly or indirectly interested, and it is of the utmost importance that no mistake should be made in establishing fundamental and statute laws for its regulation. The recent Supreme Court decision has rendered it imperative that we should now cut entirely adrift from the English common law of riparianism, and in doing so

Most Careful Legislation will be Required.

Laws of irrigation, or more properly of appropriation, may be made as oppressive a monopoly as the fullest exercise of English riparian rights. The Legislature now in session has before it one of the most important matters for consideration and action which has ever been presented to the Legislature of any State in the Union. It has the power to recommend such constitutional amendments and to pass such statutory enactments as will place in the hands of a few wealthy men the power to control the chief portion of the irrigation waters of the State, and thus establish in such hands a practical ownership over every acre of land whose fertility depends upon such waters for its development.

It may enact laws under which water rent may be collected to the utmost amount which the cultivation and traffic of the land will bear; rates which will give the lion's share of profit to the few water-owners who neither sow nor reap, and a bare living to the thousands, nay millions, which in the near future will have to bear the brunt and do the drudgery required to place the products of the land in market. Laws under which none but a community of serfs can grow up, a community with little wealth, possessing nothing but the actual necessities of life; without ambition, with but little education, and in nowise superior to the downtrodden, ignorant population of most of the country districts of Europe. On the other hand, irrigation laws may be so made as to secure to the cultivators of the soil such a just and equitable distribution of the appropriated water as to enable them to live as American citizens should live. To form prosperous and happy communities with thriving towns and villages, where the privileges of schools, churches and good society may be open and free to all who desire or may be worthy of such privileges.

#### The Legislation Called For.

In the Governor's call the first proposition is to submit to the people of the State an amendment to Article 14 of the Constitution, which provides that the Board of Supervisors shall have power to fix the rent rate of appropriated water. That this article might be amended to the advantage of the people is an acknowledged possibility; but at the same time the opportunity is opened to take from the people the advantages which they now possess, and place them more fully under the will of water appropriators.

The second proposition, which should have been the first, is to submit to the people such amendments to the Constitution of the State as may be necessary to secure the right of appropriating running water for irrigation, or other beneficial purposes—thus nullifying the late decision of the Supreme Court.

The necessity for such a law is imperative, for reasons already given; but the wording of this proposition is somewhat uncertain and misleading. The Governor's proposition is "to secure to the people the right of appropriation." The only way to secure to the people the right desired is to "secure to the State the right," etc. Without any intention of so doing, the suggestion of the Governor, if introduced into the Constitution, might place this privilege in the hands of a very few of the people, which "few" might be erected into a monopoly worse than riparianism.

In swinging away from riparianism, it should be enacted that

The Waters of the State Belong to the State Itself.

To be held, appropriated and dispensed for the benefit of all the people, and not for any few over-reaching appropriators. No law should be enacted which would give to appropriators any ownership in the water itself. That should remain forever in the State, and legislation devised by which companies and corporations might be allowed to construct ditches, reservoirs, etc., for the storing and distribution of such State property, subject to such rentals only as will pay a reasonable dividend upon the cost of ditches, reservoirs, etc., necessary for such storage, distribution, maintenance, etc. Any law founded on any other basis will most surely be converted into an oppression of the cultivators of the soil, and thus indirectly upon the entire people.

The third proposition is especially faulty and in fact inoperative. It proposes certain legislation which must depend upon the indorsement by the people of the second proposition. Under the late decision of the Supreme Court, and under the fact of the absence of any legislation declaring the waters of the State the property of the State, it will be impossible for this Legislature to pass any such laws as recommended by the Governor—the Supreme Court would be compelled to declare such laws unconstitutional—they can only be passed after the people have indorsed such an amendment as proposed in proposition two. Farther, in relation to the third proposed action by the Legislature, it proposes to "protect the people of the State in the full enjoyment of the right to appropriate, divert," etc. Now if the Legislature had the power to so legislate in the matter, the right should be adjudged to the State as its

rightful owner, and not to the people. With the fact of ownership in the State, the people are safe from monopolists, inasmuch as the State can at any time regulate and control its own property and prevent such ownership from being misused to the oppression of the people who control the State. In this connection we would call attention to the words of Mr. Kinney, of the Los Angeles delegation to the late Irrigation Convention in this city, as published in the Pasadena Union:

In so far as a change of law is necessary in water laws, that change should be most carefully undertaken. Its foundation should be solid in justice. The corner-stone should be the rights of the people. The people of California are just and liberal, and as the safety of the State is by our free government placed in their hands, so may the interests of capitalists engaged in water corporations be placed in their hands with equal safety. All the corporation has to do to be liberally treated is to deal fairly with the people.

On the other hand, the people's interests cannot be left with the corporations. A corporation is said to be without a soul; in our everyday practice we find them without a conscience.

Farther on Mr. Kinney says: "The people need guarantees; the corporations need only to act justly. \* \* \* The corporation has the guarantees; the people have nothing." Referring to the proposition then under discussion before the convention, he further remarked: "This is a fundamental error which must in the end withdraw the support of the people from these measures." Such withdrawal will be visited upon any measure which the present Legislature may enact or propose which may by any means be so used or perverted as to place the people in the hands of water or any other class of monopolists. To quote still farther from the speech of Mr. Kinney:

The whole question is one of great importance, requiring careful and delicate handling. Extreme measures hastily acted on are not to be thought of in such a vital matter. The present circumstances offer no justification for such action. \* \* \* Laws on the water rights of California must be carefully considered. No monopoly of the waters of this State can be allowed. New water laws must consider the interests of the entire State and be fair and just to all men. Due checks and safeguards must be placed in these laws to protect the people in their present and future enjoyment of the waters of the State. \* \* \* Just and reasonable laws will bear debate and examination; unjust laws alone need fear free speech. Eternal vigilance is the price of liberty. Eternal vigilance is the price of the people's control of the waters of this State. It is only by eternal vigilance that monopoly can be prevented from seizing on all the streams in California.

There are 52 counties in this State, of which over 30 use more or less water for irrigation. This fact should not be forgotten by our law-makers, nor the further fact that our present law-makers in Sacramento are being closely watched by the people of the State, and will be held strictly accountable for any act in contravention of the principles above set forth. They can also rest assured that whatever laws are passed or proposed, which, by any possible construction, may be construed and carried out to the oppression of the people in the matter of water rights, will most assuredly be repudiated, together with all who aided in their passage.

The people of this State need not be and are not in ignorance of what should constitute a proper system of irrigation for California. The subject has been carefully studied, mapped out and explained at great expense to the State in the very full and able report of the present State Engineer, William Hammond Hall, to which quite full reference was made in our last week's issue. A report on the subject has also been made to Congress by a Board of Commissioners, consisting of the Government engineers, Messrs. Mendell, Alexander and Davidson, who propose a general system for the whole valley.

VERMIN KILLING.—We sometimes think we are badly enough off with our coyotes, rabbits, squirrels, etc., but our Australian friends seem to have rather more trouble on hand. The following is given as the Government work in vermin extermination in one district: "Number of scalps paid for from March 7 to December 12, 1885: Dogs, 814; kangaroos, 27,035; wallabies, 37,993; rabbits, 2,872,043; eagle-hawks, 579; total, 2,938,449; cost, £24,998 7s. 11d." And yet the account says the Government rabbit-parties are doing little or no good in that district, and that "owing to the ravages of the rabbits, Mr. Davies has been forced to clear out from the Mattawarrangala Station, as he can keep no stock there without feeding them on hay or chaff—rather hard lines after over 20 years' occupancy." That is worse than anything we have in California, surely.

## THE IRRIGATION QUESTION.

### An Extra Session of the Legislature and Its Proposed Work.

Since our last issue went to press the Legislature of California has been summoned and has convened in extra session. There were but four days between the proclamation and the roll-call in the State Capitol. On another page we give the petition upon which Governor Stoneman based his action and the proclamation, which fixes the outline of the work to be done. Probably not 100 people, outside of the signers of the petition, knew that the session was to be called. It had been rumored, but the rumor found no credence. For this reason there was no consensus of opinion demanding it, nor was there any effort to learn the popular will. It is unnecessary to discuss the action of the Governor, for it is accomplished and the State will have to accept the fact for better or worse. If there had been opportunity for discussion it would have appeared that many people do not approve the too speedy "railroading" through which the water question seems bent on, nor would they be able to discover the necessity for drawing upon the treasury for an extra session when the regular session, with legislators chosen fresh from the people, would be held in five months' time—soon enough, one would think, for the purposes required. But as we have said, there is little use to make complaint; the Legislature is again in Sacramento and the people will have to make the best of it.

There is no doubt whatever that it will be a great public blessing to have the matters relating to water rights and irrigation definitely settled, and settled in a way that will foster and promote irrigation; and if this be done in the interest of the whole people, the cost of such legislation would not be murmured at. The danger is that in the haste and in the methods which seem to be employed, there is great hazard of the public interest being made a cover to conceal personal or corporate designs. All that can be done is to see that the pending questions are so settled that the public interest is really conserved. It is quite possible to do this, and it is possible also to create the most oppressive monopoly or aggregation of monopolies that this State has ever experienced. There should be no unseemly haste. The questions are momentous. The issue is far wider than when it was before this Legislature at its last session, for now constitutional amendments are proposed which practically amount to an impeachment of the Supreme Court of the State—an impeachment without a trial, a condemnation without a hearing. These are sharp tools, and should be handled very carefully.

However, the issue is upon us. The proceeding is according to the provisions of the Constitution of the State. While the gravest apprehensions will rest in many minds, let every honest voter do something to impress his representatives in the Legislature to act in the matter to the full limit of the public weal, but not surpass nor fall short of it.

SACRAMENTO, July 16, 1886.—The Governor has received the following memorial, signed in their proper hands by more than two-thirds of the members of both houses of the Legislature: June —, 1886.

To His Excellency, George Stoneman, Governor of California.—SIR: We, the undersigned Senators and Assemblymen, respectfully request you to convene the Legislature of the State in special session, for the purpose of passing certain bills and measures, which we herewith submit, relating to irrigation and water rights. While we disclaim all intention of controlling your Excellency's judgment, yet we beg to suggest that the present crisis in the question of water rights, which vitally affects the immediate welfare of the State, demands prompt action, and constitutes such an extraordinary occasion as to warrant the convening of the Legislature as we request.

The Supreme Court of the State has recently decided that the riparian owners along the innavigable streams are possessed of riparian rights, so called, as known under the common law of England; that they may obtain writs of injunction against persons who may have appropriated flowing waters for irrigation under the provisions of the Civil Code and under the authority of the several acts of Congress, permitting such appropriation from streams on the public land. The consequences which must inevitably follow the enforcement of this legal doctrine are painful to contemplate.

The existing appropriations of water for irrigation are almost without exception for the benefit of non-riparian owners and of ri-

parian owners whose right to irrigate depends upon their appropriations under the Civil Code and pre-existing customary law. Such diversions of water may, as we say, under the decision of the Supreme Court, be enjoined at the suit of lower riparian owners. Many such suits have heretofore been instituted; writs of injunction have been issued which have not been enforced pending the consideration of the question by the Supreme Court, and in a large number of cases have not been obeyed, although attempts have been made to enforce them. But the fact remains that the court has so declared the law that nearly every irrigating ditch and canal in the State may be closed by injunction.

The mere suspension of irrigation for a single season would result in wholesale destruction of many thousands of homes and of millions in value of improved and permanent property. The irrigators of the State now stand in fear of the immediate enforcement of the destructive policy asserted by the majority of the Supreme Court. An attempt to do so might, and most probably would, result in bloodshed in many sections of the State. Free-born American citizens will not look upon the destruction of their homes and see the results of years of toil swept away without resistance.

We believe that the rule of water rights in California, as laid down by the minority of the Court is, and ought to be, the law of the State. In common with the masses of the people, as shown by the action of several conventions and by the united voice of the public press, we have reached this conclusion, after deliberate consideration of the subject. In the month of May, 1884, a convention of those interested in the water question met at Riverside. The matter was there fully discussed. Again in December, 1884, a convention assembled at Fresno, when the measures which we now propose were discussed and formulated. The Legislature met. These measures among others were introduced. They passed the House by a vote of 51 out of 80. In the Senate they secured a large majority, and only failed for want of time. Thereupon the public agitation continued, and on the 20th of May of this year a large and representative body convened in San Francisco. Again these measures were considered and unanimously indorsed and proposed. The movement has received the earnest support of the whole press. Thousands of the best citizens have enrolled themselves in an organization to secure this reform in the laws, necessary to the peace and prosperity of the commonwealth. This organization is pledged to advocate the adoption of the particular amendments and laws which we herewith submit, and it is safe to say that a vast majority of the people of the State are in full sympathy with the irrigation movement. For these reasons we unhesitatingly commit ourselves to vote for the measures which we append to this memorial, without amendment.

The first of these is a constitutional amendment determining and fixing the nature of water rights; the second is also a proposed constitutional amendment regulating the use of water for irrigation; the third is an act governing the right to acquire the use of water by appropriation; the fourth is an act to repeal Section 1422 of the Civil Code.

These several measures can become laws with your Excellency's approval within 10 days after the assembling of the Legislature.

We believe that the executive and legislative departments of the State, without delay, should exercise their power to the fullest extent in ascertaining and confirming the right of appropriation and in repudiating the riparian doctrine of water rights announced by the Supreme Court. The State and the people cannot wait. Before the next regular session of the Legislature in January, thousands of citizens and their families may be ruined and millions of property may be destroyed. In our judgment, the exigency is so great that the constitutional amendment should be submitted to the people at a special election, to be held in the shortest time possible under the Constitution. We will vote for a bill providing for such special election.

We now, therefore, respectfully memorialize your Excellency to convene the Legislature in extraordinary session to pass these measures.

We further respectfully suggest that the Legislature be requested in the proclamation to consider suitable measures looking to the reorganization of the Supreme Court. It cannot be disputed that the best judgment of the bar of this State and the general opinion of the people is that the court should in some way be reconstituted. The salaries paid to the judges are too small, and yet they cannot be increased while the present incumbents hold office. We submit that your Excellency might well include in your proclamation the general subject of changing the organization and the personnel of the Supreme Court.

#### The Proclamation.

Upon satisfying himself of the good intent of the memorialists, the Governor has issued to day the following proclamation for an extra session of the Legislature:

STATE OF CALIFORNIA,  
EXECUTIVE DEPARTMENT,  
SACRAMENTO, July 16, 1886.

To the Senate and Assembly of the State of California: In my judgment, an extraordinary occasion has arisen which renders it expedient and necessary for the public welfare that the Legislature should be called together.

The Supreme Court of the State in a recent decision announced that the riparian owners

along the innavigable streams in California owned the flowing waters in such streams, and are entitled to the exclusive right to use the same. The widespread disaster which this decision threatens to the agricultural interests and the consequent general excitement and apprehension make it proper that the legislative and executive branches of the Government should take prompt and efficient action to prevent the injurious consequences which will otherwise inevitably flow from the establishment of such a rule of law by the highest court in the Commonwealth.

Under the sanction of the laws and customs which prevailed in California when it was acquired from Mexico, under the protective policy of the National and State Governments, and in harmony with the climatic and physical characteristics of the country, a splendid system of irrigation has grown up since the American occupation. The flowing waters were deemed public property, and were considered as dedicated to the use of the people. The right to appropriate water for irrigation was regulated by custom and by statute law. Most of the soil of California was public land of the United States. But Congress expressly sanctioned the custom of appropriation and diversion of water, and expressly authorized it upon the public domain. The practice of irrigation was thus allowed to become general, and marked the progress of the agricultural development of the State. The larger part of the great valley of California, and most of the southern portion of the State, were in a desert condition, owing to the aridity of climate and soil. Irrigation has transformed large areas of this splendid domain into luxuriant fields, vineyards and orchards; hundreds of millions of taxable property have been created; many thousands of happy homes have been planted; colonies, villages and towns have sprung up, and an intelligent and industrious population has been invited from abroad to develop the resources of the State. The agricultural prosperity already achieved and the future possibilities of Southern California and of the great valley, which comprises much the larger part of the arable land of the State, have depended and will depend upon the ability of the people to use the waters of the State for irrigation.

The majority of the judges of the Supreme Court have announced that any riparian proprietor may obtain an injunction against any person not a riparian proprietor, to prohibit him from appropriating, diverting or using water from the stream above his land. Under this ruling the ditches and canals, which are the arteries of the agricultural life of the State, may be closed by writs from the courts, and, too, upon *ex parte* application, without notice or warning or opportunity of being heard until after irretrievable damage has been done. Many such suits are now pending. Writs of injunction have been asked for and in some cases obtained, but have not been obeyed. Should an attempt be made to enforce them and others which are likely to issue, as is apprehended, serious trouble may ensue, because the people may resist to prevent the desolation of their homes, farms, vineyards and orchards. But if they should not; if they should peaceably submit, still the injury to the State would be immeasurable. To suspend irrigation for one season would destroy thousands of homes and millions of property.

Other Western and Pacific States, having an arid climate similar to our own, have conformed their organic and statute laws to the necessities and requirements of their condition in this regard. Manifestly that course is demanded in California.

In view of these considerations and particularly of the ruin and disaster which seem likely to flow from the enforcement of the doctrine recently announced by the Supreme Court as to water rights, it seems to me imperative that the Executive and the Legislature should take immediate action to confirm to the people the right to a free use of the flowing waters, which is essential to their prosperity and to the welfare of the State.

Another matter of great public concern is the reorganization of the Supreme Court. The existing system has not given satisfaction, and the evils are growing worse. It is cumbersome to a degree. The business is in arrears, notwithstanding the creation of a commission to assist the judges. The plan of dividing the court into departments has not worked well. It leads to the necessity of hearing cases twice over. A litigant defeated before a minority of the court appeals to the judges in banc, and the whole work must be gone over. The system is perplexing and unsatisfactory to everybody. And, furthermore, the salaries paid to the judges of the Supreme Court are too small. Lawyers eminent in their profession cannot accept the places without making a sacrifice which the State ought not to require. But the compensation now provided cannot be increased during the incumbency of the present judges. In my judgment, the court should be reorganized. The system of departments should be abolished. A court constituted of a compact body of judges will accomplish more. Their pay should be increased, so as to secure the best talent in the State.

Now, therefore, I, George Stoneman, Governor of the State of California, deeming that an extraordinary occasion has arisen, by virtue of the power in me vested by the Constitution of the State, do hereby convene the Legislature to meet and assemble at the State Capitol on the 20th day of July, 1886, at 12 o'clock M. of that day; and I do hereby specify the following sub-

jects upon which it is assembled to legislate:

First—To propose and submit to the people of the State an amendment or amendments to Article XIV of the Constitution of the State, relative to Water and Water Rights.

Second—To propose and submit to the people of the State such amendment or amendments to the Constitution of the State as may be necessary or proper to secure to the people the right of appropriation, diversion and use of flowing water for irrigation or other beneficial purposes, and as may be necessary or proper to protect all such rights in the courts of the State.

Third—To enact all laws necessary or proper to protect the people of the State in the full and free enjoyment of the right to appropriate, divert and use flowing water in the State for irrigation or other beneficial purposes, and so as to fully protect all such rights in the courts.

Fourth—To repeal section 1422 of the Civil Code.

Fifth—To propose and submit to the people of the State an amendment or amendments to Article VI of the Constitution of the State relative to the judicial department, so far as it relates to the Supreme Court.

Sixth—To enact a law to provide for submitting the constitutional amendments proposed to a vote of the people.

Seventh—To provide by appropriation for the expenses of holding an election for the ratification or rejection of such proposed amendments to the Constitution.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State to be affixed at my office in the city of Sacramento, this 16th day of July, 1886.

GEORGE STONEMAN, Governor.

Attest: THOS. L. THOMPSON, Sec'y of State.

### Farmer Before Corporation.

In the issues of our paper for June there were 21 pages wholly devoted to the full stenographic report of the Anti-Riparian Convention, which conveyed at length the views and claims of those who are now conducting the movement against existing laws and court decisions. We presumed that those who believed in fully posting themselves upon important questions had mastered the work of the convention and were ready for farther discussion of the problems involved in the present irrigation situation in this State, and so invited correspondence on the all-important subject. In this discussion, as is our custom with other questions, we do not propose to restrict admission to our columns to views only which coincide with our own.

The first communication presented, which we publish below, from our old and well known contributor, Abbot Kinney, of Los Angeles county, is therefore presented, not because we indorse all the views expressed, but because we regard thoughtful conclusions honestly arrived at worthy of the attention of those who are studying an important question:

EDITORS PRESS:—Laws to facilitate and encourage the use of the streams of California for irrigation would do good.

Such laws should have for their corner-stone "the rights of the people." The individual irrigator and farmer should have full and complete guarantees, first to the use of the water from the canal corporations, and second, to that use at reasonable rates.

The appropriation of the rivers of the State must be subject to State control. The wealth of individuals or corporations must not be the measure of the water they can seize. The development of the streams must be subject to franchise or other State regulation. Without this a few rich firms will hold the rivers and demand a grinding and excessive tax from the farmer.

No dependence can be more complete than that of an irrigating farmer on the distributor and controller of the water his farm requires. This dependence has in most irrigating countries made serfs and slaves of the farmers and practically confiscated their farms.

Mr. Wm. Ham Hall, our distinguished State Engineer, in his recent book, speaks of this fact in connection with some of the large Italian works.

There are 52 counties in this State, of which at least 40 are not to any important extent irrigated counties. These must be considered in new laws on this question. Such matters as debris, etc., cannot be forgotten. Laws on water must be just to all men and to all interests.

They should be short and plain so as to be easily understood and remembered. The rights of the people must be fully guaranteed in every respect. No monopoly of the waters of California can be tolerated. Monopoly of the water means the slavery and subservience of the great population so soon to occupy this State. The manhood of the farmer, even the security of our free institutions, rests on the safety of the farmer's rights to use the water on which his living will depend. We cannot allow great firms to dam up whole rivers and take them off without license or control. One such river at its height in Kern county, now claimed in more than its entirety, to the extent of 3000 cubic feet per second, represents more water than all the water developments of the imperial county of Los Angeles. It is not safe for a private corporation to have such power as this implies, to hold the water rights of a principality in its hands. There should be State control. The people must be considered. There is now in this State a wealthy and powerful combination

spending money freely. This organization is called "anti-riparian." Its main object seems to be the handing over of a certain river now, henceforth and forever to the enormous wealth of one firm.

These gentlemen have a stack of constitutional amendments and new laws on water, which they propose to pass without change or amendment.

They are pledged "to oppose through the ballot-box, and by every other legitimate means, the election of any person to office, executive, legislative or judicial, who is not known to be in full and active accord with every proposition contained in these articles of association."

They have prepared what they wish to be the future water code of the State. Their measures, they say, must be passed *without change*. "No change can be made except for the worse."

Thus they usurp the functions and powers of the representatives of the people.

The Legislature no longer makes the laws, nor even deliberates on them, but is merely the recorder of the edicts of these gentlemen. The executive is to record their wishes, and lest there should be any mistakes the courts are to be stuffed with pledged judges.

The State Government goes on nominally, but the powers of its officers will have been transferred to others not responsible to the people.

The people's government is to be only the machinery to carry out the edicts of a wealthy oligarchy.

What are these measures that are to be passed without examination or debate, without any change, that require the surrender by the people's representatives of their responsibility as law-makers to this oligarchy?

These amendments to the Constitution and revolution in the law provide in substance that the wealthiest men in California shall control the rivers and streams without any regulation whatever. The present laws are changed so as to guarantee to these rich men seven per cent per annum *net* on all the capital they can spend wisely or wastefully on irrigation works.

They are guaranteed against mistakes. Good year or bad, they get at least net seven per cent. The most barefaced thing in this measure is that the present maximum rate is done away with. There is at least seven per cent as a minimum to protect the corporation. There is no maximum, there is nothing to protect the people. The corporation gets the guarantees, the people get nothing.

Without competition the transportation rates were made so as to take all the traffic would bear. So it is likely to be in this, the tax for water will be all the farm can yield, and God have mercy on the farmer. The methods proposed are subversive of our system of free government. To pledge a judge and stuff a court, and that the highest, to decide a case for a particular party, is vicious in principle and pregnant with intolerable corruption. The Legislature should frame and examine all the laws it passes, and can never properly delegate that power to others.

The judge must be untrammelled and unpledged, a free agent to do what is right.

Error comes before us masked. If she came without disguise she would be mobbed at once.

These schemes may be well intended; they are certainly well disguised. When we tear down the mask we find the streams of California turned over to the few. These few guaranteed in the perpetual extortion of an exorbitant tax, guaranteed against wastefulness or bad judgment, and with power to freeze out any farmer in their toils. The freeze-out scheme is not even now unknown in Kern county.

The people have not a single guarantee. Not a single bit of security is given the irrigators and the farmers from the top of this stack of revolution to the bottom.

Our State has developed under the present system of law. It is doing so now. Irrigation counties are of all others the most prosperous. These laws, it seems, need complete sweeping away. Why? because the State is prosperous under them? Probably not. Let the large sums of money being spent by private parties to blind the people point to the reason of this agitation.

There is no rule of law in this State preventing the use of public streams for irrigation.

We have used the streams for irrigation, we are using them and we are going to continue that use.

The present false and unreal issue is a financial agitation to secure judges on the Supreme bench to decide a great private case in a particular and foreordained way. Such a prostitution of the first court in the State cannot be tolerated.

We will not again walk open-eyed into the mouth of greedy monopoly, as we once did in transportation matters.

The rights of the people of California must be fully guaranteed to the use of the public streams. Cunning monopoly masks its measures. It will speak of the public good and distract attention by the cry of "Stop thief!" while it rifles our pockets to the depths.

Farmers and Irrigators, be careful. Examine and weigh well these measures that must be passed without amendment. Look twice before you leap. Demand that any change in the water laws shall guarantee the farmer in the use, at reasonable rates, of the water he needs.

Look out for this first, last and all the time.

ABBOT KINNEY.

### The Legislature.

#### List of Members of the Last Senate and Assembly.

Below is given the names of the members of the last Legislature, and who were called to meet in extra session at the State Capitol at noon on Tuesday, July 20th:

##### Members of the Senate.

1. A. P. Johnson, San Bernardino, R.\*
2. R. F. Del Valle, Los Angeles, D.
3. Geo. Steele, San Luis Obispo, R.
4. P. Reddy, Mono, D.
5. J. D. Spencer, Stanislaus, D.
6. Ben. Knight, Santa Cruz, D.
7. James R. Lowe, Santa Clara, R.
8. A. W. Saxe, Santa Clara, R.
9. J. Lynch, San Francisco, D.
10. G. C. Parkinson, San Francisco, R.
11. Egisto Palmieri, San Francisco, R.
12. D. McClure, San Francisco, R.
13. G. H. Perry, San Francisco, R.
14. Daniel J. Creighton, San Francisco, D.
15. Edward F. Drum, San Francisco, D.
16. J. T. Dougherty, San Francisco, D.
17. M. Kelly, San Francisco, D.
18. John M. Days, San Francisco, R.
19. John L. Boone, San Francisco, R.
20. H. Vrooman, Alameda, R.
21. G. E. Whitney, Alameda, R.
22. F. C. DeLong, Marin, R.
23. F. T. Baldwin, San Joaquin, D.
24. B. F. Langford, San Joaquin, D.
25. A. B. Beauvais, deceased, Tuolumne, R.
26. Fred. Cox, Sacramento, D.
27. J. Routier, Sacramento, R.
28. W. B. Parker, Solano, R.
29. Martin J. Wright, Solano, R.
30. D. Spencer, Napa, D.
31. G. A. Johnson, Sonoma, D.
32. J. A. Filcher, Placer, D.
33. Henry Mahler, El Dorado, D.
34. C. W. Cross, Nevada, D.
35. H. W. Wallis, Sierra, R.
36. A. L. Chandler, Sutter, R.
37. W. W. Kellogg, Plumas, D.
38. E. G. Hurlburt, Humboldt, R.
39. C. W. Taylor, Shasta, D.
40. B. F. Foster, Tehama, D.

##### Members of the Assembly.

1. J. K. Johnson, Siskiyou, D.
2. J. H. G. Weaver, Humboldt, R.
3. Joseph Russ, Humboldt, R.
4. John Yule, Trinity, R.
5. Thomas A. Roseberry, Modoc, R.
6. George Wood, Sierra, R.
7. John Ellison, Tehama, R.
8. Allen Henry, Butte, D.
9. J. M. Ward, Butte, R.
10. Robert Barnett (resigned), Colusa, D.
11. Whit. Henley, Mendocino, D.
12. E. W. Britt, Lake, D.
13. W. H. Parks, Yuba, R.
14. Austin Walrath, Nevada, R.
15. C. F. McGlashan, Nevada, R.
16. Geo. H. Colby, Placer, R.
17. E. H. Watson, El Dorado, D.
18. W. J. Davis, Sacramento, R.
19. C. T. Jones, Sacramento, R.
20. Dwight Holister, Sacramento, R.
21. C. B. Culver, Yolo, R.
22. H. A. Pellet, Napa, R.
23. W. T. Mears, Sonoma, R.
24. S. I. Allen, Sonoma, R.
25. M. E. C. Munday, Sonoma, D.
26. D. G. Barnes, Solano, R.
27. R. C. Carter, Solano, R.
28. Joseph Almy, Marin, R.
29. James H. Daley, San Francisco, R.

## California Military Academy, Oakland, Cal.

Special Feature—Commercial Department. Next Term begins July 19, 1886. Send for circular.  
COL. W. H. O'BRIEN, Principal.

## HOPKINS ACADEMY.

OAKLAND, CAL.

REV. H. E. JEWETT, M. A., - Principal.

SIXTEENTH SCHOOL YEAR begins Tuesday morning, July 27th, 1886. Boarding and Day Scholars received. Send for Catalogue.

W. E. CHAMBERLAIN, JR.

T. A. ROBINSON.

Returned to new building, former location, 320 Post street, where students have all the advantages of elegant halls, new furniture, first-class facilities, and a full corps of experienced teachers.

LIFE SCHOLARSHIPS.....\$75.

Ladies admitted into all departments. Day and Evening Sessions during the entire year.

Call, or send for Circular to

CHAMBERLAIN & ROBINSON, Prop's.

## STOCKTON

Business Telegraph Institute and Normal School.

Open day and evening for both sexes. Expenses less than one-half the usual rates. Excellent board in private families from \$8 to \$10 per month. Address, for College Journal and Circulars, J. C. BAINBRIDGE, Principal, Stockton, Cal.

## UNIVERSITY OF THE PACIFIC,

Between San Jose and Santa Clara.

(Founded in 1851) Twenty-two Professors and Instructors. Courses of study embrace the regular college curriculum, four years' Conservatory of Music course, Post-graduate course leading to degree of Ph. D., Business course, and complete Preparatory courses leading to and connecting with College Classes. All classes open to both sexes. \$250 per year includes ALL REGULAR EXPENSES. Fall Term begins Aug. 11th. Address, C. O. STRATTON, Pres., SAN JOSE, CAL.

## GRAND HARMONIES

And rich modulations find the best expression through the medium of the Organ. The increase of the number of Organ students in this country shows that the noble instrument is receiving due attention from us, and we take pleasure in offering to the many young learners who are preparing to become Church organists, our

NEW BOOK,

Selected Gems and Modern Themes,

FOR

EITHER PIPE OR REED ORGAN.

A book which every young organist should have. The selections are made from the VERY BEST SOURCES, mainly modern, and are of a character that will tend to elevate musical taste.

Price of this New Book, \$1.50.

For which price it will be mailed to any address.

Should be on every Organ Rack.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., - 807 Broadway, New York.

NATIONAL ASSURANCE CO., OF IRELAND.

## WHITMAN Perpetual Hay PRESSES.

GUARANTEED SUPERIOR TO ANY OTHER LEVER PRESS.

\$250.

The BEST MADE and Fastest!  
CAPACITY, 8 OR 10 TONS A DAY

Makes a Bale 16x18—Variable Length.

ADDRESS

BYRON JACKSON, 625 Sixth St., San Francisco.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.

TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions:

To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President.

EDWIN F. SMITH, Sacramento.

## SEEDLINGS!

We will furnish all who desire first-class (Imported) French Seedling stocks of

PEAR, PLUM, CHERRY, Etc.,

For next season's planting, at the lowest possible rates.

All orders should be sent in by August 1st to insure early shipments. Correspondence solicited. Address

C. W. REED & CO.,  
Sacramento, Cal.

## American Exchange Hotel,

SANSOME STREET,

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

## ORANGE CULTURE

A practical treatise by T. A. GAREY, giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, S. F.

## TWENTY-FIRST

## Mechanics' Institute Fair,

SAN FRANCISCO, 1886,

Opens August 24th, Closes September 25th,

—IN THEIR—

IMMENSE PAVILION ON LARKIN ST.,

## THE FIELD.

## California Wheat Crop.

[Written for RURAL PRESS by J. R. F.]

Last year's wheat crop of this State was disappointingly small, the average to the acre not going much above seven bushels. This small average was due to extreme dry weather, causing a failure in some sections, and cutting down that of the other agricultural sections of the State. The following table of yields by years shows the light output last year, when a larger area was seeded to wheat than was even in 1884:

Years.	Cents, Year.	Cents.
1870.....	8,404,400	25,194,000
1871.....	10,054,200	21,000,000
1872.....	15,300,000	20,336,500
1873.....	12,900,000	18,840,600
1874.....	18,688,000	21,637,900
1875.....	14,280,000	21,783,200
1876.....	18,000,000	26,592,000
1877.....	13,200,000	16,200,000

While the crop was very light, yet the price at which it was sold averaged better than the season of 1884-5. But while it had a higher average than the preceding season, yet it fell considerably below any former season for over a decade past, as the following comparison of season prices shows:

Season	Price per Cental	Price per Cental
1870-71.....	\$2.20 1/2	1.67 1/2
1871-72.....	2.34	1.82
1872-73.....	1.76 1/2	1.41 1/2
1873-74.....	2.05 1/2	1.60
1874-75.....	1.62	1.73 1/2
1875-76.....	1.93 1/2	1.64 1/2
1876-77.....	1.92 1/2	1.31 1/2
1877-78.....	2.18	1.37 1/2

So as to convey a better idea of last season's prices, I present the following monthly average of prices of No. 1 shipping wheat, together with the highest price reached at any time in the month and also the lowest:

1885.	Average.	Highest.	Lowest.
July.....	1.41 1/2	1.45	1.37 1/2
August.....	1.40 1/2	1.45	1.37 1/2
September.....	1.41	1.47 1/2	1.30
October.....	1.48	1.52 1/2	1.45
November.....	1.42	1.47 1/2	1.35
December.....	1.38 1/2	1.42 1/2	1.35
1886.			
January.....	1.36	1.40	1.30
February.....	1.28 1/2	1.33 1/2	1.25
March.....	1.30 1/2	1.35	1.27 1/2
April.....	1.34 1/2	1.37 1/2	1.31 1/2
May.....	1.31	1.36 1/2	1.25
June.....	1.21 1/2	1.27 1/2	1.17 1/2

The shipments from this port are to nearly all parts of the world, as the following table of exports by sea and land last season shows:

Destination.	Cents.
Antwerp.....	325,151
Avonmouth.....	60,803
Barrow in Furness.....	27,831
Belfast.....	33,602
British Columbia.....	250
Cape Town.....	68,329
Central America.....	12,294
Civita Vecchia.....	105,179
Cork.....	5,487,218
Dublin.....	376,275
Germany.....	5,702
Gibraltar.....	159,153
Hamburg.....	21,847
Havre.....	121,109
Hawaiian Islands.....	6,529
Hull.....	499,615
Japan.....	33
Limerick.....	104,616
Liverpool.....	3,486,412
London.....	13,318
Maryport.....	58,310
Mexico.....	5
New York.....	46,560
Overland.....	18,004
Plymouth.....	112,299
Russian Possessions.....	408
Sydney.....	174,923
South America.....	25
Tahiti.....	529
Total.....	11,340,329

Same time in 1884-5.....	15,732,435
" " " 1883-4.....	11,282,548
" " " 1882-3.....	14,536,675

The flour exports expressed in wheat were as follows: 1885-6, 3,279,085 cents; 1884-5, 3,913,923; 1883-4, 3,776,637; 1881-2, 3,119,991. Of the wheat cleared for Cork, fully one-half was ordered to continental ports.

The following table gives the stock of wheat and flour in the State on July 1st of each year named, as taken by the Produce Exchange of this city:

Year.	Wheat.	Flour.
1886.....	1,252,600	102,325
1885.....	5,282,900	70,800
1884.....	664,050	112,000
1883.....	979,500	77,000
1882.....	2,822,903	119,324
1881.....	12,444,278	135,592
1880.....	323,821	30,934

Although the carry-over of old wheat from the season of 1880-81 was very heavy (622,000 tons) and the crop of 1881 was only 75,000 tons short of that of 1880, yet the average price for the season of 1881-82 was \$1.60 per cbl., being a higher average by about 19 cents than that of 1880-81. This shows that it is not so much the heavy stock with us as the

European harvests and consequently demand. The short crop in Russia that year created a better market for our grain. By the following table of average wheat charters by seasons, it will be seen that freights ruled very high in 1881-82:

Seasons.	Average freight.	Wood.	Iron.
1885-86.....	29 3	32 6	
1884-85.....	34 2	38 -	
1883-84.....	25 8	34 6	
1882-83.....	43 6	46 9	
1881-82.....	65 7	67 3	
1880-81.....	66 9	73 -	

For the sake of comparison and also that the wheat situation last season can be better understood, I give the following highest and lowest monthly charters of iron vessels (wood vessels are always 2s 6d less than iron):

Month.	Average.	Highest.	Lowest.
July.....	33 3	36 9	30 6
August.....	35 -	37 6	30 -
September.....	33 -	35 -	30 -
October.....	32 3	32 6	31 3
November.....	29 8	32 6	28 9
December.....	29 4	32 6	29 9
January.....	30 -	32 6	28 9
February.....	31 -	35 -	28 9
March.....	33 4	34 6	36 6
April.....	34 4	35 6	33 9
May.....	34 8	36 3	33 9
June.....	35 -	36 5	33 9

So far the present season the average is higher than last season in July; but now the rates of charters are dropping, owing to an increasing number of vessels headed this way, and also to the more established fact that the California wheat crop is very considerably below estimates made in May and also in the fore part of June. Not only are spot vessels lower but vessels to arrive are offering to accept lower rates. In April and May and even well into June, vessels to arrive for September-October loading were taken at 35s and some even at higher rates. Now, shippers are not disposed to take any unless they get them at a decided falling off rate from 35s U. K. f. o.

San Francisco, July 16, 1886.

## The San Francisco Bar Condemns the Governor.

The Call of the 21st publishes the following report:

The members of the Bar Association of San Francisco held a meeting last night at the rooms of the association in the Supreme Court building on Post street. About 40 members were present, including two representatives of the interior bar, C. E. Tuttle and E. Sherwood. The meeting, which was executive, was called to order by Judge T. P. Stoney. T. V. O'Brien acted as secretary.

The following resolutions were unanimously adopted:

WHEREAS, The Governor has convened the Legislature in extra session by proclamation, declaring the objects to be accomplished, among which are the reorganization of the Supreme Court and the removal of the members thereof from office; and Whereas, The Governor has so convened the Legislature because of a decision of the court upon a purely legal question duly submitted to it; and Whereas, We, the members of the Bar Association of San Francisco and members of the bar practicing in this State, desire to protest against the action of the Governor and to express our views as to the attack thus made upon the Supreme Court; therefore be it

Resolved, That the freedom and independence of the judiciary are inestimable and should be maintained, and that the present assault on the Supreme Court must be met and repelled.

Resolved, That the attempt to expel the present members of the Supreme Court through the guise of a constitutional amendment because of a decision rendered by them is fraught with danger to the independence of the judiciary, the stability and perpetuity of our institutions, and merits the severest reprobation.

Resolved, That the attack upon the court is directly subversive of the express guarantees contained in the Constitution designed to protect the independence of the judiciary in the administration of justice, and as such meets with our unqualified condemnation.

The next resolution adopted was as follows:

Resolved, That a committee of three be appointed by the chair, to prepare and present to this association for adoption, on Thursday, the 22d day of July, 1886, at 1 P. M., a memorial to be presented to the Legislature, expressive of the sense of this association with regard to the proposed reorganization of the Supreme Court.

The meeting was addressed by Judge J. W. Winans, I. M. Taylor and M. M. Estee, the speeches being in keeping with the foregoing resolutions.

MR. F. S. BELCHER, of Charlotte, Michigan, is one of the visiting comrades of the G. A. R. Mr. Belcher is the inventor and manufacturer of the Acme Steam-Heat Evaporator (described and illustrated in the RURAL PRESS) of June 12th, and for which Batchelor & Wylie are general agents, and while he is on the Pacific Coast purposes instructing those who have these dryers in the method of operating them to the best advantage.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 262 Market St., S. F.

FOR WEEK ENDING JULY 13, 1886.

- 345,404.—CHECK REIN ATTACHMENT—C. L. Bard, San Buenaventura, Cal.  
 345,567.—PIPE WRENCH—S. J. Benson, Boulder Creek, Cal.  
 345,280.—HEAT REGULATOR FOR INCUBATORS—L. H. Cutting, Stockton, Cal.  
 345,371.—TWO-WHEELED VEHICLE—S. P. Davis, Napa, Cal.  
 345,373.—ANIMAL EXTERMINATOR—H. Esborn, Petaluma, Cal.  
 345,385.—EXPANDING DRILL-BIT—C. C. Lane, S. F.  
 345,388.—SAW GUMMER—S. R. Mathewson, Porterville, Cal.  
 345,391.—STEAM CORKER—D. D. Mounts, S. F.  
 345,395.—BARREL-TILTING DEVICE—Potter & Gomez, S. F.  
 345,396.—KEY-HOLE GUARD—Katy Rumetsch, S. F.  
 345,333.—STEAM GENERATOR—J. E. Taylor, Walla Walla, W. T.  
 345,461.—CANDLESTICK—Samuel Tyrell, Grass Valley, Cal.  
 345,345.—GOPHER TRAP—John Weichhart, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co. in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

## Business College Graduates.

Following is a list of graduates of Heald's Business College for the year ending June 30, 1886:

W. B. Fielding, H. A. Long, T. W. Chandler, Miss Lulu Drinkhouse, James Simon, F. Brown, J. N. Russell, Miss Mary Carlson, Henry Hartman, J. Kullman, J. M. Brewer, G. P. Neppert, Miss Jennie Rice, Leo C. Williams, H. S. Pelton, Walter R. Lovegrove, C. Westerfield, A. C. Pistolesi, John Hennings, R. C. Rosenberg, John G. Shannon, S. Walter, H. W. Apparius, David Thomas, Chas. K. Kirby, W. F. Pollak, Edward C. Doyle, Frank J. Waizman, F. R. Capp, C. H. Poulj, W. Cordoza, A. N. Aitken, A. Garat, C. L. Quast, San Francisco; Miss A. A. Heimbold, Wm. Martin, S. H. Wheeler, R. D. McKenzie, T. A. Kilgore, G. S. Wheaton, Geo. E. Perkins, Geo. Stetson, E. C. Hyde, Eva M. Wardwell, Oakland; Samuel Messick, Miss Winnie Morris, Alameda; Paul Brown, Wm. Swank, John Swank, Marysville; Geo. Mundorf, A. H. Booker, Sonora; Chas. A. Grissel, Geo. H. Kohler, Washington; R. S. Kirtick, A. B. Birmingham, Strawberry Valley; Jas. P. Fincher, Mdsoto; J. W. Flaherty, Boca; C. T. Lindsey, Visalia; F. W. Stickney, Little River; J. T. Howell, Merced; H. T. Wall, Healdsburg; F. E. Kimball, Seminary Park; A. B. Knowles, Ocean View; E. Worrell, St. Helena; J. W. Gibson, Woodland; B. T. Thomas, Amador City; W. L. Jones, Vallejo; Edwin Jones, Nortonville; W. C. DeNise, Cambria; J. F. Ward, Red Bluff; V. P. Pena, Vacaville; F. M. Strickland, Madison; E. McGaden, Dixon; John Murphy, Iowa Hill; Fred. A. Otto, Susanville; James R. Dailey, Folsom; Dennis Desmond, Blair; Miss Kate Schafer, Gilroy; H. J. Patterson, Colusa; H. L. Guerne, Santa Rosa; C. J. Swithenbank, Garberville; Alfred E. Thomas, Alcatraz Island; J. R. Jameson, Sumner; Chas. M. Wiggins, Ferndale; Thos. W. Lynch, Honcut; Jas. W. Hyatt, Emigrant Gap; Frank W. Kerrigan, San Andreas; I. L. Compton, Princeton; W. F. Eschbacher, Downville; E. B. Ball, Bonville; F. L. White, L. E. Lee, Reno, Nev.; John Barrett, W. F. Hartman, O. F. Werner, Empire City, Nev.; Geo. E. Melzner, Gold Hill, Nev.; W. F. Aplin, Little York, Nev.; Edward R. Daily, Hamilton, Nev.; Jas. E. Gale, Wells, Nev.; H. L. Stokes, Aug. Hildebrand, Astoria, Or.; E. Rackleff, Myrtle Point, Or.; N. K. Frazer, Pendleton, Or.; W. O. Van Schuyver, Portland, Or.; D. G. Beale, Empire City, Or.; E. Keating Strobbridge, Hayward, O.; Wm. J. Martz, Leito, Minn.; Max Peters, New York; B. J. McDonald, New Westminster, B. C.; M. F. Morales, Guatemala, C. A.; E. Ulloa, Paris, France.

## Haywards Hotel.

We take pleasure in calling attention to this well and favorably known resort. It has been long established and popular. The locality is elevated and healthy, the surroundings pleasant in the midst of the fruit region of Alameda county. The table will be found supplied with the best in the market, and the proprietor intends to spare no pains in making his house a pleasant and popular home for tourists and pleasure-seekers. Further particulars will be seen in the advertisement in this paper. San Franciscans and Oaklanders find it a very convenient and delightful place to tarry.

EXCHANGE AND MART.—We have received a copy of Mr. Henry Myrick's *Real Estate Exchange and Mart* for July. It has the usual marks of Mr. Myrick's work, enterprise, candor and neatness. It is especially devoted to Santa Cruz interests, and can be had by addressing the publisher at that place.

## News in Brief.

THE hay crop in Siskiyou is larger than ever before known.

A FARMER near Galt has over 100 acres devoted to melons.

SOLANO COUNTY has 50 school districts and 5000 school children.

THE Santa Rosa *Republican* complains of the scarcity of fruit in the stores of that city.

PARTIES in St. Louis, Mo., have formed a company to sink artesian wells near Phoenix, Arizona.

THE Big Bottom Mill Company have about 4,000,000 feet of lumber on hand at the mill at Guerneville.

THE total number of immigrants to Oregon for the first five months of the present year reaches 21,575.

AN excursion from San Bernardino to San Francisco during the Grand Army Encampment is being organized.

THE supervisors of Fresno county at their last meeting paid over \$1100 as bounties on the scalps of wild animals.

SHEEPMEN in White Pine county offer a reward of \$2 each for coyote scalps, in addition to the regular bounty.

A SAN BERNARDINO butcher announces that he is prepared to make contracts for a year to retail beef at five cents a pound.

IN one of the artesian wells in Sierra valley, gas has been obtained. Experiments will be made to test its illuminating power.

THE Winnemucca *Silver State* says: "It is suggested that the Legislature offer a bounty for rabbit scalps; otherwise the country will be laid waste by them."

IN Humboldt county, Nevada, Indians are making wages by destroying noxious animals. At the last meeting of the commissioners of that county some of the red men had as high as \$20 paid them.

THE number of tourists in Northern Shasta is greater than ever before. The magnificent scenery, health-giving climate and splendid hunting grounds attract nearly as many people as the seaside resorts.

THE Gilroy *Advocate* says: This is a good point for the establishment of an ice factory. The demand of the city, and of the adjoining towns and settlements, would insure business to any factory from the start.

THERE is talk once more about building a flour mill in Galt, says the *Gazette*. In connection with the planing mill, it would seem that an industry of this kind could be started at a small cost and run at a profit.

THE *News* says: Los Gatos is growing more and more into favor with all who know its favorable situation. The fine young orchards in the vicinity have made it beautiful, and now that fruit and grapes are advancing in price, we can feel the effect in the increased number of visitors in our town.

THE San Jose *Mercury* says: Wild honey hunting has become the pastime of several persons in this community. Each visit to the bee trees has been very productive of very animated fights between the besieged and besiegers. Though in each case the bees lost their stores of honey, they left their marks on the invaders.

A EUALYPTUS tree 106 feet high was cut down recently in Santa Rosa. The tree, instead of being chopped down in the usual manner, was commenced on at the top, and piece by piece was cut off and lowered to the ground. The growth of the tree had moved an adjacent house two inches off and one inch up from the foundation. It was one of the oldest trees in town.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

## Cheap Money to Loan on Grain.

FARMERS, don't pay 10 per cent. S. D. Hovey, 330 Pine St., San Francisco, has \$500,000 to loan on grain in warehouse, at 6 per cent per annum. He loans \$18 a ton on wheat. Write him.

THE more misfit institutions, the better for Muller, the Optician, 135 Montgomery St.,

## STODDARD BARREL CHURN

With Improved Cover Fastening.

The Only Practical Churn for the Dairy.

Awarded First Premium California State Fair, 1885; also First Premium Mechanics' Fair, San Francisco, 1884 and 1885, over all opposition.

The Stoddard Churn is as great an improvement over the cumbersome, leaky, and often sour box churns as the Cream Separator is over setting in pans, and this fact is fast becoming realized, as is proven by the growing demand for them, and they are being adopted by our best dairies with the most gratifying results. Beware of imitations of the "Stoddard." All interested in dairying will regret if they fail to all or address us to investigate these matters.

#### PRICE LIST.

No. 1—10-gallon Churn, 1 to 4	\$ 8 00
No. 2—15-gallon Churn, 2 to 7	9 00
No. 3—20-gallon Churn, 3 to 9	10 00
No. 4—25-gallon Churn, 4 to 12	12 00
No. 5—35-gallon Churn, 5 to 16	14 00
No. 6—60-gallon Churn, 6 to 25	20 00

Extra heavy frames, pulleys, etc., extra. Send for price list of larger sizes, of which we carry up to 120 gallons.

**G. G. WICKSON & CO.**

**DAIRY AND FARM MACHINERY,**  
38 California St., San Francisco.

#### PATENT

## LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to **\$1.25 PER GALLON.**

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scab in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address. **DEWEY & CO.,** 252 Market St., S. F.

## S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 21, 1886.

We give below our usual variety of reports, domestic and foreign.

The latest by cable is as follows:

LIVERPOOL, July 21.—WHEAT—Steady. California spot lots, 6s 4d to 6s 7d; off coast, 32s 9d@33s; just shipped, 33s 6d; nearly due, 33s 6d; cargoes off coast, firm; on passage, quiet but steady; Mark Lane Wheat and Maize, steady; English country markets, turn dearer; French, quiet; Wheat and Flour in Paris, quiet; weather in England, hot forcing.

## Foreign Review.

LONDON, July 19.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: The rainfall has benefited the crops, excepting the wheat, which required hot forcing weather. Wheat is firmer in many provincial markets, and prices are from 6d to 1s dearer. The sales of English wheat during the past week were 28,725 quarters, at 31s, against 38,826 quarters at 33s 11d, during the corresponding week of last year. Flour is dull, foreign wheats are steadier and American is occasionally 6d dearer. The attempt to raise values, however, stops business, as buyers are apathetic. Barley is dull. A limited business has been done in wheat cargoes. There were three arrivals and two departures, two cargoes were withdrawn and two remained, one of which was from California. The trade in forward is nominally against buyers, although American red and white wheats are offered more freely. To-day the market was quiet but steady, full prices were realized, and holders of wheat are asking more money. Flour is firm, especially English flour. Barley favored the sellers, and beans were 6d dearer.

## New York Hop Market.

NEW YORK, July 18.—The wide margin of difference between buyers' and sellers' views on prices has put a quietus upon the trade in hops for the time being. Telegrams from the interior state that Friday's storms washed the honey dew off the vines to a considerable extent, but that the vermin were not affected in the least, and that growers' prices are away out of sight. A local dealer telegraphed from Malone that 27 cents was paid there for choice goods, and from other quarters it was reported that Eastern dealers are anxious buyers at Waterville and Cooperstown. Choice '85s and prime '84s are held away above the highest prices thus far paid. In the local market 25 cents is the highest price yet bid or paid for choice States. That quality is not offered, however. There was a speculative contract for about 200 bales of 1886 Pacifics on sale, for which 30 cents per pound, it was intimated, would be accepted, but that price was said to have been refused for a much larger lot. The cable reports that the German crop is unlikely to be more than one-half an average. Pacific coast crop, 1885, common to choice, is quoted at from 18 to 25 cents. Speaking of the rapid advance in hops, a large dealer said: "I think the high prices are only temporary, and will not go up to above \$1 a pound. Brewers are buying only for immediate wants, and as soon as the new crop is gathered, prices will go back."

NEW YORK, July 21.—The *Commercial Bulletin* says: Advice at hand yesterday from the hop-growing sections of this State are the worst received. The probabilities in the estimation of local merchants are decidedly against more than one-third of last year's yield. Sales have not been made at above 25 cents in this market, but 30 to 31c was paid in the interior. During the past few days there were reasonable doubts that anything less than 28 cents would buy a choice article. Lillenthal Bros. report the State crop has not improved, but this long since has been discounted. Heavy arrivals from England and a large stock in the hands of brokers, particularly in this vicinity, are likely to prevent any further advance for the present. There are local dealers offering Pacific Coast contracts at 27 cents.

NEW YORK, July 21.—The first bale of the new State hops was received from Cooperstown yesterday. This is considered unusually early. Reports from the fields in the interior are still very discouraging, some authorities estimating there will not be more than a two-thirds crop; but these should be received with caution, while speculation is rampant. There have been few operations in the New York market of late above 25 cents per pound; but in the interior as high as 30 and 31 cents has been paid.

## Eastern Wool Markets.

NEW YORK, July 18.—Wool is dull and the demand from manufacturers is irregular, with most calls based on present wants. Rates, however, remain full and the market may be called firm. Among the sales were 20,000 pounds of Eastern Oregon at 23½ cents. The Philadelphia market is quite active and very strong for all descriptions. There is some inter-trading among dealers, but the bulk of the sales is for consumption. Among the sales were 500 pounds Territory, fine, at 23 cents; 6000 pounds Territory, heavy, at 21 cents; 12,000 pounds Territory, fine medium, at 23½ cents; 14,000 pounds Territory, medium and fine, at 20 cents; and 6000 pounds Territory, medium, at 23 cents. The Boston market shows increasing strength, with a tendency among holders to advance prices. At the same time an undercurrent of doubt prevails among manufacturers. Among the sales were 230,000 pounds California spring and Oregon on private terms.

BOSTON, July 20.—The wool market is firm, with a good demand. Ohio and Pennsylvania X fleeces are quotable at 33c; XX, 35c@36c; Michigan X, 32c; No. 1 combing, 34c@40c. California, 16a@29c. Unwashed wools, 27c@30c.

PHILADELPHIA, July 20.—The wool market is firm and stocks are light.

NEW YORK, July 20.—The wool market is firm with a fair inquiry. Domestic fleeces, 27c@36c; pulled wools, 14c@33c; Texas fleeces, 9c@22c.

## California Fruit at the East.

NEW YORK, July 19.—The *Commercial Bulletin* says: California canned and dried fruits are rapidly

coming into favor with consumers in the East, and the trade here naturally watch all advices from that section that have a bearing on that subject. From information received it appears that lower rates of freight will enable Eastern dealers to lay the same down here at a trifle below the cost of last season. Earlier in the year the expectations were that the prices of this season would rule low, but the large quantity of fruit which dropped from the trees, and the increased facilities offered by the railroads combined, served to advance values for canning purposes 50@100 per cent over the opening prices. The California raisin crop will probably be double that of last year, and of greatly improved quality. Packers there are rapidly improving their methods, and each year witnesses some progress toward a closer competition with the best quality of Mediterranean fruit. The prospects for a large yield of honey on the Pacific Coast are very favorable, which fact means a low price for the article in this locality.

## Chicago Fruit Market.

[By telegraph to the Fruit Union.]

CHICAGO, July 20.—We are having fine weather for fruit—quite cool for this time of year. Early Crawford peaches are selling at \$2.00 and \$2.25 per box. Plums in crates bring from \$2.00 to \$2.25; in boxes, from \$1.75 to \$2.25. Bartlett pears range from \$3.00 to \$3.50, according to condition and quality. Fontainebleau grapes are selling at from \$2.00 to \$2.50. PORTER BROS. CO.

## New York Wheat Market.

NEW YORK, July 18.—The close was fully steady, and 3/4c higher—August 87 1/4, September 88 1/4, October 89 1/4, November 90 1/4, December 91 1/4, January 92 cents.

## Local Markets.

BARLEY—New Brewing is strong and higher. To-day's call was as follows: Buyer 1886—100 tons, 93c. Seller 1886—100 tons, 86c; 100, 86 1/4c. No. 1 Brewing, buyer season, after September 1st—100 tons, \$1.15 1/2; 100, \$1.15 1/4 per cwt.

CORN—Both California and Nebraska are scarce and higher.

DAIRY PRODUCE—The market for butter, except for something fancy, is weak. Fuller particulars in another column.

FRUITS—Full notes given elsewhere.

HAY—About 300 tons come to market daily, being sufficient for all wants. We quote: Alfalfa, \$6@8; Oat, \$7@9; Barley, \$5.50@8; Wheat, \$9@12.50 per ton.

HOPS—Market not quite so active, but buyers are reported to be bidding well up.

OATS—Market not quite so strong as last week.

WHEAT—Market strong and more active. To-day's call was as follows: Buyer season—100 tons, \$1.32 1/2. Buyer 1886—100 tons, \$1.28 1/2. Seller 1886—200 tons, \$1.22; 100, \$1.22 1/2; 2000, \$1.22 1/2 per cwt. Buyer season—100 tons, \$1.32 1/2; 500, \$1.32 1/2. Seller 1886—2000 tons, \$1.22 1/2; 100, \$1.22 1/2 per cwt.

[COMMUNICATED.]

## Market Information.

## Live-stock.

Beef cattle in good condition continue to rule strong, with now and then something very choice sold at a slight advance. Calves are strong with the supply light. Sheep have a weaker tone under freer selling offers. Lambs are fairly steady. It is claimed that both dairy and grain-fed hogs are weak and lower; whatever weakness exhibits itself, it is thought, is temporary, for when packers start up the higher cost of hog products and the light stock on this coast will create a strong competitive buying that is apt to cause better prices. The demand now ruling is chiefly for the block, which is easily supplied. Work horses are in fair inquiry, but the supply is now claimed to exceed the demand. General utility carriage and also buggy horses are in good request and animals meeting buyers' requirements meet with quick sales at good figures. For the saddle the demand is fair, with some inquiry for single-footers.

The following are to-day's meat prices: Beef—Stall-fed 7 1/4c @ 7 1/2c per lb; grass fed, extra, 6 1/4c @ 7c; first quality, 6 1/2c @ 6 3/4c; second, 5 1/2c @ 6c; third, 4 1/2c @ 5 1/4c. Calves, small, 8c @ 9c; larger, 6 1/2c @ 7 1/4c per lb. Mutton—Ewes, 4 1/2c; wethers, 4 @ 5c. Lamb—Spring, 6 @ 6 1/2c per lb. Pork—Live hogs on foot, 3 1/4c @ 4 1/4c for grain and dairy fed; 2 1/2c @ 3 1/2c for salt; dressed, 6 @ 7c for hard, and 4 @ 5c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

The *Grocer and Country Merchant* of July 9 contains the following sales of live-stock for the week as follows: San Francisco Stock Yards.—712 cattle (large; prime condition), \$39 00; 685 cattle (medium; prime condition), \$34 00; 294 cattle (rough stock; rather thin), \$28 00; 698 calves, \$4 25, \$5 50, \$6 00, \$9 00, \$12 00, \$14 00; 6321 sheep, \$1 75, \$2 00, \$2 25, \$2 50, \$3 00, \$3 25; 2643 lambs, \$1 25, \$1 50, \$1 75, \$2 10, \$2 25, \$2 40; 2497 hogs, 3c, 3 1/2c, 3 3/4c, 3 1/2c, 4c. Oakland Stock Yards.—225 cattle (large; fine), \$4 50; 163 cattle (medium; fat), \$3 60; 196 calves, \$2 75, \$3 50, \$4 25, \$5 00, \$7 00, \$12 50; 1098 sheep, \$1 80, \$2 50, \$2 75, \$3 00, \$3 25; 640 lambs, \$1 40, \$1 90, \$2 25, \$2 40; 385 hogs, 3 1/2c, 4c, 4 1/4c.

## Cereals.

The close of the cereal year finds Europe, notably the United Kingdom, with smaller stocks of wheat and flour on hand than were held on July 1, 1885, with the wheat crop outlook pointing to an under average. Russia's lack of a full harvest, India's lessened acreage, smaller yields in both Germany and France, and Australia's failure to produce an export surplus, together with cold and wet weather in the United Kingdom, are largely responsible.

Bradstreet's of July 10 claims that the wheat crop of the United States will not go over 400,000,000 bushels, which is a reduction in its estimate of six weeks ago, of 65,000,000 bushels. With a crop of only 400,000,000 conservative writers claim that this country will be about depleted of supplies before nine months pass, provided the exports only equal last season.

The local wheat market has ruled strong through-

out the week under a strong buying by persons having loading ships that will soon be on demurrage. Sales have been made at from \$1.25 to \$1.27 1/2 for No. 1 shipping, while a straight parcel of choice shipping favorably situated fetched an advance on the higher figure. Holders are very firm in their pretensions, and as threshing is progressing slowly buyers are compelled to pay up.

Much complaint continues to be heard regarding foul grain, causing all such to be discriminated against.

European markets have ruled exceedingly strong, with higher prices said to be obtainable than quoted. On Monday the English country markets were from 6d to 1s per quarter (from 2 1/2 to 5 cents per cental) higher, owing to unsettled weather in that country.

Barley has ruled very active throughout the week, with full prices obtainable, except on Saturday, when sales were made slightly off, but on Monday afternoon the decline was recovered. The demand is speculative; consumptive and shipping choice feed sold up to 92 1/2 cts, but off grades sold down to 80 cts.

The coast counties are sending considerable barley to this city, much of which is off-color.

Oats have been unsettled, with marked fluctuations in prices, which appear to have been governed by the necessities of buyers in some instances, and by those of sellers in other sales made. Receipts of new are expected to increase in volume soon, but not grow to any dimensions this month.

Rye is exceedingly dull, with \$1.15 hard to get, except for very choice.

## Bags.

The market appears to have gone to pieces by a continued selling pressure from outside holders, and no strong buying demand. Sales have been made as low as 6 1/2 cts for new Calcuttas and 5 cts for A 1 second-hand bags. The pool are not selling, claiming that the supply here held by outsiders is not enough to meet farmers' wants, and when the demand sets in stronger, all outside holdings will soon be closed out, when they say prices will be advanced. Every day the past week a few thousands have been sold at auction, cash on delivery, which has aided no little in depressing the market. The market quotations range to-day from 6 1/2 to 7 1/2 cts for new Calcuttas, standard size.

## Dairy Product.

Owing to the extreme hot weather of last week, the bulk of the butter received is soft and not desirable for the best trade. Gilt-edged butter of good color and hard is wanted, and fetches from 20 to 21 cts a pound, and at times 22 cts. Fair to good is hard to sell at from 14 to 16, and choice at 17 to 18.

Cheese continues to be talked up, but does not sell up, as the Eastern is crowding on this market and also other points supplied from here. The market is strong, but no higher.

The hot weather spoiled large quantities of eggs, and consequently only strictly choice from well-known near-by shippers fetch over 25 cts a dozen. Fair to good sell at almost any price, "as is," but when candied they fetch from 18 to 21 cts, and choice 22 to 24. Heavy receipts of Eastern weaken the market, owing to the strong selling pressure.

Poultry held to strong prices, up to Tuesday; with large, well-conditioned fowls sold at an advance on the daily press highest quotations. On Tuesday under heavy receipts the market was weaker, but to-day is steadier. The consumption shows a decided increase, necessitating dealers carrying larger stocks.

## Fruits.

Receipts of blackberries on Monday, Tuesday and to-day were the largest for three days in succession ever before known; they averaged 600 chests a day. Notwithstanding the heavy receipts, prices were sustained by canners buying.

The thunderstorm of Friday last injured small fruits, causing berries received to be in poor condition.

Raspberries and strawberries have sold generally lower, with a weak closing to-day.

Currants have been gradually receding, under a light demand. The market closed barely steady to-day, at from \$3.50 to \$4.50 a chest.

Choice varieties of both apples and pears continue firm under light receipts and a good demand. They both sold on the wharf at \$1.75 top for the more choice. Fair to good have ruled steady.

Plums have not varied any during the week, but apricots have dropped all of 35 cts a box, owing to canners' indifference and the trade buying but few.

Figs have made another down move, closing weak to-day, owing to heavy receipts and a light demand. Heavy receipts of canteloupes and watermelons have sent prices down to quite low figures, with a weak closing to-day.

A few Muscat grapes came in the past week, but the quality being poor did not sell above \$1.75 a box. Sweetwater grapes are in good supply, with a fair trade call ruling.

## Hops.

Trading the past week has been more quiet, for dealers fear that the higher prices will restrict consumption by causing the use of the bitter wood indigenous to South America. Sales of this year's for future delivery are still reported at from 25 to 27 1/2 cts for choice, while some say that some 30 cts has been paid. Old hops are well concentrated and fetch from 10 to 17 1/2 cts and even 20 for something choice. The stock of old is placed at about 2000 bales.

## Vegetables.

Onions have ruled in buyers' favor, with reds lower, but silverskins fell off 10 to 15 cts per hundred pounds.

Rhubarb is virtually out of the market. Green corn continues to come forward in heavy supplies, with the bulk rather old. Young, tender sweet corn is wanted at from 10 to 15 cts a dozen, but the older corn moves slow at low prices.

Green Peppers are very hard to sell, with dealers well stocked.

Green Okra is slow under fair receipts, but egg plants are firm at a slight advance, under light supplies.

Tomatoes have come in very heavy, with sales for poor conditioned as low as 15 cts a box to canners. The more choice were hard to sell at 50 cts.

Summer squash has ruled steady at prices current for all of three weeks past.

Receipts of cucumbers are very heavy, yet all coming in find custom at the low ruling prices.

Potatoes under heavier receipts and a moderate demand have been on the decline throughout the

week, but at the close a steady feeling is noted. Poor grades have been almost unsalable, with sales as low as 50 cts a sack on the wharf. Only well-matured fetched top prices.

Root vegetables are in liberal supply, with prices slightly shaded by outside dealers; but cabbages are steady, with receipts well cleaned up each day.

## Wool.

The market continues active, but lessening receipts restrict business. Medium to fine grades of merino are still in request, and if strong, healthy, clean and lively, fetch good prices, according to how heavy the fleeces are. Greasy, heavy fleeces loose heavily in scouring, and consequently command less than if light but healthy. Sales of fancy clips continue to be reported at the high figures given last week. The whole line is strong at full prices.

## Miscellaneous.

Large sales of new-crop mustard seed are reported for future delivery at a cts per pound. The crop is the largest ever before known. In two districts—Lompoc and Salinas valley—over 70,000 sacks have been gathered.

Extra choice hay is very firm, with sales made at \$13 per ton. Fair to good hay is in heavy supply, with the market weak at low prices.

Honey is very dull, but then there is no strong selling pressure which causes a steady market to obtain. With strong selling, lower prices must be accepted, but then buyers do not look for any undue selling pressure.

Beeswax is dull and weak at 20 to 22 1/2 cts a pound.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	313,467	216,345
In port, disengaged.....	48,293	103,549
In port, engaged.....	47,307	17,862

Totals.....409,067 337,756

The above gives a carrying capacity as follows: 1886, 654,506 short tons; 1885, 540,309 short tons. Increase over last year, 114,197.

San Francisco, July 21, 1886.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
Geo. McDOWELL—San Luis Obispo and Santa Clara Co's  
FRANK W. SMITH—Idaho and Montana.

Fruit Drier on Exhibition.

One of the Meeker Sun Fruit Driers, with all the latest improvements suggested by the experience of last season, is now on exhibition at the factory, 5th and Bryant streets, on and after Monday, Jan. 25th.

As now arranged we consider it much the most perfect and economical of any of the various driers to which the attention of fruit-growers has been called. Its various productions are the perfection of purity and excellence, and at the same time the most economical in cost of production. Fruit-growers are invited to examine and test the drier and the fruit prepared in it. Those using this drier last season realized handsome profits on their fruit.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

JULIUS REIMER, the expert accountant, has been admitted to practice as an attorney and counselor at law. He has had much experience in adjusting accounts between San Francisco commission merchants and their consignors.

THE Wheeler Fruit Packing Co. have re-organized and resumed business at 116 California street, S. F. Thos. Richardson is the new president, and Joseph Perkins secretary.

This paper is printed with Ink Manufactured by Charles Eneu Johnson & Co., 500 South 10th St., Philadelphia. Branch Offices—47 Rose St., New York, and 40 La Salle St., Chicago. Agent for the Pacific Coast—Joseph H. Dorsey, 529 Commercial St., S. F.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if REQUESTED, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0 25
- 2.—World's Cyclopaedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 9.—March of Empire, by Mallie Stafford.....25
- 10.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 11.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 12.—Dewey's Pat Newspaper Fileholder (18 to 36 in.).....5
- 13.—European Vines Described, 63 pages.....05
- 14.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
- 15.—Architecture Simplified, 60 pages.....15
- 16.—Beautiful Poetic Review, entertaining and instructive. 35 pages (a handsome and pleasing present).....25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F. Send for any further information desired. Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

CHAMBERLIN AUTOMATIC

Poultry and Stock Book

Niles' new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid, 50 cts. Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

EXTRA SESSION!

No matter what the Legislature may do, it will still be necessary to RAISE WATER.

THEREFORE, a Windmill which is

REASONABLE IN PRICE.

Easy to set up, and which shall be perfectly Self-Regulating, and requires no attention, except oiling, is what is wanted by Fruit-Growers, Stock Raisers and Farmers.

The "Cyclone" Mill, which can be put together ON THE RANCH with a HAMMER and MONKEY WRENCH, fulfills everything required in a Windmill.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

HANDMANN, NIELSEN & CO., General Agents  
GIANT POWDER COMPANY,  
SAN FRANCISCO, CAL.

IMPORTERS, MANUFACTURERS, AND DEALERS IN

## Hardware and Agricultural Implements.

### 1886—BENICIA BARLEY CRUSHERS—1886

The BENICIA BARLEY CRUSHERS, manufactured by the Benicia Agricultural Works, are the best machines for CRUSHING BARLEY that have ever been invented. They do their work effectually without separating the grain and hull, and clean it from all foul seed. Barley cleaned and crushed by these mills can be fed to stock with a certainty that no foul seed will be scattered, which is of itself an important feature and improvement. It is practical, simple in construction, durable and not liable to get out of repair.

To those who wish to see the machines in operation we invite them to call at our works and examine for themselves. Numerous machines have been built and placed on the market for sale, as Feed and Barley Mills, etc., but when put to a practical test have proved to be comparatively useless. It is not alone our experience, but that of others, that stock fed on barley crushed by these machines thrive much better and require less feed than when fed on what is usually called ground barley. The feed is also free of all dirt, sand or grit of any kind.

No. 2, or Large Size; weight, 1620 pounds; capacity, 30 tons and upward per day. Price, without wagon, \$200.

Rollers are 12 inches long and 18 inches in diameter. Should be speeded not less than 600 nor over 800 revolutions per minute. Should be run with not less than 10-horse power.

### "BENICIA" BARLEY CRUSHERS.

No. 1, or Small Size; weight, 675 pounds; capacity, 1 ton per hour; price, \$125.

Has rollers 8 inches long and 6 inches in diameter. Should be speeded not less than 1000 nor over 1200 revolutions per minute. Should be run with not less than 6-horse power.

## INGERSOLL'S HAND PRESS.

### PRICES.

No. 1. Size of Bale, 46x25x25; Weight of Bale, 200 pounds; Weight of Press, 850 pounds; Price, \$125.00.

No. 2. Size of Bale, 49x27x28; Weight of Bale, 300 pounds; Weight of Press, 1500 pounds; Price, \$175.00.

During many years' experience in the sale of presses, we are fully convinced that the Ingersoll Presses will be found to have overcome the great objections heretofore existing against hand power presses. They combine a quick, convenient, and effectual working power, and everything liable to break has been done away with.

With a double ratchet wheel combined with a chain pulley and loose sheaves, a TWO, THREE OR FOUR-FOLD lifting chain power is obtained, which, when acted on by only ONE PERSON with a light lever of only 5 or 6 feet long, will exert a force on a bale reducing it to SMALLER dimensions than has heretofore been accomplished.

### PACIFIC DOUBLE-SHAKE FANNING MILL. AS IMPROVED WITH ZINC HURDLES.

No. 1, Capacity for 18 tons, or 600 bushels for 10 hours, weight 149 pounds.....\$30 00  
No. 2, Capacity for 25 tons, or 1000 bushels for 10 hours, weight 165 pounds.....35 00  
No. 3, Capacity for 30 tons, or 1200 bushels for 10 hours, weight 225 pounds.....40 00  
No. 1 PACIFIC.—This is the farm size, and has sufficient capacity for all ordinary farm work, which it will do in the most thorough manner.  
No. 2 PACIFIC.—A small warehouse Mill, furnished with pulley, if desired. Any farmer having large quantities of grain or seed to clean, will find this Mill invaluable.  
No. 3 PACIFIC.—A large and substantial warehouse Mill, having great capacity and doing excellent work. Width of sieve 33 1/2 inches.  
We have sold this Mill extensively, and wherever it has been used it is universally acknowledged that IT HAS NO EQUAL.  
A comparison of the "Pacific" with any other style will convince any one that it is STRONGER, BETTER FINISHED AND MORE DURABLE THAN ANY OTHER MILL. It has no cross sections nailed to the sides, but all, including the head or drum, fit into grooves, and the Mill is held firmly together with rods, preventing it from getting "out of square," which will happen sooner or later to all of the other styles. By taking out these rods, the Mill can be easily taken apart and put into compact form for shipping, as shown in Fig. 2, thus making a GREAT SAVING IN COST OF FREIGHT.

TWENTY-PAGE EDITION.

Vol. XXXII.—No. 5.]

SAN FRANCISCO, SATURDAY, JULY 31, 1886.

{ \$3 a Year, in Advance  
SINGLE COPIES, 10 CTS.

#### Our Guests.

The Twentieth National Encampment of the Grand Army of the Republic will convene August 3d, in San Francisco, and continue in session for a week. It will probably be the most interesting and brilliant affair of the kind ever witnessed on the continent. Already the advance guard is arriving and the hotels are lively. A train of 28 Pullman cars is on the road, crowded with Boston veterans and their wives. From the latest advices, in a few days more there will be not less than 30,000 Grand Army visitors among us. They are coming from all parts of the Union—Maine with its six months of winter, Minnesota and Kansas with their frosts and blizzards, and Kentucky and Tennessee, the land of big-boned men, lots of children, cornpone and hominy. They are coming with great brass bands, big drums and fifes,

GENERAL PHIL. SHERIDAN.

and will make the air sonorous with the best of martial music. The female drum corps from Minnesota will be a novel feature. Those frisky old fellows, the Veteran Corps of Elizabeth, New Jersey, propose to parade in a different uniform on each of the six days of the Encampment. Many of the Sir Knights of De Molay Commandery, Louisville, who carried off the first trophy at the Templar Conclave of 1883, are coming back to see us as soldiers of the Grand Army.

They are welcome, thrice welcome, these valiant men who bore aloft the flag through that terrible war. They will find San Francisco gorgeous as a tropical forest, its streets one long emblazony of military symbols and devices. The bare and gloomy walls of Mechanics' Pavilion will blossom into banners, pendants, badges, battle-pieces and historic memories. Merchants, shop-keepers and householders will vie with each other in welcoming them by their magnificent display of decorative art and other ways. Even old Mammon will get a sniff of patriotism and put on his best clothes for a holiday.

We give upon another page the full official programme of the Encampment. From present appearances, the grand march and grand campfire will be the chief features. The march will be along streets profusely decorated with the national colors, and under an arch 80 feet high, surmounted by a monster eagle, 30 feet from

wing tip to tip, and ornamented with the figures of General Grant and Admiral Farragut, and of Presidents Washington and Lincoln. Our visitors will not make as showy a pageant as the Knights Templar; but they are no kid-glove soldiers. They are men who have smelt powder, worked in the damp trenches, toiled in the weary marches, and fed on hard-tack, beans and glory. San Francisco will put its best foot forward to make the days of our gallant visitors pass enjoyably, and Oakland, Sacramento, San Jose, Los Angeles and other places are making elaborate preparations to give them a reception. The fact is, there is a deep-laid plot, a deliber-

SAMUEL S. BURDETT, COMMANDER-IN-CHIEF, G. A. R.

ate conspiracy, to lure away these Grand Army folks into the country, feed them on climate, and capture as many of them as possible and hold them willing prisoners in the land of the orange and vine.

As pertinent to the occasion we give on this page portraits of three of the most distinguished guests of the State—Generals Sherman and Sheridan, survivors of the grand trio, headed by the late General Grant, whose names are indissolubly linked in the gratitude of a reunited people. The central figure of the present occasion, by virtue of his office, is General Burdett, Commander-in-Chief of the G. A. R., to whose portrait we award the place of honor on this page.

GRAND ARMY EXCURSIONS.—The many excursions planned by the G. A. R. Excursion Committee will enable the guests to obtain a flying view of a large part of the coast and interior regions of the central portion of the State, and added to the glimpses they will get from overland trains, should give them quite an idea of California's topography and her industrial growth.

#### Outside the City.

The Excursion Committee of the Encampment have made arrangements to show the visitors as much as possible of the country during the sessions. Of course, thousands will visit more leisurely and see for themselves after the Encampment is over. On Wednesday, August 4th, there will be an excursion to Sonoma valley, the train running through to Cloverdale, returning at once to Santa Rosa, where a reception will be given. On Friday, August 6th, there will be excursions to Monterey and to Ingrams in the redwoods of [Sonoma county.

#### The Grand Army of the Republic.

The occasion which brings to our city the hosts of veterans from all parts of the country is the 20th Encampment of the Grand Army of the Republic. In the midst of the deep gloom that overspread the land after the tragedy of April 15, 1865, the Order of the Loyal Legion was founded. Its membership was restricted to those holding commissions. The necessity of an organization into which all could come without regard to military rank, so long as they could show an honorable discharge, was met by the organization of Post No. 1, G. A. R., on the 6th day of April, 1866, at Decatur, in the State of Illinois. The happy thought is said to have occurred to Dr. B. F. Stephenson, who had served his country as a surgeon during the war. From that time the Grand Army has moved steadily on, until the light of its camp-

GENERAL WM. T. SHERMAN.

fire may be found wherever 10 Union soldiers of the Civil War are located.

The only persons eligible to become members of the G. A. R. are the honorably discharged soldiers and sailors of the army, navy and marine corps of the United States, who aided in maintaining the honor, integrity and supremacy of the National Government during the war of the rebellion. The objects sought to be accomplished by this organization are as follows:

**Fraternity**—To preserve and strengthen those kind and fraternal feelings which bind together the soldiers, sailors and marines who united to suppress the late rebellion, and to perpetuate the memory and history of the dead.

**Charity**—To assist such former comrades in arms as need help and protection, and to extend needful aid to the widows and orphans of those who have fallen.

**Loyalty**—To maintain true allegiance to the United States of America, based upon a paramount respect for, and fidelity to, its Constitution and laws; to discountenance whatever tends to weaken loyalty, incites to insurrection, treason or rebellion, or in any manner impairs the efficiency and permanency of our free institutions; and to encourage the spread of universal liberty, equal rights and justice to all men.

There are now departments of the Grand Army in nearly every State in the Union. The Posts are scattered throughout the land, from the pine forests of Maine to the golden shores of the Pacific, from the Gulf of Mexico to the chain of great lakes. The first Post organized in California was Feb. 20, 1868.

On Saturday, August 7th, there will be a grand excursion around the bay upon a fleet of five steamboats, visiting all the famous points. Monday, August 9th, will be Oakland day, and a reception has been prepared by the citizens. Ferryboats will run every 15 minutes during the day. San Jose day will be Tuesday, August 10th, and arrangements are complete for a rousing welcome in the Garden City. There will be triumphal arches, fruit in profusion, and carriage rides through the delightful scenes surrounding the city. The last and greatest excursion of the Encampment will be that to Napa and Sacramento. The whole route will be one continual ovation, as Napa, St. Helena and various minor towns have made generous preparations to welcome the veterans. The excursion will go by boat to Vallejo early Wednesday morning, August 11th, thence to St. Helena by rail, where a reception will be tendered; returning to Napa for another welcome, and thence to Sacramento, reaching the Capital City at 6 P. M. The citizens of Sacramento have prepared a great demonstration and reception which will occupy the evening of August 11th and the following day.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Camp Life and Sea Bathing.

EDITORS PRESS:—Perhaps it might interest some of your many readers to hear from the seashore resorts.

Well, I have just returned from Capitola, formerly Camp Capitola, after an absence of five weeks, and am free to add mine to the pleasure experienced by others who have been foot-loose and able to lay aside, for the time being, the active duties of life.

Santa Cruz, for a long time the resort for summer boarding and summer bathing, is holding her own this year. Crowds who come here for health and pleasure are constantly on the move.

Of course, Hotel Del Monte maintains her reputation for entertaining "the upper ten," who come with plethora purses. Near by, between the hotel and the old, quaint town of Monterey, are the warm baths in salt water, furnished in luxurious style, for 50 cents. Fifty cents more will take one by stage in a pleasant drive of five or six miles to

## Pacific Grove.

Here one finds himself in the shelter of tall pines and other trees in the midst of quiet comfort. The grove is very extensive, and the cottages much scattered or close, to suit those who like seclusion or sociability. This place has its bathing spot by the arm of Monterey bay, and is patronized especially by members of the Methodist denomination, who hold service and have literary entertainments during the summer school vacation.

The Chautauqua Society here have their annual reunions and literary exercises. Religious services and reunions are also held here by church members generally. The management aims to make this the resort of the devoted classes, and the camp rules are regarded too strict and stringent by many outsiders who attend these resorts for health and recreation.

## Capitola.

On the other hand, aims to draw the masses without religious or other restraint. Her gates are thrown wide open, and it is expected every one will be on his good behavior. The hotel furnishes good accommodations at reasonable prices. There is also a spacious hall free for general entertainments, managed in the main by the campers and guests; and much talent is always at hand among the members to entertain each other.

Social intercourse prevails; and chatting, singing, dancing, promenading, skating, bathing, etc., are woven in with literary entertainments to suit the inclinations of all; while the shore is lined, at intervals, with the masses who go to witness the frolic and fun of old and young during the bathing hour in the forenoon and afternoon. This pastime is supplemented by those who sit in the sand to witness the ocean breakers as they dash upon the shore, or to see the glimmer of the moonlight as it dances in the waves.

It will here be understood that this camp is noted for its life-giving activity, and usually innocent, harmless sports, health-inspiring as well as enjoyable. Boating and fishing are among the athletic habits; and rides by day and by moonlight to the lighthouse to Santa Cruz, and to the neighboring big trees, are enjoyed by many more. Bands of instrumental music now and then make their appearance from San Jose, Gilroy, Hollister and Santa Cruz, to mingle their music with that of the camp.

Time has not obliterated any of the primitive attractions of this old-time resort, and the camp tents are ranged alongside the neat-looking white cottages made for rent for those who desire them, with nothing but their rude tables and benches for furniture.

During the last two or three years many lots have been sold adjoining, and private cottages, of more or less style and magnitude, have been put up, and generally whitewashed or painted. Flower-gardens and evergreen hedges are to be seen, and many spend much of their time in the bathing season in these plain but cheap and comfortable homes; while a few spend the entire year, declaring that this is the best spot for a permanent home.

The beach is not excelled, if equaled, anywhere; and the railroad passes the grounds in a circular manner, upon a bridge 50 to 100 feet up from the flat portion, so as to be in fair view from the camp. The hill at the east is already bristling with cottages, built chiefly within the past year.

Mr. D. C. Feeley, of Santa Clara, has laid out 18 acres on the opposite hill, on the west, and will soon offer lots for sale.

While the old camp-ground, on the flat, has been all disposed of, and mostly improved and built upon, the rim of hills is attracting the attention of those who want an unobstructed view of the ocean and town below, as well as the background of mountain and mountain scenery.

Mr. Feeley calls his new camp "Camp Fair View," and it is expected that it will be connected by a foot-path on the bridge now being erected, as it is already by a suspension bridge across the Sequel creek.

Santa Clara.

I. A. WILCOX.

## In the Willows—San Jose.

EDITORS PRESS:—The Willows, near San Jose and south of that city, covering an area of several square miles in extent, affords some of the most attractive drives for strangers and sight-seers anywhere to be found in the country. The distant mountain scenery surrounding the Santa Clara valley is very fine, and in bright, clear weather the landscape view is enchanting. But most attractive are the beautifully designed residences, including dwellings, ornamental gardens and orchards. At many places we find everything so well kept, and under such a high state of cultivation, that during the growing and bearing season we are scarcely able to detect the presence of a single weed or blade of grass, however small, within the boundaries of cultivated grounds. To an observing stranger being driven along some of the avenues, the places on both sides seem to glide by like visions of beauty, each place vying with its neighbors, in its own peculiar forms of loveliness, its lights and shadows, its brilliant flowers, its leafy arbors, its various and highly developed fruit trees.

For a slightly orchard, the cherry, with its stately forms, and dark, heavy foliage, is one of the most effective. One of the best authorities on the cultivation of the cherry is W. C. Geiger, of the Willows, and at our earnest solicitation he has promised to give the RURAL PRESS some items on this subject, and especially with reference to pruning of the cherry.

One of the best-kept places in the Willows is that of J. C. Arthur. His trees are mostly seven years old. His fruit trees are cherry, mostly Black Tartarian, with a few of the white varieties. His cherries usually bear well, but this season produced only about one-fourth of a crop. Behind these are apricots, principally the Hemskirk and Moorpark. Among a very few places in the Santa Clara valley this season, we here find the Moorpark very full of fruit—so full that Mr. A. had to thin out at least half. His Hemskirks last year, at six years old, averaged 225 pounds per tree. They do not bear quite so well this year. Of prunes, he has 170, all bearing very full, and he reckons on some 300 pounds per tree. All trees of this orchard are remarkably thrifty and very uniform in appearance. This uniformity is, of course, produced by regularity in culture and careful pruning. The trees limb out about two feet from the ground. They are cut back annually, commencing on apricots in December, then cherries and peaches, finishing on prunes in February. Particular attention is paid to balancing heads of trees. Cherries are not pruned much after third year. They are headed back thus far and thinned out but little. Mr. A. thinks that while pruning may produce more fruit and thus bring temporary results, yet that we may expect best and most permanent results in not pruning too much. Mr. Jesse Stubbs and Mr. Williams, near neighbors of Mr. Arthur, are also good examples of neat orchardists, and keep everything in best of order.

Thos. Conant believes in low heads for fruit trees, even if we have to hoe around, in order to cultivate thoroughly. The extra expense thus incurred is saved, in being able to pick much of the fruit without use of a ladder. Especially in this way can much labor be saved in picking peaches and apricots.

W. L. Northern has, we believe, the largest apple orchard in the Willows. Of the Newtown pippin he has 18 acres in good bearing condition and two acres Bro. Jonathan newly set out. The Newtown pippin is reported to have borne every year for several years past, and Mr. N. pronounces this the best apple for winter market and profit. His trees are only 18 feet apart, and he thinks amply distant considering the soil, a heavy loam. The trees are kept well proportioned, and show great regularity in pruning. Limbs, two feet from ground; orchard doing well.

Among the many places where owners deserve special mention for their beautiful ornamentation of homes, we will mention one, because of taste exhibited in the selection of many trees, shrubs and flowering plants, all named specifically, and the habits of each individual kind studied during leisure moments throughout the season. It is that of Wm. Beauchamp, situated on Meridian avenue. Mr. B. has, among other very rare and handsome things, a great many roses of the finest types. He seems to spare neither pains nor expense in the selection and purchase of the most valuable varieties. Many of the older plants exhibit a gorgeous display of handiwork flowerers, rewarding our admiration with delicious fragrance. Many of the younger plants, however, determined from their names as among the fairest and sweetest, have not yet bloomed sufficiently to show their good qualities to advantage. Owing to this fact we made no attempt at taking names or peculiarities of varieties, but defer this for another season, hoping at some future time to be able to give the readers of the RURAL PRESS the results of some very interesting observations of the rose family at Mr. B.'s place.

Before closing we must allude to the very fine bed of pansies in front of the dwelling of Marcellus Ross and family. Mrs. Ross takes great pleasure in her flowers and has a magnificent array of choicest pansies of great variety in points of color, shades and markings.

Santa Clara Co., Cal.

McD.

## In San Luis Obispo County.

EDITORS PRESS:—May I beg space in your columns for a few remarks about our little town—San Miguel. I hope the time is not far off when it can claim the honor of a city. San Miguel is situated on the west side of the Salinas river, 40 miles from San Luis Obispo, and 49 miles from Port Harford—our nearest outlet to commerce. A few years ago our section was known as a sheep and cattle country, where herds roamed over rolling hills and valleys, grazing on the vegetation which abounds here and for which this country is noted. San Miguel has now all the appurtenances of a growing town. The country around is fast settling up, mostly by emigrants who have come from the East with moderate means, seeking homes, and who, although poor, are industrious, improving and cultivating their claims of either railroad or government land. Surveyors have been busy for several days surveying off a town north of the old Catholic Mission. It will not be long before the foot of the iron horse will sound and re-echo through hills and valleys and arouse the drowsy inhabitants from their peaceful slumbers. We expect the railway will be a valuable outlet for the products of this country, as it will save the farmers a long and tedious journey over the mountains to San Luis Obispo through the summer to get their crops to a shipping point and market.

## The Estrella Plains.

On the east side of the Salinas river, with the waving fields of yellow grain, are pleasing to the eye of the traveler who passes through that section. Nearly every quarter section of the plains has a house of some description on it. It is an extensive grain region.

## Cholame Valley

Is fast being converted into a farming country. A few years ago it was principally devoted to raising sheep, and there are still many flocks, but not nearly so many as formerly.

## Paso Robles.

Or "El Paso de las Robles" Hot Sulphur Springs, are eight miles from San Miguel, and 32 miles from San Luis Obispo City. They are owned by Blackburn & James, and are widely known as one of the best health-giving and pleasure resorts.

R. B. WALTER.

San Miguel, Cal.

## Cotton and Oats.

EDITORS PRESS:—I have been experimenting with cotton this year. I have about six acres planted. It is 12 or 15 inches high at date of writing (July 18th), and is blooming with many squares on it.

I have not irrigated. On clay points it is not doing well. I am under the impression that nights are too cool here for cotton to do first rate. It is old enough now to grow rapidly. One of my neighbors is doing a little better with a few stalks. I was in hopes cotton would do well here, for we sadly need some kind of crop that will bear transportation without taking so near all of the value to pay freight, as grain does. With a good cotton crop it would be possible for a man of small means to go ahead improving his place and wait for his vines and fruit trees to come into bearing. As it now is, all men without means here must work for others to the neglect of their own farms.

I have three and one-half acres of red rust-proof oats from Texas that are as good as I ever saw anywhere. I think oats will be a success in San Diego, particularly the rust-proof kind.

JOHN W. MOORE.

Valley Center, Cal.

## SERICULTURE.

## Government Aid to Silk Culture.

In last week's RURAL we mentioned the increased appropriation for the silk culture work under direction of Prof. C. V. Riley, U. S. Entomologist. We have just received by mail interesting documents relating to this work. An illustrated pamphlet which is designated as "Bulletin 9, Division of Entomology," is entitled "The Mulberry Silkworm, being a Manual of Instructions in Silk Culture, by C. V. Riley, M. A. Ph. D." It is an excellent document and will be of much interest to the silk-grower, who can, no doubt, obtain it by application to the Department of Agriculture or to the Member of Congress representing his district.

## Government Purchase of Cocoons.

It was stated last week also that the Government was to purchase cocoons for reeling. Concerning the details of the purchase, we have just received the following circular:

By a recently-enacted law I am instructed to conduct, "at some point in the District of Columbia, experiments with automatic machinery for reeling silk from the cocoon." To enable me to prosecute these experiments I shall pur-

chase a few thousand pounds of dry cocoons upon the following conditions:

No samples should be sent in before September 1, 1886, and no cocoons will be purchased before October 1st.

The highest price that will be paid will not exceed \$1.15 per pound, and this will be given for such cocoons only as will produce one pound of silk from four pounds of raw material. For inferior cocoons such prices will be paid as their quality will justify, and it must be remembered that very poor cocoons cannot be reeled and are only salable as waste, and as such bring excessively low prices. In the present state of the industry in this country but few raisers produce cocoons of such quality as will command the maximum price quoted.

Persons having cocoons to sell should notify this office before shipment, so that they may be informed whether or not the full quantity required has been purchased. This may be done upon the inclosed official postal card.\* No cocoons will be purchased except by such previous agreement, and lots shipped without regard to these instructions will not be returned to the shipper at the expense of this department. It would be wise to send with the notification a small sample of cocoons, which may be mailed without payment of postage if the inclosed franking label is used.\* Upon receipt of such a sample the shipper will be informed, approximately, of the price which will be paid for the cocoons. But as it is extremely difficult to judge of the value of the whole lot by the inspection of a small sample, I cannot undertake to bind myself by the estimate thus given. Lots of cocoons weighing not more than four pounds may be sent by mail with one of the inclosed slips attached.\*

In shipping samples or lots of cocoons it is very important that the name and the address of the shipper should be placed both inside and on the outside of each parcel or box. All freight and express charges must be prepaid by the shipper.

In order to save transportation expenses it is suggested that neighbors combine their small lots in one case and ship them by freight. The lots should, however, be separately packed in the case and each labeled with the name and address of its owner.

No special instructions are needed as to the packing of cocoons for shipment beyond calling attention to the fact that crushing must be guarded against. No soft or foul cocoons should be placed in the case.—NORMAN J. COLMAN, Commissioner of Agriculture. Washington, D. C., July 9, 1886.

The allusions which we have marked with a star (\*) in the circular were to sample labels and postal card sent us with it. They can no doubt be had by writing to Col. Colman. All who think of selling cocoons to the Government should write to the Commissioner at once for these instructions.

## State Board of Silk Culture.

The last regular meeting of the State Board of Silk Culture failed of a quorum owing to the absence of several of the members in distant parts of the State. Meantime matters at the State Filature (No. 22 Montgomery avenue, S. F.) are progressing well in charge of the secretary, Mrs. Louise Rienzi. It is expected that the new machinery ordered by the board will arrive in a few days, as it was shipped from Genoa on June 20th. It embraces a new double reel, with automatic battens. The board also expects a consignment of Cattaneo mulberry trees to arrive here in October, from Milan, Italy, and hopes to replace with this variety some of the less desirable varieties which are now being grown.

It now looks as though the board would have an abundant supply of cocoons for this year's reeling in their school. They estimate this year's crop as ten times as great as any yet produced in this State. More than 200 pounds of first-grade cocoons have been received from Napa county, principally from Mrs. P. Robeson, Mrs. Scheggia, Mrs. Inmann and Miss L. Gesford. Sixty pounds of cocoons have been received from Miss Turner, of Amador county. From Los Angeles and Santa Clara counties there have been received specimens of cocoons. Those from the first place are remarkable for their large size and surpass the others in their fine appearance.

Mrs. Rienzi recently returned from a tour of inspection and reports that in the vicinity of St. Helena, Napa county, the rearing of the silkworm and the culture of the mulberry is becoming quite an industry, and results are expected soon that will be surprising. Many people who raise the trees, but not the worms, permit others to use the leaves. Mrs. Rienzi is quite sanguine on the outlook of the silk industry in this State.

SILK CULTURE.—Mr. G. A. Garbarini left at our office a few days ago a bunch of fine-looking cocoons, raised on his ranch near Slabtown this year. Mr. Garbarini has gone into the business on quite an extensive scale, and his experiments for the last few years prove that this locality is as well adapted to the raising of the silkworm as any other part of the world. He has constructed a home-made reel with which he has produced a number of skeins of the finest quality of silk thread. The only thing required to make the business a success here is a reasonable amount of capital and experience.—Amador Dispatch.

## HORTICULTURE.

## Prune and Apricot Drying.

EDITORS PRESS:—Not finding an answer to the querist of San Jose in regard to apricot and prune drying, by which I might have learned something, I will answer myself as far as my experience goes. While I raise most kinds of fruit adapted to this locality, apricots and prunes are my specialty. But I am getting rid of my apricot trees as fast as I can graft them into prunes, for reasons herein mentioned.

Last season was the first my crop amounted to enough to make it an object of drying it. Let me first speak of my experience with apricots. During their season I had, besides my two boys and myself, from four to six boys and women hired to pick and cut them. The picking of them is a very annoying job, on account of their having to be picked at their proper stage of ripeness, which is just before they get soft. Before that they will be insipid, and two days after that they will turn dark in drying. So you have to pick about four different times from each tree, and move your step-ladder from three to five times at each tree.

When they were brought to the house the woman would cut and lay them out on trays (size 2x3 feet, of which I used 250), and put in the sun until we had 14 of them, which number would fill my smokehouse. Then a sulphur-ship about a foot long, such as winemakers use, was fired and laid on the ground under the trays, the door shut and left till another batch was ready to go in, and then laid in the sun. The trays were stacked about sundown and spread out again the next morning, until the fruit was dry enough to rattle, when I put them into sugar barrels upstairs. This was a great blunder. On account of the bulk, in going through the sweat, two-thirds of them turned dark; but the worst of all was, that notwithstanding I had my barrels covered with cloths and sacks, the little millers got in and in two weeks they were badly infested with worms. So we had quite a job overhauling them, grading, cleaning and throwing away about 10 per cent of them. Besides all this, while they were drying the bees would suck the juice out of many of them, and only leave a skeleton.

After going through all this, I pressed them into 25 and 50-pound boxes, in which they kept very well. But I still have about half of them on hand, and am selling them at 8, 10 and 12 cents per pound, according to grade.

## Prunes.

Now, with the prunes the story is of a different character. You may let them hang on the tree till they begin to drop fast, then shake the tree and pick them up; put them into a basket which goes easily into your wash-boiler, which you have on your stove boiling with water, in which you have put enough concentrated lye to make it a little slippery. Dip in your basket up and down for about two minutes; then let them drip half a minute, and rinse them thoroughly in a tub of clean, fresh water. Spread them on your trays and let them dry a little, and they are ready to go into the smokehouse. Then treat them the same as you would apricots, but be sure and not let them get too dry. When they are still soft they will do to pack, as there is no rot in them, and no insects have disturbed mine.

The sulphuring of them is not essential, but it gives them a little pleasanter color.

My smokehouse is a very cheap affair. It is simply a box with a tight fitting door in front, seven feet high, three feet wide inside and two feet four inches deep, with cleats nailed to the sides to let in 14 trays, which are alternately shoved in, one to go to the back and the next to the door.

I can do better to sell prunes at five cents per pound than apricots at 15 cents, and if I had to buy them I would sooner pay 15 cents for first-class prunes than five cents for apricots. This, however, is a matter of taste.

Santa Ana, Los Angeles Co.

H. G.

## Prunus Simoni.

EDITORS PRESS:—In this week's RURAL Prof. C. H. Dwinelle mentions *Prunus Simoni*, lately introduced from Northern China, and the Black apricot, which has been cultivated here for some years, as being perhaps synonymous. Both are now bearing fruit in one of my nurseries. The Purple or Black apricot has every appearance of being closely related to or a sub-species of the Myrobalan plum, and will root as readily from cuttings.

*Prunus Simoni* has a habit of growth so distinct from any plum or apricot before introduced that no one could confound the two after seeing them once. The light-green branches of *Simoni* grow as vigorous and upright as the Bartlett pear, and are heavily clothed with unusually long, narrow, light-green leaves. The fruit is quite large and has the form of the Peen-to peach; have had no success in growing it from cuttings. Among the Myrobalans introduced for stocks from France, we sometimes get a few trees of a much more vigorous, almost evergreen, variety, having a weeping habit. It has been suggested that this might make a good stock for peaches and apricots for clayey soils. It is of the utmost importance to fruit-growers and nurserymen to have the various

fruit trees grown on the best stocks, and no pains should be spared to learn which are the best for certain soils and locations, as the future value of an orchard depends as much on this point as on any other that can be mentioned.

Santa Rosa.

LUTHER BURBANK.

## THE HPIARY.

## Device for Removing Sections from Wide Frames.

EDITORS PRESS:—One of the difficulties in the production of comb-honey is to get the sections out of the wide frames without injury and with as little loss of time as possible, to prevent the bees from uncapping the cells, which they will do if they are given time enough. If the separators and the wide frames could be made so exact that the former could clasp the latter and keep their place without falling off, the separators might be removed and the bees brushed off before they had time to do any harm. But such accuracy seems to be out of the question; besides, separators are now made of such thin, flimsy material that the turned-over ends have no strength in them, and it therefore becomes necessary to nail them permanently to the frames. This increases the difficulty of removing the sections, and to obviate this difficulty I have devised and all through the present season used the following implement, as shown in the engraving:

Muth-Rasmussen's Device.

Two boards, 12½ inches long, 3½ inches wide and one-fourth inch thick, and one board of the same length and width, but five-eighths of an inch thick, form the uprights with the thick board in the middle, and spaced so that they will slip easily through the frame, between and outside of the separators. They are joined together and held in place at each end by a strip one-fourth inch thick, 1½ inches wide and 8½ inches long, let into the uprights, flush with the bottom.

## A One-inch Dressed Board.

Sixteen and one-fourth inches long and nine inches wide, is provided with two strong cleats underneath, and to one edge is nailed a thin board, which forms the guide-back and projects three-eighths of an inch above the uprights. To this back, and coming even with its top edge, are fastened two upright guide-posts, five-eighths by seven-eighths of an inch thick, the narrow side nailed to the board. To the two outside uprights, even with their bottom edge, and projecting inward, are nailed two strips of ordinary frame-material (not shown in the engraving). By these strips the uprights are fastened, with nails or screws, to the one-inch board in such a position that when a wide frame is laid on top of the uprights the bottom-bar of the frame will slip easily down between the guide-back and the nearest upright.

## To Use the Implement.

First brush off all the bees you can, trim off any comb or honey sticking under the bottom of the frame, again brush off the bees that have come out from under the separators, then lay the frame down on the uprights, separators downward, bottom of frame between the two guide-posts and snug against the guide-back. Now press on the corners of the frame, alternating from the bottom corners to the top corners, and the frame will sink down and out of the way until the separators strike the two connecting-strips at the ends of the uprights, and leave the sections lying free on top of the uprights, when they may be quickly picked up with the fingers and any bees remaining on the under side brushed off. And here let me say, in parenthesis, that for brushing bees nothing is better than a single large feather from the wing of an eagle or a vulture, the shaft of the feather inserted in a short piece of broom handle, which makes it convenient to manipulate and prevents the feather from being blown away and lost.

## To Remove the Wide Frames.

Place the thumbs on top of the guide-posts and, with the other fingers grasping the side pieces of the frame, lift it out of its place.

To facilitate cleaning the implement the uprights might be hinged at the front and fastened with two iron pins at the back, but would then require a substantial bottom (instead of the two pieces of frame-material above mentioned) to prevent them from getting out of shape.

The device with the above dimensions is for wide frames holding six "simplicity" sections, as used in the "Three-quarter Langstroth" hive. By making the implement one-fourth longer it will answer for the standard Langstroth frame.

WM. MUTH-RASMUSSEN.

Independence, Cal.

## THE DAIRY.

## Fine Jerseys for Oregon.

Mr. Henry Pierce has recently sold to Mr. J. T. Apperson, of Oregon City, Oregon, President Oregon State Agricultural Society, a small herd of Jerseys from his Yerba Buena ranch, consisting of the following animals: Iolanthe of Y. B., Hattie of Y. B., Belle of Y. B., Nina of Y. B., females, and the bull Thistle Pogis.

The heifers are of the blood of Coomassie, Farmers' Glory and Scituate families, and are in calf to bulls imported from the Eastern States. The bull Thistle Pogis is probably the best blooded Jersey bull ever sent out of California. His sire is Romeo de Bonair—the \$10,000 bull—sired by the famous Stoke Pogis III; his dam by a son of the equally famous cow Jersey Belle of Scituate. In Eastern sales the get of Romeo de Bonair bring large prices, it being considered that his promise to get large milking daughters is a trifle the better of any one of the other seven sons of Stoke Pogis III, as, in addition to strong blood on the sire's side, he has like strength on the dam's side. Of the extraordinary large butter yields in the Stoke Pogis III, Victor Hugo family, a greater number appear in the pedigree of Romeo de Bonair than in those of the others.

This lot of animals are all registered in the American Jersey Cattle Club of New York, and, added to a previous purchase by the same gentleman, should make his herd equal to, if not finer, than any other in Oregon, as the draft of animals from Mr. Pierce's herd is from his best, and his herd is acknowledged to be the foremost on this coast, having taken the lead wherever shown. It will be remembered that it was his bull Jack Low and three of his get that took the first prize at the State Fair in Sacramento last fall over all breeds and ages.

SANTA CLARA CHEESE FACTORY.—The annual meeting of the stockholders of the Santa Clara Cheese Manufacturing Co. was held at the factory, July 10th. The San Jose Mercury gives this report of the proceedings: The following persons were elected directors to serve for the ensuing year: Robt. McCubbin, S. I. Jamison, James Southerland, W. H. French and L. P. Alexander. The members subsequently met and organized by the election of S. I. Jamison as president, W. H. French as treasurer and L. P. Alexander as secretary and salesman. The balance sheet shows the corporation to be in a healthy condition, financially, a dividend of eight per cent per annum being paid on the capital stock. From the annual statement, we take the following figures: Pounds of milk received during the year ending March 1, 1886, 1,625,344; pounds of cheese made, 150,564; sales of cheese during the year, \$15,887.12; paid dividends on milk, \$12,683.48. This shows an increase of 200,000 pounds of milk over the previous year, yet owing to the extremely low prices, cash receipts have been less. Since the 1st of March last the receipts of milk have been greater than for the corresponding period of last year. Under the superintendence of Mr. J. M. Bigger, the factory is turning out a very superior quality of cheese, the product selling at present in San Francisco at 8½ cents per pound, which is above the highest market quotations. The managers intend to spare no pains or expense in the endeavor to keep the quality of the cheese up to the highest grade of excellence.

## POULTRY YARD.

## Wild Oats for Fowls.

EDITORS PRESS:—In reply to an old subscriber, in your July 17th issue, in relation to wild oats for fowls, I will say that I would not want to feed them to young fowls or to chickens, as the sharp husk is liable to prick through the crop and make trouble. But for older fowls they (oats) are a very fine feed, making biddy pan out eggs and not lay on much fat. They are very good feed, on this account, for the large breeds of fowls. I should not want to make the entire feed of the flock on oats, but give now and then a feed of wheat and corn for change. Barley in itself is a good feed, if only well threshed and cleaned of the sharp points.

There is a point just here for us all to remember—that seeds of some kind make up the living, to a great extent, of fowls in their wild state; then why not follow nature as far as possible?

South Pasadena, Cal.

E. C. CLAPP.

## Remedies for Fleas.

EDITORS PRESS:—Will you or one of your readers give the simplest and best method of driving fleas out of hens' nests, and also out of houses, etc.? There are so many in my hen house, and they are such a nuisance, that I shall either get rid of the fleas or sell the hens.

—A SUBSCRIBER, San Francisco.

A CANINE ROOST-RAIDER.—San Jose Mercury: For the past two weeks a number of the

citizens of Santa Clara have been agitated over the sudden disappearance of their poultry on various occasions. The depredations became so general, a watch was put on at several of the residences where fowls had mysteriously disappeared, and the consequence was the capture of the thief by Ike Thompson last evening, which turned out to be a large bloodhound. The animal at the time had killed ten large turkeys belonging to Mr. Thompson, and his capture was a matter of great rejoicing by the residents of the town.

## THE FIELD.

## Killing Evergreen Millet.

EDITORS PRESS:—Harvest is very nearly over in this valley. Most of the wheat has fallen short of all expectations, still we have a fair crop all over, and some fields in this neighborhood have yielded from 25 to 30 cents. The greater part, however, has fallen below 20 cents. The continuous hot weather in May and June cut short our crops considerable. We have had some very hot weather. Last week the thermometer showed 118° in the shade three days, only falling to 70° and 80° at night. It is now cool, and has been pleasant all this week.

## Alfalfa.

I have just finished hauling in the third crop of alfalfa hay this week. It makes about five tons per acre, so far. I shall get another clip yet that will go a ton or over and then give good fall pasture.

## Evergreen Millet.

There has been considerable said for and against millet in the columns of the PRESS. My opinion differs widely from the majority of those who have written about it. I have been experimenting on a small scale with it for two years and find it a splendid forage plant. It will keep double the amount of cattle per acre, through the summer and fall, than anything I have found; and then it will keep in good growing condition all winter, and keep from 15 to 20 head of stock-hogs per acre from the first rains until the first of March. The hogs will root and live on the roots, and then there will be plenty left in the ground for the summer and fall crop, by plowing and harrowing, which keeps foul weeds out.

It has been claimed by some of our farmers that when you get it in your land you can never get it out. Unless you irrigate, or have very moist bottom land, you can kill it by repeated deep plowing in hot summer time. To prove that fact, I am killing, this season, my experimental patch. It is only one-eighth of an acre. The first of March I plowed it up 10 inches deep, picked all the roots I could get, which was about two tons. I sold one ton for a cent a pound, the balance I fed to my hogs. I have plowed it three times since, and there is still a little coming up now; but the soil is getting dry now—one or two plowings in August will not leave a spear, I am satisfied. If I fail I will let you know later.

K. N. MCENTIER.

Brentwood, Contra Costa Co.

## Millet and Morning Glory.

EDITORS PRESS:—Your report of Dr. Foote's experience with Johnson grass touches my sympathies slightly. A few years ago I planted some on wet and some on dry land, with ground in good condition. The former grew; the latter did not attempt it. The second year after I heard its roots were excellent hog feed and unkillable. Of the first I was hopeful; of the last fearful. I dug a few roots and threw to my hogs. They tasted, dropped and left it. The remaining roots I dug up carefully and burned—peace to their ashes.

When the native grasses were dried up and the millet still green, I have seen cattle walk through a bunch of it, nip sparingly of the leaves and seeds and leave it for the dry feed, which showed four times the amount on equal space.

## Morning Glory.

You refer to morning glory as a standing problem. I think it can be solved. About 10 years ago I found it in my orchard on land that was always moist. Not knowing what it was at first, I gave it no attention; but after learning its character went after it with hoe, salt and other useless appliances, till, as a last protection, I corralled it with plank set 18 inches in the ground and gave a quit claim on the inclosure. It held peaceable and prosperous possession about five years. Then the grasshoppers raided the orchard, which I saved by turning my hogs in and shaking down the hoppers. When the hoppers were gone there was not a sign of morning glory above the ground, nor did it show itself any more till the next spring, and then only a few straggling vines, which I dispatched with a hoe. The present season shows still less and I think will close it out. Why the hoppers' work proved so effectual I cannot say. The glory stood two feet high and as thick as it could grow when they struck it—about the last of May. I incline to the opinion that the sudden and complete check given to its growth at that stage caused its death.

Paskenta.

M. WILCOX.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## San Joaquin Grange Notes.

[Written for the RURAL PRESS by Mrs. W. D. A.]

San Joaquin Pomona Grange No. 3 held a special meeting at Lodi, the 21st, when Brother Hoffman, chairman, resigned to take a position in San Francisco, and W. P. M. Elliott, of Lodi, was appointed to fill his place.

W. M. Fiske and the committees are determined to spare no effort to make a fine exhibit, but the season is against them. The staple, wheat, has long, slim straw and shorter heads than usual, and much of the fine apples and pears are being cast by codlin moth. Fine wool sheep have been low so long that the county is nearly decimated of Spanish merino flocks. Sister Beecher of Stockton has the experience of the other exhibit and a visit to the New Orleans Exposition to aid her as chairman of the difficult undertaking.

Stockton Grange, on the 24th, adopted the resolutions of Plymouth Grange on the water question, and will hold discussion next meeting to send delegates to Sacramento, Aug. 5th, to sustain our representatives in their efforts to have the State control her innavigable waters and justly distribute them.

## Sacramento Grange.

EDITORS PRESS:—At the last meeting of Sacramento Grange, Bro. John Reith, chairman of the Grangers' Picnic held at Beach's Grove, May 6th, submitted the following report:

Balance cash on hand May 1, 1886. . . . . \$123 05  
Total sundry receipts. . . . . 594 00

Total. . . . . \$717 05  
Expenses. . . . . 649 80

Balance on hand. . . . . \$67 25

These annual gatherings are great features of the year among the farming community and visiting city cousins. The day is taken up with games, races, dancing and general chit-chat of old and young, as well as gathering useful information on farm matters and topics of the day.

Bro. L. H. Fassett also submitted a detailed report of the Sacramento county exhibit at the State Fair last year, showing the distribution of moneys awarded, with names and amounts. The report states that in order to induce future exhibitors to take an interest, we would distribute the money among those who did not receive anything from the society; therefore, after paying out for lumber, carpenter's work, materials for trimmings and decorating to the amount of \$139, there remained a balance of \$161, which was distributed to the various parties named in the report—leaving a small balance, \$3 50, in the hands of the secretary. G. T. R.

Sacramento, Cal.

## Elk Grove Grange.

Elk Grove Grange, Sacramento county, has adopted a series of resolutions on irrigation, from which we take the following:

*Resolved*, That the appropriation of water by individuals or corporations under cover of legislative enactments is in violation of law and justice—is confiscation—and as a public policy would entail upon our State the most oppressive, grinding and odious monopoly that ever cursed a free people.

*Resolved*, That the attempt to transfer a purely judicial question (riparian) from the courts to the rostrum and the ballot is lawless, revolutionary and communistic. Striking as it does at the stability of government and property, this last device of plunder and monopoly must meet the execrations of a people loyal to justice, order and law.

*Resolved*, That in the State's right of eminent domain we have an easy and just solution of the irrigation problem, without injustice or resort to lawless methods; let the irrigation district proceed to the condemnation of any and all necessary private rights for this admittedly greater use.

## The Special Session.

At a regular meeting of Sonoma County Pomona Grange held at Santa Rosa, July 21st, the following resolutions were adopted:

*Resolved*, That the anti-riparian organization and movement is the most dangerous menace to the prosperity of the State of California that has ever confronted the people.

*Resolved*, That we await with much anxiety and apprehension the action of the special session of the Legislature, now convened, on the subject of irrigation.

*Resolved*, That we urge the Legislature to adjourn at once and without any action on any of the subjects proposed in the proclamation of the Governor in convening this special session, or upon any other subjects.

*Resolved*, That these resolutions be forwarded at once to our representatives in the Senate and Assembly, and properly attested by the Worthy Master and Secretary.

DANVILLE GRANGE, at a meeting held July 17th, discussed the irrigation question and fully indorsed the resolutions of Eden Grange, which we published in the Press of June 26th.

## Dr. S. R. Chandler.

Dr. S. R. Chandler, a well-known and highly-respected citizen of Sutter county, and member of the Grange, died suddenly of heart disease on the evening of the 17th, at his home near Yuba City. As he had been seen upon the streets two hours before his death, the news caused a shock to the community. His funeral, which took place on Tuesday, July 20th, at the M. E. church in Yuba City, was perhaps the largest that ever occurred in Sutter county, and much feeling was manifested among those gathered to testify their esteem and regret. Many of the Marysville Pioneers attended and took part in the ceremonies. The pall-bearers were A. J. Cumberson, G. P. Hunt, H. S. Graves, James Littlejohn, B. F. Walton and Wm. P. Smith, the former three being members of the Pioneers' organization, and the others neighbors of the deceased. The services were conducted by Rev. T. H. B. Anderson, of Colusa, whose sermon was impressive and memorable.

Dr. Chandler was a native of Ohio, but came to California in 1849, and had resided in the county continuously since 1853. He was 72 years old. Though afflicted by bodily infirmity, he was full of enterprise and vigor, and was actively engaged in the development of his agricultural interests. He was one of our earliest raisin-producers. His orchard enterprise was also notable, and his participation in the discussions of the State Horticultural Society, of which he was a member, was always creditable to his powers of observation and deduction. His loss will be widely regretted.

## Irrigation Resolutions.

EDITORS PRESS:—At the regular meeting of Stockton Grange, No. 70, P. of H., held on the 24th inst., the following resolutions, passed by Plymouth Grange on July 10th, were discussed and unanimously indorsed:

*Resolved*, That we are in favor of the State taking control of all the innavigable waters of the State, and passing laws for the equitable distribution of the same for agricultural purposes.

*Resolved*, That we oppose the monopoly of water in any form, and that an equitable distribution of the waters of the State is indispensable to the progress and development of the resources of the same.

H. T. Root,

Secretary Stockton Grange.

Stockton, July 26th.

WATSONVILLE GRANGE.—The Pomona Feast given by Watsonville Grange, July 17th, was attended by such a number of members and invited friends that the capacity of the hall was fully tested. Quite a display of fruit was made by members, and the exhibit was well arranged. Master J. D. Bagnall opened the exercises and welcomed the visitors in a fitting speech. The program comprised vocal solos by Mesdames Spence and Roadhouse, recitations, and the production of the amusing play, "Champion of Her Sex." After these exercises a lunch was served.

HORTICULTURAL FAIR.—We acknowledge with thanks an invitation to the Second Annual Exhibit of the fruit and vine products of Santa Clara county which will be held in the new Horticultural hall, in San Jose, from August 9th to 14th inclusive. This will be one of the most notable horticultural displays ever held in the State. The visit of the Grand Army, on the second day of the Fair, will no doubt, cause everything to be in readiness early, and will tend to bring out the very best the county can display. The *exalt* attending the first exhibit in a fine new pavilion will also tend to make the exhibition very fine. We shall not be surprised to see the best horticultural fair ever had in the State. Many things seem to promise it. All interested in our fruit industry would do well to visit San Jose during the Fair week.

THE GRAPE CROP.—There have been estimates floated upon the public press placing the probable yield of wine in this State this year at 25,000,000 gallons. Such figures are in the interest of the wine-buyers, and are like the grand figures which buyers of other crops are wont to put out just before the crops are gathered. The Viticultural Commission estimates the yield at 16,000,000 gallons, which will give about 10,000,000 for export. Of course, to double these figures is to depress prices, and publications should be careful about putting out such estimates.

ARCADIAN HIGHTS.—A recent visit to the home of our excellent correspondent, Mallie Stafford, afforded us much pleasure. Mr. Stafford has some 30 well-cultivated vines of desirable varieties of grapes. They are beautifully located on sunny slopes overlooking Atna Springs and the upper portions of Pope valley, Napa county. His cosy home is in a nearly frostless belt, where the highest heat of the warm valley by day and the lowest temperature by night are avoided. The elevated outlook affords a charming panoramic view. It would seem just the place for the emanation of clear and cheerful thoughts.

CAYENNE PEPPER blown into the cracks where ants congregate will drive them away. The same remedy is also good for mice.

## Stockton Notes.

[Written for the RURAL PRESS by Mrs. W. D. A.]

From the 8th to the 17th the longest remembered term of heat prevailed, raising the mercury in Stockton to 96° in coolest places, 108° at Lodi; at Linden, 106. A man driving a grain wagon from Farmington to Stockton was found lying on the sacks insensible from sunstroke, but with proper applications soon recovered. Four deaths have since resulted from the intense heat near here. Cool days and heavy dews, not good for the grape crop or quick grain cutting, had made farmers wish for warmer weather, and they had it, with fleecy heat clouds swimming in the hot air above the great oaks that relieve the glare of the dazzling yellow fields and unusually hot nights.

Stockton's ice companies and lemon venders profited by it, but farmers found the cold water of this valley pumped from bored wells cool enough and refreshing enough with the good fare which every farmer has.

Harvest is in full force, though a few are done and don't know whether to sell at \$1 25 or store. A fine young man lost his life driving a team that ran away with a harvester, and David Young, maker of the "Young Combined Harvester," stepping down from one of his machines, caught in the wheel just as the team was starting, but the driver saw him and instantly stopped. He was badly bruised, not seriously. Few accidents happen considering the immense work done, and the necessity of using all kinds of horses. Mules are much better.

The wheat crop has fallen short one-third—considerably from the breaking off of heads and shelling by the wind of June 12th; then heads are short—rarely more than two meshes to the head, but the quality is good. Clover pulled down the grain, and much is hard to cut clean. The highest yield I have heard of is 30 bushels of wheat and 40 of barley to the acre; 18 is near the average for wheat. Twenty-five acres yielded 170 sacks. A man near Farmington bought 1000 sacks. After sacking his crop he took back 600. Another, counting on 15 bushels, had 7 to the acre. Some fields turned out more than expected, but usually the result is short, and many farmers will have a hard time to get through the year.

Curled leaf shortened the peach crop. Boxes of two layers sell for \$1 25. Apriots were plentiful, but the Early and the Moorpark were blotted. Peach-apriots do better than any other variety here. Moorparks are delicious dried.

No field fires have occurred—no fires but the burning of 50 tons of hay of Mr. Barge (supposed by matches ignited from the sun), and wheat is being hauled and shipped to Stockton and stored for the hoped for rise. Small profits rule the hour. Everything is plentiful and low. Our children must learn to work. Our children must learn to save. Flush days have vanished.

The melon crop of Lodi distributes \$50,000 in that town, the raisers buying most articles there. Twelve carloads were shipped on the 19th, 10 on the 20th, and so on, till the famous Lodi watermelons are shipped away. The crop is large and good as usual, though the fierce heat injured some.

The old courthouse was sold for \$1000, to be torn down and give place to the fine one, which is to be of granite. A tower is to be built on the Eureka Protection engine-house to receive the bell and \$1000 clock from the old building.

Great anxiety is felt at the filling up of Stockton channel with debris from Mormon slough, now the legal channel for most of the water of Calaveras river. It is feared that navigation will become difficult in low water.

Horse-racing will not be the chief feature of the San Joaquin valley agricultural fair in September. A large temporary pavilion is to be built for exhibits of everything excellent. Liberal premiums offered for rivalry between nine counties of the district—San Joaquin, Calaveras, Tuolumne, Stanislaus, Mariposa, Merced, Fresno, Tulare and Kern—for county exhibits will stimulate effort. For several years people have been indifferent to Stockton fairs. The shows seemed a tiresome repetition, not paying the trouble of attendance. They were given to racing and gambling; but new interest has awakened and the fair promises to be one that will reward all visitors to our friendly city.

Stockton, July 24, 1886.

THE FRATERNAL PUBLISHING Co. have brought out an extra *Fraternal Record*, containing 44 pages. It is what it purports to be—a "Grand Army Issue," containing a list of all the Posts of the Department of the Pacific Coast, battle scenes of Gettysburg, portraits of leading generals, patriotic poems, stories and fine illustrations, program of the 20th National Encampment, location of the headquarters of different departments, commanders, etc., and valuable information. It is sold at 15 cents per copy.

CO-OPERATION AMONG HONEY PRODUCERS.—A dispatch from San Buenaventura states that the beemen met there on Saturday last and called a mass meeting throughout the county for August 6th. It is proposed to form an association and build a warehouse and ship honey directly East, through the association. Reports from all parts of the county show a honey yield of about one-third.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

LAMBS KILLED BY FOX-TAIL.—Livermore Herald, July 22: Our sheep-raisers have been considerably puzzled this year for a remedy for the work of the common fox-tail grass upon their lambs. The seed-stems from the fox-tail catch in the wool, and gradually work in, till the pointed end enters the flesh. The feathery tail constantly pushes the point forward, and every movement of the animal assists in the torture. As a result, the lambs in districts where this grass abounds are all poor, and many have died. We are informed by Mr. John Callahan that on opening a lamb killed on his range, recently, a section of a head of fox-tail was found imbedded in the fat of one of the kidneys. It had entered the skin and passed between the ribs. The old sheep are not affected, they having been sheared this spring. Some of the owners are combing the lambs, and others are shearing them, as a remedy. The latter is the most effectual, as in that way the fox-tail is cut in two, and the head, without the tail to urge it on, soon drops out.

NIGHT-BLOOMING CERESUS.—Oakland Enquirer, July 23: Mrs. E. M. Sanborn, of 475 Twenty-sixth street, is the possessor of a fine specimen of the grandiflora, or night-blooming cereus, which has attained a growth of 12 years, and came to maturity and bloomed for the first time last evening. The plant has grown out of doors, and showed rare perfection and size of blossom. The flower opened its petals at about 7 o'clock, and when fully expanded measured a foot across, and exhaled a delightful perfume. This class of cactus are of slow growth, and only bloom once a year, the blossom opening about 7 o'clock in the evening and closing before morning.

## Butte.

CANNERY.—Chico Chronicle, July 24: About 100 hands are now employed at the Rancho Chico cannery, putting up peaches, plums and other fruits. They intend to increase the force of hands, so as to be able to put up 4000 cans per day.

DEATH FROM GLANDERS.—On Thursday, a dark roan horse, affected with the glanders, crossed the bridge at Bidwell's mill, being so weak he could hardly walk. After going up the road a short distance he turned to come back to town, when he staggered and fell. Several men raised him up, but he was too far gone and could not stand up, and soon died. Mr. King, of Rancho Chico, had him hauled off and buried, in order that the disease might not spread. It is strictly against the law to allow such animals to run at large, and the owner should be held responsible.

IRRIGATION.—Butte Record, July 24: We learned last evening that a party had engaged the services of Surveyor McGann, to be in readiness as soon as the bills on the irrigation question, to go before the session of the Legislature, shall become laws, to appropriate the waters of Chico creek for irrigation, and to survey and plot the necessary canals and ditches. In view of the character of the work to be performed, Mr. McGann calculated that it would take at least 30 days in field and office work, and required the sum of \$300 to be placed on deposit in one of our banks, subject to his order upon completion of the work, together with \$200 to pay Chinamen and laborers employed in making the surveys. The water will be carried into an important neighborhood and distributed at a reasonable figure to those who desire to engage in the fruit and vegetable business. The scheme is a splendid one, and will add thousands of acres to that already devoted to gardens, vineyards and orchards in this vicinity. The money required will, we understand, be deposited some time during the present week, and the surveyors will camp near the creek in order to be first on the ground.

## Contra Costa.

CHERRIES ALLEGRETTIZED.—Gazette, July 24: Dr. J. Strenzel left in our office this week a number of cherries, which look as fresh as if they had just been picked from the tree. One-half of them are of the Black Tartarian variety, and were picked May 22d, over two months ago. The remainder are Royal Anne, which were picked on the second day of June. These cherries were preserved by the new Allegretti process, and their natural color and flavor remain intact, just as taken from the tree. The time required for treatment is from two to six days, according to the quantity, and the cost is comparatively small.

## Los Angeles.

WATER WITH THE LAND.—Pomona Times-Courier, July 24: The Pomona Land and Water Company is making preparations to transfer the water to private individuals holding water rights under them in accordance with the terms of many of the deeds from the company. A water company composed of S. T. Alexander, Wm. O. Smith, H. A. Palmer, F. L. Palmer and W. D. Gillette, with a nominal capital of \$242,000, has been incorporated for the purpose of making the transfer and vesting full title and control of the water in the individuals owning water rights. A committee, composed of Jas. Loney, J. E. McComas, H. Eno, C. E. White, J. A. Drille and others, are acting in behalf of citizens who hold water rights and will learn and explain the plan of transfer for water

owners. We are informed by several of the committeemen that no definite action has been taken by them yet.

**MOVING THE OSTRICHES.**—*Anaheim Gazette*, July 24: It is understood that the visit of Mr. Moses Hopkins to Anaheim was to investigate the advisability of removing the ostriches from the farm at present in use to a tract of the company's land in North Anaheim. The main reason for the contemplated change is that it is surmised that the soil of the present farm, being strongly impregnated with alkali, has something to do with the non-fertility of the eggs and the mortality among the chicks. It is very probable that the change will be made.

**VITICULTURAL.**—Pursuant to the call published in the *Gazette* last week, a number of grape-growers met at Kroeger's hall on Monday evening to organize a branch of the State Viticultural Society. Mr. J. P. Zeyn was elected temporary chairman, and Richard Melrose temporary secretary. After a full discussion of the benefits which would accrue from the organization of a live and aggressive local society, in which all present expressed themselves in favor of such an organization, the following committee was appointed to procure signatures to the society's roll of membership: F. Hartung, F. R. Krebs and F. A. Korn. Following a discussion of grape-vine diseases, A. Langenberger and F. Hartung were appointed to correspond with Prof. Hilgard regarding the disease which has of late shown itself in many vineyards. The secretary was instructed to correspond with L. J. Rose concerning the assessments recently made upon distillers by the Revenue Department, after which the meeting adjourned until Tuesday, July 27th.

**CANNING.**—The superintendent of the Los Angeles cannery reports that they have finished on apricots, having only succeeded in getting 100 tons. They expected to can 150 tons; but the ravages of a small bug resembling the fire-fly reduced the crop. Forty dollars a ton was the price paid at the cannery. The blackberry crop is large; but raspberries are only about half a crop. The Bartlett pear crop is a failure, and none are to be had in this county. Peaches will be about half a full crop, and the apple crop will be insufficient to supply the home demand.

#### Sacramento.

**HORSE SALE.**—*Bee*, July 26: The attendance at Shears' stables, opposite the entrance to Agricultural Park, at the sale of the Rancho del Rio thoroughbreds on Saturday, was large, but the attendance of buyers was small. The youngsters offered were by the stallions Norfolk, Joe Hooker and Three Cheers, and included full brothers and sisters to such noted performers as Alta, Duchess, Duke and Prince of Norfolk, Ed. Corrigan, Connor, Ballot Box, Fred, Collier, etc. Several of the colts were passed. Those sold are as follows: By Norfolk—Oro, bay colt, 1884, dam Golden Gate, by imp. Leamington; W. M. Murray, \$350. Bay colt, 1885, dam Marion, by Malcolm; Kelly & Lynch, \$1650. By Joe Hooker—Dynamite, chestnut colt, 1884, dam Chestnut Belle, by Norfolk; Albert Cooper, \$200. Chestnut colt, 1885, dam Puss, by Norfolk; W. M. Murray, \$300. Chestnut colt, 1885, dam Countess Zeika, by Norfolk; Kelly & Lynch, \$725. Bay colt, 1885, dam Ada C., by Revenue; Monroe Johnson, \$300. Chestnut filly, 1885, dam Laura Winston, by Norfolk; W. B. Todhunter, \$700. Bay filly, 1885, dam Abbie W., by Norfolk; W. B. Todhunter, \$300. Chestnut filly, 1883, dam Laura Winston, by Norfolk; John Mackey, \$375. Flora, bay mare, 1882, dam Illusion, by Alarm, Colonel James McNasser, \$575. By Three Cheers—Chestnut colt, 1885, dam Atlanta, by Norfolk; Case Winchell, \$180. Chestnut filly, 1885, dam Alice N., by Norfolk; John Mackey, \$250. By Jumbo or Joe Hooker—Chestnut colt, 1885, dam Irene Harding, by Jack Malone; W. M. Murry, \$110. Brood mares—Ada C., bay, 1863, by Revenue, dam Sally Morgan, by imp. Emancipation; Col. James McNasser, \$90. Big Gun, by Old George; Wm. McCormick, \$50. The total amount of the sale was \$5955, an average of about \$400 each.

**FRUIT SHIPMENTS.**—*Telegram*, July 22: The California Fruit Union shipped East its first full train-load of fruit, consisting of 16 cars, this forenoon. The fruit is mostly destined for Chicago as a distributive point. The union will also send two cars to-day by express, and other carloads will go this week. W. R. Strong & Co., E. T. Earl, Lyon & Curtis, and C. W. Reed, members of the Fruit Growers' Association, also send a 15-car train of fruit East from here to-day. This is the second full fruit train from the members of the association shipped to the East this week, and they will send another day after to-morrow. Sacramento has assumed the activities in the fruit trade natural to her commanding central position as a local point for gathering and shipping to the East, California's wealth of fruit. These shipments are made upon a very limited fruit crop. With a full crop next season, the present facilities in shipping and the increasing demand at the East for our fruit will insure two or more Eastern fruit trains daily from Sacramento.

#### San Joaquin.

**THE MELON PESTS.**—*Lodi Sentinel*, July 24: Mr. Rhodes, of the firm of Rhodes & Reedy, of Stockton, is our authority for saying that paris green is a sure remedy for the pests that have attacked the watermelon vines in this part of the country. He says a little of this poison sprinkled on the young vines will exterminate this evil. The sulphur remedy, we are told,

has worked well, and since the cooler weather has set in the vines are looking healthy and the melons are growing rapidly. On the whole, this promises to be an unusually profitable year for our melon-raisers. On Monday, nine cars were loaded with melons, and on Tuesday seven. The shipment for the week will not fall short of 45 cars, making 60 cars for the season up to date.

**COTTON.**—Last spring the *Sentinel* office received from the Oakland Cotton Mills a quantity of cotton seed for free distribution. Whenever the seed was given out the parties were requested to report the results to this office. Accordingly W. O. Green showed us a sample that he raised in his yard. The plants are two feet in height, just coming out in bloom, and are looking thrifty and well. The week or 10 days of hot weather just passed, of course, tickled the cotton plants. Mr. Green has watered them occasionally, and says he can see no reason why cotton cannot be raised here in the Live Oaks as successfully as it is in the cotton States. So far as we have learned, all the seed that we gave out has been planted and shows promise of maturing a good crop.

**PUMPING FOR IRRIGATION.**—E. Lawrence and John Hutchins of Lodi went to San Francisco last week and entered into a contract with the firm of H. P. Gregory & Co. to place in position, on the banks of the Mokelumne river, a 75-horse power steam engine and a 15-inch centrifugal pump. The engine weighs 7500 pounds and the boiler 15,000 pounds. The pump will throw from 10,000 to 15,000 gallons per minute, according to the height of water in the river. They calculate to be able to furnish water to thoroughly irrigate two square miles of land. They will adopt a schedule of water rates and sell water to the public at about the cost to pump it, and they are confident they can furnish water as cheap as many of the irrigation ditches in the southern country. Their investment in this enterprise will reach about \$6000.

#### Solano.

**FRUIT SHIPMENTS.**—The fruit shipments from Vacaville during the week ending July 23d comprised 457,190 pounds.

#### Sutter.

**NEW THRESHER.**—*Farmer*, July 23: Last Tuesday afternoon we were persuaded by Dave Harney, of the Empire Foundry, and an *Appeal* reporter, to accompany them on a "short" trip to the country. We finally pulled into the field of the Blevin Bros., about five miles northwest of town, and had the pleasure of viewing a very unique and novel thresher in operation. It is entirely new in the way of a thresher, and from the view we obtained it would be difficult to give a satisfactory or accurate description. The machine was invented and constructed at the Empire Foundry, in Marysville, and Mr. George Gates, manager of that institution, will explain its merits to those interested if they will call on him at the foundry. The thresher is drawn by 14 animals alongside a header, which cuts the grain and conveys it to the machine as it would to the header wagon. Mr. Blevin informed us that the machine did good work. It did not crack the grain, and threshed as clean as the stationary separator. The services of four men are all that is required to run both header and thresher.

### The Irrigation Question.

**EDITORS PRESS:**—I have been farming in the State of California since the fall of 1851. Since 1853 I have irrigated my land more or less each year, according to the necessities of the season. I have read nearly everything that has been published on the subject by the leading papers of the State—reports, court decisions, common and statute law. I am a riparian proprietor and have recorded my claim under the code as an appropriator. I have, therefore, a safe thing, whatever becomes of riparian rights. I do not write for pleasure, nor to tickle my vanity in parading my private affairs before the public; but at a time like this, when an avalanche of misrepresentation to hide public plunder comes from all directions, it becomes every free man to speak out and stem the foul tide or bag his head and be a tool of oligarchy.

Your correspondent, Mr. Kinney, has spoken. I thank and honor him for those truthful words. The only fault I can find with him is that he throws down his pen too soon, and some of his statements are not broad enough. For example, he says: "There is no rule of law in this State preventing the use of public streams for irrigation." True; neither the common law of England nor the statute law prevents it, and further, it should be added, neither does the decision of the Supreme Court in the *Miller vs. Lux* case prevent it, nor does any other Supreme Court decision. The whole excitement has been gotten up by hiring typesetters and stump orators to distort the truth for a purpose. Governor Stoneman and the memorialists talk like Rip Van Winkles awakened from a sound sleep during an earthquake and impressed by a Second Adventist that the world was coming to an end. Hear the Governor:

"The Supreme Court of the State in a recent decision announced that the riparian owners along the innavigable streams in California owned the flowing waters in such streams, and are entitled to the exclusive right to use the same."

### PACIFIC COAST WEATHER FOR THE WEEK.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 m. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

I believe the Governor is mistaken as to his source of information. It must have been Angell or some other old author, and when the doctrine is fairly stated and understood it will scare nobody.

I will state the doctrine fairly, for it is the corner-stone of riparian rights, as follows: "The owners of lands on a natural stream are the owners of the waters thereof in common, for a beneficial use." Why did the common law make owners to land and water? Because without private ownership of these elements they would not be utilized in the creation of wealth, and men would sink to the condition of the Indian tribes. The word "owner" I understand to mean the people's tenant—one who has possession as against any individual, but not as against the people's agent, the Government. It is the whole people's land and water all the time—the sovereignty is in the State or organized people. Reason tells me that riparian rights can be abolished under the natural law of eminent domain, unwritten in the statutes. In that I differ with the Supreme Court.

"Ownership of water in common." That implies equality. That requires an equal use of water by all owners on the stream, whether large or small owners. In that respect the common law differs from our statute law of appropriation, and also differs from any bill proposed at the last or present session of the Legislature. Had our appropriation laws required an equal division of water among all prepared to utilize it by irrigation, somebody beside Haggins and Carr could have taken up desert land in Kern county outside the artesian belt. Possession of Kern river has enabled them to acquire possession of more than a hundred thousand acres of land, and this in the face of the Constitution, which pronounces such ownership "against the public interest," and makes it the duty of the Legislature to abate the evil! Will the legislators who have had this matter under consideration for two years obey the Constitution, or will they, by the passage of the bills under discussion, deliver the San Joaquin valley, where the ownership of water includes the ownership of land, into the possession of a syndicate of Haggins and Carrs?

I now return to my quotation from the common law. You observe the riparian owner owns the water for "a beneficial use"—that is, he does not own a drop more than he puts to such use. All surplus water can be taken out under our present law of appropriation. But, says the Governor, injunctions may be issued. True, but to obtain an injunction a preparation and intent to use the water must be shown. The same must be proved in all actions for damages; hence riparian proprietors cannot compel the water to run to waste, and have no license of law to waste it or cause it to be wasted. Riparian owners have just the same priority over the first appropriator that he has over the second. Why should he not have? Is not his land cut up, overflowed and damaged by the stream? Can he not irrigate his land, produce wealth and use it for the public good as well as appropriators do?

I have shown the superiority of riparian law, yet I am in favor of its repeal after enacting its best features. Its great defects are the divided counsel, loose responsibility, and uncertainty of practical application in dividing water. The confusion of language employed in rendering decisions makes the subject difficult. There can be no successful irrigation except in unity of control. The controlling person should be a sworn officer of the Government. The law should compel him to serve every man alike, but in case corporations are to continue control, rigid laws should be passed to compel the division of water among all land-owners; and, in case of scarcity, that every owner have an equal share except riparian proprietors, who, to compensate for the damages of the stream, should have a double share.

Irrigators should pay a tax to the State, to pay for this extra session and all State expenses on their account, and to enable the State to purchase dams and ditches existing. This tax should be graduated so as to enforce the Constitution in "discouraging the holding of large tracts of land." Every man should consider that he has an important duty to perform in this matter. If the people cannot control the water in the interests of the people within a year, the tide of monopoly cannot be stayed till the clash of arms between the millionaires and tramps comes, and either monarchy or socialism alone survives.

D. A. LEARNED.

Stockton, Cal.

### List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING JULY 20, 1886.

345,944.—PORTABLE HOUSE—W. J. Anderfuren, S. F.  
345,686.—EXTENSION FIRE LADDER—D. D. Hayes, S. F.  
345,701.—FRUIT-DRYER—C. W. Kitts, Grass Valley, Cal.  
345,852.—CANE-STOOL—E. O. Leermo, Gold Hill, Nevada.  
345,797.—REVERSIBLE PLOW—Neil McLean, Watsonville, Cal.  
345,804.—SEWER-CLEANING APPARATUS—Geo. W. Pringle, Benicia, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

### Heald's Business College.

This well known commercial-education institution is continuing its work with unabated vigor. In the last issue of *Heald's College Journal* we find the following:

It is due to a California public, who have so liberally patronized this college for the past 22 years, that a statement of what we are doing, and our purposes for the future, should be made known, in order that those interested in education may know whether we are deserving of the high encomiums that the press of the Pacific Coast has so generally lavished upon us. We publish on another page a few extracts of some of the leading journals.

Our purpose in the future shall be, as in the past, to make our school replete with all the modern and useful appliances for thorough business instruction in trade and commerce, as well as in the more intricate arts and sciences. In order to better improve the worth, and advance the great interests of business colleges in the United States, the leading institutions devoted to commercial instruction meet together in convention each year to discuss the best methods of teaching. The senior member of our firm, Professor E. P. Heald, will attend the Business Educators' Association of America, which meets at Jacksonville, Illinois, on the ninth day of this month.

It is expected that this year's convention will be the largest and most enthusiastic ever held, and will be productive of the greatest good to the chain of business colleges. Our institution is the only college west of the Rocky mountains having any connection with the great chain of business colleges or holding a membership in the Business Educators' Association of America, and consequently Prof. Heald will be the only representative of the Pacific Coast at this convention.

It has been urged against us, by some of the smaller schools, that we have too many scholars to do justice to each student. We are willing to admit, and the facts of the case compel us to say, that our number of students exceeds two or three times that of any other institution of the kind on the Pacific Coast. If this be true, the question arises, Why is it so? There must be some good reason for students to come here for instruction. We must refer the reader to the public to make answer.

As to the charge of any neglect of students, we must say that while our number of pupils is so much larger than other schools, our corps of teachers is also proportionately larger. We number in teachers and assistants 26, who busy themselves in giving individual instruction in all our various departments, our object being to urge all students forward to the earliest possible completion of their course, having ever in view thoroughness of instruction.

We cannot refrain from thanking the business community and farmers of this Coast for the very liberal manner in which they have given us their support, and we assure them that we shall spare no pains in our endeavors to make Heald's Business College worthy of their patronage.

**A CURIOUS CLOCK.**—The town of New Verbaz, in Hungary, has a curiosity in the way of a steeple clock, constructed about 100 years ago. Part of the clock is in the steeple of the Lutheran church and the remainder is in the steeple of another church across the street. Both steeples have dials, but one strikes the hours and the other the quarters, and the hour is never struck until the quarters have finished striking. Morgosy, who writes from Nusatz to describe the clock, does not mention by what means the two parts of the clock are kept in communication, nor whether it keeps good time

### Women of the War.

We hear of men and heroes  
Whose flashing swords are keen,  
Who on the field of battle  
"Drink from the same canteen;  
Who at the post of danger  
With front unbroken stand,  
And in her hour of peril  
Will guard our native land.  
But who will tell the story  
Of Love's sublimest law,  
Of choicest treasures given  
By "Women of the War?"

On the altar of her country  
The mother lays her son;  
The maiden bids her lover  
"Fight till the field is won."  
And how the news comes flashing  
Of victory or defeat,  
How dead and dying mingle  
We will not here repeat.

The dim light of the hospital  
Shone on the beds of pain,  
And the long night seemed endless,  
When in walked "Betsy Jane."  
'My God! is this a woman?'  
Said one poor soldier boy;  
And tears rained down the manly cheeks  
But they were tears of joy.

And chaos turned to order  
As "Betsy Jane" stepped in,  
And cleanliness, which we are told,  
To goodness is kin.  
Hard tack and salted bacon  
To chicken broth gave way;  
And Sanitary stores came in,  
And beef tea won the day.

'Oh, see my soft, white pillow,  
My bed, so clean—not straw!'—  
And "some one's darling" smiled upon  
This "Woman of the War."

We know not if our "Betsy Jane"  
Was fair to other eyes,  
But to her "boys in blue" she seemed  
An angel from the skies.  
Her apron and her gown of serge  
Each soldier loved to see,  
And blessed her footsteps as she brought  
Such "heavenly" toast and tea.  
All the sweet charities of home  
Soon clustered in her ward;  
And each day's work now brought its own  
"Exceeding great reward."

It was not in the earthquake  
Or in the fiery flame,  
But in the soothing, gentle voice  
God's Spirit truly came.  
When He shall come whose right it is  
Within our hearts to reign,  
And read from out the Book of Life  
The name of "Betsy Jane,"  
And in the last great muster-roll  
Before the Judge of All,  
While faithful servants of the Lord  
Will answer to His call,  
Perhaps He'll say to one of them,  
'For inasmuch as ye  
Have done it to the least of these,  
Ye've done it unto me.'  
And then with palms of victory,  
By Love's sublimest law,  
The pearly gates will open wide  
To "Women of the War."

### The Drummer of the Rappahannock.

Written for the RURAL PRESS by CLARA S. BROWN.]

It was my good fortune to be in Portland, Maine, at the time of the 19th National Encampment of the Grand Army of the Republic, which took place in that beautiful city by the sea last June.

Never have I seen so grand a sight as the brave army of 25,000 men which, on the opening day of the encampment, marched through the streets in all the pomp of handsome uniforms, glittering accoutrements, and waving banners, some fresh and bright, of elegant texture and gay trimmings, others tattered and drooping, even as they were brought sorrowfully forth from some disastrous battle, or triumphantly borne through the fierce strife to a hard-won victory. A glance at those time-worn shreds thrilled the heart with a sense of the patriotism and bravery manifested by our young soldier boys and their comrades of maturer years, and most devoutly we gave thanks that the dread war-cloud no longer shed its gloom over our land.

Did you ever think how much nerve it must require to stand boldly in the face of an enemy's fire, or charge unflinchingly upon a powerful battery that is raking down, to the right and left, before, behind your companions in the fight? To dream about it, and, through a love of excitement, to desire to engage in it, is one thing; to do it, another.

And so we cannot feel too proud of our bat-

tle-scarred war veterans. They have rendered to this broad and incomparable country a service beyond the power of man to estimate.

It is pleasant to note that there is an increasing interest in the annual reunions of the Grand Army, when tents are pitched and camp-fires built as of old, and around the cheerful blaze long-separated comrades meet again and rehearse the scenes of the past, undisturbed by thoughts of battle on the morrow. The encampment at Portland was the largest ever held since the war, and the present reunion in San Francisco bids fair to be a memorable one.

Returning to the parade, you will realize its interest when I tell you that it occupied three hours in passing a given point, and was attended by 40 bands of music and as many drum and fife corps of the Revolutionary period. The air was filled with martial strains, and file after file of erect, blue-coated, precisely-stepping veterans passed under the arches and banners of red, white and blue that adorned the Portland streets in profusion.

All won universal admiration, but some members of the pageant attracted unusual attention. Among the latter was a trim-built, rather small-sized man who scarcely seemed old enough to have taken a part in the great Rebellion. He was among the drummers, and with a right good will he stirred his hearers into patriotic fervor. This was

Major Robert Henry Hendershot, the Drummer Boy of the Rappahannock.

Widely known under the above title, and the subject of this sketch. He has a history that any man might be proud of, which has elicited the warmest approval from the most famous personages in the country, and is recorded in the annals of the Rebellion as a matter of history.

He was only 12 years of age when he enlisted as a drummer in the Ninth Michigan Infantry, August 12, 1861. From the outset he showed great bravery and faithfulness to all his duties, and was taken prisoner at Murfreesboro, Tenn., July 13, 1862, paroled and discharged.

He at once re-enlisted in the Eighth Michigan Infantry, and soon afterward distinguished himself for life by his patriotic conduct at the battle of Fredericksburg, Va., being at the time scarcely 13 years old.

General Burnside's army was in the mud, and it became necessary to lay pontoon bridges over the Rappahannock river; but, as the enemy occupied the opposite shore, it was extremely hazardous to attempt the feat, under a merciless fire. The General called for volunteers, and who do you think was the first to step out from the ranks, with no sign of fear? This young drummer-boy, little more than a child, who, with might and main urged on his comrades to their duty by his beating of the drum.

Soon a sufficient force was organized and a boat placed in readiness, but the captain, seeing the extreme youth of the drummer, had not the heart to permit him to face such great danger, and ordered him peremptorily out of the boat and back to camp. Finding entreaties of no avail, Hendershot left his drum on the seat, and obeyed sufficiently to slip over the stern of the boat, shove it off, and hang to it all the way across the river.

Not long after a landing was made on the other shore, a bursting bomb shattered his drum. Nothing daunted, he picked up a musket near by—it belonged to a fallen comrade—and set forth in search of an opportunity to prove his ability, small as he was, to serve in the capacity of a fighter. He entered a house near by, and finding it empty, set fire to it. Out in the back yard he discovered a rebel soldier peeping through a crack in a board fence, watching for a chance to shoot.

The drummer boy unexpectedly proved a match for the "reb," for he leveled the musket at him so squarely that the soldier saw there was no escape and surrendered unconditionally. There was some sensation at the landing when this youthful captor marched his prisoner to the commander at that point, and two soldiers were detailed to accompany the pair to Burnside's headquarters, where the story of the boy's daring was told, and he received the compliments of the general.

After recrossing the river, Hendershot served most efficiently in the charge on Fredericksburg, and received two wounds—one in the face and one in the leg.

When Horace Greeley, who was then editing the New York Tribune, heard about the boy and his shattered drum, he forwarded a splendid silver drum, thus inscribed:

"Presented by the Tribune Association to Robert Henry Hendershot, of the Eighth Michigan Infantry, for his gallantry at the attack on Fredericksburg, on the 11th of December, 1862."

The sticks that he now uses are gold-mounted and bear the following inscription: "Presented to R. H. Hendershot by the Republicans of Kinnmundy, Salem and Altamont, Ill., for his services rendered in the Garfield and Arthur campaign of 1880."

He was sent home to recover from his wounds after the memorable battle, but as soon as possible again entered the field, and was wounded a third time before the close of the war. His residence is now at Chamberlain, Brule county, Dakota, but he is away from home much of the time, answering the call of Grand Army Posts to give exhibitions of his skill upon the drum.

Everywhere his wonderful playing excites unbounded enthusiasm, and he has been the means of adding very materially to the pecuniary prosperity of the Grand Army.

He gave two entertainments at Portland in

June, to the second of which I was fortunate enough to gain admittance. The first was chiefly designed for the Sunday-school children in the city, and more than 2000 of them filled the spacious City Hall, until even standing room was taken. It is estimated that 1800 people were turned away, and their disappointment was so great that the performance was repeated on the following night, no admittance fee being charged either time.

The boys and girls, and "the children of larger growth," as well, were delighted. I cannot describe his playing, but I wish you might all some time hear it. I never realized before how much could be done with a drum.

At first he played "U. S. Grant's March," and then "Phil. Sheridan's Favorite." He represented a locomotive drawing a train from Bar Harbor to Portland—there was the starting, the steady, swift passage, the slowing up, and letting off steam, and crossing of bridges, until you could almost see the advancing engine, as well as hear it.

Then he plunged into a desperate conflict—the dullest among us could not mistake the sounds. We recognized the long, heavy roll of the countless musketry, the crash of shot and shell from the batteries, the swift progress of the battle to its culminating point, and the gradual cessation of hostilities—even the sharpshooters were heard picking off the men from their retreats.

I heard a lady behind me say, "Well, both he and his drum must be very strongly put together, or they would burst." He used the identical silver drum presented him by Greeley.

During the performance he sang some verses devoted to "The Army Bean," familiar to all soldiers, and occasioned shouts of laughter, the veterans joining heartily in the chorus. Brimming over with merriment and full of vim, he captured the good-wishes of his audience.

He remained some months in the New England States, seeking a better state of health, and was requested by many towns to give an exhibition of his powers.

This summer he expects to be in California, and the Pacific Coast people will hear some marvelous drumming.

The fearless and loyal spirit of this "Drummer Boy" is, no doubt, the type of many "Brave Boys in Blue" who will soon be seen in the veterans' ranks in San Francisco.

### Camp U. S. Grant.

The camp at Portland last year was named in honor of that renowned soldier who has answered the roll-call from Heaven—General U. S. Grant. It was beautifully situated on the brow of a hill overlooking Portland harbor with its islands, Casco bay, and the broad ocean—one of the fairest scenes in all America.

This time the tents will be set on the shore of the smiling Pacific, where a widely different, but still a most charming, view will be presented; and let us hope that among the throng will surely be "The Drummer Boy of the Rappahannock."

### The Other Fellow.

In the *Farmers' Advocate* of St. Paul, Minn., we find the following humorous speech, delivered at the Grand Army reception, by Hon. E. D. Meyers, which we think will be thoroughly enjoyed by the comrades having had like experience, as well as many others:

Things are exactly reversed from what they were in the war. In the army of the rebellion there were a great many privates and very few officers. Now there are a great many officers and very few privates. In fact, I am the only private that could be found, and they brought me here because they thought I would be a greater curiosity than the Ice Palace. I am simply applying my theory to the truth of history. I found one of those special providences in the shape of a big stump before I got very close to the fort. I lay down behind it so sudden that several of the boys thought I was shot and lay down alongside of me to see how badly I was hurt. I have heard a good many tell their experiences and feelings while in battle. They nearly all expressed themselves as being free from fear after they once got fairly in the fight. Now, that was not my case. I wanted to get into that fight awful bad. I was in it and had a good

### Strategic Position.

But I was scared. It appeared to me that that stump was about the only thing that separated me from the sweet by and by. I felt what a sinner I was to leave my mother unprotected and go into the war, even if that girl did want me to. In fact, I think all the love I ever had for her turned to hate. We took the fort and I was not killed, as I was afraid I would be at the time; but I wish to say right here that I never loved that girl since, and I wish to say further, in conclusion, that if ever there is another war I hope her husband will be drafted.

While listening to the speakers this evening, I could not help thinking what a queer thing this sentiment of patriotism is. I thought of how it affected people in the beginning of the war. Everybody had it, and they had it bad, and the strange thing about it is, it seemed to affect every one differently. Some did one thing and some another. Some of the young fellows rushed off and got married. You see, they felt as if they must be doing something. I think the young women had it worse

than the men. They could not, it is true, enlist as soldiers, but they could and did sacrifice their hearts' best idols on the altars of their country. I know what I am talking about. One of them sacrificed me. I was a very bold and

### Desperate Young Man.

And when the first gun was fired at Sumter my first impulse was to enlist, but on second thought I recollected my mother was a widow, and I was her only means of support, and I felt it my duty to stay with her. I told my girl about it. I thought she would think more of me if she found I was good to my mother, but she didn't. She said what I wanted to do was so brace up, and have some style about me and enlist. She said the man she married must be a soldier. That, of course, it would be the greatest sorrow of her life to part with me, but she would try to bear up under it. In two weeks from that day I was marching away to the wild, grand music of war—that is, folks said it was wild and grand, and I suppose it was, but it didn't sound grand to me under the circumstances. I want to remark right here, I never knew any one to bear up under a great sorrow like that girl. She even smiled when we parted for the last time. In six months she was married to the other fellow. I don't know how it is that girls always have another fellow, but they do. There may be five girls to one boy in a neighborhood, but if you fall in love with one of those girls, you are sure to find another fellow loafing around. The girls always explain it by saying they regard the other fellow

### As a Brother.

But, confound him, he never is their brother, and if you are in love, as I was, the other fellow is always a subject of suspicion. You are never satisfied. I wasn't when I enlisted. Married men are never troubled that way—that is, hardly ever. So I argue that while it was a terrible thing for husbands to tear themselves away from their wives and children to go into the army, yet in such cases there might be mitigating circumstances. A husband might have his personal liberty circumscribed, or the children might be bad little brats. In such cases their sorrow was not so great as it appeared. The real heart-rending cases were when the boys were torn away from their sweethearts. There was nothing to mitigate their sorrow, but, as I said before, the other fellow was always around to aggravate it. I well recollect the day when I heard my girl was married. It was the morning before we stormed the rebel works at Arkansas Post, a fort on the Arkansas river. I was feeling pretty bad about the prospective fight we all knew was coming off that day. The orderly came and distributed the mail which had just arrived. He handed me a letter. I saw it was from my girl. I tore it open, hoping to get some consolation. I got it.

The first thing I read was that she was married, and that she had only regarded me as a brother. So you see, after all, I was the other fellow. I tell you I was mad. I felt that I was a victim of misplaced confidence. I told the boys I was glad the fight was coming off. In fact, I

### Thirsted for Gore.

I felt that while I could not get revenge out of the fellow that had married my girl, yet I could and would wreak horrible vengeance on the rebels in the fort. I resolved to rush to glory or the grave. I felt that if I won promotion and became a great commander, some folks would be sorry for the way they had treated me. I had never been in a fight, but I wanted to be. The charge was ordered about 2 o'clock that afternoon, and in justice to myself I must say that I rushed at that fort with the greatest animosity. But those rebels were armed and waiting for us, and don't you forget it. I hadn't gone far before I was satisfied I had made a mistake. It became clear to my mind that those rebels could have had nothing to do with my girl marrying the other fellow, and I ought not to want to hurt them on that account. In fact I was sorry that there was any misunderstanding in the matter. There are two classes of theologians. One class believes in special providence, the other in instrumentalities. I believe in both. When the rebels were shooting at me, I always regarded a stump as a special providence, and myself as an instrument foreordained from the beginning of the world to get behind it. The point I make is this: If stumps were not made for the protection of life, what were they made for? I have no doubt there are persons present who will differ with me from a religious point of view, but I will not argue the question.

### Loss From Liquor.

EDITORS PRESS:—Looking over my PRESS of July 10th I notice an article, "Personal Liberty," copied from *People's Cause*. Will you allow me space for correction of an error which appears in the original, and of course copied correctly by you. The estimated loss to the nation through the liquor traffic, instead of reading \$130,000,000, should have read \$1,300,000,000. One cipher had been omitted in the notation, making a very erroneous reading and a very apparent discrepancy between items and footing, though the items of the estimate were not fully given. I am glad to see that you thought my article worth copying.

Paskenta, Cal.

THOUGHTOGRAPH.

**LIFE'S DECAY.**—Charles Kingsley once said: "One of the kind wishes expressed for me is long life. Let anything be asked for me except that. Let us live hard, work hard, go a good pace, and get to our journey's end as soon as possible. Then let the post-horse get his shoulder out of the collar. I have lived long enough to feel, like the old post-horse, very thankful that his end draws near. Long life is the last thing I desire. It may be that as one grows older one acquires more and more the consciousness of the difference between what ought to be done and what can be done, and sits down more quietly when one gets the wrong side of 50, to let others start up and do for us things we cannot do for ourselves. But it is the highest pleasure a man can have who has (to his own exceeding comfort) turned down the hill at last, to believe that younger spirits will rise up after him and catch the lamp of truth, as in the old, lamp-bearing race of Greece, out of his hand before it expires, and carry it on to the goal with swifter and more even steps."

**THE WASTE OF LIFE.**—An English naturalist remarks it is a sad reflection that while the turbot lays 14,000,000 eggs, not more than one, on the average, ever lives to reach maturity. In fish generally it takes yearly at least a hundred thousand eggs for each individual to keep up the average of the species. In frogs and amphibians a few hundred are amply sufficient. Reptiles often lay only a much smaller number. In birds which hatch their own eggs and feed their young, from two to ten eggs per annum are quite sufficient to replenish the earth. Among mammals, three or four at a birth is a rare number, and many of the larger sorts produce one calf or foal at a time only. In the human race at large, a total of five or six children for each married couple during a whole lifetime makes up sufficiently for infant mortality and all other sources of loss, though among savages a far higher rate is usually necessary. In England an average of four and a half children per family suffices to keep the population stationary.

**A TEN-TON CLOCK.**—The works of the immense clock which has been put up in the Board of Trade building in Chicago are pronounced a most perfect reproduction of those of the great Westminster palace clock in London, but with some additions and improvements adapted to its commercial purpose. It is constructed of iron, bronze and steel, and weighs 10 tons without the bell, the latter adding some 4500 pounds more. The pendulum alone weighs 750 pounds. In its arrangements the works are divided into a time train, a hand train and a striking train, these several trains comprising separate machines, resting, side by side, on separate frames. Each of the trains is operated by a separate weight, and the three weights together reach some 3500 pounds. The hammer that strikes the bell weighs 80 pounds, the clockwork is below the dials, which are 10 feet 10 inches in diameter, and the bell is above them, or 250 feet above the ground. The pendulum swings one way in two seconds.

**THE FIRST WATCH.**—The first description of a watch extant is found in the "Cosmographia Pomponii Melæ," under the heading "Nuremberg." After a description of the place comes a sentence in Latin which, freely translated, reads: Peter Hele, quite a young man, is making articles here which excite the admiration of even the most learned scientists; out of a small quantity of iron he makes a clock with numerous wheels which will register and strike 40 hours in whatever position it may be laid, and even when carried in the bosom or in the purse. This Hele was born about 1480, and is claimed as the inventor of the pocket-clock, as it is called in Germany. No specimen known to be his work beyond a doubt has come down to us, but some of the Nuremberg eggs were probably contemporaneous with the works of his later years.

**PIANOS IN WINTER.**—Winter is the heavy season for piano tuners. The heat of a fire soon puts a piano out of tune. This is not due to the expanding and contracting of the strings, as generally supposed, but to the variations produced in the sounding-boards under the influence of the increased dryness of the air, especially in furnace-heated houses. Sounding-boards are made of spruce because of the superior resonance of that timber, but spruce, of all woods, is most affected by changes in moisture.

**THE NOMENCLATURE OF CARRIAGES.**—Fifty years ago the names of the different kinds of carriages, wagons, etc., in use were few and easily remembered; but at the present day we are overwhelmed with a multitude of fancy names used to designate the particular productions of various ingenious houses engaged in this class of industry. As to the wisdom of this system of multifarious nomenclature, there may be differences of opinion.

**AN ANCIENT STONE PLOW.** weighing about 300 pounds, has been unearthed in New Jersey, at the old Smith-Clark quarry. The *Milford Leader* says: "It had the appearance of having been cut into the shape of a plow by an ancient people. It was complete in nearly all its parts, and bore a strong resemblance to that sort of agricultural implement used by the Assyrians and Egyptians centuries ago."

## YOUNG HOLKS' COLUMN.

### Farmer Boys.

[Written for RURAL PRESS by ADA E. TAYLOR.]

Oh, if I had the joys of the farmer boys,  
How happy I would be;  
Their life is as gay as a summer's day  
When the sky from clouds is free.  
They shout and sing till the woodlands ring  
With their music loud and clear,  
While no thoughts of care their young hearts share,  
No dark days ever appear.

They plow and sow as they merrily go  
Whistling a careless tune;  
They romp for hours 'mid fragrant flowers  
That in wild profusion bloom.  
They roam thro' dells where the tinkling bells  
Are heard thro' the summer's day,  
And where the stream, like a fairy's dream,  
Is lulled by the birds' soft lay.

When the evening shades in the quiet glades  
Are deep'ning into night,  
Oh, then for a stray and noisy play  
That's filled with wild delight.  
They romp and tear with never a care  
Of what the future may bring;  
Their hearts are as light as moonbeams bright,  
Or birds that joyously sing.

They toss all day the new-mown hay  
In the gentle, fragrant breeze,  
And they rest at will by the rippling rill,  
'Neath the cool and shady trees.  
They ramble over sweet fields of clover  
In the morning clear and bright,  
When the sparkling dew, with its brilliant hue,  
Is trembling in the light.

No traces there, on their brows so fair,  
Of sorrow or of pain;  
They think not the days, with gay, boyish plays,  
Will never return again.  
Oh, if ever I roam in search of a home,  
A farmer I will be;  
I'll sing with delight from morn till night,  
And feel I'm perfectly free.

I'll scatter and reap the dimpling wheat,  
With its graceful heads of gold;  
I'll breathe the fresh air in the morning fair,  
And brave the heat and cold.  
Three cheers for the boys the farm employs,  
With brave hearts strong and true,  
Who are willing to toil and till the soil,  
Beneath a canopy blue.

There is many a lad who is poorly clad,  
With feet all brown and bare,  
Who yet may stand above all in the land,  
And a proud name nobly wear.  
Toil bravely along with your careless song,  
In meadows fresh and sweet;  
In some future day that's not far away,  
The harvest you will reap.

Mount Pleasant.

### A Story About Another Jack.

[Written for RURAL PRESS by MRS. A. E. DAVIS.]

EDITORS PRESS:—Here is another story about Jack, only this time it is not a cat, but a rooster—of what class or species I do not know. I only know he is of a bluish-gray color, and has five toes on one foot and four on the other; so he is often called "Jack-o'-nine-toes" by us, and he lives in the back yard of No. — M— street, San Francisco, and is a great favorite of all there. He came from Napa county about two years ago, and was brought to my house among a large number of his kind and designed for table use.

I gave him and another one to a lady living near by. She had his mate killed at once, but reserved Jack for future use by tying him fast to one corner of her yard by a string. But, like the "kite," he became impatient of restraint, and tugged and pulled until he broke it, and was then free to return to his mates in my yard, which he did plus about two feet of string. And now that string became the badge by which we knew he belonged to the lady, and three times, by her request, in the following two weeks I ordered him killed, and each time they would miss the one with the string and some other poor unfortunate be beheaded in his place.

At last all were gone and only he remained, and now he would eat nothing. No matter what we gave him, not a bite would he pick for himself—only stand and "cut, cut, cut-i-cut" all day for the companions fate had delivered to the cook for pot-pie. And so it went on until we expected every morning to find he had been translated to the happy shadow-land of chickens, where good little bugs stand up in rows and just beg to be eaten. But a good fairy, in the form of a young turkey, came to his rescue, and he began to eat, and his suicidal mania of starvation passed by. It was then we discovered that no lapdog in all the land loved to be petted and caressed better than he. I taught him then to crow and to sit down when told, and to be carried around in a shawl-strap.

One day as I was cleaning a bed-room, where a door opens on a back porch, in came Master Jack, walking very stately, to view the proceedings. Thinking to surprise him, I picked him up suddenly and placed him on a bureau, saying: "There, Jack, see yourself as others see you."

I thought he would cackle or express some emotion at seeing his reflection in the mirror. But no! he only stood and stretched out his

neck, and "nothing more." So, being in a hurry, I turned to my work again and forgot all about him.

It was quite a time after when I was recalled to thoughts of him by hearing a fluttering, and looking on the bureau beheld him pitching into that shadow rooster in a way that would have made the feathers fly had it been a real bird; and ever after we had to keep close watch on that door, yet in spite of our vigilance he would get in, and then we would find combs, brushes, bottles, in fact every movable thing on the bureau, scattered over the room, silent witnesses of the battle fought there.

If any one thing delights him more than another, it is to have some one make believe fight with him by working the fingers and jumping the hand at him, when he will fly at it with every appearance of being beside himself with passion. But just stop and say "Why, Jack, old boy, what's the matter?" and he will spread his wing and spur around, seeming to enjoy the laugh he has created as well as any of us.

Not long since he met with a mishap which, for a time, we thought had finished his career. The children were playing with some lumber in the yard, when a piece fell on his head and laid him out as one dead; but pretty soon he struggled to his feet, and with his usual good fortune he came through safely enough, and was as prompt as he is every morning,

When first the light reveals the east,  
With clarion throat and tongue,  
He chronicles to all around,  
Another day begun.  
And if they fail at first to heed  
His warning voice so plain,  
He loudly flaps his wings and crows,  
And crows and crows again—

Much to the annoyance of the sleepy-heads in the vicinity of his yard.

Most of the neighbors say, "Jack is as good as an alarm clock;" but sometimes I fear some of the aforementioned sleepy-heads will give this "early bird," as a reward, a bug full of poison.

One more laughable notion of his, out of many, and I have done. About a year and a half ago a young lady student was visiting me, and chose for her place of study a seat at the back parlor window, outside of which a long railing ran, one end approaching the window, the other extending away from it. When she was sitting there Jack used to perch himself on the railing as near as he could get, and with a look of rapt devotion on his countenance sit and gaze at her by the hour. As it was an attention he conferred on no other member of the family, we laughed merrily at her about her new admirer; but as I have seen, on more than one occasion, that same look of rapt devotion in the eyes of "sighing swains," I assert it as my belief that Jack is a bird of fine discrimination and taste.

And now, Mr. Editor, if any one of your readers doubts this true story of Jack, I give you leave to fill out that blank number and give it to such a one, so that he or she may have ocular demonstration of the truth of all I have asserted; even the lady student being again a member of our household, which might be an inducement to some "doubting Thomas" to make the pilgrimage.

NOTE.—Since writing the above, Jack has (as he is a bird of fashion) gone across the bay to sojourn for a time in the rural town of San L—, about 30 miles distant.

San Francisco.

## GOOD HEALTH.

### Pasteur's Method of Vaccination.

If a section of the spinal cord of a rabid dog be inserted into the brain of a rabbit by trephining, the latter animal becomes mad in about 15 days; and when the virus from this rabbit is transmitted to a second, and from the second to a third, and so on, by the same method of inoculation, the rabies soon become more and more pronounced, and the developing or incubation period becomes shorter and shorter, until, at the end of 50 inoculations, a most severe form of madness results in about seven days. The virus from the last rabbit is of great purity and of invariable strength, so that similar sections of spinal cord may, therefore, be relied upon to produce exactly similar effects. It has been further shown that the virulence of the pieces of cord slowly and quite regularly disappears when kept in dry air and remains unaltered when preserved in carbonic acid gas. An understanding of these principles makes it possible to have constantly on hand hydrophobic poison varying in strength from harmless mildness to deadliest virulence. It is upon these graduated poisons that Pasteur depends for his remarkable method of protecting the animal system from hydrophobia. Experimenting first with dogs, a little meat broth containing weak virus was injected under the skin the first day, and was followed daily by injections of increasing virulence—that is, preparations from cord of shorter exposure to air—until in a few days the fresh or strongest virus was used, when it was demonstrated that, without injury to the animals, had become entirely refractory to rabies from bites—even when inflicted before treatment—or inoculations of any degree. The method was first tried on a human subject

in July, 1885, when immunity was conferred within ten days on a boy considered to be in great danger. Since then several hundred bitten persons have been treated, and thus far the only failure to prevent hydrophobia has been in a single case where the inoculations were attempted too late.

### Sunstrokes.

One of the peculiarities of the late warm spell is the occurrence of sunstrokes in the hot valleys of the interior portion of the State. Some of our cotemporaries have connected them with the thunderstorms which have recently occurred not only in the bay counties but in the Colorado desert region. One of our city cotemporaries says: We have already called attention to the fact that our last storm had its counterpart 10 years ago, and that season was remarkable for its sunstrokes, seven cases occurring near the town of Turlock in one day. Much higher temperatures are felt almost every year than characterized the late heated spell, and no such results have followed. It is embarrassing, however, to be obliged to explain to our Grand Army visitors how exceptional thunderstorms and sunstrokes are in this State, for there are some who will be ungenerous enough to be incredulous.

The following cases of sunstroke were reported within a day or two after the late electric display: At Oroville the deaths include Mrs. T. J. Coffin, a nurse, and Mrs. John Pollock.

Four cases of sunstroke are reported from Moore's Station, Butte county.

In Tehama county there were two deaths from sunstroke on Friday and Saturday. Both were harvest laborers, one being named Leslie and the other Domingo.

Two more deaths are reported near Stockton—James Dooley, a laborer from San Francisco, and Christ. Wall, who was a deckhand on a schooner.

At Sacramento, Saturday, Patrick O'Brien died suddenly from the effects of the heat.

## DOMESTIC ECONOMY.

### Cheap and Nutritive Luncheon.

EDITORS PRESS:—As many of your readers, particularly farmers' wives, are looking to ways of comfort these hot days, I would like to put some of them on a way of saving labor, and at the same time getting up a simple and healthful luncheon for these hot noontimes. No hot fire, no work getting ready, and dish-washing reduced to a minimum. I refer to

### Curd and Cream.

I have never seen the dish in this country, but in Scotland it is quite a favorite dish, and townspeople will often make excursions into the country to enjoy the luxury at the farmers' houses. There it is accounted as great a treat as ice cream is here, and far more healthful. The requisites are unskimmed sweet milk and calf's rennet. The rennet can be had from the butcher, and is prepared by emptying the contents (if any), salting thoroughly and drying, and must then be kept as any salted and dried meat. When wanted for use, cut off a piece the size of a quarter of a dollar and put it to soak in a quarter of a teacupful of water for say 12 hours, when it is ready for use.

In the morning, take your milk and have it blood-warm, put the quantity required (say one quart for a family of four or five persons) in an earthenware vessel or tin pan, and put about half a teaspoonful of the solution of rennet with it, stirred well through, and set it away until noon in a cool place, when it will be like clabber in appearance, but perfectly sweet and with all the cream in it. Dish it out as you would pudding, pouring good sweet cream over it, eating with bread and butter, and you have a dish fit for a queen or a granger, and which, if eaten in the way directed, will agree with many stomachs that could not use milk in the ordinary manner. Nothing else is needed to make a hearty and nourishing meal, and one that commends itself to overworked farmers' wives, and no disagreeable washing of greasy dishes in hot water.

FARMER'S WIFE.

Riverside, Cal.

**A DREAM CAKE.**—Make a rich batter, and bake it in three layers. The layers should be frosted with confectioner's sugar and the white of eggs. The frosting for the first layer should be flavored with lemon, for the next layer with vanilla, and the top layer should be flavored with a few drops of rose water and thickly covered with cocoanut.

**TONGUE TOAST.**—A very nice dish is prepared from cold boiled or potted tongue. Slice the tongue, and cut each slice into small, fine pieces; heat it in a pan, with a little butter. To prevent burning, moisten with warm water or clear soup. Add salt and pepper; stir into it two beaten eggs. When set, arrange neatly on toast.

**MILK LEMONADE.**—Dissolve in one quart of boiling water one and one-half cups of loaf sugar, add one-half pint of lemon juice, and lastly, one and one-half pints of boiling milk.

## The Week.

The prevailing topic of conversation is still the extra session, although the Encampment is coming to divide honors with it. Indications multiply that the Legislature now in session is not to be as greatly feared as some have thought. It displays signs of caution and evidently has a conscience as well as an intellect. We are inclined to hope well from it. It has had experience. It was only monopolized by a scratch last time, and some of the members should have gained wisdom since that experience. They now have a chance to do some telling work in the public interest, and we are hopeful a majority will conduct themselves so as to win lasting honors.

The coming week will witness the beginning of the great social event of the year, the Encampment, to which allusion is made elsewhere. Aside from the hosts from the East, there will probably be more Californians in San Francisco than ever before. They are coming from up and down the coast, arriving by rail-

way, and even floating down the rivers on nicely furnished barges, which will be both transportation and hotel during their sojourn here. It promises to be a gala occasion for all concerned, and to furnish scenes which will be memorable for a life time. In other columns of this issue the main features of the event are outlined.

## Uses of the Extra Session.

It argues a happy disposition to find some good in everything, and we propose to base our claim to geniality upon the good which we can find in so trying an affair as the extra session of the Legislature now in progress in Sacramento.

It is now quite settled that it will not do the evil for which it was claimed to be convened. There were to be discovered in its horizon most threatening clouds of revolutionary and monopolistic trouble. Many of them were swept away by the strong breeze of popular protest even before the Speaker's gavel fell for the first time. The most revolutionary feature of the work laid out was abandoned before the members reached the capitol. The third house saved the heads of the judges—or, rather, the people saved the State that outrage upon decency—and the lobby dropped its axes almost before they were well in hand. We see in this fact alone, demonstrating as it does national safety because of the irresistible force of public opinion, a lesson in the strength of our popular sovereignty which is of great value, not alone to the State and nation, but to the world at large. In a true republic a *coup d'etat* is impossible; all things must be done decently and in order.

But we see other and more direct benefit in the experience which we are now gaining. In the better understanding of the right to water and the use of this life-blood of an arid State, there will be popular progress in a few weeks, which, in the usual course of events, might have required months and years. Our general understanding of water rights and water distribution has been too vague and shadowy. We have agreed that irrigation is essential to the development of vast areas of our State; we have seen little colonies grow into rich and large communities within a decade; we have seen wealth and population grow quickly and sturdily, just as vegetation grows, when water is brought upon our barren wastes. With these facts before us we have been ready to throw up our hats and cry: "Hail to irrigation, it is the State's greatest need!"

Such perhaps it is—but very few really saw that there might be such a manipulation and such direction of the popular appreciation of the benefits of irrigation that it might really constitute a menace to the popular weal. The waters were so smooth and beautiful upon the surface that few discerned the current which was drawing toward sunken rocks. If there is any selfish individual or corporate greed in the movement which has been so strenuously promoted in the name of the general welfare, the very best method has been adopted to bring it into view in all its hatefulness. If there had been less zeal, less precipitation, less stickling for certain forms and methods of action, certain measures might have been carried through which might have riveted the chains of monopoly upon our water supply even more effectually than does the English riparian law. People grew apprehensive some weeks ago. The convention, the proceedings of which we printed in full, was not the popular body we expected it would be. The institution of the literary bureau without any visible means of support, and other matters of similar character, indicated that the movement was being over-managed. It is not common to see enterprises of merely general popular welfare conducted too well. This was the condition of the popular mind when the call for the extra session came, and that, bearing the insignia of the same motive force as the preceding features of the movement against riparianism, not only aroused but alarmed the press and the people. It was apparently a time for alarm, but whether there was really occasion for it or not, the popular arousing which has resulted is the most fortunate thing, it seems to us, which could have happened for the advancement of true irrigation enterprises and interests in this State. As we have said, the people bid fairer now to understand the irrigation problem than ever, simply because it now comes before them in the strongest possible light, and every feature and tend-

ency will be thoroughly discussed. It seems to us that it is quite possible that those who were instrumental in bringing about the extra session builded much better than they knew, for the welfare and general progress of the commonwealth.

The Legislature has already appropriated about \$50,000 to pay its cost. There is some objection made to the extra session on account of its expense and its burden upon the taxpayers. It is quite true that every dollar added to the tax levy is a burden to the people and the burden should be made as light as is consistent with safety and true advancement of popular interests. But it seems to us that the State will really obtain very cheaply the lessons which this extra session will teach. It will probably show that the waters of the State cannot be monopolized, and this is certainly a valuable demonstration, whether there was really immediate danger of such evil at the time or not. It seems probable also that there will be some preliminary legislative steps taken which will be indeed in the popular interest, and if so the enactments will be worth what they cost, and the elaboration of an irrigation system which shall embody and conserve the general interest, can be based upon them and secured through coming Legislatures. If these fundamental enactments are secured, it will clear the coming general election from the clouds of dust raised by contending monopolists and will enable people to see more clearly the character of the men who appeal for their suffrages and more calmly to choose between them. We believe, in any event, that the extra session has aroused the voters to the great danger to the interests of the State, and that the chances are now far better than they otherwise would have been for securing an honest Legislature for the coming two years. The times are full of matters of the greatest moment and it behooves all to be vigilant and active and to use their utmost influence that the right shall prevail, and the true interests of the State be guarded from lurking dangers.

In an address before the Senate Committee on Irrigation, Mr. Marks, of Fresno, claiming to represent the small irrigators of that county, is reported to have said that it is unfortunate that Haggin & Carr have figured so prominently on the irrigators' side of this issue. It is indeed unfortunate, except perhaps that having monopolists on the other side of the question, it is well to have monopolists to fight them with; for when monopolists fall out it is likely that popular rights may lie between them. What we want, and what, perhaps, the present Legislature may give, is the enactment into our organic and statute laws some plain propositions which shall free our waters from the burden of ill-suited foreign precedents and favor their distribution upon equitable principles to all who can make good use of them. We do not want laws which will cinch anybody out of the rights to which they are justly entitled, whether they be large proprietors or small. We do not want the water monopolized either for greed or for waste, but husbanded, distributed and used, to the full extent of the possibilities in it, for increasing the productivity, the population and the prosperity of our State. We apparently never stood a better chance of obtaining just such legislation as that than we do at present, and for that reason we look with expectation and with a degree of complacency upon the assembling of the Solons at Sacramento.

## Better Times.

The signs all point to an improvement in business matters here from this time on. Nearly everywhere the crops show well. There will be a large harvest and good prices for both fruit and grain. A big yield affects not only the farmer but the tradesman and mechanic as well, for it makes money more plentiful. The money received for the wheat and fruit crop will be distributed, and that will bring an improvement in all sorts of business. The pressure of hard times will be loosened. People will be able to purchase more freely of both necessities and luxuries, thus spreading the coin in all channels of trade.

The future of California is bright with promise. A staple and industrious class of people is settling up our spare lands, and thousands have come within the past few years to make their homes with us. The building of railroads in all directions is bringing new regions and

tracts into use. The unsettled portions of the State are fast filling up. The lands are more salable, and are cultivated in a more diversified manner than formerly. Our markets are more extended, and our products better appreciated outside our borders. The railroads now carry our perishable products to distant markets, where good prices are obtained.

These and other things indicate a certain prosperity for the future. The climate, soil, and other natural advantages of California are bound to tell in time, and as they become better known, the State will become more prosperous and more largely settled. We are getting out of many old ruts and becoming more progressive in our ways. The "new blood" of late years is doing us good in the main. The temporary hard times of the past few years have made our communities more frugal and taught them to be less extravagant.

Good crops make the country prosperous, and on the prosperity of the country depends good times in the cities and towns. It looks now as if the era of hard times was passing away, and that soon money would be more plentiful in all branches of business.

## The Peach Crop.

The peach crop will be light in this State and values high. There has been a sharp demand from canners to fill orders, which have been unusually large because of the great reduction in Delaware and other Eastern producing districts. Those who have peaches to sell this year will get plenty of money for them, and if we had only been favored with a generally good crop, the peach would have had a notable boom. The measure of our prices depends largely upon Eastern crops. Heretofore this has mainly acted through the canners, though the fruit shippers have done good service; but this year there is a brisk canning demand added to a greatly increased opportunity to sell fresh peaches at the East, and it is no wonder that prices are so good.

Our peach-growing readers may like to know more definitely the condition of affairs in our competing peach districts at the East, and we give such information as we have. The report of Prof. Dodge, statistician for the Department of Agriculture, for July, says that the prospect for the peach crop is not encouraging, the condition having seriously fallen off during the last month. In the States of heavy production, condition is somewhat low, standing at 84 in New Jersey, 60 in Delaware and 86 in Maryland—100 being the standard or average crop. In the Southern States, Kentucky and West Virginia, fruit is rotting badly and the crop will be very small.

Concerning the Delaware crop, a correspondent of the New York Tribune of recent date says:

The peach crop will be a small one. Few are so sanguine as to put it above 2,750,000 baskets, while some get it as low as 1,500,000. These are extremes, however. The consensus of opinion among growers and shippers points to a total of about 2,300,000 baskets of good fruit, and it is upon this basis that preparations for marketing are being made. Over on the eastern shore of Maryland the yield will be very large, however, so that the total of peaches shipped from this entire peninsula will scarcely be less than that of any former year. How much Delaware has suffered may be seen in the fact that the range of crops for the past dozen years has been from 3,000,000 to 4,000,000 bushels, against only 2,300,000 this year.

It is also stated that Delaware is counting less on her peach crop than formerly, as other fruits seem more valuable and trustworthy. This seems to be in harmony with the general decadence of the peach at the East, and points more clearly to California as the future peach-producing country.

**THE DOG SHOW.**—The bench show of the California Kennel Club, which has been noticed in previous issues of the RURAL, is in progress this week in Platt's hall. There were over 200 entries made and nearly all were in place on Tuesday, the opening night. An opening address was made by Mr. Robert Ferral, which was received with much applause from the benches. There are a number of famous and valuable dogs on exhibition, the highest value placed on any single animal being \$10,000, said to be the equivalent of an English setter owned by a man from Cincinnati; the highest priced California dog is also an English setter owned in San Francisco and valued at \$2500. The show will continue during the week.

## The Organizations of Mercy.

Upon the assembling of the hosts of the Grand Army, it is fitting to remember only what is bright and beautiful in our country's history, and we cannot refrain from calling attention to the new form of religion which traveled along the burnt path of the war. At the first gun of battle not only did many of the best surgeons of our cities hasten to the front and gratuitously offer their skill and experience, but gentle and refined women left their homes of comfort and luxury to live in tents near the armies, so as to be ready to serve the sick, wounded and dying. Besides the religious teachers furnished by the Government, many congregations spared to their brothers in the field their ablest ministers.

This noble, patriotic sentiment gradually took shape in the Sanitary and Christian Commissions. To the Sanitary Commission the Government gave a most earnest support; the people gave it their hearts. They did more: the rich gave lavishly of their abundance, the laborer no inconsiderable portion of his scanty earnings. The poor widow cast in her mite. The people gave it more than three millions of dollars in money, of which one million came from the Pacific States; they sent it nine millions' worth of supplies. The Christian Commission, emulating the noble conduct of the Sanitary Commission, aided the surgeon, helped the chaplain, followed the armies in their weary marches, went into the trenches, along the picket-line, went everywhere. Wherever there was a sick, a wounded, a dying man, an agent of this Commission was near by. Many of them were tender-hearted women.

These beautiful charities dotted the scenes of war from Paducah to Port Royal, from Belle Plain in Virginia to Brownsville in Texas, with homes and hospitals, caring alike for friend and foe. They had an independent transportation of their own. They had tents, wagons, ambulances, cars. They soon invented better litters, better stretchers, better ambulances. They secured transportation for the wounded soldier from the battle-field to the hospital. On the railroads they had hospital cars, with kitchen, dispensary and a surgeon's car in the midst. They gave Christian burial whenever possible; they marked the graves of the dead. The Christian Commission distributed nearly five million dollars in money and supplies.

Such an organization of private charity was never seen before in the history of the world. Even that grim, surly old man, Thomas Carlyle, had to confess that "the Sanitary Commission was a genuine expression of the people. It was to America in this century what the Orders of chivalry were to Europe in their day." An eloquent writer in the *North American Review* said: "To the end of time it will stand in history as a worthy monument of the patriotism, the humanity and the religion of a Christian democracy."

One of our war correspondents, who had an eye for the beautiful, relates that after the terrible cannonading at Gettysburg, when four hundred cannon answered each other along Cemetery Ridge, there came a lull while Pickett's division was getting ready for its grand charge, and then the birds, which had been chased away out of the peach orchards and plum trees, came flying back through the smoke and began to sing. Over that field of fratricidal strife, where ten thousand corpses lay on the earth with hearts scarcely stopped beating, the sweet birds sang. But later in the afternoon, after that awful storm of human rage and passion had spent itself and the two great armies lay panting and gasping for breath, a still more beautiful spectacle was seen when the divine form of religion, in the shape of Protestant clergymen and Roman Catholic priests, Protestant women and Sisters of Charity, came from every tented hospital on both sides of the line, tenderly caring for the wounded, consoling the dying, and dropping hot tears like rain as they sent the last words of the dead to the loved ones at home.

**THE IRRIGATION ISSUE.**—It has always been the aim of the RURAL PRESS to furnish full and trustworthy information on important industrial issues. We give this week the leading propositions advanced for consideration of the legislators. We expect to continue this course in the presentation of other important matters hereafter.

## Time as a Healer.

Time is a great healer. It levels every hillock in the graveyard, mingles the dust of friend and foe, and covers with one common sod the wars and strifes and mad agonies of a past generation. It touches with curative gentleness the hurts of the mind and the wounds of society. Two men part in early manhood mutual enemies, full of hate and revenge; but late in life's afternoon they meet again, recognize each other, shake hands and are friends once more.

Twenty-five years ago these war veterans now coming among us were marching to the front, singing, "We'll hang Jeff Davis on a sour apple tree," and they meant it. Now he can travel all over the land, write books and make speeches in vindication of the "lost

livered an address of welcome on the part of the ex-Confederate soldiers, and was responded to by General Keifer on the part of the Society of the Army of the Cumberland. Among many beautiful things Major Key said: "Your country is our country; your flag is our flag; your destiny is our destiny; and we here and now give you our pledge that we will stand by you in defense of this country and that flag." And General Keifer replied: "We warmly and fraternally touch hearts with you under the same flag on this historic field." This mingling of the blue and gray that day on Cameron Hill, under the National flag and in sight of the bloody field of Chickamauga; Lookout Mountain, where Hooker fought above the clouds; Missionary Ridge, with its two cemeteries, one Union and one Confederate, now tenanted with seventeen thousand

THE GENIUS OF AMERICA—Halbig.

cause," and every one smiles at the old man as they would at the antics of one that had escaped from the lunatic asylum. Had we been told immediately after the surrender of Lee that in a few swift years the men who fought for the Union and the men who tried to pull it down would meet in the halls of Congress and in the most friendly manner legislate for the good of our common country, it would have been regarded as a madman's dream.

What surprises there are in history! A few days after Garfield had panted out his life in the little cottage by the sea, the officers and soldiers of both armies that had fought each other with desperate courage at Chickamauga, Lookout Mountain, Missionary Ridge and other historic places, assembled at Chattanooga for a peaceful and pleasant fraternization. The old flag, heavily draped in mourning, was hoisted to the top of the flagstaff by Major M. Grant of the Federal Army and Major I. L. McCullum of the Confederate service, the band playing "The Star-spangled Banner;" and as it was lowered at half-mast the band played "Nearer, My God, to Thee," more than ten thousand people standing uncovered. Major Summerfield A. Key, brother of the ex-Postmaster General, de-

livered an address of welcome on the part of the ex-Confederate soldiers, and was responded to by General Keifer on the part of the Society of the Army of the Cumberland. Among many beautiful things Major Key said: "Your country is our country; your flag is our flag; your destiny is our destiny; and we here and now give you our pledge that we will stand by you in defense of this country and that flag." And General Keifer replied: "We warmly and fraternally touch hearts with you under the same flag on this historic field." This mingling of the blue and gray that day on Cameron Hill, under the National flag and in sight of the bloody field of Chickamauga; Lookout Mountain, where Hooker fought above the clouds; Missionary Ridge, with its two cemeteries, one Union and one Confederate, now tenanted with seventeen thousand

## The Genius of America.

We adorn this page with an engraving of a marble which now stands in the art gallery of the State University at Berkeley, being one of many gifts to the institution by Henry D. Bacon. It is entitled the "Genius of America," and is by the sculptor Halbig. The theme is very appropriate to the occasion which is at hand—the Encampment of the Grand Army in this city. The group will explain itself to all. The freedom for which the nation was established came last to the slave. Columbia, with her face lighted with joy, points her finger to heaven, as if to say, "This is the decree of the Most High." A slave, kneeling at her feet, lifts up her eyes in gratitude for the deliverance. America became at last the "home of the free" indeed, and The Genius of America triumphed.

## The Legislature.

## Irrigation Propositions Now Pending.

As stated in last week's RURAL, the Legislature assembled in extra session in the State Capitol on Tuesday, July 20th. The Senate, in the absence of Lieutenant-Governor Daggett and of Senator Knight, of Santa Cruz, president pro tem, was called to order by Senator B. F. Langford, of San Joaquin, and in the House the Speaker, W. H. Parks, presided.

## Governor's Message.

STATE OF CALIFORNIA, EXECUTIVE DEPT.,  
SACRAMENTO, July 20, 1886.  
To the Senate and Assembly of the State of California:

GENTLEMEN: My proclamation in bringing you together in extra session of the Legislature calls on you to legislate and take action on only two subjects, namely:

First—Irrigation and water rights; and  
Second—Reorganization of the Supreme Court.

The proclamation sets forth my views fully on these subjects, and the urgent reasons which impelled me to call you from your homes and occupations at this sultry summer season.

The emergency is great and pressing. It demands prompt, wise and careful action. Reliance upon our statutes and upon the judicial interpretation of the law to regulate satisfactorily water and water rights in this State, has practically failed. Public opinion is united and irresistible in the demand for legislative action, which will prevent threatened disaster to our vast agricultural interests.

In many sections of the State—embracing a vast area now attracting a rapid tide of immigration—a feeling of dissatisfaction and irritation prevails regarding the claims and threatened or pending action of riparian owners, which may culminate in danger to the peace and good order of the State, unless averted by just and timely legislation.

Until the contentions arising between the riparian and irrigation interests are adjusted upon an equitable and practical basis—intruded in our Constitution and laws, and safe-guarded in our courts—immigration will be retarded, agricultural development checked and all the industrial resources of the State crippled or impaired.

The merchants and business men in general feel at this juncture that their prosperity is at stake. They unite with the farmers and fruit-growers in this urgent call for a redress of grievances on the all absorbing water question. Property worth millions of dollars, including alike the large tracts owned by the rich and the small farms owned by the settler, is threatened with destruction pending the settlement of the question of riparian ownership. It is a question of far-reaching and vital importance which materially affects the interests of agriculturists in many States and Territories, and one which, in this State, has reached a painful crisis in consequence of the recent decision of the Supreme Court in favor of riparian owners.

That you are alive and earnest in the interest of the tillers of the soil—the interest of all—is evident from the fact that such a large majority of your honorable body have united in a request to me, as Chief Executive, to call this extra session of the Legislature.

Believing with you in its imperative necessity, I have done my part in the good work by promptly responding to your call. It now remains with you faithfully and energetically to do your part by legislating on the lines indicated in my proclamation. One of the certain and not remote results of such action by you will be the division of large land-holdings into small tracts where men can, by industry and thrift, convert the arid land into productive fields, orchards and vineyards. Thousands of happy homes will then dot the land.

With regard to the second subject recommended in the proclamation for legislative action, my views are therein clearly put forward. That the Supreme Court, under its present cumbersome operative system, has failed to realize the aims and accomplish the results intended by the framers of our State Constitution, is palpably evident to all interested in the efficient and satisfactory working of our judicial system.

The legislation recommended for enactment is not of a character in which considerations of political or party advantage should enter or are involved.

This fact will tend to make smooth your deliberations and shorten the duration of a session from which the people have reason to expect decisive and highly beneficial results.

GEORGE STONEMAN, Governor.

## Mr. Moffatt's Amendment.

In the Assembly, by Moffatt of Alameda—An act to amend an act to establish a civil code, approved March 21, 1872.

Section 1. Section 1422 of the Civil Code is hereby repealed.

Sec. 2. This act shall take effect from and after its passage.

## Mr. Yale's Amendment.

By Yale of Trinity—An act to propose to the people of the State an amendment to the Constitution of the State of California, relative to water and water rights.

Section 3. The water of every natural navigable stream, within the State of California, is the property of the public and is dedicated to

the use of the people of the State, subject to appropriation, diversion and use for irrigation and other beneficial purposes; and the right to divert unappropriated waters of any natural navigable stream to such beneficial uses shall never be denied. Prior appropriations to any such use, whether heretofore or hereafter made, shall give the better right, and the right of appropriation shall be exercised under legislative regulations. The English common law of riparian rights, so far as it conflicts with this section, shall not be recognized as a rule of decision in any of the courts of this State.

#### Mr. French's Amendment.

By French of San Francisco—An act to propose to the people of the State an amendment to the Constitution of the State of California, relative to water and water rights:

Section 1. The use of all water now appropriated, or that may hereafter be appropriated for irrigation, sale, rental or distribution, is hereby declared to be a public use, and subject to the regulation and control of the State, in a manner to be prescribed by law; provided, that the rates of compensation to be collected by any person, company, corporation or irrigation district in this State for the use of water supplied to any county, or city and county, or city, or town, or irrigation district, or the inhabitants thereof, shall be fixed every three years by the supervisors, or city and county, or city, or town council, or other governing body of such county, or city and county, or city, or town, or irrigation district, and shall continue in force for three years and until new rates are established; but in establishing such rates they shall take into consideration the cost of construction and maintenance of the works by which the water is supplied, and the rates so established shall be such as will yield to the person, company or corporation so supplying water, a net return of not less than six per cent and not more than eight per cent per annum upon the amount invested in the construction and maintenance of such works. Such rates shall be fixed in the month of February, and take effect on the first day of July thereafter. Any board or body failing to fix the water rates where necessary, within such time, shall be subject to summary process to compel action at the suit of any party interested, and shall be liable to such further process and penalties as the Legislature may prescribe. Any person, company or corporation collecting water rates in excess of those so established shall forfeit the franchise of such person, company or corporation to the county, or city and county, or city, or town, or irrigation district from which the same are collected for the public use.

#### Ownership to Water.

By DeWitt of Tulare: An act concerning the ownership of water in natural navigable streams and providing for the acquisition thereof by appropriation.

Section 1. The water of every natural navigable stream, within the State of California, is hereby declared to be the property of the public, and is dedicated to the use of the people of the State, subject to appropriation, diversion and use for irrigation or other beneficial purposes; and the right to divert unappropriated waters of any natural navigable stream to such beneficial uses shall never be denied. Prior appropriations, whether heretofore or hereafter made, to any such use, shall give the better right, and the right of appropriation shall be exercised under legislative regulations. The English common law of riparian rights, so far as it conflicts with this act, shall not be recognized as a rule of decision in any courts of this State.

Sec. 2. All acts and parts of acts which in any way conflict with the provisions of this act are hereby repealed.

Sec. 3. This act shall take effect from and after its passage.

#### Mr. Edwards' Amendment.

By Edwards, of Los Angeles—An act to amend Sec. 25, Art. IV, of the Constitution, so as to read as follows: But nothing in this section contained shall be understood or construed to prevent the Legislature from passing such special laws as it may deem best, regulating the construction of ditches, canals and other works for irrigating purposes, and for the establishment of rates to consumers, as the same may be specially required in any county of the State.

#### Senator Cross' Bills

Senator Cross introduced three bills.

The first was entitled: "An act to submit to the vote of the people of the State of California the question of erecting State water works for irrigation and other beneficial uses." It provides that the people of the State of California, represented in Senate and Assembly, do enact as follows:

Thirty days prior to the next general or special State election, the Governor shall issue his proclamation calling upon the electors of the State to signify at same election their will as to the State inaugurating a system of water works for the purpose of supplying, within the State, water for irrigation and other beneficial uses, by placing upon their ballots the words "For a system of State water works," or the words "Against a system of State water works." The judges and inspectors of election at each and every poll in the State shall ascertain and make returns of the number of votes "For a system of State water works," and the number of votes cast "Against a system of State water works" in like manner as other votes are.

The Secretary of State shall make a count and the result shall be advertised in San Francisco, Sacramento and Los Angeles.

The second bill introduced by Cross provides that within 60 days after the Secretary of State shall have certified to the Governor that a majority of the votes cast were in favor of a State system of water works, the Board of Examiners shall cause to be printed \$20,000,000 of State water works bonds. One-half of amount of said bonds shall be issued in denominations of \$100, and one-half in denominations of \$1000. Said bonds to bear interest at the rate of 5 per cent per annum, and to be payable on or before 20 years from the date thereof. Said bonds shall be sold upon sealed bids to be received by the State Controller in quantities not exceeding \$1,000,000 per month, said sales to be made only upon the approval of the State Board of Examiners, and at not less than par. Said Board of Examiners shall have the power to reject any and all bids, and no sale shall be made until notice of such sale, with the time and place and amount of bonds to be sold, shall be first given for at least one month, in at least three daily papers, one of which shall be published in Sacramento, one in San Francisco and one in Los Angeles. The moneys derived from the sale of said bonds shall be kept by the Treasurer of the State in a separate fund, to be known as and designated as the fund of the system of the State water works, and shall be paid out only upon warrants issued as provided for in the acts creating the State Board of Water Commissioners.

The third bill introduced by Cross provides that within 30 days after the Secretary of State shall have certified to the Governor that a majority of the votes, cast in accordance with the act relative to a State system of water works, have been cast in favor of that project, the Governor shall appoint one competent person a water commissioner of said State. Within five days after the next Senate of the State of California shall have been duly organized, it shall select, by *viva voce* vote, two competent persons to be water commissioners of said State. Within five days after the next Assembly of the State of California shall have been duly organized, it shall select, by *viva voce* vote, two persons to be water commissioners of said State, and the five persons so chosen shall constitute the State Board of Water Commissioners. Said commissioners shall serve for four years, and until their successors are chosen and qualified. Such successors shall be elected or appointed by the same authorities and in the same manner as the commissioners hereinbefore provided for.

#### Senator Reddy's Constitutional Amendment.

Senator Reddy submitted the following amendment to Article XIV of the Constitution:

Section 3. The water of every natural or navigable stream within the State of California is the property of the public, and is dedicated to the use of the people of the State. Such water may be appropriated, diverted and used for irrigation or other beneficial purposes. The right to divert unappropriated waters of any natural navigable stream to such beneficial uses shall be regulated by law. Prior appropriations to any such use, whether heretofore or hereafter made, so long as applied to such use, shall give the better right, and the right of appropriation shall be exercised under legislative regulations. The English common law of riparian rights, so far as it conflicts with this section, shall not be recognized as a rule of decision in any of the courts of this State.

#### Senator Whiting's Bill.

Senator Whiting introduced the following bill on irrigation:

An act to declare the title to waters in rivers, streams, lakes and ponds, and the right to their use, and is as follows:

Section 1. The waters of all rivers, streams, lakes and ponds not situated wholly within the lands of a single proprietor, are the common property of the people of the State and forever inalienable. There can be no private ownership of such waters while in their natural beds or channels.

Sec. 2. Water rising upon lands in private ownership is the property of the owner of such lands until allowed to escape by natural flow beyond such lands, when it becomes common property of the people of the State. But the right to the use of such waters may be acquired by the owners of other lands, either by grant or prescription.

Sec. 3. Water developed in tunnels and wells is the property of the person first developing it, and may be controlled and disposed of as other property, but not wastefully until it passes from the lands of such person in the natural flow, when it becomes the property of the people of the State.

Sec. 4. Water falling in rain or snow is the property of the person upon whose land it falls, and may be disposed of as other property until it passes by natural flow from such lands, when it becomes common property.

Sec. 5. The waters declared to be common property are devoted to the sustaining of life and to domestic and sanitary uses, which shall always be preferred uses.

Sec. 6. The owner of lands watered by a natural stream has a right by ditches constructed so as to prevent waste in channels above, and to sufficient water for the reasonable irrigation of such lands; but such right may be lost by abandonment or non-use, or by adverse use for five years.

Sec. 7. In the arid agricultural portions of the State, subject to the preferred uses declared in the preceding sections, all lands susceptible of irrigation from the waters therein mentioned are entitled to such waters for agricultural purposes. Those parts of the State are declared to be arid, within the intent of this section, in which agricultural products cannot be profitably raised without artificial irrigation.

Sec. 8. Where the waters of a source or series of sources of supply are not sufficient for the reasonable irrigation of all the lands to which such waters may be brought, those first in the actual enjoyment shall have a preferred right to the extent of such use, by works so constructed as to prevent unnecessary waste. But no person has a right to a wasteful use of water, either in its carriage or application to the soil.

Sec. 9. It is unlawful for any person or corporation (for the purpose of irrigation), to the injury or deprivation of another, to divert or carry through any ditch, pipe or flume, any water in excess of the necessary requirements of the lands under cultivation and depending upon the use of such waters.

Sec. 10 prescribes how the Legislature shall direct the distribution of water. First, to municipal corporations for domestic use. Second, to private corporations to meet an actual need for the same purposes. Third, to irrigating districts. Fourth, to works constructed and owned by private parties and corporations for distributing and supplying water for irrigating the lands of others.

Sec. 11. The use of waters for mills and other mechanical purposes is not affected when such use can be made without material diminution or defilement.

#### After the Recess.

Both branches of the Legislature adjourned from Thursday, 22d, to Monday of this week. After reassembling, Senator Del Valle presented a protest by the City Council of Los Angeles against the passage of the proposed constitutional amendment fixing water rates.

Senator John M. Days introduced the following, which was referred to the Committee on Irrigation.

#### Senator Days' Bill.

An act to propose an amendment to Article XIV of the State Constitution by adding thereto Sections 3, 4, 5, 6, 7 and 8, in relation to water rights.

The Legislature of the State of California, at its session commencing on the 20th day of July, 1886, two-thirds of all the members elected to each of the two houses of said Legislature voting in favor thereof, hereby proposes that Article XIV of the Constitution of the State of California be amended by adding six new sections thereto, to be known as Sections 3, 4, 5, 6, 7 and 8, and to read as follows:

Sec. 3. The water flowing in all non-navigable rivers, streams, creeks and natural courses within the State of California, is the property of the public, and is dedicated to the use of the people of the State. Such water may be applied for purposes of supplying cities and counties, towns, villages and hamlets, navigation, irrigation and other beneficial uses. The use of said water to be granted or leased for a term of years not exceeding 20, upon conditions to be prescribed by law.

Sec. 4. For the administration and regulation of all systems of said water derivation, distribution and drainage, the Governor, by and with the consent of the Senate, shall appoint a State Water Commission of three suitable persons, one of whom must be a competent civil engineer; the terms, duties and emoluments of office of said commission shall be prescribed by law.

Sec. 5. For purposes of irrigation and drainage in connection therewith, there shall be established, when necessary, irrigable land districts that may be directly accessible by the waters of the aforesaid rivers, streams, creeks and natural courses, in such manner as shall most equitably apportion the distribution of the said waters upon the lands of the said districts, provided that the aggregate or total area of such districts upon any one natural water channel or source shall not require an excess of the main channel supply of water therein for irrigation and agricultural use. The location, extent and area of each district to be determined by the said water commissioners upon judicious irrigation practice and as may be prescribed by law.

Sec. 6. The State may by law undertake and complete the construction of head-works, dams and other appliances for the raising, flowing and storage of water, and the legal interest on the cost thereof shall be annually levied upon the lands of the districts for whose service they may be intended, together with the cost of their repairs and the proportional expenses of the said water commissioners' establishment estimated upon the whole number of districts under its charge; such levies to be paid annually. The Legislature shall pass all laws necessary to carry out the provisions of this article.

Sec. 7. For the application of said waters upon the lands of said districts, associations or companies—to consist of citizens of the United States—may be formed under laws to be prescribed by the State; and who shall be owners or occupants of the said lands and to which the use of said waters shall be granted or leased. The said associations or companies, under the direction of such engineer as the said water commissioners shall appoint, shall survey, locate, construct and maintain the main and distributing canals in their extension from the

head works, dams and reservoirs, their outlets, gates, etc., and keep them in repair.

Sec. 8. Whenever the owners or occupants of land in an irrigable land district are unable from want of funds to comply with the provisions of the previous section, the Legislature may prescribe by law for the construction and maintenance of said main and distributing canals in the manner provided for building head works, etc., and expense thereof as set out in Sec. 6 hereof; provided, however, that the engineer in charge shall give preference of employment in the said construction to any and every land-holder of said district, giving receipts to each for the value of his labor, which receipts must be received in payment of expenses levied against him.

#### Senator Cross' Fourth Bill

Provides for the condemnation of riparian rights and reads as follows:

Section 1. Whenever an action is brought in the name of the State of California or of the people of the State of California to condemn or acquire by the exercise of the right of eminent domain any water or water rights, or any other property necessary or proper for the purpose of obtaining water for or applying to irrigation or other beneficial uses in addition to the provisions of the Code of Civil Procedure, the plaintiff shall have the right to join in one suit, as defendants, any or all parties claiming the right to use or divert the water of any stream and its tributaries within the county within which the said suit is brought. Such suit may be brought against any or all owners or claimants known or unknown, but no judgment in such proceedings shall lie valid against any party not named, or served with process in the proceedings, unless a summons complying with the provisions of Sections 756 and 757 of the Code of Civil Procedure, duly issued in accordance with the provisions of Section 1245 of the Code of Civil Procedure, against such unnamed, unserved and unknown owners shall first have been published in said county (if there be any) in the manner prescribed in Section 413 of the Code of Civil Procedure.

Sec. 2. Upon the hearing of said cause the court or jury shall find or adjudge the amount of damages to be paid each claimant separately, and judgment shall be entered accordingly.

Sec. 3. No water or water-right actually applied to a beneficial use by its possessor shall be acquired by the State, except by purchase.

Sec. 4. In such actions or proceedings the following portion of Subdivision 3 of Section 1240 of the Code of Civil Procedure shall be inapplicable; but such property shall not be taken unless for a more necessary public use than that to which it has already been appropriated.

Sec. 5. In such actions or proceedings Subdivision 3 of Section 1241 of the Code of Civil Procedure shall be inapplicable.

#### Senator Saxe's Amendment.

Senator Saxe introduced the following bill defining riparian rights:

Sec. 1. Riparian rights as declared in Section 1422 of the Civil Code of the State of California, are hereby declared to consist of the right to the use of so much of any body of water flowing through or contiguous to the lands of any proprietor as is necessary for domestic use, the watering of stock, irrigation where practicable, and mechanical purposes where the water is returned into its original channel, and all surplus of said waters may be used by others for the same purposes.

#### Mr. Jordan's Amendment.

In the Assembly, Jordan, of Alameda, introduced an amendment to Article XIV of the Constitution, providing as follows:

The waters of all natural non-navigable lakes not situated upon private lands in one ownership, and all non-navigable rivers and brooks passing beyond lands in one ownership and the surplus waters of all navigable lakes and rivers diverted at such times as shall not impair the navigation thereof, are declared the property of the State, and no ownership in or right to the use, appropriation or diversion shall ever be granted to any person, company or corporation. The water shall be subject to distribution for municipal mechanical, mining mechanical and irrigation purposes under control of the State. In cases where water rights have already been appropriated, all such rights shall revert to the State. In the case of corporations at the expiration of the corporation's legal term of existence, and in the case of private persons at the expiration of 20 years from the commencement of use. Riparian-owners shall be protected in the use of water for household and stock purposes, but not for irrigation. Cities owning and supplying cities shall not be permitted to charge more than seven nor less than five per cent on the actual cost of improvements, besides the current expenses. Corporations or persons owning works by prior appropriation shall be similarly governed. The State may at any general election, before the expiration of corporation or personal rights, condemn all ditches and canals owned. The English law of riparian rights is abolished.

#### Against Riparian Rights.

McJunkin, of San Francisco, introduced a bill condemning the waters of Innavigable streams and the rights of persons living on the banks thereof.

#### Senator Cross' Fifth Bill.

Mr. Cross introduced a bill to amend Section 1238 of the Code of Civil Procedure, so as to apply the law of eminent domain to water and water rights.

## State Engineer's Views.

Memorandum on Irrigation, by Request of the Governor.

W. Hammond Hall, State Engineer of California, has been engaged for years upon the study of irrigation as applicable to the needs of California, and has in preparation elaborate reports embodying the conclusions at which he arrives. As these reports will not be immediately available, the Governor requested an outline of his conclusions for immediate use by the Legislature. As the document presents concisely the results of long thought and investigation, we present it with the explanatory correspondence between the Governor and the State Engineer, as follows:

STATE OF CALIFORNIA, EXECUTIVE DEPT.,  
SACRAMENTO, CAL., July 17, 1886.  
Colonel Wm. Hammond Hall, State Engineer:

SIR: I have called the Legislature to assemble in extra session for the purpose of considering certain fundamental points relating to the irrigation question in California, which are recited in my proclamation of yesterday, the 16th inst.

You have, under legislative instruction, been engaged in studying this question, and are instructed by law to report your opinion as to "the principles which ought to govern" in its elucidation. In my judgment it is essential that the results of your studies should be placed before the members of the Legislature immediately on their assembling, and in as condensed a form as possible. You will, therefore, please prepare an abstract of your opinions on the points at issue, and which are to be treated under specifications first, second and third of my proclamation, and hand it to me at the earliest practicable moment for transmission to the Legislature.

GEORGE STONEMAN,  
Governor.

OFFICE OF THE STATE ENGINEER,  
SACRAMENTO, July 20, 1886.  
To His Excellency George Stoneman, Governor of California:

SIR: Your communication of the 17th inst., calling upon me for an abstract of my report upon the irrigation question as now presented in this State, has been carefully considered, and, in response, I beg leave to hand you the inclosed brief statement. As you have suggested, I have endeavored to make it as concise and pointed as possible. To accomplish this end, many statements are left unsupported by argument or explanation or relation of facts. I can only say that I stand ready to explain them in any particular they or any of them require it.

Very respectfully,  
Your obedient servant,  
WM. HAM. HALL,  
State Engineer.

## The Irrigation Question in California.

California is pre-eminently an irrigation country, and the proper settlement of the questions now before the public on this subject is not only of vital interest to the present irrigation districts but is of primal importance to the future well-being of every county in the State.

There must be irrigation laws in irrigation countries. Such countries are, perforce, classed as "irrigation," because subjected to physical conditions, which render necessary customs and laws not desired in other climates.

There are no irrigation laws worthy of the name in California. In this respect our State is far in the rear of any other civilized country where irrigation has attained nearly so high a degree of development.

The detriment which this condition of things has been to the country—the extent of its check on advancing prosperity—is immeasurably great, and can only be appreciated upon intimate acquaintance with the physical facts and the history of our agricultural growth.

## A Basis for Systemization.

Some defined water-right policy must underlie every system of irrigation, legislation and administration.

The ownership and control of streams—whether by Governments, by the people in common, or by individuals—constitutes the starting point of all water-right systems.

In countries where irrigation is highly developed, streams and their waters are, generally, the property of the public, or of the people in common, and are under control of and supervision by governmental authorities.

In such countries riparian proprietors have certain limited privileges defined by statute, but rights to divert water from streams are conceded to individuals, communities, and companies, generally, by the Governments as representing the people.

In England, where irrigation is not a common practice, and in several of her colonies and the States of the United States where irrigation is just now struggling for legal existence, there are no general systems of public control and supervision of streams.

In England the common law virtually makes riparian proprietors guardians of streams, and these persons, companies, or corporations appealing to the courts in defense of their individual rights, protect the water-courses but indirectly.

In projecting any system for the promotion and government of irrigation and the conservation and administration of streams in California, it is necessary that we know at the outset upon what basis, as to ownership of natural water-courses, we are to proceed.

Although it is not my province officially to express an opinion as to whether or not the English law of riparian rights has become a rule

of property in California, I freely say that, in my opinion, it is a great misfortune for the State if it is the law.

This law, which accords to the riparian, or bank-owning, proprietors a property right in natural streams, has never yet been made the basis of an irrigation system, and is wholly unsuited for such application.

Irrigation in a country like California is a necessary common or public use of waters, which can only be efficiently founded upon public control of water supplies, and this, in turn, must rest on public ownership of streams.

Hence, the irrigation legislative system for California should be based upon the principle of public ownership of water-courses, and not upon that of private ownership of streams which the English riparian-rights doctrine recognizes.

Such privileges or rights as it may be just and equitable to accord riparian proprietors should be defined by statute, at least if they cannot be by the courts, and be protected by administrative action as well as by power of appeal to courts.

The custom of appropriation of waters, practiced in California, is an application of the doctrine of public use of waters. But it is not the only alternative to the system of condemnation necessary to be set up if private ownership of streams is recognized.

We must clearly distinguish between the fundamental principle of public ownership and control of streams, and the unguarded custom of appropriation, which no legislation and crude legislation has permitted and encouraged to grow up under it.

Because in the past California has permitted and encouraged unlimited and unregulated appropriation of waters is no reason why the ownership of natural streams which, by the law of nature, belong to the public, should be vested in riparian land-owners for the protection of such streams.

Because two opposing, powerful, private interests champion, respectively, "appropriation" and "riparian rights"—each affirming that the other is actuated only by private concern—is no reason why the fact should be lost sight of that the first right is founded on public ownership and is or can be subjected to public control, and that the other is founded on private ownership of streams, and cannot be thus regulated for the public good.

Once vest in the State the ownership of all water-courses and waters not rising and continuing on one piece of private property, and excepting, also, those the property of the United States, and we will have established the basis of safe and efficient water-course laws and administration, on which alone can rest an operative system of irrigation legislation.

Once vest in the individual owners of lands bordering on streams a right of property in the streams themselves and we have set up a right contrary to natural law, which must of necessity conflict with public administration, and on which an operative system of irrigation legislation cannot be founded.

The State of California has everything to fear from the private ownership of natural water-courses. She can have nothing to fear from owning and administering them herself. The people of California compose the State. Their prosperity and safety in the future depend upon the conservation and economical use of waters. It is time that the State Government were acting in behalf of the people.

The custom of appropriation of water should rest upon the principle of inalienable public ownership thereof, namely, that all things which are necessary for human use in common, such as air, running water, etc., are public; and hence, that the State, representing the people, may sanction appropriation as a means of apportioning the waters to those who can distribute them to best advantage for the public good.

The riparian right of property in streams is upheld upon the principle that all which rests upon, grows out of, or lies underneath of land belongs to the land-owner, and is subject to his exclusive use and control; and, hence, streams, inclusive of waters, resting upon lands in private ownership, belong to the proprietors thereof.

The principles of public ownership and control of streams are correlative with those of a fair measure of popular freedom from monarchical and feudal rule, and in history they have been repeatedly striven for, and obtained by measures akin to revolution.

That of private ownership of natural water-courses is the outgrowth of monarchical and feudal monopoly of the choice and controlling property interests of a country, and has everywhere been antagonized by popular opinion and resisted by popular clamor, protest and action for centuries past.

It would certainly be an odd spectacle, in this day and generation, and under a popular Government, to see the great commonwealth of California appealing to the few riparian proprietors to protect the courses and conserve the waters which drain from wide empires of public domain, leaning, under pretext of public necessity and common welfare, upon that principle of private monopoly of an element, the use of which is necessary to all men, against which the people of countries under monarchical governments have been openly fighting for generations, and which they have in notable instances set aside or abridged for the public good.

The English riparian ownership of streams

may be an established rule of property in California; but if so it will prove here a multiplication of the established curse it has been to the country where it originated.

The principles which I have said ought to govern may now be impracticable here, because the individual owners of bank lands own the waters which touch them; but it should not be understood that such ownership is a conservator of public interests or is founded on any principle of popular right.

It may be that the custom of water appropriation which has grown up in this State will, unmodified, lead to onerous monopoly of diverted waters and the unjust injury of private rights without due compensation; but this should be no excuse for welcoming a ruling which fixes as a part of our law an exclusive private property right in waters in natural streams.

We should, if possible, ground our system upon the true principle of inalienable public ownership of water-courses—channels and waters—and establish regulations which will prevent the evils of water monopoly in artificial works.

If the streams—channels and waters, whether appropriated or not—belong to the State, it is entirely within the province of the Legislature to correct any and all abuses which have grown, or to prevent such as might grow, out of the custom of water appropriation in California.

It is within the power of the Legislature to provide for the protection of equitable private rights on streams, even though riparian proprietors be denied the right of property, in the stream itself, which the English common law accords them.

It is within the power of the Legislature to provide for the complete protection of streams if the common-law property rights therein, of riparian proprietors, be denied in this State.

It needs neither the recognition of the common-law rights of riparian proprietors nor the action of Legislature, to establish a basis for the protection of navigable streams, although it is necessary to provide State administration of water-courses to check practices which insensibly damage them.

But it is not within the power of Legislature to provide for an efficient administration of streams, or operative system of water-rights, under a law which accords a property right in the streams themselves to the bank-owners.

The difference of result under the two general systems of water-course law results from this:

Under the common-law system, both public and private use of waters, and public control of water-courses, are subordinated to private ownership of streams and waters.

Under the civil-law system, all rights to streams or waters, or to their use, are subordinated to public ownership and control thereof.

Public control does not mean construction of public works, interference with private industry, or the maintenance of an army of officials. After due adjustment, a very little inspection would constitute the State's part of such a system for California.

It is not alone the irrigation interest which has made State control of water-courses necessary in California, as has been abundantly proven by experience.

The mining debris evil is an outgrowth of the common-law system of riparian rights. It never would have assumed damaging proportions under a civil law system of State supervision of water-courses. Capital would never have been largely invested in hydraulic mining if warned in time.

The time is coming when the deposit of sewage and factory offal in our streams will render them foul and even noxious, and will impair their channel-ways. This result will grow under a common-law system of riparian rights, as it has elsewhere, because it cannot be stopped by a riparian complainant until a damage is imminent, will not be stopped until it is apparent, and is always hard to put an end to under this system.

Under the English system of riparian rights invariably grow up many riparian and public wrongs which are noticed and appreciated only after it is too late to prevent and often too late to ameliorate them.

Under this system the right to protect one's self and the stream because of riparian proprietorship, is accompanied with the unregulated right to do many things to the stream which in the aggregate result in great harm.

Under a civil-law system of control of streams, all acts which may affect the stream or its waters are subject to supervision and conditions from the beginning. No seriously damaging results can accrue if the administration is efficient.

The general ownership and management of irrigation works by the State or United States, as a basis for irrigation development and practice, while it might be made to do away with the present riparian-right conflict and with those conflicts which now arise between appropriators, would insure an unending series of contests between governmental officers and the users of water, and would necessitate such an army of employes as would make the system a curse to the land.

This State or the General Government could to much better advantage own and operate railways, telegraphs, city water supply works, or even gas works, than the irrigation works in California. These latter, as a general thing,

are not and cannot be made large unified systems, which may to advantage be operated by employed overseers. The irrigation works of California are destined to number in the thousands, as they do now high up in the hundreds, and for the most part can only be profitably managed by those who use the water.

The ownership of all natural streams—channels and waters—not rising and flowing on one piece of property, and not the property of the United States, should be vested in the State, and remain forever in the State, whether heretofore appropriated or at any future time appropriated or not.

The ownership of all irrigation works and of the water-rights thereto belonging should, in each case, become attached to the lands served in irrigation.

This end is being accomplished in many cases of irrigation development in California, and may be brought about in all, under a proper system of State laws, in the course of time.

It cannot be imposed as a condition at the outset of irrigation work, without so far hampering enterprise as to be a very serious hindrance to the growth of industry—indeed, without absolutely prohibiting very many enterprises of all sizes and grades, and of the first importance to State prosperity.

Under proper State laws the interests of land-owners, irrigators, and of the public generally may be conserved, the dreaded evils of water monopoly be averted, and the desired end of control of distribution by those who actually use the waters may be accomplished, and without embarrassing or prohibiting private or corporate enterprise in the construction of new works.

Irrigation in California cannot be developed under any one form of enterprise. The physical, social and political conditions are such that great latitude must be allowed individual exertion in inaugurating and carrying out works, else our plains and foothills will very long remain unirrigated. There are not only many examples at home but a great fund of precedent abroad to substantiate this conclusion.

The State may impose conditions upon diverters, which will insure the conservation, economical use of, and accounting for public waters, and their ultimate attachment to the lands irrigated; may direct and control works in streams, so as to guard these public properties from injury; may advise upon and collect and furnish information concerning works and practice, so as to contribute to and enhance good results; but she cannot interfere with private enterprise, direct the forms of organization, specify rigidly the location or style of works (except in the stream beds and banks), or designate beforehand the lands to be irrigated by any system of works or diversion of waters, without actually paralyzing the chief and growing industry of the country.

A system of irrigation cannot be developed in a barren, desert country, as is a large part of California where irrigation is most to be desired, upon the basis of an original valuation in the lands to be irrigated, and through the offices of a community of people resident upon those lands: First, because the value is not in the land until after water is put upon it and cultivation has progressed; and second, because people cannot live and be supported on the lands until after capital, in some form, has been expended in bringing out the water.

Therefore, the use of capital in some form must, in almost every instance, precede the presence of population sufficient for the organization of "farming communities," in very many irrigation districts in California.

The acquirement of, or prior claim to, the water rights must precede the use of capital and labor in construction of works, else capital and labor are in jeopardy, and will not undertake the enterprise.

Hence, a system which necessitates the organization of "farming communities" and the acquirement of water-rights by condemning riparian rights before irrigation works can be constructed, would have doomed a large part of the present irrigated districts of California to perpetual sterility, may, if enforced, unnecessarily and unjustly return much of this reclaimed land to its barren condition, and will prevent the development of very much of that which yet lies unoccupied.

The public good in California demands that all available waters be used in irrigation.

In South California this means all waters that can be taken on the surface or brought to the surface of the ground; and the taking and the bringing should be exercised where and how the least measure of loss will be sustained. All interests unite in wanting the waters out of the streams and not in them.

In the southern part of the great central valley of the State the same rule applies, and the unity of interest in the demand for water out of the streams holds good, save only that lower riparian proprietors insist that the water be allowed to run to them so that they may divert and use it, or so that it may spread and naturally irrigate their lands.

Wherever, as in the San Joaquin and Sacramento valleys, there are navigable rivers, the availability of water for irrigation must be secondary to the requirements of navigation as interpreted by the United States authority, which alone has power to permit the abridgment of the navigable qualities of a stream.

The proposition that irrigators should be con-

tent with using the "surplus waters of streams" is not reasonable as a solution of the question in the half of the State where irrigation is most needed:

First, in South California, because there is absolutely no surplus over and above the necessities of irrigation at the time when the crops there raised most need water; second, in the southern half of the great central valley, because, if its resources are to be developed, there will be required for the purpose much more water than riparian proprietors will rank as being surplus; and, third, in both regions named, because, as understood by those who propose the compromise, it would result in the loss of enough water by percolation into stream beds to irrigate and make fruitful an empire of territory.

The proposition that the surplus waters of full and flood periods of streams flow be stored for use in irrigation at times when demand is greater than current supply, is impracticable as a general solution of the irrigation water-supply question:

First, because practicable storage sites of nearly sufficient number and capacity are not in existence; and, second, because the storage of water, as a general rule, costs more than pioneer irrigation enterprise can afford.

That there are very many good and some most excellent sites for water storage, commanding irrigation districts, is true. That some of these are being availed of, and others will be brought into use from time to time, is equally true. But with all that can or ever will be done in this way, in the southern half of the State, the waters of streams, not required in them because of greater public necessity, will be needed out of them to meet the general public necessity for irrigation.

The doctrine of riparian rights, as laid down in the recent decision of the Supreme Court of California, is opposed to the public welfare in any country, but especially in one where irrigation is a necessity, as it is in this State.

It virtually gives to the owners of stream banks a monopoly of streams, including the waters thereof; the public control and use is subordinated to the private property rights of those who hold the waters, and not necessarily for use.

The fact that these rights can be condemned by "farming communities," for use in irrigation, does not alter the case. All private property is subject to condemnation for public use, when the use can be shown as a public necessity.

There can be no question but that by nature the waters are public, and if the law of nature were followed out we should accord the public waters a primordial right to occupy channels carved by them on the face of nature, as by the hand of God, without subjecting them and their channels to the ownership of him who happens to possess the property bordering thereon, or even the soil of their beds.

In this connection we must clearly hold in view the difference between a channel and the soil which constitutes its bed and banks, for this ground may yet be in private ownership.

In the same way, public waters being taken under plea of public benefit by diversion and use, should always remain public property, subject to State control, although the channels or works into which they are taken be in private ownership.

In establishing a system of irrigation laws for California, if we are to proceed upon the basis of the English common law as applied to water courses, we must provide for the organization of all irrigation enterprises, excepting those of individual riparian proprietors, into public or quasi-municipal corporations, with power to assess or levy taxes within themselves, and to condemn private rights for their public use.

Under this system it will yet be necessary to have a State administrative control to guard the streams and administer rights, else we will have eternal wrangling as bitter as now. Yet such administration under this system of law will not and cannot prevent those conflicts which will arise between the administration and riparian proprietors, and between these latter themselves.

If we are to proceed upon the basis of public ownership of streams and waters, we must have a system recognizing the right of appropriation, but regulating diversion and use under rights thus acquired; or one providing for the issuing of water-rights by administrative authority, and for the regulation of water diversions, by such authority.

This system will necessitate local control of streams in natural water districts, and an accounting to and power of appeal to a central State authority.

Under this system, or any, in fact, it will be not only expedient but necessary to have a law for the organization of farming neighborhoods into irrigation districts with the powers of quasi-municipal corporations.

Such organizations will not necessarily be of those who own the canals, but always of those who use the waters, and would be necessarily formed only where the land-owners in a district desired organization of the kind.

That which has thus far been said relates entirely to the principles and forms which ought to underlie and shape an irrigation system in California. As to the definite measure of privilege which ought to be accorded riparian pro-

prietors, it is not a part of my duty to report an opinion.

There will, of course, always be differences of opinion on this point. The exact extent of privilege to be accorded different classes of land-owners or citizens is a subject for representative legislative determination. It is my duty only to indicate the principles which ought to govern in framing irrigation legislation, and the outline of general measures embodying such principles.

The point made and insisted upon in this memorandum, as a matter of principle, is: That riparian privileges should rest, not upon the, so-called, natural ownership of streams, but upon statutory enactment and be subjected to the same measure of control that those of the public, or other individuals, are subjected, in the matter of diversion of waters and management of streams, as they are in other irrigation countries.

Riparian proprietors should have grounds for actions at law to recover for actual damage consequent upon diversions above.

They might be given preferred rights to water for stock and domestic purposes.

They might be given authority to appropriate, and thus hold, water in streams to the extent of their actual, demonstrable, and economical use thereof.

They might be given preferred privileges of appropriation for diversion and irrigation.

In other words, they might, by statutory law, be given all the advantages which, as now claimed, the situation of their lands naturally commands for them, to the extent of actual benefit availed of by them, or to any other extent, if equitable and the people as represented chose to make the law.

But they never can be given the ownership of the streams and of the waters in an irrigation country, as is contemplated by a recent decision of the Supreme Court of this State, and have recourse by injunction against all diverters of waters, not riparian proprietors, without its proving an incalculable hindrance to the development of the country, and almost an insurmountable barrier to the inauguration of a proper public control of water-courses.

The affirmance of the riparian-rights doctrine might drive water appropriators to an opposite extreme ground in order to combat it, and in the endeavor to escape this incubus of private ownership of natural streams and waters, an unregulated right of unlimited appropriation might be set up which might lead to monopoly of waters in private canals and reservoirs. But this result may very readily be averted in legislative action.

If by legislation and constitutional amendment the streams and waters in this State—whether already appropriated or not, or appropriated at any time or not—can be assured as public property—not susceptible of private ownership by any one—and their use clearly declared to be subject to legislative control and regulation, it ought to be done; and when it is done, the foundation will have been laid for operative and equitable irrigation legislation, and administration of water-courses.

These conclusions are grounded upon a study of the fundamental principles spoken of, as applied to the facts we have to deal with in California, and I am confirmed in them by a review of the lessons afforded by countries, such as England, France, Italy, Spain, and others, where experiences with several systems have developed contrasting results.

This memorandum is necessarily general in its terms, and dogmatic in style, seeing that it is intended to announce only primary conclusions. To fully substantiate all its assertions by illustration and argument would prolong its preparation beyond the limits of time available now for the purpose. The third part of the final report on irrigation, now in preparation, of which this is a partial outline of conclusions, will deal with each point here made, in all necessary detail.

Very respectfully submitted,

WM. HAM. HALL,  
To His Excellency, State Engineer.  
GOVERNOR GEORGE STONEMAN.

ETNA SPRINGS, Pope valley, some 16 miles from St. Helena, Napa county, are mostly surrounded with fine scenery and bold mountain views. The grounds form a nearly level park, uniquely laid out, with many cottages placed in irregular yet attractive and neighborly order. The dining-room, library and assembly hall, steam and swimming baths, are kept in good order, and an air of neatness and comfort prevails about the place. The postoffice, kept by Mr. Wm. H. Liddell, proprietor of the springs, affords a great convenience to guests.

FARES TO THE ST. LOUIS CONCLAVE.—A reader of the RURAL asks if there will be a general reduction of fares to St. Louis during the Templars' Conclave, or whether the reduction will be to Knights only. We understand the reduced rates will be made only to Knights and their families and female relatives. All information on the subject may be had by addressing I. P. Allen, care of Bank of California, S. F.

A GOOD PAINT for sheet iron is made as follows: Good varnish, one-half gallon; boiled linseed oil, one-half gallon; add red lead sufficient to bring to the consistency of common paint. Apply with a brush. Applicable to any kind of iron work exposed to the weather.

## PROGRAMME.

### Twentieth National Encampment, Grand Army of the Republic.

SAN FRANCISCO, CAL., AUGUST, 1886.

#### FIRST DAY—MONDAY, AUGUST 2d.

Details from all Posts in the city to be on duty for escort and reception purposes to arriving comrades and organizations, in pursuance of general or special orders.

All of the Posts located in this city, as well as any others in this Department who may feel disposed to do so, are requested to establish headquarters in some public hall or rooms, where they may be prepared to receive and greet all visiting comrades as they arrive, continuing same through the week.

Meeting of Executive Committee of the National Council of Administration at National Headquarters, Occidental hotel.

"Society of the Army of the Potomac."

Business meeting for Army Corps Societies, 11 o'clock A. M.

Business meeting of Society of the Army of the Potomac, at 2 o'clock P. M.

EVENING, 8 O'CLOCK.

Review of the Second Brigade of the National Guard of California, General W. H. Dimond Commanding, at the Mechanics' Pavilion, at 8 o'clock P. M., tendered to the Commander-in-Chief of the Grand Army of the Republic; to be followed by a reception and grand ball to the officers and delegates to the National Encampment, G. A. R., and of the National Convention of the Woman's Relief Corps.

Reception by Mayor of city; oration, poem, etc., etc., 8 o'clock P. M.

#### SECOND DAY—TUESDAY, AUGUST 3d.

Grand Parade, 10 A. M.—Grand parade of the National Encampment, the Grand Army and all kindred societies, in accordance with special programme to be prepared by the Committee on Grand Parade.

EVENING, 8 O'CLOCK.

Parade and escort to Commander-in-Chief and Staff, National Officers and Members of Encampment, and general reception at the Mechanics' Pavilion; said reception to be tendered to the National Encampment, the Army of the Potomac, the Loyal Legion, Woman's Relief Corps and all kindred societies, with addresses of welcome by the Governor of the State, Mayor of the city and Department Commander, in accordance with a special programme prepared by the Committee on Reception.

#### THIRD DAY—WEDNESDAY, AUGUST 4TH.

National Encampment.—10 A. M.—Meeting of the National Encampment in legislative session, to continue through the day.

Meeting of the National Convention of Woman's Relief Corps, at Irving hall, commencing at 10 o'clock A. M.

By order of the General Committee.

S. W. BACKUS, Chairman.

H. BARTLING, Secretary.

## Fertilizers.

The use of fertilizers is constantly increasing in California, but not as rapidly as the interests of producers would warrant. Many held that California soils were different from other soils, and that they had some mysterious way of enriching themselves from air and water which no other soils possess. This is a mistake. It is true that they gain from these agencies, but not enough to compensate for the drain by steady cropping. Of course, some soils need replenishment sooner than others; but it is a fact here, as everywhere, that sooner or later our soils need feeding with fertilizers. Our orchardists, vineyardists and gardeners learn the lesson first, and the receipts from their crops allow them to make investment in fertilizers, which will pay them good returns.

For years the rich fertilizers made from bones and other offal have been shipped out of the State to enrich distant fields. This process should be stopped and there should be a good home demand for all material of this kind. Our advertising columns contain the announcement of the California Bone, Meal and Fertilizer Co., which is now engaged in preparation of fertilizers, and offers them to the farmers of the State. They have issued an interesting pamphlet, which contains description and an analysis of their special manures adapted to different crops, with prices, etc. This pamphlet should be generally read, and can be had by addressing the company at their office, 116 California St., S. F.

## Fruit Drier on Exhibition.

One of the Meeker Sun Fruit Driers, with all the latest improvements suggested by the experience of last season, is now on exhibition at the factory, 5th and Bryant streets, on and after Monday, Jan. 25th.

As now arranged we consider it much the most perfect and economical of any of the various driers to which the attention of fruit-growers has been called. Its various productions are the perfection of purity and excellence, and at the same time the most economical in cost of production. Fruit-growers are invited to examine and test the drier and the fruit prepared in it. Those using this drier last season realized handsome profits on their fruit.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

## Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their Scientific Press Patent Agency (S. F.) from week to week and year to year.

## Cheap Money to Loan on Grain.

FARMERS, don't pay 10 per cent. S. D. Hovey, 330 Pine St., San Francisco, has \$500,000 to loan on grain in warehouse, at 6 per cent per annum. He loans \$18 a ton on wheat. Write him.

FROZEN MILK IN FEVER.—Dr. E. J. Janeway, a New York physician of some note, acting on a suggestion from a colleague practicing in the country, has given frozen milk to patients whose stomachs did not tolerate ice-cream, and speaks highly of its use in fevers.

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.

TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information. JESSE D. CARR, President. EDWIN F. SMITH, Sacramento.

formation.

## SHEEP AND SHEEPWASH.

### LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to

\$1.25

PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scab in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,

San Francisco, Cal.

UNIVERSITY OF THE PACIFIC,

Between San Jose and Santa Clara.

(Founded in 1851.) Twenty-two Professors and Instructors. Courses of study embrace the regular college curriculum, four years' Conservatory of Music course, Post-graduate course leading to degree of Ph. D., Business course, and complete Preparatory courses leading to and connecting with College Classes. All classes open to both sexes. \$250 per year includes ALL REGULAR EXPENSES. Fall Term begins Aug. 11th. Address, C. C. STRATTON, Pres., SAN JOSE, CAL.

STOCKTON

Telegraph Institute  
and  
NORMAL SCHOOL.  
College.

Open day and evening for both sexes. Expenses less than one-half the usual rates. Excellent board. Private families from \$5 to \$10 per month. Address, J. C. BAINBRIDGE, Principal, Stockton, Cal.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

THIS COLONY

Has been subdivided into 20-acre lots with convenient ROADS AND DITCHES on the land.

Situated 1½ miles N. W. of SELMA (a fast-growing Railroad town 15 miles S. W. of Fresno and the second in the County) and 2 miles S. of Fowler, also a Railroad town.

IT IS FIRST-CLASS

**Fruit,  
Vine, and  
Alfalfa  
Land,**

Some of it being specially adapted to Gardening. It has

SUPERIOR WATER PRIVILEGES,

Having a main Canal 60 feet on the bottom, running through the land and all necessary main distributing ditches, making it a very desirable location for a Colony, as its

WATER AND RAILROAD FACILITIES

Cannot be surpassed in the County.

**TO BE SOLD CHEAP,  
AND ON EXTREMELY EASY TERMS TO ACTUAL SETTLERS.**

**HOME SEEKERS!**

DON'T MISS THIS OPPORTUNITY!

Correspondence solicited and lands shown free of charge.

L. SHARPE, Selma, Cal., or O. J. WOODWARD, Fresno, Cal.

**San Diego County! El Cajon Rancho!**

16,500 acres, known as the Jarvis Tract, situated 13 miles from San Diego, surrounded by high hills, protected from winds and fogs—the most equable climate in the world—rich soil and lovely surroundings. Will be offered as a whole or in subdivisions, from 10 acres upward, at prices according to desirability, from \$10 to \$75 per acre, part cash, balance on time. The wonderful Raisins and Olives grown in this valley command the admiration of every one. Water from 6 to 12 feet. No irrigation, and Fruit and Raisins cured by solar heat. All the Semi-Tropical Fruits raised to perfection.

Also 1000 acres, the Smith Tract, adjoining, now in grain.

G. W. FRINK, General Manager Pacific Coast Land Bureau.

618 Market St., opp. Palace Hotel, and 15 & 17 Post St., San Francisco.

DR. JOSEPH JARVIS,  
Riverside, California.

R. J. PENNELL,  
San Diego, California.

TRINITY SCHOOL,

1534 MISSION ST., SAN FRANCISCO.

CHRISTMAS TERM OPENS

Monday.....August 2, 1886

REV. E. B. SPALDING, Rector.

SACKETT SCHOOL,

Oakland, Alameda Co., Cal.

A Preparatory School for Young Men and Boys. Next Term will commence on Monday, July 19, 1886.

Healthful location, pleasant home, and thorough School. Send for circular.  
D. P. SACKETT, Principal.

**GRAIN BAGS! GRAIN BAGS!**

SEND TO

R. C. GALLEGO & CO.

FOR PRICES,

310 California Street, San Francisco.

BAG BROKERS.

R. C. GALLEGO, late Inspector of Bags for San Francisco Produce Exchange.

California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. ANGEL'S LIVER PILLS cure rheumatism and headache.

## S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 28, 1886.

There is a fair trade in leading staples, but without notable change in values. Sales of wheat are reported in the interior up to an equivalent of \$1.30 in the city, which is rather above the city rates. Reports of lessened production, as shown by harvesting, continue, and general opinion is changing notably as to the probable amount of available supplies for the year.

The following is the latest by cable:

LIVERPOOL, July 28.—WHEAT.—Firm. California spot lots, 48 to 50 cts; off coast, 38s just shipped, 34s, nearly due, 35s; cargoes off coast and on passage, firm; Mark Lane Wheat and Maize, firm. English country markets, strong; French quiet. Wheat in Paris, turn dealer; quantity of Wheat on passage to Continent, 600,000 qrs.; Wheat and Flour on passage to U. K., 2,000,000 qrs.

## Foreign Review.

LONDON, July 26.—The *Mark Lane Express*, in its review of the British grain trade, says: "A large acreage of the best cereal crops has been damaged by rain. The supplies of native wheat are much restricted, causing values to improve 6d to 1s. The sales of English wheat during the past week were 27,294 quarters, at 31s 6d, against 32,254 quarters, at 33s 11d during the corresponding week of last year. Flour is steady. Foreign wheats are lifeless. Buyers do not show the slightest anxiety as regards the future. The prices of American red wheat favor the buyers. There were 11 arrivals and 5 sales; two cargoes were withdrawn and four remained, one of which was American. In to-day's market wheat was of slow sale, and prices were not improved. English flour was scarce and prices were against the buyers. Foreign flour was dull and neglected. American corn was 3d dearer. Round corn was steady, but prices were no dearer."

## English Wheat Markets.

LONDON, July 26.—The wheat market has rather a weaker feeling.

LIVERPOOL, July 26.—The wheat market is quiet and lower to sell.

## London Agricultural Seed Trade.

MONDAY, July 12, 1886.

Messrs. John Shaw & Sons, seed merchants of 37 Mark Lane, E. C., write that the quietude usual at this season continues to characterize the market for farm seeds. Some little business is taking place in new French lettuce, lower and more tempting rates having now come to hand. Mustard and Rape are without quotable variation. Cloverseed, in the absence of transactions, call for no remark. Less money is asked for Hempseed, but Canary keeps fairly steady. Orders still come to hand for Blue Peas. In Feeding Linseed there is no alteration of importance.

## New York Wheat Market.

NEW YORK, July 25.—Wheat closed heavy at a slight rally, with net declines of 3/4c for August at 84 1/2c, 10c for September at 85 1/2c, October at 86 1/2c, and November at 87 1/2c, 11c for December at 88 1/2c and 1 1/4c for January at 90c.

## Hops at the East.

NEW YORK, July 22.—The first bale of the new crop of hops, known as "Palmer Seedlings," grown at Cooperstown, N. Y., was received at the Produce Exchange by John R. Scott & Co. yesterday, and was bought by the Long Island and New York Ale-brewing Company at 50 cts per pound.

UTICA (N. Y.), July 23.—The *Herald* prints to-day reports from 10 hop-growing counties of the State, touching the present condition of the crop. From every quarter comes the same story of devastation and the same predictions of failures. None of the writers estimate the yield at more than half the usual average, while most of them put it at one-eighth to one-fifth. All through the hop-producing region it is evident the vine has gone to pieces in the low grounds, while upland yards are not so badly off, owing to the later growth of the vine. Taking the whole territory into consideration, it is estimated the crop will not exceed one-third the usual yield.

CANAJOHARIE (N. Y.), July 27.—The last ray of hope entertained by the hop-growers throughout New York State vanished this morning. During the night a heavy rain occurred. The growers thought that this would have a good effect, but instead, the yards which yesterday appeared green and healthy, are now black and utterly ruined. Many growers destroyed their yards a week ago, and their example will now be followed generally. Where one week ago it was thought that a quarter of an average crop would be harvested, now it is believed that not a pound will be picked. Growers are very much disheartened, and their predicament is only equalled by that of the hop-pickers. Good 1885 hops now bring 30c per pound against 10c six weeks ago.

NEW YORK, July 25.—There has been no change in the situation. Brewers buy only for current needs, and holders sell only at prices somewhere near what the market can be expected for. In the critical condition of the crop no one is inclined to indulge in wild speculation. Some contracts for 1886 hops are said to be still entered here at 30 cents, but parties considered good, will not name less than 40c. Reports from Central New York state that the hop yards are looking worse, with the loss increasing. The *Union Herald* estimates the crop at from a third to a quarter of a full yield, and places the crop of the country as follows: Coast, 50,000 bales; New York, 45,000; West and New England, 15,000. The normal yield is 200,000 bales, of which 125,000 are needed for home consumption. Coast, crop of 1885, common to choice, 20 to 25 cents.

## Eastern Wool Markets.

NEW YORK, July 25.—Trade is slow, chiefly because holders are unwilling to offer any concessions

At the same time, manufacturers are loth to invest until fully satisfied with the outlook for the product. Prices remain high, with the demand chiefly for medium wools, on which some gain has been made. Among the sales were 23,000 pounds of spring California at 41 cents, and 40 bales of California at 20 1/2 to 21 cents. The market is more active, manufacturers having shown greater interest. Prices are steady, holders making no concessions. There is a sharp call for medium wools, which are fully 20 per cent higher than at the same time last year. Fine wools are quiet, though unwashed wools—California and Territories—are in greater favor. California wools range from 10 to 25 cents, Oregon and Washington Territory from 18 to 27 cents, Nevada from 19 to 22 cents, Wyoming from 18 to 27 cents. Among the sales were 397,000 pounds of California spring and Oregon at 19 to 21 cents. The Philadelphia market is strong and sales are fully up to the average. Holders are independent about realizing except on their own terms. Among the sales were 2000 pounds of scoured California at 52 cents, 10,000 pounds of scoured California at 54 cents, 15,000 pounds of scoured California at 56 cents and 50,000 pounds of California at 23 cents.

NEW YORK, July 27.—Wool is firm and fairly active. Domestic fleeces, 27@36¢ lb; pulled, 14@35¢; Texas, 60@25¢.

PHILADELPHIA, July 27.—Wool is steady at unchanged prices.

BOSTON, July 27.—Wool is firm with good demand. Ohio and Pennsylvania N fleeces, 33@34¢ lb; N. X., 32@33¢; Michigan N fleeces, 32@33¢; N. 1 Wools, Ohio, 37@37 1/2¢; do Michigan, 36@37¢; medium unwashed Wools, 25@26¢.

## California Fruit at the East.

CHICAGO, July 22.—A special train of eight cars, with a large consignment of California fruit, arrived to-day, and the shipments will be distributed among the following firms: Earl Bros. receiving three cars, Butts & Fry two, and Thacker Bros. three. The fruit was mostly in good condition. The prices were low, owing to a cut made by Porter Bros. Bartlett Pears sold at \$2@2.50, Plums at \$1.50@1.85, Peaches at \$1.50@1.90, according to their condition; some in poor order, not bringing more than \$1; Nectarines, \$1.50@2; Grapes, \$1.50@1.90. Oranges, which are rather late in the season, are quoted at \$3.75@4.75, according to quality.

## Local Markets.

BAGS.—Purchases have been more free and rates are slightly advanced. It is reported that 10,000 Detrick Wheat Bags, 22x36, in perfect order, were sold by auction Tuesday at 6 1/2c; balance of offering of 50,000 withdrawn. The market is apparently firmer, as there are no bags offering under 7 1/2c.

BARLEY.—Various descriptions have advanced considerably since our last report, the best lots rating 7 1/2c higher per cbl. There has been a reaction, however, and to-day the market is softer. We note sales on call to-day: Buyer 1886—100 tons, 94 1/2c; 100, 95c. Seller 1886—500 tons, 88; 900, 88 1/2c. No. 1 Brewing, buyer season, after September 1st—200 tons \$1.17 1/2c cbl. Buyer season—100 tons, 87 1/2c. Buyer 1886—200 tons, 94 1/2c; 200, 94c. Buyer 1886, after August 1st—100 tons 94c. Seller 1886—100 tons, 88c; 200, 87 1/2c; 200, 87 1/2c; 100, 87 1/2c; 400, 87 1/2c; 200, 87c. No. 1 Brewing, buyer season, after September 1st—100, \$1.17 1/2c; 100, \$1.17 1/2c.

BEANS.—There has been a slight improvement in most kinds.

CORN.—Corn holds last week's advance, and Nebraska has advanced again to \$1.15. Choice California corn is out of sight.

FEED.—Bran is \$1 per ton higher. Hay rates are as follows: Alfalfa \$5@9; Barley, \$3@8; Oat, \$2@6. Wheat, \$6@13 1/2 per ton. Trade is fair and supplies moderate.

HOPS.—Old Hops have advanced to \$15@17 1/2c and new are generally quoted from 25 to 28c. It is telegraphed from New York to-day July 28th: "We hear that a prominent brewer, who had a representative in the hop district, offered 34c for 1886 Pacifics, laid down here, while 30c, free on board, on coast is the highest price actually touched thus far." It is evident that the New York crop is in shocking shape as shown by dispatches printed elsewhere.

OATS.—New Oats are being well received, owing to a bare market. Black Oats are selling much higher than quoted last week.

WHEAT.—Wheat is selling moderately as described elsewhere. To-day call sales were as follows: Buyer season—700 tons, \$1.23; 200, \$1.22 1/2. Seller 1886—1700 tons, \$1.22; 500, \$1.22 1/2; 600, \$1.21 1/2 per cbl. Buyer season—200 tons, \$1.22 1/2. Buyer 1886—200 tons, \$1.22 1/2. Seller 1886—100 tons, 1.21 1/2; 500, \$1.21 1/2 per cbl.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JAMES C. HOGAN—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
Geo. McDowell—San Luis Obispo and Santa Clara Co's.  
FRANK W. SMITH—Idaho and Montana.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000 from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

Misfit institutions bring grist to the mill. Muller's optical depot, 135 Montgomery St. x

## Market Information.

## Bags.

Sales the past week have been unusually large to consumers at a wide range in prices. It is claimed that the bulk of outside holdings has been sold, and consequently, values are on the advance. It is reported that the balance of the San Quentin bags were sold this week at 6 1/2 cts; now jobbed out at 7 1/2 cts. Heavy sales, in lots, are said to have been made in the interior to farmers direct, at prices shaded on asking rates here.

## Cereals.

London cables have given the past week two advances in wheat in the English country markets, aggregating 1s to 2s per quarter, or about 5 to 10 cts per cental. The advance was brought about by cold, wet weather, and reported damage to the crop. Although English-grown wheat advanced on an average about 7 1/2 cts, yet foreign wheat only went up in sympathy 2 cts.

Telegraphic and mail advices report that estimates of the wheat crop of this country have been reduced until as low as 390,000,000 bushels is given by a good authority. Advices also concur in saying that the exports from the Atlantic seaports will be unusually heavy.

The corn crop of this State promises to be considerably larger than last year; but the crop of the United States will be below last year's, owing to the drouth at the West.

It is claimed that western farmers will market their grain early, owing to their being pressed for funds, and consequently exporters and millers are bearing the wheat market so as to buy cheap. The same tactics, it is said, are being pursued in this State through the Call Board by mining stock speculators, aided by a few grain dealers. It is claimed they will cross orders and otherwise fool with trading on call so as to keep prices down until they have bought the bulk of the farmer's crop, after which they will send prices up. It is claimed by well-informed parties that over three-quarters of the sales recorded on call are cross-orders, so as to crush out small operators and keep prices down.

Throughout the week, wheat, barley and oats have held to strong prices, with an advance obtainable for parcels to meet pressing wants. Lower charters for ships and quite a number of vessels, having laid about up, caused higher prices for wheat, while barley advanced under strong eastern buying to ship before an advance in overland freights. Old oats did better under very light stocks and a fair demand, while new continued firm and steady.

The bulk of new oats received so far this season are poor, and would not command attention were it not for stocks being exhausted.

It is claimed by well-informed parties that more barley has been purchased this month for shipment East than was purchased the entire season of 1885-86.

Farmers not being free sellers have disappointed exporters and ship-owners, and consequently ships have accepted lower charters, with the rates weak at the decline.

Wheat closed very strong for sample parcels, but barley and oats under heavier supplies favored buyers.

Press telegrams from England gave a firm wheat market, without an advance, but private cables report an advance obtainable for cargoes for prompt shipment.

## Dairy Product.

Gilt-edged butter continues in demand at from 21 to 22 cts in consignment lots with an advance of 1/2 ct. obtainable in jobbing lots from stores. But the stock and also receipts of second and third grade butter are very heavy, with dealers reporting considerable trouble to place consignments even at concessions on the low prices quoted. Cheese continues to hold to strong prices, with a good home trade reported. At the close to-day gilt-edged butter sold at 23 cts to 24 cts by the box.

Receipts of Eastern eggs have been very heavy, and as they have been forced on the market, the price of fair to good California eggs had to be sold low, but strictly choice have held up. It is now stated that the shipments of Eastern eggs have stopped, owing to an advance in the supply market. Private telegrams from shipping points East quote the price 17 cents, which is more than they sell for here.

Poultry of all kinds except ducks were strong and in good demand up to Tuesday, with an advance obtained for choice, large, well-conditioned stock. On Tuesday, under free receipts, dealers were more offish, and the market was weaker, although prices were maintained. The consumption is all of 30 per cent more than at the beginning of the present month.

Retail poultry dealers have an association for mutual protection and also to keep, so said, prices of poultry reasonably low. Recently they notified poultry commission merchants they would not buy from a firm that sold to a retail dealer not in the association. It is claimed that by this action strong buying competition is kept down and therefore not as high prices paid as would if all were allowed a fair chance.

## Fruits.

Blackberries have continued to arrive freely throughout the week, but prices were well maintained up to Monday, when they fell 50 cents a chest. Several canners contracted early in the season at \$3 a chest for from 1000 to 2000 chests each.

Apricots are going out, yet prices do not improve as canners will not pay over four cents for the very best, down to three for fair.

Peaches have been coming in more freely, allowing canners to buy the more choice varieties at from 80 to 90 cts a basket. On Monday only 1200 baskets came in, which caused an advance to be asked, but yesterday nearly 4000 were received when prices went off again. The local trade is increasing, but then to the canners, dealers look to market the bulk received.

Strawberries and raspberries have moved slowly throughout the week at lower prices. The trade is not running on them, consequently canners have it their own way.

Figs, if choice, and in good condition, found buyers at 75 cts for large boxes, but those in poor condition sold at almost any price.

Apples held up to good prices up to Monday when freer receipts sent prices off. The quality is improving.

Grapes are coming in more freely, but the bulk

received are hard to sell, owing to their being too green. The market is weaker and lower.

Nectarines sell steadily at \$1 to \$1.35 a box.

Currants come in quite freely for the time of the year, and sell at from \$3 to \$4 a chest, first price by the chest, and the last named by two or three drawers at a time.

Pears are coming in very freely, but as the bulk is under contract to canners, choice varieties hold to strong prices.

Sweet apples are about unsalable. A consignment is now on the market at 50 cts without finding buyers. Choice apples were in good demand for shipping, and fetched fully \$1.75 a box.

To-day the following fruits closed weak: Peaches, apricots, raspberries, blackberries, strawberries, grapes; and the following closed firm: Canning apples and choice pears.

## Hops.

The market presents very few features worth note. Buyers talk indifferent, yet they are taking all contracts for new crop delivery at a range of 20 to 27 1/2 cents per lb for fair to extra choice. European advices report the crop prospects in England and also on the continent good for about an average yield to the acre; but it is also stated they will yield the new crop with a lessened stock compared with last year. The light stocks combined with a crop reports from New York brought on a large speculative consumptive demand both in England and Germany, which sent prices to a good round figure.

## Live-stock.

Beef, sheep and lambs are unchanged. The supply offering on the market is not excessive, and consequently choice commands full prices. Buyers are talking hogs down and will not make full bids. It is claimed that when the packing season commences, grain and dairy-fed hogs will rule higher than at present. For the block there is only a moderate call. In cows there is nothing doing, so far as can be ascertained. The horse market is in a contradictory condition. Some dealers report a good inquiry for work horses, while others report no demand. For horses for general use there is a fair inquiry, with matched animals fetching good figures. Single-lotters are scarce and wanted.

The following are to-day's meat prices: Beef—Stall-fed 7 1/2c @ 7 3/4c lb; grass-fed, extra, 6 1/2c @ 7c; first quality, 5 1/2c @ 6 1/2c, second, 5 1/4c @ 6c; third, 4 1/2c @ 5 1/4c. Calves, small, 8@9c; larger, 6 1/2c @ 7 1/2c lb. Mutton—Ewes, 4 1/2c; wethers, 4@5c. Lamb—Spring, 6@6 1/2c lb. Pork—Live hogs on foot, 3 1/4c @ 4c for grain and dairy fed; 2 1/2c @ 3c for soft; dressed, 6@7c for hard, and 4@5c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

The *Grocer and Country Merchant* of July 24 contains the following sales of live-stock for the week as follows: San Francisco Stock Yards—749 cattle (large); choice, \$4@5; 813 cattle (medium); fair condition, \$3@5; 213 cattle (mixed); rather thin, \$2@3; 891 calves, \$3@5, \$5@6, \$9@10, \$13@15, \$15@17.50, 6245 sheep, \$2@3, \$2@3, \$2@3, \$3@4, \$3@4, 2896 lambs, \$1.50, \$1.75, \$2.00, \$2.15, \$2.35; 2487 hogs, 3c, 3 1/2c, 3 3/4c, 4c. Oakland Stock Yards—243 cattle (large); fair, \$4@5; 141 cattle (medium); good, \$3@4; 206 calves, \$3@5, \$4@5, \$5@6, \$6@7, \$14@15; 938 sheep, \$2@3, \$2@3, \$3@4, \$3@4, \$2@3, 621 lambs, \$1.50, \$1.75, \$2@3, \$2@3; 387 hogs, 3 1/2c, 3 3/4c, 4c, 4 1/2c.

NOTE.—Since putting the above in type, an advance of 1/2c per lb has been made on beef; and it is also reported that an advance of 1/2c in sheep and lambs is under contemplation by wholesale butchers.

## Vegetables.

Onions have ruled low throughout the week under heavy receipts and a strong selling pressure.

Potatoes ruled weak and low up to Monday, when an improved feeling set causing the market to close firmer with a slight advance followed on yesterday. Choice, well matured, suitable for distant orders, are given the preference. Considerable arriving are either wormy or rooty, which operate on their being placed quickly at satisfactory prices; some sold as low as 50 cents.

String beans continue slow, owing to canners' indifference in buying above 1 1/2 cents for the more choice varieties.

Cabbage and carrots are in liberal supply and weak, but beets and parsnips continue firm and steady.

Egg plants, green okra and green peppers have ruled slow throughout the week, with quotations hard to obtain correctly.

Cucumbers have fluctuated slightly, but as soon as an advance of 5 or 10 cts was established heavy receipts broke them again.

Green corn under a good demand and lighter receipts have been steadily advancing. After this week, it is claimed, receipts will be extremely light up to about the middle of August, when late corn will come in. The crop of late corn is unusually large.

Tomatoes are coming in more freely, causing lower prices to rule. Yesterday over 1500 boxes came in, and broke prices until it was difficult to sell choice at over 30 cts for large-sized boxes. Canners buy at from 20 to 30 cts a box.

## Wool.

Receipts are light, as are the stocks in this city, which cause lessened trading owing to the poor selections to offer buyers. Sales have been made the past week at extreme prices. Some medium to fine merino, clean, healthy and light, was placed at as high a figure as 28 cents per lb. It is also said that some crossbred has also sold well up. Buyers and sellers are very reticent regarding the higher prices and it is only in an indirect way they can be learned. Eastern and foreign advices continue to report a strong market, with still higher prices looked for before the close of the year.

## Miscellaneous.

Beans are strong at a slight advance, particularly white varieties. The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way	318,834	227,481
In port, disengaged	52,064	100,519
In port, engaged	51,651	16,562

Totals 422,549 344,562  
The above gives a carrying capacity as follows:

1886, 675,126 short tons; 1885, 551,139 short tons, increase over last year, 124,987.  
Choice to extra choice hay is in light supply, with the market firm.  
Bran is higher, as are middlings, with a strong closing.

Calf Feeders

AND WEANERS

For Rearing Stock by Hand.

Both Proved Successful and Indispensable.

Funk's Calf Nipple is just as important for calves as the nursing bottle is for children. The saliva fluid is necessary for proper digestion of the food, and without the Nipple the calf drinks too fast, takes the milk in bulk and causes bloating, scours and indigestion. The Feeder was invented to raise better calves with less trouble. No air swallowed, no fingers chewed, no ears sucked. It teaches the calf to feed from the pail without assistance. The Nipple always connects with the milk and the calf will soon wean itself. Price, 75 cents; post-paid, 85 cts.

Rice's Patent Calf Weaner,

AND SUCKING-COW MUZZLE,

Prevents Calves and Cows Sucking Themselves or Each Other.

Habits most injurious to the animal and costly to the owner. It is no hindrance to either eating or drinking, does the animal no injury, has been thoroughly tested, is used and endorsed by the best stock raisers in the United States and England, approved of by the Royal Society for the Prevention of Cruelty to Animals, and acknowledged by all to be the best thing ever made for the purpose.

PRICES.—For Calves, 50 cents; post-paid, 55 cents. Yearlings, 75 cents; post-paid, 80 cents. Full-grown animals, \$1.00; post-paid, \$1.12.

TEBBETS' IMPROVED MILK TUBE,

Has proved an entire success, for the relief and permanent cure of Garget, or stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Farmers are well aware that cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the Spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the result of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal. We guarantee them to be made of COIN SILVER. A single tube answers for an entire herd, and is cheap insurance against loss. Price, 75 cents each, post-paid.

Edson's Cream Tester.

A DAIRYMAN'S PRACTICAL INVENTION.

Consists of a frame holding six glass tubes graduated at the sides of the glass so as to show the per cent of cream in freshly-drawn milk. The frames are substantially made of wood, carefully graduated, and the glasses easily removed for cleaning. Actual tests prove that common or grade cows give equally as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to have common stock do this, they must be bred from deep and rich milkers, the bull as well as the heifer, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise bulls from. It is calculated that 20 pounds of milk will make one pound of butter, but instances have been known where 12 pounds made one of butter, thus showing that it is not the cow that gives the largest flow of milk that produces the most butter. It should be our aim to get a large flow of very rich milk. How should we do this? By testing our milk, and only keeping and raising stock from cows that give not less than 15 per cent, and it would be better to say 20 per cent of cream. By this method, you would soon have a dairy of cows that would be a pleasure as well as a profit to you. Price of Testers, \$1.00 each; Large Size, \$2.00. ADDRESS

G. G. WICKSON & CO., 38 California St., San Francisco.

THE PACIFIC ASYLUM,

STOCKTON, SAN JOAQUIN COUNTY, CAL.

PRIVATE ASYLUM for the Care and Treatment of Mental and Nervous Diseases.

The Proprietary Institution called THE PACIFIC ASYLUM, where the Insane of the State of Nevada have been kept for several years, was opened as a PRIVATE ASYLUM for the care and treatment of Mental and Nervous Diseases, on the 10th of August, 1882, the Nevada patients having been removed to the new State Asylum at Reno. The buildings are capacious and comfortable, having been constructed for the accommodation of over 200 patients, and they are pleasantly situated in the suburbs of Stockton, and are surrounded by attractive grounds of 40 acres in extent, with cultivated gardens and pleasant walks. Its advantages over public institutions in facility of admission and procuring extra accommodations, if required, are obvious. For terms and other particulars apply to the proprietor and Superintendent, DR. ASA CLARK, PACIFIC ASYLUM, STOCKTON, CAL. ASA CLARK, M. D.

MACHINE-MADE

"Standard" Shot-Gun

Sold by all Dealers in Ammunition

DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two-shoes (instead of one, as in machines of other manufacture), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction. By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented. For full particulars, apply to DANIEL BEST, 513 Fifth Street, Oakland, Cal.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE,  
by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE  
STUMPS AND TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with  
roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.  
In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder  
not strong enough.

For particulars how to use the same, apply to

BANDMANN, NIELSEN &amp; CO., General Agents

GIANT POWDER COMPANY,

SAN FRANCISCO, CAL.

## The American Churn

Excels in the art of Churning,  
Washing, Salting and  
Working Butter.

THE AMERICAN IS PERFECTLY CYL-  
INDRICAL IN FORM, leaving no possible  
opportunity for cream to stick to corners (as  
is invariably the case with other than round  
churns); thus works easily, rapidly, and will  
not make streaked butter. There is no  
partially churned cream mixed  
with the butter to make it streaked  
or impair its keeping quality. The  
dasher follows the radius of churn body  
loosely while the blades give the cream a  
rapid counter-current to and fro movement,  
agitating the cream thoroughly and making  
granular gilt-edge butter in from 2 to 10  
minutes.

TRY AN AMERICAN CHURN.

We Guarantee Satisfaction.

And will send on trial to responsible parties

**Dewey & Co.'s Scientific Press**  
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY  
presents many and important advantages as a  
Home Agency over all others, by reason of long  
establishment, great experience, thorough sys-  
tem, intimate acquaintance with the subjects of  
inventions in our own community, and our  
most extensive law and reference library, con-  
taining official American and foreign reports,  
files of scientific and mechanical publications,  
etc. All worthy inventions patented through  
our Agency will have the benefit of an illustra-  
tion or a description in the MINING AND SCIENTIFIC  
PRESS. We transact every branch of  
Patent business, and obtain Patents in all coun-  
tries which grant protection to inventors. The  
large majority of U. S. and Foreign Patents  
issued to inventors on the Pacific Coast have  
been obtained through our Agency. We can  
give the best and most reliable advice as to the  
patentability of new inventions. Our prices  
are as low as any first-class agencies in the  
Eastern States, while our advantages for Pacific  
Coast inventors are far superior. Advice and  
Circulars free.

## A Heroine of the War.

One of the actors in the late war, whose form is not seen in the ranks of the veterans, and whose name is not made prominent in the lists of distinguished attendants upon the Encampment of the Grand Army, is the quiet lady whose portrait appears upon this page. She is in truth a heroine of the war and deserves a share in the glory which justly pertains to the country's defenders. Her work was quiet and unostentatious, but it was nevertheless full of patriotism and self-sacrifice and noble accomplishment, as many of the soldiers who are with us this week can testify. We have deemed it fitting to mention her as deserving a portion of the honors which the popular heart is now so freely pouring out upon the veterans, and we are sure that her deeds will find no warmer appreciation than in the thoughts of RURAL readers.

One of the noted figures of the War of the Rebellion, who has since made her home in California, is the lady who was known among the soldiers as "Mother Bickerdyke," and who did as much as any single individual could do to alleviate the sufferings of the sick and wounded. She is a true heroine, having sacrificed her comfort and her time for years in carrying on the benevolent work she commenced at the beginning of the war. She followed the armies to the field with the sole intent of caring for and nursing the soldiers who might become injured or sick while on duty.

Mrs. Mary A. Bickerdyke's father, Hiram Ball, was a soldier in the war of 1812. She was born in Knox county, Ohio, July 19, 1817, and was married to a widower, Robert Bickerdyke, in 1847. They resided in Cincinnati until her husband's failing health induced him to emigrate with his family to Gainesborough, where he died in 1853. Mrs. Bickerdyke supported herself and her two younger children by working in the hospitals.

She was thus well prepared for her noble work in the war. During the spring of 1861 she went to Cairo to take charge of sick and wounded soldiers and also to distribute sanitary stores. After this she was constantly laboring in the military hospitals and on the battle-fields until the end of the Rebellion, her course having been with the great Western armies.

The places where she did her most noted work were Fort Donelson, Shiloh, Savannah, Corinth, Memphis, Vicksburg, Huntsville, Chattanooga and Missionary Ridge. During the Georgia campaign she was at Resaca and Kingston in the hospitals. At Altoona Pass and Marietta she was in the field hospitals, and was at Atlanta during the whole siege. The following January she went to Wilmington to care for our prisoners, and to Beaufort, and from thence to Washington. She was engaged in work for soldiers for several years after the war.

The labors of Mother Bickerdyke were highly appreciated by the surgeons, and among the soldiers she was honored with the greatest esteem and affection. Many of the prominent generals testify to her energy, faithfulness and great value in her chosen sphere. In all the prominent sanitary organizations during the war she was well known and appreciated. A woman of great courage, strong common sense and physical strength, she was enabled to go through scenes that most women would have shrunk from.

A good portrait of her is shown on this page.

The great good she did in her field and hospital work, thousands of soldiers remember and appreciate. For some years past she has resided in San Francisco, but not in such circumstances as her patriotic work deserves. She has a small pension which is inadequate to her wants. The story of her life has been published at this office, giving an account of her work and adventures during the war, and is offered the public at the remarkably low price of one

## At Rest.

It is with feelings of deep regret that we chronicle the death of Martha D. Ewer, wife of Warren B. Ewer, of the firm of Dewey & Co., who died July 31st, at her residence, 1516 Folsom street, San Francisco, at the age of 51 years. Her death is a sad surprise, for though she had been ailing for some time she was believed to be hopefully convalescent. Mrs.

[MRS. MARY A. BICKERDYKE.]

dollar per copy. We are confident it will be a work which many will prize, not only as a memento of the stirring scenes of the war, but also as the history of one of the few women who took a prominent part in it in the field. Moreover, the purchase of the book will aid this heroic lady in her old age.

THIS WEEK'S "RURAL."—We drop back this week to the regular size of the RURAL, 16 pages, in sympathy with the prevailing holiday spirit of the week and to allow our employees an opportunity to participate in the various exercises. There is in fact very little doing except in the way of celebration. We have had visits from a large number of RURAL subscribers who have availed themselves of the visit to the city to bring us kind words of cheer and something else rather harder and heavier which is calculated to brighten the printer's pathway. To all such, thanks.

THE electric lighting plant for 40 lamps has been completed at Tulare.

Ewer was a native of Massachusetts, having spent her girlhood days in the neighborhood of Martha's Vineyard. Her companion, an aged mother, son, sister and brother mourn her loss. She was a member of Temescal Grange, Patrons of Husbandry, Ivy Chapter No. 27, Eastern Star, and the Knights and Ladies of Honor. Mrs. Ewer possessed in a remarkable degree the happy faculty of making a sunny home and winning and retaining the confidence of many friends. Her sweet and amiable disposition, cheerful manners, kind and generous impulses, will cause her loss to be deeply felt in the circle in which she moved.

Mrs. Ewer's funeral was held from her late residence on Monday afternoon, August 2d. The services, which were conducted by Rev. N. L. Rowell and Rev. Dr. Pendleton, were very impressive. A fitting tribute was paid to the character and worth of the deceased. The concourse of mourning friends, the beautiful floral offerings, the earnestness of the sympathy which was tendered to the bereaved ones, were all sig-

nificant of the fact that home and society had lost one whose life has been precious to all who came within its influence.

## Tuesday's Pageant.

A more sublime spectacle than the grand parade and review on Tuesday has never been witnessed in San Francisco. The Knights Templar parade of 1883 was more gorgeous in symbolism and showy regalia, more brilliant in military evolutions, but never were the streets crowded with such a vast mass of eager humanity, made more sonorous with bursts of martial airs, and the sight of the old grizzled veterans of the war, with their bullet-riddled flags, awoke sentiments of gratitude and admiration akin to those of religion in sacredness. The day was charming, a genial ocean breeze fluttering the moving forest of banners. All the principal streets were profusely decorated with bunting, streamers, badges and evergreens, and from every window and housetop floated thousands of smaller flags and signs of welcome.

The figures of Washington, Lincoln, Garfield and other noted soldiers were seen everywhere, together with battle-pieces, camp scenes, soldiers on picket duty with such inscriptions as "Welcome," "Welcome to the Brave," "Welcome to California." To one looking up Market and Kearny streets the flags, streamers and pennants seemed to cover the streets. The superb triumphal arch on Market street added greatly to the imposing occasion; for elaborateness and beauty of historic designs it has probably never been surpassed on the continent. The reviewing platform, erected at Lotta's fountain, was occupied by the commander-in-chief of the Grand Army and many distinguished gentlemen. The reception given to Generals Sherman and Logan must have been extremely gratifying. As their carriages passed along the line the cheers that had been before very enthusiastic, became almost deafening. Sherman's genial face beamed with smiles, and the more grave and somber features of Logan showed a blossom of lively appreciation.

"Marching Through Georgia" seemed to be the favorite tune, and along some parts of the line the veterans sang the soul-stirring air, hundreds of spectators taking part. It is estimated there were 12,000 persons in the procession. The torch-light parade in the evening was simply indescribable. The whole heavens seemed aflame with rockets, Roman candles and bombs, while the flashing torches and glare of red fire gave a weird appearance to everything. No one who witnessed this splendid spectacle can help feeling that in this mammon-hungry, commercial age, patriotism is more than a name, and the memory of the gallant heroes of the Union will be held in everlasting honor.

THE LEGISLATURE.—Since our last report the Legislature has continued its committee work on the various irrigation measures which we described last week. It has also disposed of the senatorial problem by the election of Williams to fill out Gen. Miller's term. It has attended the Encampment in San Francisco, and as we write on Wednesday is in session again in Sacramento, and ready, we presume, to pursue the water problem to some conclusion. Next week we expect to give more interesting information on this subject.

OVER 450 tons of fruit have been shipped East from Sacramento this season.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Placer County.

EDITORS PRESS: Having lived in this county nearly five years, and having thereby become somewhat conversant with its respective features, we are induced under peculiar circumstances to reader a few brief but impartial statements thereof, which, it is confidently expected, will be of interest to those who have not as yet had the opportunity of visiting the foothills and the mountain slopes of this flourishing region. Time and space being so limited, we shall endeavor to describe only those features which are practically important. The various topics that might be mentioned would respectively constitute a series of interesting papers.

In discussing the physical and industrial characteristics of the counties of California, many writers are inclined to be enthusiastic in their descriptions, and in consideration of this fact it may be well to remark that Placer county stands in the front rank. Sketches thus written are sources of valuable information, especially to those whose object it is to seek homes, investments or speculations. The wonderful resources developed, the material improvements brought about, the educational advantages, the numerous real estate speculations and many other profitable enterprises in which one may embark, together with varieties of delightful climate, are the chief wonders of California, descriptions of which are frequently received by people abroad with considerable allowance for exaggeration; although, hearing of these striking features, thousands of persons from various parts of the globe are continually immigrating here to seek homes, health and wealth, the anticipations of whom are realized only by earnest application to active pursuits. Certain individuals erroneously assert that it is over-estimated. Such assertions are evidently erroneous, for the simple reason that California, generally speaking, is not only what it is represented to be, but is far beyond any descriptive powers hitherto manifested, especially in the capabilities of its various industries and the unsurpassed salubrity of its climate. During the past half century the State has proved itself very great in many respects; and we entertain no doubts that our hopes will be more than realized in the future.

## Topography of Placer County.

As regards the geographical position of Placer county, we observe, by reference to the map of California, that it is nearly a parallelogram, extending northwest and southeast about a hundred miles. It is bounded by the counties of Nevada, Sutter, Sacramento and El Dorado. The topographical features of this section of the State, being traversed by numerous ravines and diversified by undulating hills, present a scenery rarely equaled. The chief industries are mining, granite-quarrying and horticulture, which, within the last score of years, have been very extensively developed. Mining operations are not so flourishing as formerly; but other industries are apparently attracting much attention. Many years ago placer mining was the leading feature along the foothill section, especially in the vicinity of Newcastle, where the old-time mining camps of Ophir, Virginia City and Gold Hill are located. And there are honest old miners who actually believe this the veritable "Ophir" from which King Solomon procured the gold for his temple. It is really amusing to hear the old settlers, who are yet indulging to considerable extent in placer mining operations, tell of the good times they once enjoyed. The vicissitudes which have been experienced by many experts in this pursuit are objects of interesting reflections. Having neglected the unparalleled opportunities offered in this department of labor, many who are now financially poor in their old age are very much regretting their lack of discretion; although it may be well to mention that a comparatively few persons, who were far-seeing enough to grasp these opportunities, have become the owners of handsome fortunes. Others have lost thousands of dollars, the reason for which might be assigned, chiefly, perhaps, by continuing to embark in risky mining speculations.

## The Thrifty Mongolian.

Many of these ravines have of late years been diligently prospected, more thoroughly, perhaps, by Mongolians than any other people, who are true models of patience and perseverance, especially in this pursuit. It is observable that the Chinese always live in hope. Whatever object is contemplated to be accomplished, they are determined to persevere in spite of all discouragements, though their anticipations may not be realized. An experienced miner, with whom we are intimately acquainted, recently related an incident which occurred to him many years ago in one of the mines up in the Sierras. He had purchased a claim for so much, but, within a few weeks, seeing no indication of its advancing in value, he sold it to a Chinaman for a mere song. In a very short time the investment of the latter resulted in a handsome fortune, and, as might naturally be supposed, it was not long before its owner had found his way to the "Flowery Kingdom," to enjoy the rest of his days in affluence.

This is only one of the many instances of the kind which one might mention.

## Quartz Mining.

Quartz mining is for the most part carried on in the lower section of the county, there being several mills between Penryn and Newcastle. The quartz mill which was recently erected in the vicinity of the latter village deserves mention. It was built at an expense of many thousand dollars by Mr. William Lawrence, of Newcastle. In visiting this locality a few weeks ago, we were informed that the owner is a practical expert in this line of business, the result of which has very much to do with the success of his enterprise. There were then about 12 employes at work. It was reported that work in the Julien mine, about half a mile distant, would be resumed immediately.

## Immense Deposits of Granite.

Between the towns of Rocklin and Auburn, along the Central Pacific Railway, which runs in a northeasterly direction, the soil partakes, to a more or less extent, of granite formation, production of which is to be seen in the construction of colossal buildings in San Francisco. This region of country is apparently inexhaustible in its granite resources. There are three varieties of this stone in common use in California for building purposes, namely, the blue, the black and the white granite. The quality is so excellent that it is not surpassed, if indeed equaled, by that of any other part of the continent. During the last 20 years it has been extensively used for various purposes, especially in San Francisco, and the effect is good, as may be seen by the practical tests repeatedly made of its superior quality.

## Horticultural Inducements.

The horticultural wealth of the foothills forms a very important feature, being a matter of interesting discussion among tourists and travelers. The interval which has elapsed since the completion of the Central Pacific Railway through this part of the country has wrought very important changes in the various departments of horticulture, and to those who have lived here during that space of time it is quite astonishing to realize the magnitude of this prosperity; although, great as the developments hitherto brought about may seem, this industry is destined to become much greater. No other part of California has offered greater inducements to actual settlers, and on investigation it will be found that many have been far-seeing enough to grasp the golden opportunities thus offered by this Government to secure cheap and permanent homes. Although the greater portion of Government land has been taken, there remains a vast acreage of tillable railway land susceptible of profitable cultivation, which may be obtained at various prices, according to the quality of the soil and the location. In speaking of these lands, reference is more particularly made to the foothill section, which occupies about one-third of the county. Opinions of scientific men have been expressed concerning the fertility of its soil and its adaptability to the growth of cereals, fruits and vegetables. Judging from the rapidity with which these fruit farms have covered this part of the country within the last few years, it will not be very long before vast tracts will have been converted into beautiful homes of enterprising orchardists.

## The East a Great Consumer.

The products shipped in large quantities to Eastern markets find ready sales at highly remunerative prices, the demands therefrom having rapidly increased, and the facilities to meet these demands will in the near future be amply supplied. It is a fact worthy of mention that those who have been permanently and earnestly engaged in this industry have finally acquired a competency. Really, it is wonderful to contemplate what can be accomplished in any pursuit by industry and perseverance. These requisites are universally conceded as being among the chief elements of success, and without them it is impossible to attain any prosperity in life.

## Representation at the Fair.

That Placer county is in the foremost rank for horticultural resources there is not the slightest doubt, even to the most skeptical observers, as the fact thereof has just been satisfactorily demonstrated by the quality and the variety of its productions exhibited at the Citrus Fair. This is a prophecy and a fulfillment of the future of this county. Pears, oranges, plums, peaches, etc., are from year to year produced in great abundance. Alfalfa yields from four to six crops every year, but it requires a certain amount of irrigation. Notwithstanding the exorbitant price charged for the conveyance of water, any capital invested in this industry becomes highly remunerative.

## Price of Land.

No definite information can be given regarding the prices of these lands, as it depends almost exclusively upon the quality of the soil and the location. Hence, the better way in determining the true value comes only within the range of personal investigation. A piece of land in one locality may be purchased very cheaply, while, perhaps, a few miles distant another piece, containing an equal number of acres, may be obtained only at an exorbitant price. But notwithstanding the selections which have already been made, there remains within this county thousands of acres of land

unsurpassed for horticultural purposes that may be obtained at very moderate prices. In some districts, lands are rapidly advancing in price, owing chiefly to rapidly-increasing population and the adaptability of the soil to the cultivation of so varied a line of products. And it is equally true that capitalists are availing themselves of these opportunities. In view of this fact, we may cite one of the many instances which have come even within the scope of our own observation. An acquaintance of ours had recently purchased half a section at so much per acre, but he little thought that within a few months thereafter his investment would have realized to him twice the amount of money laid out. Most assuredly, he was delighted with his success, and those to whom the property had been offered previously on precisely the same terms are very much chagrined at their shortsightedness. Any capital judiciously invested in lands becomes highly remunerative, although, of course, there may be rare exceptions.

The reason that real estate speculations are steadily increasing is mainly attributable to the fact that prices are tending upward, differing from mining stocks and other risky enterprises that for 20 years have been so detrimental to the prosperity of this State. In rendering these statements, it is not the object of the writer to indulge in what may be construed as an exaggeration, but simply to express candid views.

The cultivation of the orange is carried on with success, and they grow luxuriantly, producing fruit of delicious flavor; and to those who have never seen such large oranges a description of them would seem almost fabulous. About Christmas, when this luscious fruit is matured, the golden yellow, blended with the dark green foliage of the orange trees, presents a sight beautiful beyond description.

Grape culture is no less interesting to visitors who are not accustomed to see the vines as they grow here. The immense clusters and their profusion surprise those not accustomed to see this viticultural wealth.

Placer county contains about 15,000 inhabitants, most of whom are representatives of American and English nationalities, and the flourishing population which constitutes a cosmopolitan character is being augmented by immigrants from various parts of the globe. Owing to sundry inducements offered in many departments of labor, this number is destined to become much greater. Those who are inclined to industrious habits will do well here, as this region is yet but sparsely settled, considering the extent of its square miles.

## The Climate

Is exceedingly salubrious, as shown by the appearance of the inhabitants. Another evidence of the fact is, that 90 per cent of the children reared within its limits are perfect types of health. During the summer months it is warm in the valleys, the thermometer at times ranging as high as 100° in the shade, and even higher. But notwithstanding this, the nights are delightfully cool and pleasant, thus rendering sleep refreshing; and if it were not for the genial and invigorating breezes that one enjoys, such intensity of heat would be almost unbearable. And even when it is really warm, those who have been inured to this extreme of climatic influences are seemingly not in any manner affected by it. For nearly two-thirds of the year the temperature is almost uniform, and very appropriately has the remark been applied that it is "identical with that of Southern Italy." It is a fact worthy of mention, that during the time it is intensely cold in some parts of the continent in winter, out-of-door laborers find it here to their advantage to pursue their work in their shirt-sleeves. Owing thus to the climate, many of the well-to-do business men of San Francisco find it advantageous to visit these foothills for a few weeks in the summer for recreation, and on returning to the city are prepared to resume their labor with renewed energy. During the summer season, Auburn, Blue Canyon and Lake Tahoe are special resorts of hundreds of invalids, and it is gratifying that many individuals who were apparently in advanced stages of consumption have found relief. Being so conducive to health and comfort and to all other requisites that are deemed indispensably necessary to render life enjoyable, they attract also the admiration of hosts of pleasure-seekers. Auburn, the county seat of Placer county, and which, judging by the healthful appearance of its residents, might be termed the sanitarium of the Sacramento valley, is one of the oldest towns in the State. It is very beautifully situated at an altitude of 1350 feet above sea level, with a population of 1000, the town proper extending about a mile below the railway station, sheltered by lofty hills and approached by a long narrow ravine which runs in a southwesterly direction toward the villages of Ophir and Newcastle. In many instances it compares favorably with any other town on the Pacific Coast. The immediate vicinity is dotted with fine orchards and handsome villas, the sites of which only a few years ago were densely covered with brush and chapparal; and to persons who have inhabited this part of the country during that interval it seems almost impossible to realize the magnitude of the improvements made in so short a time. In reference to its public buildings, suffice it to say they are at all times in good repair. As the Courthouse is, in all respects, well adapted to the administration of the governmental requisites, so also the county hospital is equally well conducted for

the accommodation of those who are homeless, decrepit and aged. On investigation, we find that this hospital has a capacity for 70 patients, 15 minus that number being the average attendance. The money required to defray all expenses sums up about \$10,000 per annum. The entire property embraced within 60 acres of land is roughly estimated at \$20,000. There is no doubt that the object of so prominent a structure is of inestimable value to impecunious invalids and those to whom railway accidents occur. Many other costly buildings, including churches, schools, hotels, etc., of architectural beauty, speak well for the taste of this community. The Putnam house, which is decidedly the finest and most imposing caravansary in this section of the "Golden State," was, if we have been correctly informed, built at the expense of \$15,000.

In traveling through this part of the country, one cannot fail to observe the beautiful panorama of the Sacramento valley—scenery so grand, so indescribably picturesque. How wonderfully the majestic mountains with their lofty peaks and highly romantic features form a panoramic combination of unrivaled beauties!

Such scenes are simply beyond description. Down in the distance the State Capitol which looms up 350 feet can be seen very distinctly, and while catching a glimpse of the surrounding country, one is absorbed with the grandeur of the Sierras on the one hand and the beauty of the valley on the other. DAVID GRIFFITH.  
Penryn, Cal.

## FRUIT MARKETING.

## California Fruit at the East.

The following paper was read at the meeting of the State Horticultural Society by Dr. W. P. Gibbons, of Alameda:

From personal observations in Boston, New Haven, New York, Philadelphia, and elsewhere, I am satisfied that the time which elapses between the shipping of fruit in California and its distribution at retail stations is so long that the essential qualities of the fruit are obliterated to such an extent as to render it undesirable for table purposes. Moreover, the retail prices are so high as to amount to prohibition among those who would otherwise be regular consumers. This may probably be owing in part to its being packed too green and in part to the manner of packing. Thus, in Boston in June, California cherries were retailing at 25 cents a pound. Currants at the same rate. Cherries were second rate in quality and condition and would not be marketable with us. Small apricots 50 cents for about 30, and 20 cents a dozen for medium size. In Philadelphia, apricots of small size were selling three small ones for five cents, and five cents apiece for medium sized ones. The small ones had no flavor whatever, and yet they were considered a great delicacy in some quarters. A retailer in Philadelphia told me that a box of apricots cost him \$2.50. He was selling them three for five cents. In Pennsylvania, Delaware, and Southern New York there is no crop of plums; the curculio destroys the fruit. At a first-class hotel table was a dish of California fruits—dwarfed Bartlett pears, apricots and plums of fair size. The latter were acid as vinegar and without flavor; the apricots not much better.

The Middle States receive their early fruits a little later than the arrival of California shipments, from the South. A fruit dealer told me he thought the time was near when California fruit would thus be forestalled, as it came to the market in an inferior condition; that the more Northern States would consume more California fruit if greater care were exercised in selecting the best varieties. In Washington city I saw California fruit I have no doubt that the demand would consume all of our extra supply, if the factors of quality, shipments and prices were properly regulated. As it now is, our eastern friends pay exorbitant prices for very indifferent products of our orchards. A gentleman in New Haven told me that he paid 20 cents for one California pear, and he thought that it was worth the money. Diversity of opinion exists as to our pears; many complain of their being coarse-grained. There is no reason why the best variety for shipment should not be cultivated in our State. There is increasing attention being paid to the cultivation of the grape in eastern States. Along the banks of Seneca lake a gentleman informs me there were thousands of acres now planted out, and the acreage was increasing. It was so further east and south. The Catawba flourished best. The vines are planted 8 to 12 feet apart and trained along wires—not headed in as in California vineyards. The dampness of climate renders this kind of cultivation necessary. California can always maintain her supremacy in the cultivation of this fruit.

Our Black Tartarian cherries are spoken of in very favorable terms. A Californian may know the fruit of his State at a glance when in good order, by the neatness of packing and the beauty of the article. Eastern cherries come to market principally in baskets, and they sell by the quart in most localities. The past season was unfavorable for cherries in New York, owing to cold and rainy weather. Further south and west the crop was good.

Observations lead to the final conclusion: That in many cases the desire to realize from fruit induces orchardists to ship some varieties

so green that by the time it comes to the consumer it has lost its characteristic flavor.

That second-class winter pears should not be cultivated for transportation.

That the problem of placing fruit on Eastern markets and distributing it in such manner and at such prices that everybody could afford to eat it, has not yet been fully solved.

**CALIFORNIA FRUIT IN CHICAGO.**—Chicago, July 28th: The weather here for the last three or four days has been extremely warm, and to-day it was very hot, the thermometer ranging from 90° to 95° in the shade. Fruit from California, which is said to have been packed during cool weather, arrived here in very good condition. A special train of eight cars, heavily loaded with California fruit arrived to-day, Earl Bros. receiving three cars and the rest going to numerous other firms in the city. Prices are ruling very low, as it is reported that Porter Brothers received a shipment of 10 cars containing California fruit from the California Fruit Union, and are selling pears as low as \$1.90, while other firms are trying to get from \$2 to \$2.50. This is the first shipment of California fruit that this firm has received by special train, and it is thought that these shipments by the Fruit Union to Porter Bros. will not be satisfactory, as it takes several days for the union to make up the train, which would naturally necessitate the arrival of a large portion of the fruit in poor condition. So much fruit coming to one firm in one day must always have an unfavorable effect on the market. Peaches are quoted at \$1.50@1.75; plums, \$1.50@1.75; Fontainebleau grapes, not all in good order, 1@1.75, according to quality.

**THE DISPLAY IN NEW YORK.**—A New York telegram, dated Aug 1st, quotes from the *Tribune*, as follows: California is giving a fine display of choice pears, plums and peaches in the fruit stores. The Pacific offering is magnificent and acceptable to those who do not want much change out of a dollar. Pears turn out large and handsome, and now include many choice varieties, with the Bartletts leading. Peaches, for so tender a fruit, stand the long journey well. In plums there are rich table varieties and the showy purple McLaughlin. This is not named after the great jockey, but its originator, who is here at present, thinks there may be something in the name in getting ahead.

## SHEEP AND WOOL.

### The Mohair Industry.

"The weight of all with our last hope relies."—MILTON.

**EDITORS PRESS:**—In response to the request expressed in your issue of July 24, 1886, I submit the following as my ideal of the model mohair goat ranch of the future in California.

The first essential of our model mohair goat ranch is climate. Two hundred miles inland lies Angora, 4000 feet above the level of the sea. My information is that Angora has a very peculiar climate and surroundings, and my belief is that the mohair goat is the natural product of the climate and soil of Angora. Hence, it follows that the nearer we come to placing the goat in a similarity of conditions, the easier it will be to succeed. Having located the camp within a southerly exposure, our first care should be to procure a nucleus of heavily-fleeced stock bred to the factory standard. This nucleus is to supply the males for propagation. At this time it will not be necessary to take the common goat for females. Neither would it be judicious to use heavily-fleeced nannies, for it would be altogether too expensive to obtain them on the factory standard; and if they are not on the factory standard and are heavily fleeced, they might be prepotent over our sires and transmit a fleece that would be worthless. Both these extremes can be obviated by selecting females that have no determinate characteristics of their own from the edge of the mohair zone. Mark me, it is a doctrine of mine that the common goat is a degenerate fleece goat. Now, what will take place when these nannies are moved to the mohair zone? In the first place, there will be a strong tendency to regain the fleece that had been rejected generations before. And secondly, they will have no power to resist our sires. Consequently in two generations we would obtain a fleece of first and second quality, in all probability the first quality predominating. While it would be necessary to keep the choice breeding stock within inclosures, the rest of the stock should be unrestrained, and a hunter should be placed upon the range to protect them. Open sheds should be built at suitable places, surrounded by corrals, and a part of the duty of the hunter should be to salt the goats within the corrals. The principal value of these corrals would be to inclose the goats at shearing time. The principles of selection and rejection should never be lost sight of, and such females as do not breed well should be noted and disposed of for mutton. When the stock would accumulate on the range the wethers and wether yearlings should be drafted and placed upon an adjacent range, so as not to interfere with the breeding females. Of course, a record of the transactions of the whole business should be kept and a register of the breeding stock, and

there is little doubt but when the enterprise would be established considerable profit would be derived from sales of the surplus breeding stock to persons starting similar enterprises, as well as the lease of males to others who would keep (say) a couple of hundred head of nannies, and who had no desire to be the owner of the male. As I began with Milton, I will end with him: "Who can (still) advise may speak."

MARTIN KIRBY (73).

Darrah, Mariposa Co.

## THE FIELD.

### Barley Review.

**EDITORS PRESS:**—This season's barley crop in California is estimated as follows:

Counties.	Centals.
Alameda.....	340,000
Amador.....	205,000
Butte.....	90,000
Calaveras.....	305,000
Contra Costa.....	270,000
Fresno.....	315,000
Kern.....	120,000
Los Angeles.....	1,250,000
Mariposa.....	80,000
Mendocino.....	60,000
Merced.....	340,000
Monterey.....	110,000
Napa.....	35,000
Sacramento.....	210,000
San Benito.....	180,000
San Bernardino.....	950,000
San Diego.....	275,000
San Joaquin.....	420,000
San Luis Obispo.....	1,320,000
San Mateo.....	120,000
Santa Barbara.....	330,000
Santa Clara.....	1,215,000
Santa Cruz.....	190,000
Siskiyou.....	73,000
Solano.....	180,000
Stanislaus.....	330,000
Sutter.....	120,000
Tulare.....	540,000
Tuolumne.....	40,000
Ventura.....	710,000
Yolo.....	430,000
Yuba.....	130,000
<b>Total.....</b>	<b>10,060,000</b>

Although this is the largest crop grown in this State, yet had it not been for the north winds last month and also such large quantities cut for hay, it would have been all of 60 per cent larger than it now foots up.

The following table gives the crops for several years past:

Year.	Centals.	Years.	Centals.
1869.....	6,147,000	1878.....	7,475,000
1870.....	3,699,000	1879.....	8,250,000
1871.....	3,643,000	1880.....	7,360,000
1872.....	3,679,000	1881.....	5,070,000
1873.....	5,107,000	1882.....	4,560,000
1874.....	5,500,000	1883.....	5,060,000
1875.....	4,525,000	1884.....	8,100,000
1876.....	5,970,000	1885.....	5,900,000
1877.....	3,900,000	1886.....	10,060,000

The stocks in the State on the first day of July for several years past, as returned to the Produce Exchange, were as follows:

Years.	Centals.	Years.	Centals.
1886.....	114,850	1881.....	595,000
1885.....	608,150	1880.....	908,000
1884.....	640,000	1879.....	806,505
1883.....	820,009	1878.....	147,598
1882.....	162,000		

The stocks do not take into consideration the invisible—only the visible stock. It is claimed that the invisible—that held on the farms—was quite large each year, except this year, when farmers sold very close owing to the high prices ruling. It is claimed by reliable parties that many farmers who have carried a considerable quantity in their granaries had to buy toward the close of the season.

The highest, lowest and average prices for the past 12 months were as follows:

Year.	Average.	Highest.	Lowest.
July.....	\$1.16	\$1.22½	\$1.10
August.....	1.29	1.32½	1.20
September.....	1.29	1.37½	1.25
October.....	1.39½	1.50	1.30
November.....	1.35½	1.40	1.30
December.....	1.32	1.42½	1.22½
January.....	1.31	1.35	1.27½
February.....	1.27½	1.32½	1.22½
March.....	1.26½	1.32½	1.22½
April.....	1.23½	1.37½	1.27½
May.....	1.30	1.32½	1.27½
June (new).....	87½	1.00	76½

The average price by seasons was as follows:

Season.	Price.	Season.	Price.
1882-83.....	\$1.25½	1884-85.....	\$ 97 1-10
1883-84.....	94½	1885-86.....	1.28

The arrivals of new barley in this city and price brought were as follows:

Year.	Date.	Price.	Year.	Date.	Price.
1870.....	June 19.....	\$1.20	1879.....	June 30.....	75
1871.....	" 12.....	1.57½	1880.....	" 24.....	68½
1872.....	" 6.....	1.40	1881.....	" 21.....	90
1873.....	" 5.....	1.10	1882.....	" 12.....	1.65
1874.....	" 9.....	1.45	1883.....	" 25.....	95
1875.....	" 20.....	1.35	1884.....	" 9.....	90
1876.....	May 30.....	90	1885.....	" 16.....	1.25
1877.....	June 30.....	1.55	1886.....	May 27.....	1.10
1878.....	" 11.....	80			

The exports of barley the past crop season were as follows:

Destination.	Centals.
British Columbia.....	3.487
Central America.....	79

China.....	7,600
Hawaiian Islands.....	84,304
Liverpool.....	8,103
Mexico.....	134
Overland.....	21,888
New York.....	95,536
Panama.....	51
Russian Possessions.....	540
Tahiti.....	4,074
<b>Total.....</b>	<b>219,886</b>
Same time in 1884-85.....	480,654
" " 1883-84.....	399,271
" " 1882-83.....	264,597

By deducting the exports from the crops, it will be seen that the consumption of this State is very large; for, in addition to our own crop, Oregon sends us considerable each year. Taking it as an average, the consumption has been the past four seasons, by adding the Oregon receipts to the California, about 300,000 tons a year. This season, it is claimed by well-informed parties, the consumption will be from one-third to one-half more than the average. This is based on the very large increased number of work-horses sold to contractors on railroads, and also for farm use. Not only this, but there is marked increase of horses reported in this city and Oakland. For exporting there has been so far an unusually good demand, and it is claimed that the exports will be the largest ever before known, particularly to the Eastern and Western States of brewing grades.

S. F., July 23, 1886.

J. R. F.

### New California Harvesters.

California easily leads the world in the invention of complete harvesters. Our readers are familiar with the several styles which are manufactured at Stockton, and which have this year harvested quite a respectable fraction of our wheat crop. We have also had allusions to still newer devices, and we consider it our duty to keep our readers well informed of the remarkable progress which is being made in cheapening wheat production, for this seems to be the one great power which will enable us to retain our hold upon the wheat markets of the world.

We gave some weeks ago a description of the Berry steam harvester, brought out in Tulare county. We find in the *Visalia Delta* a fuller account of this machine which will be read with interest:

Mr. Berry first conceived the idea of making such a machine five or six years ago, and has been working on the plans ever since, until the completion of the harvester under consideration. He has been operating combined harvesters that run by horse-power ever since they first came in use, and has had 20 years' experience with all kinds of farming machinery. During the last 12 years he has resided in Tulare county, and has been engaged in farming and harvesting. He began late last spring to put the harvester together. All the work was done on the ranch except some special casting.

The huge machine is 38 feet wide and of about the same length, making it nearly square. It can only operate in a level country like the San Joaquin valley, but as the different sections are hinged together the whole is quite flexible, and does excellent work in rough hog-wallow lands, missing less wheat than the common header or harvester, notwithstanding the great width of the knife.

The harvester has two engines, and they are mounted independently of all other machinery. The main engine, which runs the traction power, moves the harvester along, and also works the header knife when desired. This is a 25-horse power Mitchell-Fisher engine, made in Oakland. The smaller engine is a 6-horse power Westinghouse, which runs the separator. Both take steam from the same boiler. The latter gives a steady motion to the thrashing machinery without being affected in any way by the motion of the machine. The main driving wheels, which are five and a half feet in diameter, with faces two feet broad, are placed under the boiler, near its center, so that they may carry, and not be made to pull, nearly all the weight of the engines, and the principal weight of the header as well. This enables it to move over soft, sandy ground very easily. The steering wheels, which are two and a half feet in diameter, with six-inch faces, are placed behind, with proper gear. An endless chain communicates with a wheel, where the steersman sits, in the front part of the engine and just back of the header-knife, by means of which power is transmitted to the rudder-wheels. The steersman has perfect control of the machine, and turns it in any direction, or round a sharp corner, without any difficulty.

The right or outside end of the header frame is supported by a wheel; the left is attached by hinges to the main body. The separator is attached to the left side of the front part of the body in the same way, and is supported by a wheel on the outer side. A tank cart, for supplying water to the boiler, is also attached to the right side, in the rear. When empty, an other full one takes its place, while the one detached is hauled by horses to the pumps or tanks to be refilled.

The header-knife operates on the same principle as that of any mowing machine or header, while over it revolves a reel similar to that of

the ordinary reaper. The machine moves fast or slow as the grain being cut stands thick or thin on the ground. The knife can be lowered to the ground or can be raised two feet from the ground, and works with the same motion at any elevation. It is 22 feet long and cuts a swath of that width.

The stalks of the grain, after being cut, of any desired length, fall on a draper back of the knife, which carries it to the thrasher, on the left of the machine, where a feeder passes it on to the cylinder, where it goes through an ordinary separator. The straw is separated from the chaff, and passes alone over a chute which carries it to the platform near the furnace, where it is used for fuel. When the supply on the platform is sufficient, the chute, which works with a hinge, is raised, and the straw falls to the ground. The use of straw for fuel reduces the cost of operating the machine considerably. The stack is tall and has a free exhaust, and no damage has been done in consequence from sparks. There is less liability to loss from this cause than is the case with a stationary thrashing outfit planted near a large strawstack and using wood or coal for fuel. The use of a large exhaust fan to assist the draft, and the tall stack, reduce the chances of loss by fire to a minimum. The *Tulare Register* also mentions that around the furnace water is constantly kept spraying and everything is kept wet until there is little or no chance of scattering fire in the rear.

The separation of the grain and chaff from the straw has been described. The chaff and grain are separated at the end of the grain-carrier by a contrivance of Mr. Berry's, and are conveyed to sieves. The chaff is blown out on the ground, and the grain passes into an elevator and thence into the sacks, which are sewed up when filled and dropped in the field.

The harvester can travel from place to place without working the header-knife or the thrashing machinery, or the header can be set in motion if so desired. The power to run the traction wheels is taken separately, and no other part of the machine interferes when it is in motion. The harvester can also remain stationary beside a stack of grain, and run the thrashing machinery or separator alone, and can change position with much less trouble than the ordinary thrashing outfit.

Back of the engine and over the rudder wheels is a rack in which straw is deposited at night, that the supply may be sufficient for getting up steam in the morning, which takes 20 to 30 minutes.

One team is employed to haul water for use in the boiler and one to follow the harvester and pick up the sacks of wheat. These are the only horses employed. The men engaged are the engineer, fireman, steersman, header-tender, sack-sewer, water-hauler and sack-hauler. With these seven men 50 acres can be headed and thrashed in a day, and the grain piled in stacks as fast as it comes from the harvester. Thus the wheat standing in a field of 50 acres in the morning could be left piled in sacks in the evening.

Mr. Berry's actual cash outlay for running the harvester, in his own field, not taking into account allowance for wear of machinery and interest on value of same, amounts to about 40 cents per acre. And he can make a profit on harvesting for others at one dollar per acre, whereas the lowest rate charged by other harvesters is two dollars. It requires 25 to 30 horses to run other harvesters, and they have to be fed in addition to paying for harvesting. The expense for each animal is about 40 cents a day. The cost of Mr. Berry's whole machine is about equal to the value of the horses or mules required to pull the others. Mr. Berry's harvester will also cut just about double the amount each day that the others will. And another advantage, in case any accident should occur to the machinery, is that there are not a large number of idle horses to feed. About the same number of men are required on both kinds of harvesters.

Mr. Berry has about 3000 acres of his own to cut this year. Most of this is on ground as level as a floor. But, as said in the first part of the article, the harvester works well on uneven land, having been tried in the hog-wallow region near the foothills. The knife is raised or lowered readily, so that in going over these successive elevations and depressions it can be gauged to suit.

Much careful study was expended on the machine before the final plans were made, and every one of the many difficulties that presented themselves seems to have been overcome. It works well in every way. It moves over the ground with the greatest ease. It heads the standing grain and thrashes it well, and from experiments made elsewhere it may be said that it saves more grain than the old way of heading, stacking and thrashing. It has now been in constant use for two months, and has given complete satisfaction in every particular. Such a harvester as this can only be used, of course, in an even country like this. But even in this immense valley, where grain growing is the principal agricultural industry, many of them could be used with profit. It is a very important invention, and will assist materially in lessening the expense of harvesting the wheat and barley crops.

**SUNKEN TIMBER.**—When vessels or timber sink to great depths in the ocean the pressure is so great that the water is forced into the pores, and the wood becomes too heavy to rise again. It is this pressure that makes it possible for divers to descend to any great depth.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Bro. Webster on the Water Question.

Bro. J. V. Webster writes for the *Patron* a letter on the present great issue in his usual trenchant style. We quote as follows:

In all this controversy the chief end sought to be attained by the anti-riparianists and their busy agents is to make it appear that if the decision of the Supreme Court is sustained irrigation will be at an end, and that all the sparkling waters of the State must inevitably run waste to the sea.

It is rather late in the history of the world to make many converts by misrepresentation, and he who endeavors to foist a fraud upon his neighbor is usually the first to bite the dust.

The use of the waters of the State for the irrigation of its dry lands is inseparable from the prosperity of the commonwealth. To let flow our rivers to the ocean as they now go, is to banish the fondest hopes of our glorious State's future.

No man in his senses will undertake to maintain such a proposition. No man endowed with sufficient reason to come in when it rains will seriously consider a proposition so absurd.

No! The land and water must be united, that its progeny may feed and shelter, not only this generation, but millions yet unborn. That not water, but wealth of its products, shall run to the sea in an everlasting stream.

The Legislature of the State has upon its hands this great responsibility of equitably wedding water and land—not in the interest of corporations, but in the interest of the whole people.

A railroad may be so exorbitant in its charges for transportation as to bar its use by the producer, nevertheless he has his old facilities of hauling or driving his products to market; but with the waters of the State under the control of corporations, there is no alternative left the producer in the irrigated districts but to pay the price demanded for water or perish!

The *Post* and *Examiner* advocate packing the Supreme Court in order to get a decision favorable to the anti-riparianists. When Stanford, Crocker, Gould & Co. were packing the Supreme Court of the United States, with the persons of Stanley Matthews and Judge Field, in order to get a reversal of the court's decision in the "Granger cases," how these same spasmic virtue papers did howl with indignation; now they are advocating the same thing in an aggravated form.

Being without soul or conscience, nothing better could be expected of monopoly corporations. Papers printed for the reading of the general public ought to be consistent and easy with their railings, at least show the semblance of honest purpose. It will be well for every man who is not trying to rob somebody else to keep an eye on the influence these papers have on their party nominations this coming fall, and fall down hard on the party that dares leave off its State ticket either of the Supreme Judges who in the face of threats and intimidations had the honesty and manhood to give an opinion in accordance with all precedent.

Now, Mr. Editor, I cannot more fittingly close this article than by repeating words used by Bro. I. C. Steele, as published in the *RURAL PRESS* of May 22d. He says:

"To own the water unrestrictedly is to own the country. Can the State permit such a monopoly? Is there any justice in permitting a few men to possess themselves of the water that Nature supplies in abundance for all who have use for it?"

"This question is before the people for solution, and every interest involved in the controversy should be treated fairly."

## Sacramento Grange.

EDITORS PRESS:—Sacramento Grange had a good representation of brother and sister Grangers far and near to-day. An extra call was sent forth in connection with a meeting of Pomona Grange, No. 2. We had the pleasure of the presence of W. M., W. Johnston, W. L., Daniel Flint, Flora, Sister Plummer, of the State Grange; also Brothers Kelsey, Nelson, Dr. Caples, A. M. Plummer, H. Kerr, McConnell and others of the sister Granges, with the sisters of the same.

The day was specially set to confer the third and fourth degrees on six brothers and one sister. Grange opened at 10:30 A. M., and after the labors of the field were over, 100 members marched up-stairs to the banquet hall and partook of an elaborate dinner. It was such a feast as all Matrons know how to prepare to tempt the inner man, and wound up with ice-cream, after which the Grange reassembled. It was decided to donate \$20 to the benefit of the G. A. R. reception on "Sacramento day," Grange closed, and in a few minutes the

## Pomona Grange, No. 2.

Opened with W. M., C. A. Hull, in the chair. After taking up the various orders of business the meeting passed to the Good of the Order.

The Grange appointed the W. M. as chairman of the Committee on County Exhibits for the next State Fair, which committee had pre-

viously been appointed; they had already been at work and would try to make as good a showing as they can.

Dr. Caples presented a well-written memorial which he read on the calling of the Legislature by the Governor, showing its utter fallacy and inconsistency. It commented at length on the call by reading extracts from it, and asked the Grange to adopt the same and present it to both houses as emanating from this body.

Remarks followed from Bros. McConnell, Kelsey, Nelson, Hancock and others. The Grange voted unanimously in favor of the memorial with a rising vote. Copies were ordered sent to the *Daily Record-Union* and *RURAL PRESS*. G. T. R.

Sacramento, Cal.

## Ceres Grange on Irrigation.

At a meeting of Ceres Grange held on Friday, July 23d, the following resolutions on the subject of legislation for irrigation were passed and ordered published:

*Resolved*, That we are in favor of the doctrine that all the running water of the State is common property, to be held for equitable distribution.

*Resolved*, That we are in favor of amending the proposed amendments to the State Constitution offered by the late Irrigation Convention held at San Francisco (Sec. 1), by striking out "the rates so established shall be such as will yield to the person, company or corporation so supplying water a net return of at least 7 per cent per annum upon the amount invested in the construction and maintenance of such works," and inserting in lieu thereof the following: "The rates so established shall be such as will yield to the person, company or corporation so supplying water, a return of not less than 3 per cent nor more than 7 per cent per annum of the cost of construction of such works. And, in addition to the aforesaid amount, the Supervisors shall, when fixing rates for water, authorize the collection by means of the said rates of an amount sufficient to defray the expenses of maintaining such works."

*Resolved*, That we are in favor of an amendment to our State Constitution, forbidding, under heavy penalty, the "watering of stock," after the style of railroad corporations, by canal owners. Also, we are in favor of an amendment whereby to compel owners of canals to furnish to Boards of Supervisors an account of all receipts and expenditures, and to compel them to furnish for inspection all papers and books of account pertaining to the business of their respective canals upon demand of the supervisors.

## Walnut Creek Grange.

The following resolutions were adopted by the Walnut Creek Grange, at a regular meeting held on the 24th day of July, 1886:

WALNUT CREEK, July 24, 1886.

WHEREAS, It has become a settled conclusion that the use of water for irrigation is absolutely necessary for the successful cultivation of the large tracts of land known as the dry valleys of this State; and

Whereas, The waters of the streams and rivers are being diverted from their natural courses without regard to the riparian owners, and an effort is being made by certain parties to monopolize said waters to the injury of actual settlers; therefore be it

*Resolved*, That we are in favor of the State assuming the entire control of the waters of the State, to be used in a manner that will secure the greatest good to the greatest number, rendering due compensation to all whose acquired property rights it may be found necessary to condemn.

*Resolved*, That we regard the decision of the Supreme Court in the case of *Lux vs. Haggis* as a just and correct interpretation of not only the common law, but of our statute laws governing property rights. L. A. STEELE, Sec'y.

## No Gambling or Liquor at Concord Fair.

An appeal was made last year to the directors of the Agricultural Fair by the Grangers and the several Women's Christian Temperance Unions of the county to prohibit gambling and liquor-selling on the fair grounds at Concord. The effort was made too late to effect its purpose in 1885, but the request has been granted for this year.

It now devolves upon the petitioners to testify to the sincerity of their demand by attending the coming fair and in every way contributing to its success.

The Women's Christian Temperance Union of Contra Costa county entertains all the temperance people, and especially all members of Granges and I. O. G. T. Lodges, fraternal orders to which so many white-ribbon women belong, to give such moral support and financial assistance to the directors as may insure permanence to the "new departure" so long desired.

MRS. S. J. WILLS,

President Co. W. C. T. U. and W. M. Point of Timber Grange.—*Contra Costa Gazette*.

## Curing Sultanas.

EDITORS PRESS:—Will some of your correspondents kindly inform me as to the best method for curing and treating Sultan grapes, in order to impart to them a bright, attractive appearance.—NOVICE.

SEVERAL horses died in Tulare recently from the effects of the horse disease which is prevalent in that county. It affects the horses that are at work as well as those that are running in pasture.

## The late Samuel J. Tilden.

As we go to press the telegraph announces the death of the distinguished citizen whose portrait appears herewith—the Hon. Samuel J. Tilden, of New York. Mr. Tilden has occupied for many years a prominent place in

public affairs. He won his first great honors in the overthrow of the Boss Tweed dynasty in New York City, and was shown the people's thanks for that service by election to the governorship of New York State. He was the Democratic candidate for the presidency against Hayes, and which one really beat is a mooted question with many. Mr. Tilden was of Quaker parentage, and was born in 1814. His death will be generally regretted, and his public services will cause his name to be long remembered.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

HAY.—*Livermore Herald*: The hay shipment from Livermore station for the 13 months ending July 1, 1886, was 13,689 tons. There were remaining in our warehouses at the beginning of the last shipping season about 2000 tons of hay, which would thus give about 11,600 tons, as the surplus of the section tributary to Livermore last year. We predict that that amount will be doubled this season. John Clark gives us the following data of work on James Doolin's Aylward Hay Press, while he was watching it, the other day. In two hours 18 bales were turned out, in light hay, which weighed 4855 pounds, or an average of 270 to the bale. In a lot of 74 tons of good hay the average weight was about 335 pounds to the bale. The rate of work on the light hay would give for a day's work of 14 hours, 18 tons and 900 pounds.

FOUR CARS OF MULES.—*Pleasanton Star*: There arrived at the Pleasanton depot last week four carloads of young mules, direct from Texas, consigned to W. H. Norris, of San Ramon valley. In conversation with Mr. Norris he stated that he had just returned from Texas, where he had recently gone to purchase the animals. He stated that the young mules are not any cheaper there than here after you pay their freight. The only advantage is that you can buy them in large numbers, whereas in this State you would have to travel over much of the country to get that number. There are 25 animals in each car—100 in all. They are all about two years old, and will average, when grown, about 800 pounds. Mr. Norris says that he would sooner have a 750-pound mule than a 1000-pound one for ordinary farm purposes. The little mules will wear the big ones out and still be in fine order. These mules will be used on his immense ranch in San Ramon valley.

BARLEY-GROWING.—*Haywards Journal*, July 31: The 440-acre tract of H. W. Meek, on the Mt. Eden road near Haywards, has all along been considered the most promising chevalier in the valley, and the general opinion was that it would yield a heavy crop. About one-half was sown broadcast and the remainder drilled in. The lower end, running toward the railroad, is low ground and was rather wet this year. This part did not come up to the remainder and naturally brought down the average of the whole tract. The drilled grain went from 28 to 30 sacks to the acre, while the broadcast fell considerably below that figure. The quality of the grain is conceded on all sides to be the finest raised in the valley, and samples have been in demand from grain men in the city and elsewhere. The entire tract yielded something over 12,000 sacks, the average weight of sacks being 131 pounds. The average of the whole was 34.6 cents to the acre.

## Butte.

THE RANCHO CHICO.—*Chico Chronicle*, July 29: The Rancho Chico is sending away a great deal of fruit this season to other markets. Yesterday a carload consisting of 990 boxes of plums, peaches and pears, was shipped by ex-

press to Chicago. To-day a carload goes to Sacramento, and to-morrow morning another car of fruit leaves for Chicago. The products of this great farm have a national reputation, and the brand of Rancho Chico on the boxes at once places the fruit in active demand in the markets. None but the very choicest fruits are sent abroad, so that parties in the East get the very best fruits that the Rancho produces. General Bidwell at present employs more laborers than any one man in Butte, as there are 275 persons now at work in orchards and fruit cannery.

EGYPTIAN CORN.—*Oroville Register*, July 29: More attention is being paid to Egyptian corn this year than ever before in Butte. About Gridley and Biggs there are many acres planted, and on the east side of Feather river not less than 15 or 20 farmers have small patches growing for chicken and hog feed. Mr. P. Nash, who owns a farm a few miles west of Oroville, planted this season six acres of Egyptian corn; the corn is now six feet high and promises a bountiful yield. Nash thinks that it may go 100 bushels to the acre. This is planted on summer-fallow land, and he says that he can raise a crop of this corn one season and then a crop of wheat the next, and thus use the land instead of letting it lie idle one year while waiting for the summer-fallow.

## Colusa.

FINE GRAPES.—*San*, July 31: We received from the farm of Jerry Becker, situated about eight miles southwest of Colusa, a box of Seedless Sultan grapes, which were very fine indeed. These grapes were grown on the plains without irrigation of any kind. Good cultivation will work wonders, but good cultivation with judicious irrigation will double any result that can be made without irrigation. The more irrigation, the more cultivation becomes necessary.

## Fresno.

EDITORS PRESS:—Harvesting is drawing rapidly to a close in our section. All the farmers have long since put their estimates on their unthrashed stacks way below their guess per acre previous to heading. This is because of the very discouraging and unexpected reports from some of the few neighbors who have thrashed, some of their stacks not yielding one-half the anticipated number of bushels. Examination into the reasons for this diminution has convinced all that grain this year has shelled much more than usual. Many are the grain farmers I have heard say, lately, that "there is nothing in raising grain." And I agree with them, for just so long as our Government sanctions the existence and work of those human sharks who speculate in the breadstuffs of the land, just so long will the poor farmer nibble at the crib of poverty. He can put up with an occasional shortage in crops, but when he must add to this probability the certainty of being compelled to buy and give away all his sacks each year—owing to another syndicate of sharks—instead of employing canvas bags, as does the Eastern man in emptying his grain into an elevator, which allows him to retain his sacks a lifetime; and that other California certainty, high freight rates to tide-water, it becomes very plain why the sensible farmers are beginning to cut up their great ranches into small tracts for fruit-raising, thus rapidly turning our beautiful State into what it was only intended for, the fruit, flower and vegetable garden of the world. Fresno will be the banner county for fruit this season. The estimated yield is enormous, and we have had but one week of weather that has in any way diminished those estimates. A fortnight ago the "hot spell" did considerable damage, but not nearly so much as it would have done a month earlier. It was expected that the grasshoppers would not leave a grape or anything else green, but the few that came in the early part of the season took their departure for "pastures new," much to the delight of those who suffered from their depredations last year. Raisin-making will soon begin, as will also grape-crushing, when the many large vineyards hereabouts will present a busy scene; but whether the late agitation of the Chinese question will result in more or less "pigtails" in the formation of the said scene than has hitherto been employed cannot yet be told. This part of Southern California is not "cracked up" much as an Indian corn growing section, but we "allow we are some" on Egyptian corn. If any one who reads this is disposed to doubt it, let him come here and I will take him to a small 10-acre patch that my neighbor, T. L. Loomis, is growing on his Nevada Colony lot, and I am sure he will be convinced that we do not claim any more than our due. Mr. L. planted the corn between the rows of his newly planted vineyard, and though I do not agree with his policy, I must say that I think he will make far more than enough from his corn to make up for the loss of nutriment to his vines in the future.—E. L. A., *Temperance*.

RAISIN-PACKING.—*Republican*, July 30: Indications are that the raisin crop of this section will be fully 100 per cent greater than last year, and every raisin-packer is taking special care to secure perfect and attractive packing. So important has the raisin industry become in Fresno county that Eastern dealers come here to contract with producers for their entire pack, and only last week Geo. W. Meade & Co., of San Francisco, purchased the fruit cannery in this city for the express purpose of turning it into an immense fruit-drying and raisin-packing establishment. They will endeavor to buy up

most of the raisins of the county and pack them to suit themselves.

**ANTS.**—A row of beautiful *Solanum Magnificum*, with large blue flowers, began suddenly to die, and upon examination we found the stems hollow, all eaten out by the little red ants. We then placed a small cup of sweet oil near to every plant, with such success that within a week the oil was literally one lump of ants, and not one was left in the ground to destroy the plants. If similar cups of oil are placed in pantries and wardrobes, they will soon trap all the ants at large.

#### Placer.

**ANOTHER SMYRNA FIG.**—*Republican*: At Iowa Hill Mrs. Adelia Hill has in her garden a fig tree which produces exceptionally fine fruit. The tree was grown from a cutting procured from a sea captain by Mr. Hill in 1856. Mr. Hill happened to be in San Francisco and met the captain, who was an old acquaintance and had just come in from the Mediterranean. Mr. Hill visited his friend's ship and in the cabin saw the cuttings, two of which were given to him and planted by him at Iowa Hill. Last week J. B. Hobson sent to the *Republican* some specimens of fruit from one of the trees. The figs are very large and have an unusually thin skin. They were forwarded to E. W. Maslin at Pismo, who has the reputation of being a fig sharp. Gas Leighton, of Iowa Hill, has been a sailor in the fig-carrying trade, and he thinks these figs are of the genuine Smyrna variety and has planted a good many cuttings from the trees.

#### Sacramento.

**HEAT AND GRAPES.**—*Bee*, August 2: The phenomenal "hot spell" last month did considerable damage to the grape crop in some vineyards and in certain localities, but those who have followed the plan of "staking" their vines report that the precaution proved effective. Vines tied up in this way shield the grapes from the direct heat of the sun. Staking also permits of closer cultivation. Senator Routier, of this county, whose vines are staked, expects a crop of six or seven tons of grapes to the acre this season. Thorough and skilled cultivation always tell in the vineyard. It is interesting to note that none of the Senator's vines are irrigated.

#### San Joaquin.

**LOSS OF A STALLION.**—*Independent*, July 31: W. H. Parker's fine stallion Elect was taken sick with inflammation of the bowels last Saturday night and died the following Tuesday. The animal was five years old and valued at \$5000. His gait was fast and he was constantly improving. It was expected that he would trot in 2:20. Elect was entered for the stallion stake at the coming fair. He was the father of 25 fine colts (four months) and his death will be a great loss to the stock-breeders of San Joaquin county. He has taken first premium as the best roadster stallion in the State. His dam was Stanford's Electioneer, and he is considered to be the best colt of that celebrated horse in San Joaquin county.

#### Santa Cruz.

**HORSES FOR AUSTRALIA.**—*Sentinel*, July 31: E. R. Dean, one of the wealthiest stock-raisers in Australia, in company with Chas. Fiddes and Adolphe Spreckels, visited the Spreckels ranch near Aptos for the purpose of purchasing several yearlings. Some years ago Mr. Dean bought two Speculation colts from Dolph for \$1500, and they gave so much satisfaction that he concluded to again buy colts from Spreckels. On Wednesday he bought three colts at the ranch for \$5000, and on Thursday purchased a stallion for \$5000, and will ship them to Australia by the next steamer.

#### Sonoma.

**HOPS.**—*Index*, July 31: Hop-growers of the upper end of the county, in view of the rise in the price of hops, and to encourage white labor, propose to raise the pay of pickers from 70 cents to \$1 per hundred. Hop-raising promises to prove a profitable business this season.

#### Tehama.

**SORGHUM.**—*Sentinel*, July 30: Ed. Wright, who owns a farm about eight miles northwest of town, brought to this office a few stalks of sorghum, which he will send to the Tehama county Grand Army exhibit. This sorghum was grown on gray adobe land. The seed were sown broadcast on summer-fallow land and grown without irrigation or further cultivation. The stalks attained a height of seven feet and the seed pods are very full of well-grown seed. Mr. Wright thinks sorghum will prove to be an excellent forage plant for hogs and cattle. The latter eat the stalks and seed up clean, and an acre of it will fatten more hogs than an acre of wheat or barley. He does not consider it valuable in this country for sugar.

#### Tuolumne.

**EDITORS PRESS:**—As your paper is a representative of all counties of California, it is high time a few lines appeared from Tuolumne county. Not that we have any special good news to record, but it is a social and fraternal duty to represent the industrial interests of every section of our common country. Our fruit crop is comparatively a failure, especially the peach crop. It is much worse than appearances in the spring indicated. The causes are varied. Heat, which has been oppressive, helped to dwarf the growth, prematurely ripen the fruit and destroy the flavor. Apples are affected by the same cause. The codlin moth

is particularly busy. The short crop is so general that little fruit is offered for sale by peddlers. Drying is out of the question; prices are low and there is little to dry. This may raise the price of spare fruit. The birds are making away with what is left as soon as it shows a ripeness. Complaints come in from all sections of the county regarding the numbers of birds and their destructiveness. Canned fruit will be in demand. Few families will be enabled to preserve enough for home use. Grapes and figs will be an exception. Birds and bees may preempt even these two useful specialties. If the present hot spell continues they may be prematurely ripened and value depreciated. Nature is earnest in her operations, inquiring and caring not whom it may affect. Of course, the San Francisco market will continue to be well supplied with the choicest fruit to delight the eye and please the palate of Eastern visitors. Our State is so diversified in soil and climate that if one section fails another supplies the demand. From San Diego to Shasta is a productive empire, which supplies all that other nations can boast, and that, too, in profusion. Between grasshoppers and other causes our foothills for a few years have been under a cloud. But we know what has been accomplished in producing fine fruit, and plenty of it, and still have faith in the future of the foothills of the Sierras. The planetary disturbances will not last forever. We believe the time is nigh when Nature will assume her wonted good behavior. Fruit and fruit trees will cease to be blighted by sudden electric changes. Grain begins to come into the county freely from Dry Creek and the plains. Quality is not so good as anticipated, neither is the quantity. Hay is the only crop which realized expectations; it is now selling from \$12 to \$14 in the foothills, and Sonora. The thermometer registers 104° at noon in the shade, and not a breath of air stirring. It is a season for cool shade and cool beverages. There is not so much sickness as might be anticipated; many have gone to the higher Sierras for recreation and a sound, cool sleep.—JOHN TAYLOR.

#### Tulare.

**HANFORD HOPS.**—*Times*: Young Chow, the boss Chinaman of Hanford, rented last winter, of A. Heilbron & Co., the 60 acres of hops put in on the grant several years ago. Off of the 60 acres he expects to get 60 tons. He has already harvested 30 tons, which he sold on the ranch for 15 cents per pound. He expects to get 30 tons more, and will have them ready for market by September 1st. For the remainder of the crop he has been offered 25 cents per pound on the ranch. As the hop market is now on the rise, Chow says he will not be in any hurry to sell what he has left.

#### Ventura.

**DESPITE THE FIRE.**—*Free Press*, July 23: W. T. Coleman & Co. have leased Surdam's dryer, and Superintendent Bailey and a corps of assistants are working there energetically, getting things in order to handle the balance of the fruit crop. The gentlemen comprising this firm are the kind we like to see locate an enterprise in Ventura. Set-backs which would extinguish the ardor of ordinary men seem only to afford them opportunity to display their resources. Again they are prepared to pay cash for sound fruit brought to them, and next year, we understand, will erect a big dryer of their own and probably add to it a canning establishment.

**FRUIT DRYING.**—Mr. Day has three furnaces, and a capacity of 40 tons of fruit per day; but it is now working about 20 hands, and averaging, perhaps, 12 tons of fruit daily. This is all selected fruit, however, and will be packed in two and one-half and five-pound tins and shipped directly to the Eastern market. The packing apparatus, a sort of compress arrangement, is in an insect-proof warehouse adjoining the dryer, where are now stored some 15 tons of the prettiest dried fruit we have ever seen. The tins as put up form very attractive packages. Thus far Mr. Day has fed his furnaces entirely with cuttings from his fruit trees, which is decided economy of fuel. With Mr. Day's dryer, and Finney's and Surdam's and Coleman's big one to be erected, we should certainly be able to handle our big crop next year.

**RECEIPTS OF BARLEY** at the Hueneme warehouse Saturday were 1540 sacks. Total for season, 11,000 sacks. It is estimated that for the season a total of 300,000 sacks of wheat and barley will be received at the warehouse of that lively port. Thus far the crop on the other side of the river has exceeded the farmers' estimates in nearly every instance, and should this continue, the total for the season will exceed the above estimate.

#### Yuba.

**DEBRIS SUIT.**—*Sutter Farmer*, July 30: Papers have been served in a suit brought by Yuba county against the South Yuba Water and Mining Company. The action is brought to enjoin and restrain the company from selling to any person, company or corporation, or from suffering or permitting them to use any portion of the water rights owned or controlled by said company, for the purpose of mining by the hydraulic process, or by any other process of mining with water, by which there will or may be dumped, washed or deposited into the Yuba river, or any of its forks or tributaries, any tailings, boulders, gravel or other debris. It is charged in the summons that defendants, with others, have nearly filled the bed of the Yuba, causing the stream to be widened and shallowed, thereby causing the waters to overflow and greatly damage property of plaintiff.

## THE DAIRY.

### President Cleveland and Oleomargarine.

WASHINGTON, August 2.—The President has signed the oleomargarine bill, and sent the following message to the House of Representatives stating his reasons for approving it:

*To the House of Representatives:* I have this day approved the bill originating in the House of Representatives entitled "An Act defining butter; also imposing a tax upon and regulating the manufacture, sale, importation and exportation of oleomargarine." This legislation has awakened much interest among the people of the country, and earnest argument has been addressed to the Executive for the purpose of influencing his action thereupon. Many in opposition have urged its dangerous character, as tending to break down the boundaries between the proper exercise of the legislative power by federal and State authorities. Many in favor of the enactment have represented that it promised great advantages to a large portion of our population who sadly need relief, and those on both sides of the question whose advocacy or opposition is based upon no broader foundation than local or personal interest have outnumbered all the others.

This, upon its face and in its main features, is a revenue bill, and was first introduced in the House of Representatives, wherein the Constitution declares all bills for raising revenue shall originate. The Constitution has invested Congress with very wide legislative discretion, both as to the necessity of taxation and the selection of the objects of its burden; and though if the question was presented to me as an original proposition I might doubt the present need of increased taxation, I deem it my duty in this instance to defer to the judgment of the legislative branch of the Government, which has been so emphatically announced in both houses of Congress upon the passage of this bill. Moreover, those who desire to see removed the weight of taxation now pressing upon the people from other directions may well be justified in the hope and expectation that the selection of an additional subject of internal taxation, so well able to bear it, will in consistency be followed by legislation relieving our citizens from other revenue burdens rendered by the passage of this bill even more than heretofore unnecessary and needlessly oppressive.

It has been urged as an objection to this measure that, while purporting to be legislation for revenue, its real purpose is to destroy, by the use of the taxing power, one industry of our people for the protection and benefit of another. If entitled to indulge in such a suspicion as the basis of official action in this case, and if entirely satisfied that the consequences indicated would ensue, I would doubtless feel constrained to interpose the executive dissent; but I do not feel called upon to interpret the motives of Congress otherwise than by the apparent character of the bill which has been presented to me, and I am convinced that the taxes which it creates cannot possibly destroy the open and legitimate manufacture and sale of the thing upon which it is levied. If this article has the merit which its friends claim for it, and if the people of the land, with a full knowledge of its character, desire to purchase and use it, the taxes enacted by this bill will permit a fair profit to both manufacturer and dealer. If the existence of the commodity taxed and the profits of its sale depend upon disposing of it to people for something else which it deceitfully imitates, the entire enterprise is a fraud and not an industry; and if it cannot endure the exhibition of its real character, which will be affected by the inspection, supervision and stamping which this bill directs, the sooner it is destroyed the better, in the interest of fair dealing. Such a result would not furnish the first instance in the history of legislation in which a revenue bill produced a benefit which was merely incidental to its main purpose.

There is certainly no industry better entitled to the incidental advantages which may follow this legislation than our farming and dairy interests, and to none of our people should they be less begrudged than to our farmers and dairymen. The present depression of their occupation, the hard, steady and often unremunerative toil which such occupation exacts, and the burdens of location which our farmers bear, entitle them to every legitimate consideration. Nor should there be opposition to the

incidental effect of this legislation by those who profess to be engaged honestly and fairly in the manufacture and sale of wholesome and valuable articles of food, which, by its provisions, may be subject to taxation. As long as their business is carried on under cover and by false pretenses, such men have bad companions. Those who manufacture an article, however vile and harmful, take their place without challenge with the better sort in a common crusade of deceit against the public. But if this occupation and its methods are forced into the light and all these manufacturers must thus either stand upon their merits or fall, the good and bad must soon part company, and the fittest only will survive.

Not the least important incident related to this legislation is the defense afforded to the consumer against the fraudulent substitution and sale of an imitation for a genuine article of food of very general household use. Notwithstanding the immense quantity of the article described in this bill which is sold to the people for their consumption as food, and notwithstanding the claim that its manufacture supplies a cheaper substitute for butter, I venture to say that hardly a pound ever entered a poor man's house under its real name and in its true character. While there should be no governmental regulation of what a citizen shall eat, it is certainly not a cause of regret if by legislation of this character he is afforded a means by which he may better protect himself against imposition in meeting the needs and wants of his daily life. Having entered upon this legislation, it is the manifest duty of the Government to render it as effective as possible in the accomplishment of all good which should legitimately follow in its train.

This leads to the suggestion that the article proposed to be taxed, and the circumstances which subject it thereto, should be clearly and with great distinctness defined in the statute. It seems to me that this object has not been completely attained in the phraseology of the second section of the bill, and that a question may well arise as to the precise condition the article to be taxed must assume in order to be regarded as "made in imitation or semblance of butter, or when made, calculated or intended to be sold as butter or for butter." The fourteenth and fifteenth sections of the bill, in my opinion, are in danger of being construed as an interference with the police powers of the States. Not being entirely satisfied of the unconstitutionality of its provisions and regarding them as not being so connected and interwoven with the other sections, if found invalid, to vitiate the entire measure, I have determined to commend that to the attention of the House, with a view to an immediate amendment of the bill, if it should be deemed necessary, and if it is practicable at this late day in the session of Congress. The fact, too, that the bill does not take effect by its terms until 90 days have elapsed after its approval, thus leaving it but one month in operation before the next session of Congress, when, if time does not now permit, the safety and efficiency of the measure may be abundantly protected by remedial legislative action, and a desire to see realized the beneficent results which it is expected will immediately follow the inauguration of this legislation, have had their influence in determining my official action. The considerations which have been referred to will, I hope, justify this communication and the suggestions which it contains.

GROVER CLEVELAND.

Executive Mansion, Aug. 2, 1886.

**SOURING OF MILK IN A THUNDER-STORM.**—Some one sent a query to the *Manufacturer and Builder* asking the cause of the souring of milk during or immediately after a thunder-storm. After recognizing the existence of the fact, that journal says that "the most satisfactory explanation that has been offered to account for the phenomenon is that the electricity developed when a thunder-storm is passing causes the formation of ozone in considerable quantity. This is a powerful oxidizing agent, and being absorbed by the milk, converts a portion of the milk-sugar contained as one of its constituents into lactic acid, which in turn acts on the nitrogenous matter (the casein), causing this to coagulate or curdle."

**GREEN VS. SEASONED OAK.**—It is said that experiments have proved that green oak posts will last longer in the ground than those from the same variety of seasoned timber.

### Noontide and Harvest.

Inscribed to A. and M. C.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

From my high perch upon the long veranda,  
Where shadows droop and fragrance fills the air,  
Where roses mingle and sweet woodbine clammers,  
I look upon a scene most wondrously fair.  
'Tis not the majesty of mountain ranges,  
Nor the deep ripple of the sparkling stream,  
Nor the fair vale with all its magic changes  
Alone that wakes the fervor of my theme.

It is the harvest time. Full ripe and ready  
The tawny fields lie 'neath the cloudless sun;  
A golden tint has burnished field and meadow  
Where'er the splendor of his course has run.  
Noontide and heat! No breeze disturbs the quiet  
That broods above the vale in restful calm,  
Save when a wanton zephyr, running riot,  
Shakes from the pine's green crest a breath of balm.

The weeping oaks, magnificent, seem wooing  
The tardy breeze that soon shall sweep their crests.  
From some far bough I hear a lone dove cooing,  
But who can guess where swings its hidden nest?  
The broad fields glow beneath the sun's full splendor,  
And the fair hills rise in their silent pride  
As tho' in homage mute they fain would render  
Their tribute to the harvest full and wide.

A train of harvesters, led by a "header,"  
Plows thro' the seeming sea of dead, gold grain.  
We hear the busy whirring strong and steady,  
We see them moving o'er the half-shorn plain.  
They charge in squads, but wield a bloodless battle.  
An army vast, unbannered tho' are they—  
Heroes of peace, whose music is the rattle  
Of the keen blade, as rank and file they slay.

Brave sons of toil! They heap the bearded treasure  
In countless stacks along the glimmering plain,  
And Ceres crowned pours out in generous measure  
Her wealth to mark the glory of her reign.  
Long may her scepter wave on plain and mountain,  
In this bright land beside the western sea,  
And Peace and Plenty, like a living fountain,  
Forever bless the fair homes of the free.

Oak Grove, Napa Co., Cal.

### From the Girl of Twenty.

EDITORS PRESS:—Through your columns I would like to thank the "Woman of 4—" for her motherly lecture, and though I appreciate it fully, yet I think she has misunderstood me a little. I can see how self-assertive my article No. 2 might have seemed to some, especially when it was known that "only a girl" was the writer. No doubt the old belief holds good for "girls of twenty" as well as for those younger, that children should be seen and not heard, although notes No. 2 had no deeper motive than to please and interest, with the exception of the subject of reading.

Many of my young friends say to me in surprise when I protest against their indiscriminate reading: "Why, don't you ever read novels?" Indeed I do. I have read more novels than everything else put together, but the books that were read to me when a child, or put into my hands, formed a taste and love for only the best, and, consequently, such books that otherwise might have been harmful did no injury whatever.

It seems to me, my lecturer has said just the right thing on the subject, about young girls living in the emotions rather than in the intellect, and therefore are more interested in such books as portray vividly these sentiments. Yet if they can be only interested in the books that are most overdrawn and sensational, surely it is not the right and true interest, but a depraved taste, that comes from wrong indulgence at first. One might overlook this in very young girls, for the very reason that a "Woman of 4—" gave, but when one sees bright, intelligent young women, some wives and mothers with little ones clustering around their knees, truly it is to be regretted.

I was discussing this subject the other day with a friend, another woman of 40, and one who has done a great and good work in the training and forming of young minds. The subject under discussion was the instruction of children of Christian parents in the Sunday-schools. A third person advanced the idea that such children should be instructed at home by their own parents, while the children of unconverted parents, who would have no Christian training at home, should be the ones gathered into the schools. There arose this question: How many mothers are there who can sit down with their little ones and intelligently explain and interest them in the stories of the Bible? How many more are there who can delight the little ones and at the same time train their young minds with the charming scraps from our literature that are so adapted to them? They know nothing about these things; their literature is limited to third and fourth-class novels, and the trashy stories that appear in some of

the fashion journals. And yet they are good, earnest, well-meaning mothers.

My friend spoke from experience, having been for years a teacher of literature in one of the large high schools. Every year, of the 50 or 100 pupils who passed under her hand, it was a mere handful that knew anything about books or reading; the rest were perfect blanks, or what knowledge they had was most deplorable.

I am afraid the "Woman of 4—" in reading of the little sister who inquired, "Who is the author?" conjured up a vision of a pale-faced, large-eyed child, bent nearly double over a volume of ancient lore. Not a bit of it. A big red cheeked, romping girl, a perfect tomboy, one who climbs trees and hay-mows, but also a girl who, in her quiet moments, loves to read, and also, already, shows a decided taste in the right direction. True, her discriminating powers, as yet, are not perfect, for only the other day I was obliged to take away from her a volume of Peck's Bad Boy (unfortunately we could not prevent an older brother from thinking it funny) that she was reading on the sly. But to show the difference in her early training and that of her playmate, Bessie, a girl nearly 13 years old, is a child who has one of the best of mothers, in the common accepted sense of the word; one who sees that she goes to school, keeps her well dressed and is quite indulgent, but never a book or a story has the child known. Often when she comes in to see my little sister, my mother has tried to interest the two children with a story, perhaps from the *Wide Awake* or *St. Nicholas*, but Bessie is restless, fidgety and uninterested, and says she does not like it at all. A Woman of 4—may say it is because her disposition is different and she does not take kindly to the restraint that is imposed upon her when she is obliged to sit still and listen to the reading of a story. Perhaps, but this is certain, Bessie will grow up uncultivated and ignorant like her mother; and think of the different influence these two girls will have as women!

Our little town boasts of a most excellent library; that is, its shelves are well crowded, but the excellent applies only to quantity, not quality. Of course, there are a few standard works, Dickens, Scott, etc., and these the young folks read from a sense of duty and because they think they "have to." The rest are mostly third and fourth-class novels. The *Century* and *Harper's* lie almost untouched—perhaps there are half a dozen ladies who read them, and I doubt even that number.

"Girls!" I exclaimed, one afternoon, impulsively, "what do you read those things for? Here are some good novels up here," and I pointed to some on the shelves, not heavy, uninteresting ones, nor even a Howells or James, but really light and charming. "If you haven't another advantage in the world," I went on, "do read a good novel when you have a chance, for that is something." They looked at me in mild horror, and I have no doubt thought me a fanatic and pitied me.

Dear me, am I saying something sarcastic? I have only a desire to do some good and to cultivate in myself, and help in others, to the highest the faculties God gave. Is not that the truest conception of a woman?

Further, a knowledge of books and authors is a liberal education. Leaving school at the age of 15, and obliged ever since to assume the management of a large farm household, the only education received has been from the companionship of books; of technical training there has been none. And yet I feel that I can take my stand among girls who have had far better advantages. This is not written in self-praise, but for the benefit of our girls—our farmers' girls—who, did they but know it, have the material and surroundings that, if properly developed, will bring out grander women than their often-envied city cousins.

I am proud that I am a country girl—not the conventional country girl, with the usual attributes, but one who glories in the open air, the liberty and breadth of thought and action that such a life gives; one who can learn a lesson from homely duties, read a sermon in the rocks or upturned earth and be inspired to nobler thoughts and deeds by the weird enchantment of a summer twilight.

A GIRL OF TWENTY.

### A Model Love-letter.

EDITORS PRESS:—No doubt the Home Circle folks will be somewhat amused at the following letter. The young lady who received this letter has given me permission to publish it, or I should not have done so. Here it is:

LACONIA, Feb. 11, 1885.

MISS ADDIE BRADLEY:—Undoubtedly some surprise and perhaps great indignation awaits this epistle, but the spirit prompts me and I write. Will you read my explanation, consider my words and carefully ponder the context? I am a stranger—an old bachelor of 45; but I have since had my eye upon you and—and you cannot see me blush—have had a great admiration for you.

I passed through my youthful days without any of that peculiar feeling that sentimental people demonstrate love. Now I realize that my days are gliding swiftly by and I have been thinking—well, thinking of you. How would you like to be a farmer's wife and live kinder easy? Have nothing to do only milk six cows morning and night, make butter, raise turkeys, do a little washing and ironing and some darn-

ing, take care of a small family of 12 and have all the leisure time to yourself? I have a steady horse you can drive some and you can have a good easy time. Realize, you are getting to be an old maid and will never have another such good offer. Now, think of this and think quick, and let me know and I will come after you at once. Please write me as soon as possible, and believe me to be your sincere admirer,

OBADIAH TOMPKINS.

There, now, isn't that a good one? I have given it just as written, only I have changed the names of the parties.

WILL B.

Los Angeles Co., Cal.

### The Chautauqua Assembly at Pacific Grove.

[Written for the RURAL PRESS by H. M. F.]

The RURAL PRESS has so long befriended the "People's College" that it surely should have a report of our holiday proceedings. The program which the RURAL PRESS printed two months ago was triumphantly carried out, and the very elements conspired to make it a complete success. Days of unbroken sunshine and nights of starlit calm have followed each other in unvaried succession. The grove, too, is always adding to its charms. Each new cottage is prettier than its predecessors, and every year finds improvements. The crowds who have filled every available tent and room on the grounds during the present season have testified to the public appreciation of this favorite spot, and the numbers which have been turned away have led the Southern Pacific R. R. Co. to plan great additions to their hotel accommodations. Another year will find room for all. They are also building a pretty little museum for the use of the Chautauquans, and which will be the receptacle of all their natural history collections. Pacific Grove is to be indeed a center of educational interest; the home of a summer school of science with a faculty of teachers such as our best schools and colleges can furnish, and a gathering place for students from all over the Golden State. Nevada has this year contributed some enthusiastic Chautauquans to the Assembly, and even Texas has sent a "lone star" in the person of a young lady from the El Paso circle.

The program, as has been already said, was almost entirely carried out. Dr. Sprague gave his four grand lectures upon Shakespeare and Milton; Dr. James B. Worden, of Philadelphia, inspired the Sunday-school workers with much enthusiasm; Dr. Spinning, of San Francisco, rivaled Mark Twain in his humorous account of his European travels; Prof. Joseph Le Conte, of Berkeley University, talked eloquently of evolution, which he regards as the true theory of creation and not at all inconsistent with a reverent belief in the great Creator; Dr. Stratton, of San Jose, gave an admirable lecture upon the place of moral and mental science in education, which he thinks should be the foremost one, and many other excellent speakers took up various themes literary and scientific and delighted their audiences, which were invariably large.

The music of the Assembly was beautifully furnished by Prof. F. L. King of San Jose, and the grand choir of the First Congregational church of Oakland, under Mr. A. M. Benham. A musical convention was held in connection with the Assembly which will hereafter be one of its features. Nearly a hundred musicians took part in it.

The commencement exercises were full of interest. Eight ladies and gentlemen graduated: Mrs. M. L. Parkhurst and Miss Langley, of San Francisco; Miss Pierpont of San Juan; Miss Fitzpatrick of Alameda; Miss Etta Miller of Napa; Mr. Leonard Todman of San Lorenzo; Mr. Fred. W. Morris of San Francisco, and Mr. Joseph Layman of Berkeley.

Bishop Warren addressed the Chautauquans in eloquent and inspiring language. Dr. Bentley spoke more particularly to the graduates, while Dr. Stratton presented the diplomas.

A glorious camp-fire on the beach ended the jubilee, around whose leaping flames the gathered Chautauquans reported their different circles, read a beautiful responsive service prepared by Rev. Dr. Vincent, president of the society, and listened to the reading of an inspiring letter from Major H. C. Dane of Boston, who last year made an enduring record in the Assembly's annals.

The Assembly has been made happy by the presentation to it of an elegant flag, and also a banner, the gift of many local circles, chiefly the "Spiral" of San Francisco. Upon the banner are the Chautauqua initials and an exquisite piece of painting representing an outstretched hand holding a torch toward which another hand is reaching. This is the artistic work of Miss E. A. Rockwell of San Francisco, a Chautauquan who evidently appreciates the society's motto, "We study for light to bless with light." The old officers were unanimously re-elected at the business meeting.

The one new feature of the Assembly has been its more thorough organization of the scientific classes. This was most successfully accomplished under the veteran teachers who have hitherto conducted these classes, Prof. J. Keep of Mills college, and Dr. C. L. Anderson of Santa Cruz. Mrs. W. A. Hughes, of Auburn, also did excellent work in organizing a class in general botany.

It is proposed to perfect this system, and the respective teachers are now preparing a schedule of scientific study which may be carried on in one's own home during the year, and then re-

viewed and enlarged under the best of instructors at the next Assembly. Thus the People's college is deepening its foundations.

Pacific Grove, July 21st.

### What May be Done.

EDITORS PRESS:—Your correspondent "Now and Then" in your issue of July 17, in her article, "What Shall We Women Do?" opens up the pro side of the Chinese question in a vigorous and lively manner. However, it appears that although she gave up her China boy her heart was not in the anti-Chinese movement, for it was simply "fear of the boycotters" that led her to do so; therefore it could hardly be expected that her action would be a success. The Southern people thought that they could not do without their "niggers," but emancipation came all the same and in a way they wot not of; in fact, the Southern people were the veriest slaves to their slaves, as many of them now see. If we are in the position that we can't get along without our China boys, are we not in a species of slavery to our Chinese? Is it not so that in many cases our China boys are so tyrannical in the kitchen that the mistress dare not set her foot inside of it for fear he may leave? Has it ever occurred to those who employ labor that the entire labor question is in a very unsettled condition? We speak from knowledge, having seen both sides of the labor question, both as an employer and an employee. If you are an employer, it often seems as if you had to work hard to give somebody an easy living and be worse off at the end of the year than the one you employ; while again, if you are an employee, your faithful and conscientious services are received with less appreciation than the merest eye service.

Many, no doubt, look to the past and wonder why we can't have the same good help that our mothers and grandmothers had, forgetting the fact that our mothers and grandmothers treated their hired girls as companions and friends, and on a footing of perfect equality and as if they were doing a service (which they were) by assisting in the household duties.

The Knights of Labor say that "Labor is noble and holy;" that they "uphold the dignity of labor" and "affirm the nobility of all who earn their bread by the sweat of their brow." Now, have we been acting as if we believed such to be the case? Have we not called household labor menial, and acted as if those who did such work were necessarily inferior? Have we not employed a servile class to do such work until a stigma attaches to all who are obliged to work in that way? Put yourself in their place. Which of us wants to go out and work in a stranger's kitchen? Who among us wants our daughters to work in the stranger's household? Do we not instinctively feel that we are virtually degrading them by doing so?

What is the remedy? Think where many of you would stand if your domestic help should stop work to-morrow? At present we are in a transition stage of labor, and the relations of employer and employee are necessarily strained. Supposed necessity compelled the employment of Chinese in the first place in our households. Pride also had something to do with it, for is not Mrs. A, who employs a China boy, socially above Mrs. B, who does not choose to do so? The true remedy, as we see it, is for us to adopt the first article in the preamble to the declaration of principles of the Knights of Labor, which declares it to be their purpose "to make industrial and moral worth, not wealth, the true standard of individual and national greatness." When we get down to the practice of the above we will not be far from the kingdom of heaven. Then we will not have a good cook spoiled by trying to make a fine lady of her, as is sometimes done. If, in that good time which is coming, any of us are so unfortunate as not to be able to do for ourselves the common services of every-day life, we will be able to obtain such help as we require—not for money merely, but because it is conducive to the good of all, and if we are unable to work in the so-called menial callings, we will still feel that society has a right to demand that our talent shall not lie buried, but that it shall be employed for the welfare of others as much as our own welfare. Let us not meantime think that that time is going to come about without effort or sacrifice on our part; but let us be willing to make any reasonable sacrifice toward bringing about a more perfect condition of things.

As long as we have a servile class to do our common labors just so long will we be unable to get other than the "poor white trash," and so if we find that we (while the transition is going on) are unable to get along in the style in which we have been accustomed to live, without help, let us try and cut off some of the superfluous luxuries and see if we do not thereby enjoy better health, and by virtue of that be better able to do the work which we thought ourselves unable heretofore to do. If we are unwilling to make any sacrifice ourselves in a like measure, we will be unable to profit by the sacrifices which have been made for us in the past.

If our Revolutionary forefathers made the sacrifices they did on our behalf that we may have the freedom we now enjoy, posterity demands that we do as much as we can for them so that they can use our example as a stimulant in time of necessity. In many cases a little self-denial is all that is required to put us on the highway to emancipation from kitchen drudgery.

PIONEER.

Riverside, Cal.

## The Moral Status of the Business.

Of the 8000 licensed rum-sellers in the city of New York, 6438 have been in jail or the penitentiary; and yet these men have satisfied the authorities that they are of good moral character. If a term in the penitentiary is sufficient to deprive a man of the franchise, why should it not be sufficient cause for withholding from him a license to conduct a business that needs the guarantee that he is a moral man? Mr. Piper, a prominent saloon-keeper in New York City, in a recent meeting of the saloon fraternity, said: "We don't wish to advertise ourselves as law-breakers, though everybody knows we are; for there is probably not an hour in the day that we don't violate the law." This is not an estimate put upon the traffic by persons opposed to the business, but the free, frank expression of one of the fraternity of liquor dealers.

In keeping with this is the preamble to a resolution passed by the Retail Liquor Dealers' Protective Association. It reads as follows: "Whereas, on almost every street in this city so-called groceries and other shops vend liquors by the glass and have no retail liquor license, and such shops are a financial injury to us as business men and tend to bring the whole business into disrepute from the fact of doing an illicit business, and acting as wholesale breeders of crime, want, misery and disgrace from the selling of liquor to women and girls."

Now mark, the evil complained of is, that these groceries bring disrepute upon the saloons, because they do an "illicit business," and, second, they are "wholesale breeders of crime, want, misery and disgrace," because they "sell liquor to women and girls." Then it "breeds crime, want, misery, and disgrace" to sell liquor to women. Will not the same business work the same results with the men? What is there in sex to prevent the inevitable consequences of drink with one, and to produce such ruin with the other? As to the selling of liquor to minors, that is too common now in the saloons for such a complaint to come from such a fraternity against the grocers. Here it is admitted the traffic is a "breeder of crime, want, misery and disgrace."

Said Senator Frye, of Maine, in a debate in the United States Senate in 1884: "I have seen a restaurant of one of these Houses become an open, notorious, low, miserable grogery. I have also seen a man, with his pantaloons inside his boots and with his coarse blouse on, standing at the bar of a restaurant of one of the Houses of Congress, drinking miserable whisky out of a cup."

"A tin cup" inquired one of the members.

"No, sir," said Mr. Frye. "A crockery cup; and I have seen whisky ordered again and again, and called 'tea,' and brought and served in a cup and saucer. Anybody, whether a member of Congress or otherwise, can sit down and order his 'tea' and drink it out of a cup."

"To me," the Senator from Maine continued, "whether there is anything wrong in it or not, there is something utterly disgusting about it, and it is entirely unbecoming the character and dignity of the capital of the United States." Think of the disgrace, of law and decency being outraged in the very buildings where our legislators assemble and under their eye. The times demand that a business self-confessed to be a "breeder of crime, want, misery and disgrace" should have no place in our public buildings. Drive the disgraceful business from every haunt it pollutes, and every community it degrades.—Selected.

A PLUCKY SCHOOLTEACHER.—Miss — (her name we withhold by request), who teaches the Glynn school in Coleman valley, displayed an uncommon amount of pluck Friday morning. She arrived at the schoolhouse a little earlier than usual, and was busying herself in arranging things in the little schoolroom for the morning session, when she was startled by the loud barking of dogs close at hand. She went to the front door and discovered two of Jim Smith's large deer hounds barking in a furious manner at the foot of a tall tree. She went to the spot and discovered a large panther crouching on one of the lower limbs, its large yellow eyes gleaming fiercely at the dogs below, while it lashed its tail viciously from side to side. One glance at those fiery eyes would have been enough for most women, and some men for that matter, but she is made of the old Puritan stock, and it takes something as small as a mouse to frighten her. She did not faint or go into hysterics, but did go into the schoolhouse and bring forth her Winchester. She then walked around the base of the tree until she arrived at a point where she could take accurate aim at a vital spot, and fired. The shot was answered by an unearthly screech, as only a panther can give, and the large spotted body fell to the ground. After one or two convulsive quivers, the huge mass was lifeless. It measured seven feet from tip to tip. It wasn't a good day for panthers, either.—Sonoma Dem.

ANDERSEN'S WRITINGS.—A card is received from Santa Barbara protesting against Prof. Foster's translating "from the German of Hans Christian Andersen," because Andersen was a Dane. It may be answered that, though Andersen was a Dane and wrote his earlier works in Danish, he had many friends and admirers in Germany and adopted the practice of issuing his writings both in Danish and German. Prof. Foster, in his translation, has the German version, and consequently translates from it.

## YOUNG FOLKS' COLUMN.

## Young Folks' Letters.

## Poultry Club Notes.

MRS. J. HILTON:—I read the letters of the boys and girls, and as I am very much interested I concluded to answer one of the questions in our last paper, the July 17 number of the RURAL PRESS. I will answer the question of F. Wood, "What makes my chickens mope about?" This moping about is the roup, and is caused by having fowls roosting in a draft, dampness, wet weather, sudden changes, or in foul and badly ventilated houses. Your little reader, JAMES MCKELVEY, Los Angeles.

DEAR MRS. HILTON:—You wanted to know how many eggs is best to put under a hen. I would put 13 under a small hen and 15 under a large one. Your little ten-year-old friend, LULU E. GODFREY, Visalia.

MRS. J. HILTON:—I live at a place eight miles east of San Bernardino, and I am nine years old. I will answer some of your questions. It is best to put only 12 or 13 eggs under a hen to set. The ones who own the hens have the best luck with those which steal their nest. The chickens which mope about do so because they are lousy.

I will ask a question: "What shall we feed young mocking birds?"—MATTIE M. STARR, Lugonia.

MRS. J. HILTON:—I think if Harry Hopkins would poultice his big dog's foot with mud or wet sand, changing it twice or three times a day, it would get well; as our dogs would always to seek the mud and lie in it for anything of the kind.

Tell F. Wood his chicks, probably, are troubled with vermin, in which case he must use lots of cold water about their roosting place; rub the roosts well with coal oil, and whitewash the coops thoroughly. Feed raw onions cut into little bits.

If any of the "young folks" hens or chickens are troubled with swelled heads, they will find showering with cold water a very good remedy. An old coffee or teapot is good to use for it, if there is no faucet to hold them under. About twice a day is sufficient.—A. E. D.

## Pigeons.

EDITORS PRESS:—I send this answer to "Polly" in the Young Folks' Club as to the "best way to care for pigeons." The best way as we think (and we judge from our own success somewhat) is the let-alone principle. Pigeons should always have their roosting and nesting places, as well as the entrances to the same, inside of a barn or shed. If the entrances are from the outside, they are apt to be troubled by hawks and owls, and will frequently leave such places on that account. They also like to roost like chickens on the ties to rafters high up on the roof (except when hatching), secure from cats or other enemies in the night time. The writer of this has had no trouble about having all the pigeons he wanted under the conditions mentioned above, while his neighbors' pigeons will often come to him to stay; in fact the first pigeons we had came of their own accord. No further care is necessary, except a little cleanliness. If there are any stubble fields near they will find their own feed in the summer, while in winter they want to be fed any kind of small grain. Green feed is necessary and beneficial, of which there is generally enough in any neighborhood any time of the year. Under the above conditions pigeons will increase so fast as to be almost a nuisance.—B., Riverside.

## Morro and Its Surroundings.

DEAR EDITOR:—Haying, heading and thrashing are in great progress. It seems as if everybody has got a header or thrasher. Potatoes are very plentiful and are very low in price, from 50 to 75 cents a sack. Onions are \$1 a sack, and wheat and barley are a dollar a sack. There is no price set on hay as yet, and fruits are different prices. Butter is 14 cents in Cayucas, so you see the dairymen are not making fortunes this year.

They had a grand picnic the Fourth of July up on Toro creek, but I was very sick and we could not go. Miss Kittie Congdon and Mrs. Deo, her sister, played on the organ and sang. I do not know who delivered the oration. The Toro creek teacher (a lady) read the Declaration of Independence. After that they had a barbecued beef.

I saw a letter in the PRESS from a girl in Muscle Slough, and as I came from Visalia, only 30 miles from there, it seems like a letter from home.

Our school begins in August. Our teacher's name is Mrs. Hamlin. I wish Miss Congdon could have got it. I will be glad when school begins. We will have four months of school, and then it will stop and commence again in March. We will get our share of schooling.—EDITH MEAD, Morro.

## From Wild Flower.

EDITORS PRESS:—I thought I would write a few lines from this section of the country. Harvesting is nearly over, and grain is turning out very well. Some few sheep are coming in to eat down the stubble. We have had some of the warmest weather I ever saw; it was very sultry. I enjoy the watermelons so much, and we have a good many. I am aware that I am

taking too much space in your valuable paper, of which I have been a reader for some years. The Young Folks' Column is always good; it is the first thing I look for in the paper. I will close for the present.—C., Wild Flower, Fresno County.

## GOOD HEALTH.

## Recovery From Illness.

I think that only those who have been on long beds of sickness, experiencing weeks of pain and weariness, coming slowly up through convalescence once more, can fully appreciate all that good health means.

In sickness your world is limited to the world of your chamber; your interests to obtaining ease and rest from pain. You are like a babe in your despondency, and a child in your temper and caprice. Strange thoughts come and go through the brain; all the future is dull and lurid, as seen through the morbidness of disease, and between it and you lies the valley of the shadow of death, perhaps. If you escape that valley, and feel life thrilling once more within your veins, how slow the creeping back to the old landmarks once more, and the awakening of the old interests. But one by one they come to you once again, the pulse beats ever stronger until you can cry jubilant, I am well.

And there is a compensation of one sort for sickness. The wheels of your machinery have been oiled and jointed afresh, and move with greater ease; the new fibers of flesh and muscle have something of the elasticity of youth about them, and your brain is cleared of many cobwebs. In the hand-to-hand conflict you have had with disease, all minor troubles have lessened or vanished entirely, and the blessings of life so nearly lost are appreciated at their worth.

Hope is in the ascendancy again, and you are thankful, loving, willing, glad to do your part once more in the work of life. All this comes with real healing from disease.—Herald of Health.

CAUSE OF PREMATURE OLD AGE.—The cause of much of the premature old age and decrepitude and nerve degeneracy and break-down is in the many inventions man has devised whereby he robs himself of timely rest. The morning newspaper, often read through before breakfast; the telephone in his house, to call him at any and all times aside from his repose; the electric light to keep his brain unduly stimulated through the retina; the railroad and the sleeping-coach, which may keep him continuously on the rail (if he chooses so to travel) for many weeks, without rest from the noisome and exhaustive cerebro-spinal concussions of this mode of travel, hasty meals and telegrams and business, and nightmare sleep, all commingled, wither and wreck lives innumerable, which, under wiser management, might end differently; and the needless noises of the city—the bells and whistles, howling hucksters, noisy street cars, yelling hoodlums, that make night hideous with their howls—hasten the premature ending of useful lives; and when, superadded to all this unphysiological strain, we have the assault of a pestilence that poisons, like cholera, how much exemption can such overwrought organisms expect? How much of resisting immunity can such overstrained and exhausted nerve-force oppose to the invading foe?—Sanitarian.

WHAT IS CATARRH?—Catarrh is a mucopurulent discharge, caused by the presence and development of the vegetable parasite amoeba in the internal lining membrane of the nose. This parasite is only developed under favorable circumstances, and these are: Morbid state of the blood as the blighted corpuscle of tubercle, the germ poison of syphilis, mercury, toxemia, from the retention of the effete matter of the skin, suppressed perspiration, badly-ventilated sleeping apartments, and other poisons that are germinated in the blood. These poisons keep the internal lining membrane of the nose in a constant state of irritation, ever ready for the deposit of the seeds of these germs, which spread up the nostrils and down the fauces or back of the throat, causing ulceration of the throat; up the eustachian tubes, causing deafness; burrowing in the vocal chords, causing hoarseness; usurping the proper structure of the bronchial tubes, ending in pulmonary consumption and death. Many attempts have been made to discover a cure for this distressing disease by the use of inhalants and other ingenious devices; but none of these treatments can do a particle of good until the amoeba are either destroyed or removed from the mucous tissue.

CHANGING THE VOICE.—As the result of an experimental inquiry, Dr. Sandras, a physician of Paris, claims to be able to change the nature, intensity, pitch and extent of the voice in a surprising degree by the use of different inhalations. A few inspirations of alcoholic vapor impart a decided hoarseness, some vapors weaken the voice, while others strengthen it to such an extent that it acquires new notes, high and low. If the same effects are produced upon people generally, this curious discovery must prove of great practical value to public speakers, singers, and all who use the voice considerably.

## DOMESTIC ECONOMY.

A DELICIOUS SALAD is made by cutting up peaches and bananas in thin pieces and sprinkling them with sugar and a little lemon juice.

COOKIES.—Beat two eggs in a cup, and two tablespoons of melted butter, two tablespoonfuls sour milk; fill the cup with sugar, half teaspoonful soda, flour to roll; bake quick; best if kept in a stone jar.

CREAM FOR PUFFS.—One quart of milk; let the milk come to a boil. Mix together four tablespoonfuls of cornstarch, five tablespoonfuls of sugar and four eggs, pour into the milk, stirring constantly. Cut the puffs in half and fill with the cream.

BREADED POTATOES.—Boil potatoes in their skins until done, but not too soft. Peel them, cut them in thick slices, dip them in beaten egg, roll them in fine bread or zwiebeck crumbs. Fry the slices in hot butter or drippings until they are a golden brown, and serve.

CREAM PUFFS.—One pint boiling water; while boiling stir in one cupful of butter, two heaping cups of flour and eight eggs, yolks and whites beaten separately. Stir until well mixed, then take off the fire. When cool, stir in one teaspoonful of soda. Now drop in gem pans and bake in hot oven.

TURNIP SOUP.—Slice five turnips and three onions with a piece of butter into a saucepan; cover close and let it stew for half an hour; then put in as much good stock as you require for the quantity of soup; add a few peppercorns, let it simmer for two hours, add a good slice of bread, rub it through a sieve, and add half a pint of milk before serving.

GREEN PEA PANCAKES.—A cup of boiled green peas, rubbed smooth with a teaspoonful of butter and seasoned with salt and pepper; should have been put aside after dinner yesterday for this purpose. Mix with it now a cupful of milk, two beaten eggs and three tablespoonfuls of prepared flour. Beat to a soft batter and bake as you would griddle cakes.

RASPBERRY JAM.—Warm the fruit, mash it well in an earthen jar, and boil 20 minutes. Then to every pound of fruit use three-fourths of a pound of sugar. After this is put in, let it boil till by taking some out on a plate to try it no juice gathers about it. Then it is ready to put away, as you would jelly, in glasses or stone jars. Seal with paper dipped in the white of an egg, when it is quite cool.

RASPBERRY PIE WITH CREAM.—Line a pie plate with a good paste and fill with ripe raspberries sweetened abundantly, says Marion Harland. Lay the upper crust on evenly, but do not fasten by pinching or printing the outer edges. When the pie is baked, set aside to cool. The crust should be cold and stiff when you lift it to cover the contents with a cup of whipped cream, sweetened with powdered sugar. Replace the upper crust, sift sugar over it and send to the table.

CHICKEN SALAD.—Two common-sized fowls, one teacup of good salad oil, half a jar of French sweet mustard, the hard-boiled yolks of ten eggs, half a pint of vinegar, one teaspoonful of cayenne pepper, eight heads of celery, one teaspoonful of salt or a little more if required. Cut and mix the chicken and celery, and set away in a cool place. Mash the eggs to a paste with the oil; then add the vinegar and other things; mix thoroughly, but do not pour it over the salad until about half an hour before serving, as the celery may become wilted.

WATERMELON RIND PICKLE.—Pare the outer rind off watermelons that are brought from the dinner table; cut them simply into strips, leaves or stars—any shape, in short, that you may fancy; take 10 pounds of this rind and boil it in clean water until tender; make a syrup of two pounds of sugar, one quart of vinegar, half an ounce of cloves and half an ounce of cinnamon; the syrup to be boiled and poured over the rinds boiling hot; drain the syrup off and let it come to a boil, and pour over the rinds three days in succession. It will keep for years.

FRENCH HASH.—The recipe is: Use cold, fresh beef, cut in small, thin slices. It does not make any difference whether you cut the meat with the grain or not, as the time of cooking is short. For a pound of beef use a teaspoonful of onion, chopped very fine; put the onion in a frying-pan with a heaping tablespoonful of butter, and put them on the fire until they begin to brown. Put in the beef and brown it very quickly. Then stir in a tablespoonful of flour, and as soon as brown add sufficient boiling water to cover the beef. Season with salt and pepper rather highly. Heat all the ingredients together very quickly and take the frying-pan off the fire. Stir in the yolk of an egg and a glass of wine and serve. Miss Corson added, that those who are unaccustomed to the stirring in of eggs had better take a teaspoonful of the gravy and stir it together with the egg in a cup before adding to the sauce or gravy. That will insure smoothness.

## The Week.

It is needless to state what is the prevailing topic this week. Every one within reach of the telegraph or in sight of passing trains on the overland railroads knows that patriotism is abroad and monopolizes the public mind. Not alone in the metropolis where the affair has culminated in a blaze of glory this week, but in the distant towns whence the delegations have come and the directions in which excursions are planned, there is little thought or talked of than the Grand Encampment. In the city, business has been laid aside and the time given to pageants and receptions of a character and grandeur never seen before on the Pacific Coast.

One can judge how great an attraction the demonstration has proved from the fact that the Legislature forgot the exciting water question, met at midnight to discharge its constitutional duty in voting for a U. S. Senator, and then left the capitol in a body to attend the Encampment demonstration in San Francisco. Certainly no subject has ever so deeply engrossed the public mind.

We have been gratified in all the demonstrations we have seen and all the words we have heard uttered that there has been no indication that the asperities of the conflict remain. There is general rejoicing over the maintenance of the integrity of the nation and most solemn pledges

for the future, not for the advantage of any section, but for the good of the whole people, and upon this broad platform we are brothers all.

## A New Senator.

As we go to press the telegraph brings the announcement of the election of A. P. Williams, of San Francisco, to succeed George Hearst, whose senatorial life was cut short by the calling of an extra session by Governor Stoneman. Mr. Williams has long been a prominent wholesale liquor merchant in S. F., and is well spoken of by his associates. He has also figured considerably as a Republican politician. Mr. Williams will only hold office until the election of a Senator by the Legislature in January next, and the conferring of the senatorial toga upon him is little more than complimentary. It is hardly probable that those who elected him would have nominated a man in his business to catch the popular vote.

We cannot squeeze out many tears over the retirement of Mr. Hearst. He did not succeed in making a record which would commend itself to our readers. He was arraigned for his favor of the bogus butter men and wrote a letter, which we published, stating that he could be trusted to vote in the public interest on all measures. We rather thought his letter was too diplomatic to carry conviction, and yet we charitably received it as assurance that Mr. Hearst really would not favor the fraud. So it was received by others, and he was absolved from the intention to insult and endanger the genuine dairy interest. In spite of this declaration, when the bill came up, Mr. Hearst voted against the oleomargarine bill, which his constituents called upon him to support. Such a man "will not be missed" from the national councils. Fortunately, Senator Hearst did no harm in this matter, for the bill passed triumphantly.

President Cleveland has placed his signature upon it, and expressed his views in a message which may be found upon another page. The dairy interest may now take courage. We have not yet received the full text of the bill as it went to the President, but will have it soon. It may be said, however, as indicating the service which it will do the genuine interest, that after November 1st all imitations of butter will come under the revenue department of the Government, must pay a special tax, and, best of all, must bear upon every package a revenue stamp which will declare its character. We have always claimed that the greatest service to the dairy interest would be to let every one know when he was eating tallow and lard products, and that will not be required by the vigilant revenue department of the Government. This has been secured in spite of the opposition of Mr. George Hearst.

Another matter in which Mr. Hearst figured to the detriment of the agricultural and commercial interests of California was in the attempt he made with such adroitness to kill the effort of the Government to aid the people of California in stopping debris destruction and repairing the damages already done to our water-courses. He did this by leading the Senate to strike out of the River and Harbor bill the clause instructing the Secretary of War to bring suit against hydraulic miners in California who are filling up the navigable rivers with debris, as it was stated that the Secretary of War would not use any portion of the appropriation for the improvement of the Sacramento and San Joaquin rivers until he was satisfied that hydraulic mining had closed.

Mr. Hearst's action in this matter was a temporary revulsion of all the earnest work which has been done for years to get the U. S. Government to do its duty in this matter, and naturally it was received with great indignation in California. It seems that the other representatives set at work at once to repair the damage Mr. Hearst had done, and the Washington telegrams this (Wednesday) morning indicate successful work in this direction:

When Hearst succeeded in eliminating from the River and Harbor bill the clause against hydraulic mining, McKenna went quietly to work to have it restored through Markham, who is on the committee and who was one of the conferees. McKenna had the clause restored in conference, and to-day it passed both houses, Senator Hearst not knowing anything about it. The River and Harbor bill now directs the Secretary of War to bring suit against

hydraulic miners and compel them to cease depositing mining debris in navigable streams.

It thus appears that California has little to thank Mr. Hearst for; and, considering his course, the general opinion will be that his term in the Senate, short as it was, was quite long enough for the good of California.

## Among the Rural Exhibits.

The special displays of products from Californian counties and other portions of the Pacific Coast are noteworthy features of Encampment week. One of our staff spent a few hours Wednesday in an excursion—tantalizingly rapid—among those he could find most readily.

Entering Platt's hall and turning to the left, he first came upon a little exhibit made under the auspices of Gen. John F. Miller Post, G. A. R., of Colusa, and embracing apples, pears, peaches, plums and grapes—Muscats, Rose of Peru, etc.—onions, both yellow and red, half a foot across, and handsome samples of mohair, from Julius Weyand's Angoras, both male and female.

The space beyond, assigned to Yolo county, was cared for by the Woodland and Winters Posts. A vine loaded with hops, which showed no signs of New York blight or vermin, adorned the corner pillar; while the table supported big watermelons, nectarines, pomegranates, beautiful peaches and other fruits, fine Muscat, Flame Tokay and Black Hamburg grapes, and glass dishes full of grain.

There was also a pile of little muslin sacks, each three and a half inches high, labeled "Sample of grain grown in Yolo Co., Cal. (Sacramento Valley), Exhibit National Encampment, G. A. R., S. F., Aug., 1886," for Eastern visitors to carry home with them.

The most striking thing, however, was an arch of converging palm-fronds, from the center of which hung a huge cluster of green dates, about the size and shape of small olives. This interesting contribution was from S. C. Wolf-skill, of Winters. The bunches of alfalfa, too, would attract the attention of farm-folk from beyond the Rockies.

Next came Tehama county, having on its boundary a little cabinet of mineral specimens. Here was an extensive and handsome show of fruits, grain and vegetables, set off by tall and shapely sheaves of wheat and stalks of corn, reaching from floor to gallery. There were many samples of Snow-flake and other wheat in open boxes; potatoes, Irish and sweet; an 82-pound squash; gourds, cucumbers and tomatoes; a 54-pound watermelon; apples, pears, quinces, grapes, nectarines and other stone-fruits too numerous to specify.

But the exhibit from Butte, occupying the southern half of the hall, outdid all others. "A Butte county sliver" of sugar pine, more than a yard in width and 16 feet long, stood sentry at one end.

There is an elegant show-case filled with ores, asbestos, petrified wood and other specimens most engaging to the mineralogist. Towering corn, grain and pulse in jars, fine fruit in great variety, including bearing branches not a few, all go to prove the rich productiveness of the region. Especially showy were the many plates of superb Butte county oranges. The lucid oil, expressed from Oroville olives, the long bunches of timothy grown 2500 feet above the sea, the 80 varieties of wheat neatly displayed in sheaf and jar, 14 varieties of corn, 10 or 12 of barley, 2 or 3 of sorghum, the ramie, the walnuts, black and English, almonds, can barely be mentioned; 45 varieties of wood grown in the county are shown in the shape of uniform tablets by L. F. Smith, of Chico. The case of dried fruits and nuts from Gen. Bidwell's—24 divisions under glass—is the same which was admired at the New Orleans Exposition. The Casaba melons were the handsomest we have ever seen; and there were lots of them. Our enjoyment while hastily reconnoitering this charming exhibit was heightened by the courtesy of Mr. Boynton, of the Oroville Register, who takes a lively interest in pointing out its varied features.

In front of the Lick house, the cross-section of a redwood, measuring about nine feet in diameter, and lettered "From the Big Bottom Mill, Sonoma Co.," is set up edgewise upon the sidewalk and serves as a guide-board to the Sonoma County Pomona Grange exhibit within. On one side of the deep room are arranged grain

and grasses, showing in many instances the whole plant—root, stalk and head. One of the courteous committee in charge informed us that there are 80 varieties of native grasses and forage plants, including clovers, in their collection, although they cannot all be displayed until they are put up later in the Mechanics' pavilion. There are oats here, both wild and cultivated, considerably over nine feet high, and specially interesting are the volunteer oats, second crop, from suckers.

Opposite, on a terraced slope of 10 or a dozen shelves, are marshaled in close array hundreds of small glass jars, filled with a great diversity of products, fruit, pulse, grains, seeds of many sorts, wool washed and unwashed, etc., with two rows of bottles of native wines at the top. Above all is broadly placarded, "No irrigation." Across the end of the allotted space is stretched a fac-simile of the Sonoma "bear flag" of '46, having horizontal stripes red, white and blue, with a single star in a parallelogram, in the upper inner corner, and a lively looking bear diagonally opposite.

Passing out, we note a little exhibit from Washington Territory, comprising wheat, Australian, Little Club, etc., in heads, a variety of wheat, oats and barley in jars, slabs of native woods, samples of wool, mohair (14 inches long) and cocoons and silk grown in Walla Walla.

What San Diego county can raise is well exemplified at Easton & Eldridge's. Dampfs' white figs from Otay valley and Cowles' El Cajon raisins, grown without irrigation and cured by solar heat, stand for dried products. Grain is not omitted—there are maize, wheat and oats; but the growing trees in boxes of earth overshadow lesser objects. The loquat, not being in bearing, has a picture of the plums framed above it. The boughs of the guava are thickly set with small green fruit, and the citrus branches are freighted with their own yellow treasures.

The largest lemon tree rises from the center of a low, rimmed table, some 12 feet square, which is covered with a display of splendid fruit, mostly citrus, where Navel oranges and Eureka lemons are interspersed with Muscat and purple grapes, russet pears, apricots and apples, green and ruddy. After that comes an olive tree in bearing, and then a table whereon are stacked frames of choicest comb-honey, beside which is fittingly shown a lofty bundle of the white sage so dear to Southern bees.

At the Oregon headquarters, in the new I. O. O. F. building, we are first struck with the singularly beautiful showing of native woods. The rare specimen of maple burl—a section of trunk 7 feet high, cut on one side and exposing polished surfaces—which stands nearest the door, is followed by a series of large, glossy slabs of maple, Alaska cedar, Oregon mountain oak, myrtle, ash, etc. In the middle of the room is a large pyramidal stand, elaborately and tastefully constructed by the Portland Furniture Manufacturing Company, in itself a handsome exhibit, on which are arranged in glass numerous samples of grain (rye, oats, barley and wheat), fruit and berries in great variety. To the rear a pair of tapering towers are built of grains and grasses, bound in slender sheaves and set upright around circular stands, two and three stories high. Among the wheats we noticed Black African, White Australian, Chili Club, Seven-headed Egyptian and English Purple Velvet, the last tagged as yielding 96 bushels per acre. The timothy was gigantic.

There were also dressed chunks of Polk county freestones, a big glass case of unwashed fleeces and a cabinet of minerals, which, to our non-expert eye, were fine-looking specimens.

All these resorts were thronged with visiting veterans and their lady companions, who appeared full, by turns, of lively, pleased curiosity and quiet satisfaction.

JAPANESE PLUMS.—Mr. Ass Cleveland, of Alameda, has handed us two branches covered with Japanese plums, of what he calls the low and the high "Tank-ei" varieties. The twig of the latter bore 17 yellow plums on a length of seven inches, while within the same space upon the forked cutting from the low variety, 40 purple fruit were crowded. The cions from which they grew were obtained of Mr. Chabot, East Oakland, and grafted upon apricot stock, Mr. Cleveland thinks, in January or February, 1884. The trees were transplanted a year ago last May.

### A Colusa Farmer's Home.

As our State is full of visitors, going about to see some new thing, we have thought we might entertain them as well as our old readers by giving a view and description of one of the most remarkable residence buildings in California. It is the home of L. F. Moulton, and is situated near Colusa. The general exterior aspect of the building, from one point of view, may be gained from the engraving on this page, which is made from a photograph. Perhaps the first feature which strikes the beholder is the height of the structure. A person standing upon the tower which crowns the residence has his eye about 75 feet from the ground, and this altitude gives a grand view of the Sacramento valley and river to the south, the Coast Range to the west, the Sierras to the east, and the eternal snows upon Mt. Lassen and Mt. Shasta to the north.

Mr. Moulton's residence contains many novel features, in fact, nearly everything about is novel and characteristic. Take first the portion that first strikes the observer by its bold elevation. The engraving shows that the central portion rises four full stories, and overtowers the other parts. This is, in fact, the tankhouse, for instead of erecting his tank house apart from his residence, as is commonly done, Mr. Moulton has made his tank-house a central idea in his house planning, but has made such good use of the space and so elegantly fitted it up that no one would discover any likeness to its progenitor the tank-house. The interior of the tower is used for an elevator and around it is the stairway. There is also space for an observatory where a telescope may be arranged.

At the very top of the tower is a lookout which forms the roof or deck over the main tank holding 1500 gallons, situated 65 feet above the ground. This tank has a supply pipe of galvanized iron two and a half inches in diameter, which pours into it from above, and another similar pipe from the bottom for distributing the water. Connected with this are three one-inch pipes which carry water for fire purposes to about 25 buildings situated within a radius of half a mile. From the tank there are also a 2½-inch and a 2-inch pipe leading to hydrants at all necessary places, for the purpose of extinguishing fires, watering stock, irrigation, etc. The water to supply the main tank is obtained in this way: There are two Garret pumps, one on each end of a 2½-inch iron shaft, 80 feet long. This shaft is supported on a frame and is run by steam or horse power as desired. It is so arranged that either or both pumps can be used at will.

Under each of the pumps are wells with pipes running directly into them, and pumps are also connected with four other bored wells, in different directions. In this way they draw upon a large area of water space below the surface, instead of one large well as is usual. Mr. Moulton finds that bored wells cost less and are not liable to get out of order.

Aside from the large tank surmounting the tower there is another of 500 gallons capacity, which receives the rain-water from the house-roof and is the head of the system of water supply for domestic use, in wash-bowls and bath-tubs, as there is hot and cold water throughout the different stories of the house. There is also a system for flooding the house-roof, etc., with water in case of fire and means for drawing off quickly any water thus set free,

which must be seen to be appreciated, as their plan is very ingenious and working effective.

Another notable feature of the residence is its chimney system, which is quite as remarkable in its way as the water system. The chimney is a large structure to the center of the

mantels. This chimney runs up through three grand rooms, one above the other, and each 22½ by 32 feet in size; other rooms, arranged to suit convenience, communicate with the main rooms. On the ground floor, as shown in the plan, the large room 22½ by 32 feet opens by

nomical observatories. The telescope support will have eight arches, supported by columns, through the center of which will run 15-inch pipes, and these will be slanted up and out of the way above, so as to reach open air and unobstructed draft.

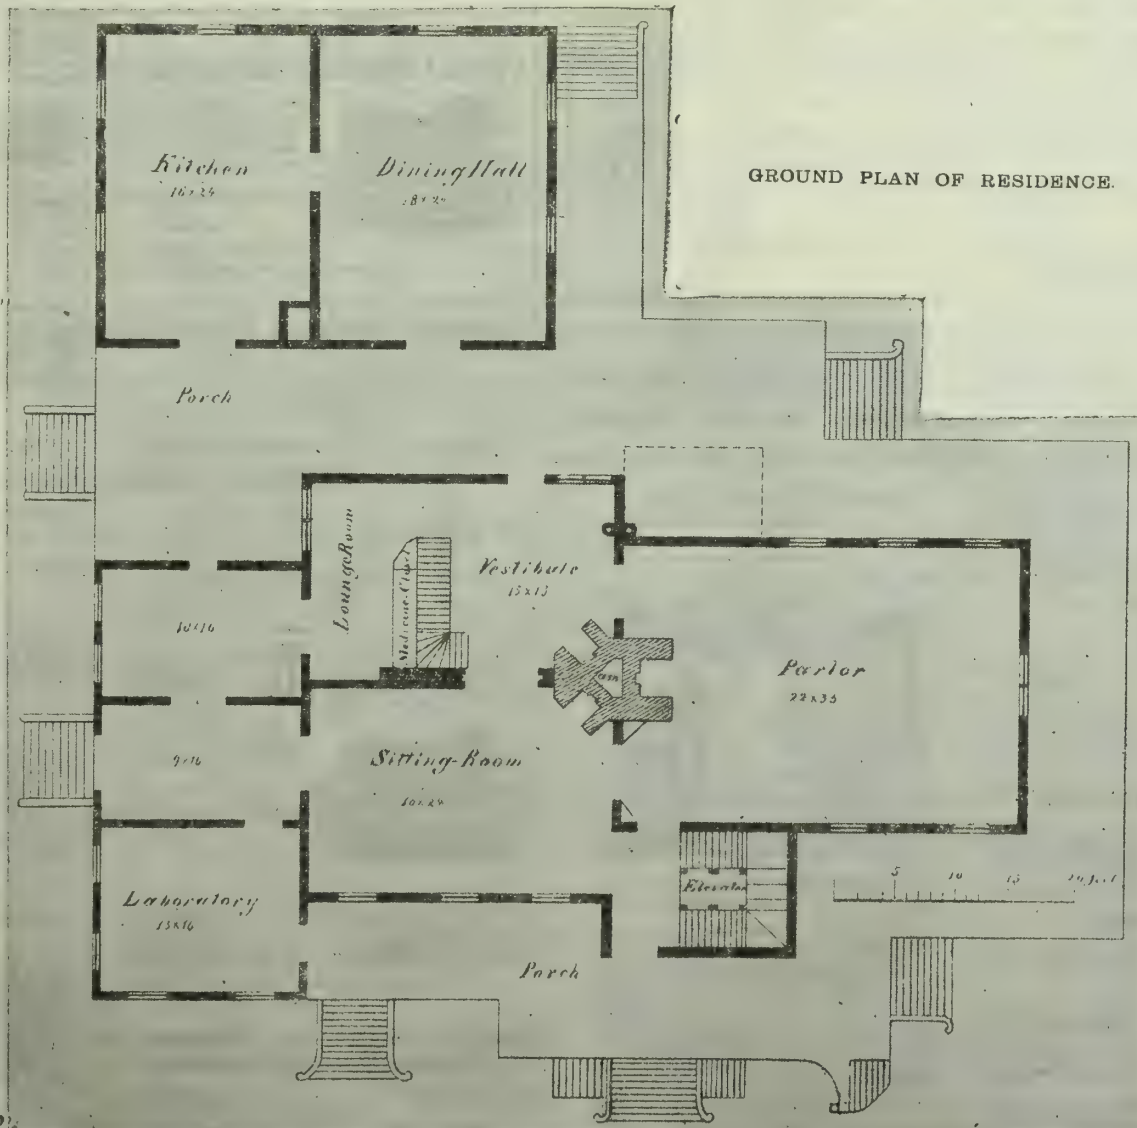

We have not space to comment at greater length upon Mr. Moulton's structure. A study of the engravings will show the reader many points not described. His house is located on a farm comprising 9000 acres of high grain land and 9000 acres more, which are partly subject to overflow; but the lowest is said to be good hay land, and also has fruit trees and vines that have lived through the worst overflow of many years. Mr. Moulton is now preparing to set out 100,000 young prune and pear trees, having a large lot of imported French stocks, which he will bud this summer, besides other hardy stocks now growing in the nursery. The farm has about 30 miles of fencing, inclosing all but the grain land.

We have heard that the ranch has produced as high as 120,000 bushels of wheat in one season, besides other products. There are now 200 acres of orchard and vineyard, just coming into bearing. An irrigation canal is projected from Chico creek to the land, which, it is thought, would supply water to irrigate the whole of it.

Colusa county, situated in the center of the great Sacramento valley, is now demonstrating its fitness for a great extension of its list of products, as it is found that its soil and climate are adapted to many fruits and other desirable growths, which will give the region wide fame and tend to the progress of the county in wealth and population.

RESIDENCE OF L. F. MOULTON, COLUSA, CAL.

house, as may be seen in the ground plan, and the top of it is located just back of the tower, in the prospective view. The chimney is 50

folding and over-head rolling doors into other rooms to the west, which, by double doors, open into rooms still farther west, and these by

WE take great pleasure in calling the attention of the many readers of the RURAL PRESS to the fact that the story of Mother Bickerdyke's heroic life and labors for the relief of our soldiers during the war is the work of "M. B. D.," one of its valued correspondents. It is her first appearance as an authoress and is regarded as a valuable contribution to the literature of that great struggle. It is a marvel how one so young could so accurately conceive and graphically portray the grand and stirring scenes of that mighty drama.

By the recent order of the Interior Department, saw mills in Alaska are not permitted to cut logs and manufacture the same into lumber, except for the personal use of the proprietors of said mills. The order is based on the fact that there are no land laws in that Territory, and no person can acquire ownership to real property. The only persons who have title to real estate are a few Russians who owned land in Sitka at the time of the transfer of the Territory to the United States.

DR. LINDLEY, of the Los Angeles Medical College, has been collecting statistics and reports concerning the disease known as "hay fever" or "hay asthma" in Southern California, and after wide research he enunciates three conclusions: 1. Hay fever never originates in Southern California. 2. All cases of hay fever that have come, seeking relief, to Southern California, have been benefited—almost all have been cured. 3. That a few miles inland, in the foothills, relieves such cases as are not benefited by a residence at the seaside.

THE Los Angeles and Ostrich Farm Railway has been incorporated.

feet high and 10 feet in diameter at the top; upon which are now placed the pipes from the several flues, as shown in the picture.

The chimney has a hollow center, into which each fireplace discharges its ashes, which may be removed at pleasure from below. The fireplaces are furnished with the choicest onyx

double doors again communicate with the surrounding lawns and gardens in which are rows of orange, citron, lemon, lime and other choice trees which flourish in our mild climate.

It is Mr. Moulton's design to surmount his great chimney with an observatory with revolving dome, of the construction usual in astro-

All applications for storage or other business addressed to CHAS. H. SINCLAIR, Superintendent.

OFFICE, 318 California St., Room 8.

## S. H. MARKET REPORT

NOTE: Our quotations are for Wednesday, not Saturday. See date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, August 4, 1886.

The week's trade has been seriously broken in upon by the holiday feeling and the many distractions incident to the Encampment. Our prices below show that the cereals have taken rather an easier condition.

The latest by cable is as follows:

LIVERPOOL, August 4.—WHEAT—Rather easier. California spot lots, 6s 5d to 6s 8d; off coast, 33s; just shipped, 33s 6d; nearly due, 33s; cargoes off coast, quiet but on passage, steady; quantity of wheat on passage to continent, 740,000 qrs.; wheat and flour on passage to U. K., 1,975,000 qrs.; Mark Lane wheat, quiet; Maize steady; weather in England, unsettled.

## New York Hop Market.

NEW YORK, Aug. 1.—During the past week there was very little demand here for State hops of any growth. Dealers seem to be quietly awaiting developments, and brewers are holding back in the absence of any urgency of their wants. Offerings are comparatively light, and are restricted wholly to returned from London goods that are not in an attractive condition, and on common grades. Holders who have a first-class article guard them very jealously, and prices are nominal to a great extent for the same, there being about 30¢ margin between asked prices and the best bids. Offers were made of 32¢ to 34¢, f. o. b., there, as to condition, for 1886, Pacific, but previous sellers here would not offer at any price. It was stated on very good authority that a Western brewer is an anxious buyer of Pacifics, and that three-quarters of what remained unsold of the growing crop could be placed west of Chicago at prices above those named. A cable from London reports the condition of the crop very good. The weather there appears to be all that is desired for favorable growth. Reports of mold thence several days since are not now mentioned. It is presumed any damage that way is insignificant in character. Offerings in London are light. State, best, quoted at 28¢ to 30¢; good and prime, 24¢ to 26¢; common, 19¢ to 22¢; old crop, 14¢ to 20¢; California, 22¢ to 27¢.

## New York Wheat Market.

NEW YORK, Aug. 1.—Wheat has been very unsettled, and at the opening of the week was quite depressed. Active speculation on Tuesday caused a sharp advance, but it seemed to have no other basis than "sympathy with corn," which is decidedly dearer on reports of damage to the growing crop by drought. Wednesday the advance was lost. There has been a moderate export demand, though somewhat retarded by the firmer views of holders. Receipts of new wheat from the fall-sown crop continue liberal, and less complaint of the prospects of the spring-sown crop is heard. Spot closed firm at 1/4¢ to 1/2¢ advance for the week; futures closed weak, but 1/2¢ to 1 1/4¢ higher for the week.

## Eastern Wool Markets.

NEW YORK, Aug. 1.—Wool—Demand for domestic fleece has slackened, owing to the extreme figures demanded; but the confidence of holders remains unshaken, and no concessions are made anywhere, while supplies are offered sparingly. Foreign advances continue to favor sellers. Sales for the week included 15,000 pounds scoured California at 58¢, 10,000 pounds Territory at 17¢ to 18¢; California tail, fine, quoted at 16¢ to 18¢; low, 13¢ to 15¢; do spring, fine, 22¢ to 24¢; medium, 18¢ to 20¢; low, 12¢ to 17¢.

CANAJOHARIE, N. Y., August 3.—The utterly ruined condition of the hop crop throughout New York State by lice has caused a sudden advance. Growers in this vicinity have repeatedly refused 35¢ for those picked in 1885, and yesterday a grower in Minden sold last year's crop at 40¢, which is the highest price paid in three years.

NEW YORK, August 3.—Wool is quiet and firm. Domestic fleeces, 27¢ to 30¢; pulled, 14¢ to 35¢; Texas, 9¢ to 25¢.

## The Eastern Hop Crop.

CANAJOHARIE (N. Y.), Aug. 3.—The utterly ruined condition of the hop crop throughout New York State by lice has created a sudden advance. Growers in this vicinity have repeatedly refused 35¢ for those picked in 1885, and yesterday a grower of Minden sold last year's crop at 40¢, which is the highest price paid in three years.

## Local Markets.

BAGS.—The latest notes are given below.

BARLEY.—There has been considerable reduction in rates since our last report, and a strong effort is apparently being made to break down values. Call sales to-day were as follows: Seller season—200 tons, 82¢. Seller 1886—100 tons, 81 1/2¢; 200, 81 1/2¢; 100, 81 1/2¢; 400, 82¢; 300, 82 1/2¢; 1000, 82 1/2¢. No. 1 brewing, buyer season after September 1st—100 tons, 81 1/2¢; 200, 82 1/2¢. Seller 1885—300 tons, 82 1/2¢.

BEANS.—Beans are somewhat changed this week, as shown in our price list.

CORN.—Corn is quiet and unchanged.

DAIRY PRODUCE.—Butter is advancing, as described below.

OATS.—Oats are selling fairly, with especially good samples in request.

PROVISIONS.—Hams have dropped back a little this week.

WHEAT.—There is little doing. The drop in values does not please holders and they are reticent about offering. Call sales to-day were as follows: Buyer season—1600 tons, 1.32 1/2¢. Buyer 1886—800 tons, 1.28. Seller 1886—1300 tons, 1.22; 1300, 1.21 1/2¢; 1000, 1.20. Buyer season, 1700 tons, 1.32 1/2¢. Buyer 1886—1600 tons, 1.28; 100, 1.28 1/2¢. Seller 1886—1300 tons, 1.21 1/2¢; 100, 1.21 1/2¢.

[COMMUNICATED.]

## Market Information.

## Bags.

Standard grain bags which closed strong last week are again off, with 7 cts the asking price for Calcuttas. The demand has improved, but then there are more sellers, owing to heavy deliveries of bags on July contract. The market is difficult to give correctly, owing to the many influences at work to break and advance prices.

## Cereals.

The low price (\$1.10 to \$1.15) ruling for brewing barley caused continued steady buying, chiefly from brewers in this State. There are orders still on the market from the East, notwithstanding the recent advance in overland freights.

Feed barley which advanced quite sharply the last fortnight in July, under a strong buying to fill July contracts, is again weak. It is claimed that when short dealers come to filling August contracts, prices will again appreciate. The consumptive demand is very large, all of double last year's in this month.

It is given out that the Produce Exchange estimates the barley crop of this State at 700,000 tons, which is considerably above what harvesters returns indicate. Perhaps the members who give out the estimate want to buy on speculation at low prices.

The exports of barley by sea last month, from this port, aggregated 2207 tons, and the consumption, 8447. Where there is one animal fed in San Francisco and neighboring bay cities, there are five fed in the country.

Last month's consumption of oats, in San Francisco, aggregated 1197 tons. Prices have weakened off under freer receipts and a lessened call.

The July shipments of wheat (flour reduced to wheat) hence aggregated 53,271 tons, of which 42,785 tons went to Europe and the remainder to China, Australia, South America, etc.

Wheat buying for the Australian market continues. The last steamer took out 350 tons, and the next to leave takes out several hundred tons more.

The last steamer that sailed for Australia took out 4765 bbls of flour, which reduced to wheat makes 715 tons. On August 1st the stock of wheat on hand at Port Costa was 40,930 tons, and in this city 9236. Total, 50,266 tons.

Trading in wheat the past week has been interfered with by the G. A. R. festivities. The sales made by samples are said to have been at full prices, except where a few parcels were forced on the market so as to weaken prices. To-day buyers only bid \$1.25 for No. 1 shipping, as the top, but three sales more made it \$1.26 1/2. There are not many sellers, consequently the bears have some difficulty in making prices for actual delivery. Semi-public English cables received to-day give a weak market for cargoes in Liverpool, with 33s 6d quoted for prompt shipment. Private cables report the market somewhat unsettled by reason of the low, demoralized market for silver, and also unsettled course of the new ministry; but the damp unfavorable weather was in favor of wheat.

Rye is firmer and a shade higher. Corn is very firm, with an advance obtainable. The crop in this State will not equal more than last year's, owing to the north winds.

## Fruits.

Heavy receipts yesterday and again this morning broke prices and caused more or less of a demoralized feeling in all fruits except apricots. It is difficult to-day to get \$1.00 a box for choice Rose of Peru grapes and 85¢ for Muscats. Several consignments of grapes are more or less mildewed or moldy, causing them to be hard to sell. Some poor and bad conditions were closed out at 25¢ a box to peddlers. Wine grapes are steady and in good demand. Peaches under liberal receipts have been weakening until \$1 is the top for choice in good shipping order, and for city trade 80¢ to 90¢. Several consignments of over-ripe were sold from 25¢ to 35¢ a basket to peddlers.

Pears, under heavy receipts and canners bidding lower, have weakened off until it is difficult to get \$1.50 for choice B. R. lemons. Canners only bid 20¢ per pound. Fair pears are slow and quite low. Canners only bid from 1/4 to 1/2 cts per pound for greengages. The trade buys sparingly, consequently the stock is large, and to sell, canners' views, must, it is thought, be acceded to.

Plums and prunes are slow at lower quotations. It takes very choice plums to fetch two cts a pound. Apples are coming in more freely, with the trade confining itself chiefly to the more choice varieties. The stock of off-qualities is very large and accumulating.

Currents continue to come to hand, but do not fetch over \$3 a chest. Berries ruled fairly steady with a slight advance on Saturday, but on Monday they were easier, and yesterday it was hard to sell strawberries and blackberries, with even raspberries slow at a decline.

## Hops.

The market is quiet, as buyers are disposed to await further developments, particularly with overland freights higher and prospect of another advance soon. The New York crop is now conceded to be 60,000 bales against 130,000 last year. European crops are below an average, which, taken in connection with the very light stocks that will be carried over, cause operators to look for still higher prices abroad. On this coast it is claimed that the crop will be 40,000 bales, of which one-third has been sold for future delivery.

## Live-stock.

Beef continues to rule in sellers' favor at our quotations, with now and then some placed at a slight advance. Sheep are barely steady, but lambs are very firm, as are calves. Sales are reported at an advance on quotations; but they were on time, not cash; cash sales cannot be made over quotations. Grain-fed and dairy-fed hogs are in better request, but there is reported a strong holding, under the belief that when cooler weather sets in prices will be higher. In the horse market there is nothing new to report, as trading has been interfered with by the G. A. R. festivities.

The following are to-day's meat prices: Beef—Stall-fed 7 1/4¢ to 7 1/2¢; grass-fed, extra, 6 1/4¢ to 7¢; first quality, 6 1/4¢ to 6 1/2¢; second, 5 1/4¢ to 6¢; third, 4 1/4¢ to 5 1/4¢. Calves, small, 8¢ to 9¢; larger, 6 1/4¢ to 7 1/4¢. Mutton—Ewes, 4 1/4¢; wethers, 5¢.

Lamb—Spring, 6¢ to 6 1/2¢; Pork—Live hogs on foot, 3 1/4¢ to 4¢ for grain and dairy fed; 2 1/2¢ to 3 1/2¢ for soft; dressed, 6¢ to 7¢ for hard, and 4¢ to 5¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

The Grocer and Country Merchant of July 30 contains the following sales of live-stock for the week as follows: San Francisco Stock Yards.—815 cattle (large; fat), \$45.00; 643 cattle (medium; fat), \$37.00; 212 cattle (rather thin lot), \$29.00; 863 calves, \$3.75, \$6.00, \$9.00, \$10.00, \$15.50, 6186 sheep, \$2.75, \$2.90, \$3.00, \$3.25, \$3.40; 2998 lambs, \$1.50, \$1.80, \$2.00, \$2.25, \$2.50; 3475 hogs, 3 1/4¢, 3 1/2¢, 3 3/4¢. Oakland Stock Yards.—167 cattle (fat; large; smooth), \$46.00; 213 cattle (fat; medium; good), \$35.00; 265 calves, \$2.75, \$3.50, \$5.00, \$9.00, \$13.50; 988 sheep, \$2.75, \$3.00, \$3.25; 675 lambs, \$1.75, \$2.00, \$2.50; 763 hogs, 3¢, 3 1/2¢, 3 3/4¢, 4¢.

## Vegetables.

Choice, well-matured Early Rose potatoes have been quite scarce, causing as high as \$1.10 to be paid on the wharf; but poor to good have been in free supply, with sales of inferior as low as 45 cts per cental. Garnet Chilis and Peerless have moved off at steady prices, with well-matured for shipping taken at an advance on daily press quotations.

Under very heavy receipts, tomatoes have been dropping until sales were made at from 10 to 35 cts a box. Canners are buying very little, giving as a reason that river tomatoes are too watery, and that they will buy only Santa Clara and Alameda.

Green corn advanced slightly up to Monday, but under heavy receipts and an offish demand the market weakened to-day.

Onions have been in heavy supply. Considerable reds were dumped, but at the close to-day there is a steadier tone. Silverskins have been steady at the low prices quoted.

Green okra, green pepper, summer squash and cucumbers ruled steady up to Monday, but to-day they are weak with considerable selling pressure, owing to a large carry-over stock from yesterday. Cabbages, cauliflowers and root vegetables are fairly steady, although at times concessions were made to clean up consignments.

## Dairy Product.

Gilt-edged butter continues in fair request with sales still reported at 25 cts; but the large supply of good to choice, pressing the market at from 18 to 20 cts, lessens the demand. The consumption, locally, is very heavy.

Strictly choice eggs have been in good demand throughout the week, with no difficulty reported in getting 27 1/2 cts a dozen for shippers of this quality only. Good eggs have ruled weak, with buyers naming prices; but it is claimed that a steadier feeling is manifesting itself owing to lighter receipts, and the stock greatly reduced. Eastern eggs, it is thought, will soon be out of the market, owing to higher prices in the West and also higher freights overland.

Cheese is firmly held, with only a moderate trade call reported.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	310,393	233,281
In port, disengaged.....	58,824	102,774
In port, engaged.....	54,244	14,572

Totals.....423,461 350,627

The above gives a carrying capacity as follows: 1886, 983,537 short tons; 1885, 561,003 short tons; increase over last year, 122,534.

Honey is steady, with a firm tone, owing to holders not pressing the market. Buyers, to have their wants met, have at times to pay an advance, but they hold off as long as possible before buying.

Charters are very weak for both ships in port and to arrive.

Beans continue firm but no higher.

Hams and bacon are very firm, owing to a good demand and higher overland freights.

Choice hay continues scarce, but off grades are in liberal supply.

Poultry has been demoralized under very heavy receipts, and dealers being overstocked. Hens that sold two weeks ago at \$8.00 a dozen only fetched \$6.00 on Saturday and Monday last. All other fowls were proportionately lower. It is claimed that this week receipts will fall off and values appreciate.

San Francisco, August 4, 1886.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING JULY 27, 1886.

- 346,350.—HORSESHOE—J. E. Bingham, Walla Walla, W. T.
- 346,351.—HORSESHOE—J. E. Bingham, Walla Walla, W. T.
- 346,150.—WATER-PROOF COMPOSITION FOR FELT SHOES, ETC.—Feldmann & Dunbar, Portland, Or.
- 346,287.—PIE-PLATE LIFTER—G. H. Hollidge, Tacoma, W. T.
- 346,105.—BURGLAR ALARM—J. E. Hunt, S. F.
- 346,304.—WATER FILTER—McLean & Cumming, S. F.
- 346,212.—PRESSURE-REGULATING VALVE—P. F. Morey, Portland, Or.
- 346,226.—HORSE COLLAR—R. M. Sears, S. F.
- 346,333.—BRAKE BEAM CONNECTION—Walsh & Smith, Taylorsville, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Fairs to Come.

- Bay District Association, San Francisco, Aug. 7th to 14th.
- Sonoma County Agricultural Association, Santa Rosa, Aug. 16th to 21st.
- Third District—Butte, Tehama and Colusa counties—Chico, Aug. 17th to 23d.
- Fourth District—Sonoma, Marin, Solano and Napa counties—Petaluma, Aug. 23d to 28th.
- Seventeenth District—Nevada and Placer counties—Glenbrook Park and Pavilion, Nevada City, Aug. 24th to 28th.
- Mechanics' Institute Fair, San Francisco, Aug. 24th to Sept. 25th.
- Golden Gate Fair, Oakland, Aug. 30th to Sept. 4th.
- Thirteenth District—Sacramento, Yolo, Yuba and Sutter counties—Marysville, August 31st to September 4th.
- Eighth District—El Dorado, Amador, Alpine and Mono counties—Placerville, August 31st to September 4th.
- Contra Costa Agricultural Society, Concord, Sept. 6th to 10th.
- State Agricultural Society, Sacramento, September 6th to 18th.
- Oregon State Agricultural Society, Salem, September 13th to 18th.
- Eleventh District—Plumas, Lassen, Sierra and Modoc counties—Greenville, September 20th to 24th.
- Second District—San Joaquin, Calaveras, Tuolumne, Stanislaus, Merced, Mariposa, Fresno, Tulare and Kern counties—Stockton, Sept. 21st to 25th.
- Ninth District—Del Norte and Humboldt counties—Rohnerville, Sept. 21st to 24th.
- Fifth District—San Mateo and Santa Clara counties—San Jose, Sept. 27th to Oct. 2d.
- Seventh District—Monterey, Santa Cruz, San Benito and San Luis Obispo counties—Salinas City, Sept. 28th to Oct. 2d.
- Tenth District—Siskiyou, Trinity and Shasta counties—Yreka, Sept. 29th to Oct. 2d.
- Nevada State Fair, Reno, Oct. 4th to 9th.
- Santa Barbara Agricultural, October 5th to 8th.
- San Diego Horticultural Society, Oct. 6th to 8th.
- Sixth District—Los Angeles, Santa Barbara, Ventura, San Diego, San Bernardino and Inyo counties—Los Angeles, Oct. 11th to 16th.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

- JARED C. HOAG—California.
- G. W. INGALLS—Arizona.
- E. L. RICHARDS—San Diego Co.
- R. G. HUSTON—Idaho and Montana.
- GEO. McDOWELL—San Luis Obispo and Santa Clara Co's
- FRANK W. SMITH—Idaho and Montana.

LUMBER RESOURCES OF LOUISIANA.—The New Orleans Times-Democrat says that the State of Louisiana possesses the largest area of merchantable timber of any State of the Union, and the greatest variety of woods.

Cheap Money to Loan on Grain.

FARMERS, don't pay 10 per cent. S. D. Hovey, 330 Pine St., San Francisco, has \$500,000 to loan on grain in warehouse, at 6 per cent per annum. He loans \$18 a ton on wheat. Write him.

American Exchange Hotel, SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

A Good Opportunity for a Machinist.

A variety of good Tools, Patterns, etc., with business for sale cheap by a party retiring from business. A splendid opportunity for an enterprising mechanic.

Address A. B. C., care of this paper.

Cholera is Quick, PERRY DAVIS' PAIN KILLER is Quicker. 46 Years experience PROVES that PERRY DAVIS' PAIN KILLER is the cure for Cholera.

Oughtn't you to get a bottle quickly so if you need it quickly no time will be lost? For Cholera Morbus, Diarrhoea, Summer Complaint, Dysentery there is no remedy equal to P.D.P.K. Your druggist sells it, PERRY DAVIS & SON, Prop's PROVIDENCE, R.I.

CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th. TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President. EDWIN F. SMITH, Sacramento.

Acme Steam Heat FRUIT EVAPORATORS.

Absolutely No Danger from Fire

For Illustrated Catalogues and full information regarding this new process of EVAPORATING FRUIT, address

BATCHELOR & WYLIE,

37 Market Street, San Francisco.

PARTIES VISITING SAN FRANCISCO WILL FIND first-class accommodations much under hotel rates at 1013 Sutter St.; private family. MRS. A. M. TIRRELL.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

DEWEY & CO. PATENT SOLICITORS.

252 MARKET ST. S. F. ELEVATOR 12 FRONT ST. S. F.

About Obtaining Patents.

Patents are Virtually Contracts.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, in order that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive, for the small sum of \$5 for the examination, a verbal or written report showing definitely wherein his invention has been anticipated, thereby saving him further expense and perhaps much time, anxiety, etc.

To avoid all needless delay, however, and secure patents at the earliest moment practicable, inventors will do well to forward a model, drawing or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with \$15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately and forwarded to the inventor for his signature. When he receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps.] When the patent is allowed the inventor will be duly notified, and on sending the final Government fee of \$20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretense of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give up a case so long as there is a chance of obtaining a patent. The Agency charge, including drawings, rarely exceeds \$40, and for this we do not claim without appealing the case.

Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are more satisfactory to the Patent Office than the old cumbersome system of storing up an immense bulk of countless models.

Drawings or sketches, sufficient to illustrate the invention clearly, with a description that will enable us to make a full set of perfect drawings for the Patent Office, is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sale had it been skillfully, completely and artistically portrayed. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken to have the invention fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. has edited and published the MINING AND SCIENTIFIC PRESS continuously since 1860, a period of 26 years. Few agents, who are still engaged in the business, have had so long-extended practice in patent soliciting. The members of the firm give personal attention to the applications entrusted to their care; and their familiarity with inventions and with local affairs in the Pacific States and Territories, enables them to understand the wants of inventors on this coast more readily and thoroughly, as we believe, than any other agents in America. Thus there is saved a great deal of the time which ordinarily—when distant agents are employed—is wasted in preliminary writing back and forth.

This happy-combination of long business experience together, and wide connections, has placed our firm in a position unquestionably most fortunate for affording inventors prompt and reliable advice, and the best facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention, in one or more of our influential and reliable newspapers, affording just the circulation best calculated to widely inform the class of readers especially interested in the subject of his invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, which is adjudged to be novel and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from \$10 to \$20. The Government fee is \$10 additional. To enable us to prepare caveat papers, we require only a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves or for them by other agents) and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors doing business with us will be notified of the state of their application in the Patent Office whenever it is possible for us to furnish such information.

DEWEY & CO.

Patent Solicitors, Office of SCIENTIFIC PRESS, 252 Market St. Elevator entrance, No. 12 Front St., S. F. GEO. H. STRONG. W. R. EWELE. A. T. DEWEY.

## DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 23-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished.

We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to  
**DANIEL BEST,**  
513 Fifth Street, Oakland, Cal.

## HENLEY'S Monarch Fence Machine, \$40.00.

With one of these Machines a farmer can build his own fence cheaper and better than he can buy it, or make it by hand. TRY ONE. Send for Catalogue.

## CLEAR YOUR LAND WITH JUDSON POWDER.

**RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE,** by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE STUMPS AND TREES.

FROM 5 TO 30 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.

In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

**BANDMANN, NIELSEN & CO., General Agents**  
**GIANT POWDER COMPANY,**  
SAN FRANCISCO, CAL.

## STODDARD BARREL CHURN

With Improved Cover Fastening.

The Only Practical Churn for the Dairy.

Awarded First Premium California State Fair, 1885; also First Premium Mechanics' Fair, San Francisco, 1884 and 1885, over all opposition.

The Stoddard Churn is as great an improvement over the cumbersome, leaky, and often sour box churns as the Cream Separator is over setting in pans, and this fact is fast becoming realized, as is proven by the growing demand for them, and they are being adopted by our best dairies with the most gratifying results. Beware of imitations of the "Stoddard." All interested in dairying will regret if they fail to all or address us to investigate these matters.

### PRICE LIST.

## WHITMAN Perpetual Hay PRESSES.

**\$250.**

GUARANTEED SUPERIOR TO ANY OTHER HAY PRESS.

The BEST MADE and Fastest!  
CAPACITY, 8 OR 10 TONS A DAY.

Makes a Bale 16x18—Variable Length.

ADDRESS

BYRON JACKSON, 625 Sixth St., San Francisco.

## ROSES! FOR FALL, 1886! ROSES!

READY FOR SALE,

300,000 Low-budded Roses, 2 and 3 years old, out-door grown.

THE BEST FOR FORCING OR BEDDING PURPOSES.

We highly recommend them. We sell the cheapest, according to what we give. Lowest cash prices for the Trade.

100 Hybrid Perpetuals in the best variety, our selection	\$ 2 00
1000 Hybrid Perpetuals in the best variety, our selection	25 00
100 Hybrid Perpetuals, purchaser's selection	10 00
1000 Hybrid Perpetuals, purchaser's selection	25 00
100 Teas and Monthly, our selection of variety	12 00
500 Teas and Monthly, our selection of variety	58 00
100 Teas and Monthly, purchaser's selection	14 00
100 Moss Roses, best variety, our selection	9 00
100 Moss Roses, purchaser's selection	10 00

This is not including the new Roses of '85 and '86.

100 Grapevines, best imported variety, our selection	\$10 00
100 Standard Tree Roses, our selection	40 00
100 Half Standards, our selection	30 00

One hundred roses packed weigh about 50 pounds, 1000 about 400 pounds. Parties wanting the Roses sent by freight must add \$3.00 for prepayment of freight for every 100 pounds they order.

We start shipping after 1st of October. Catalogue on application. Plants are sent by Express or Freight. They are too large to be sent by mail. Order early to get the best. Cash must accompany every order. For reference see the editor.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 61,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by 6 inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles, throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

## Judge Joel Russell.

We propose to give life-like portraits of the several candidates who shall be nominated for governor during the present campaign, together with such facts about them as our time and space will permit. It is always more pleasant to speak of the good qualities of one whom we have known personally than to print the views of strangers. We have known for years the gentleman whose portrait appears upon this page, and we present him to our readers as the candidate of the Prohibition party for the governorship of California, without discussion of his candidacy or views, but as a practical farmer and a man whose life has secured for him esteem and an honorable reputation.

Joel Russell was born in Waterford, Oxford county, Maine, where he resided until he attained the age of 17 years. Mr. Russell then began the battle of life. Going to Medford, Massachusetts, he alternated his time between his service as a clerk in the drug store of Luther Angier, in that place, and the pursuit of his studies at Bethel academy, in his native county, where he finally graduated with a diploma as a teacher. On October 30, 1849, in company with a few intimate friends, among whom was his especial friend and shipmate, W. H. Stearns, now one of the successful and long-established business men of San Francisco, he sailed in the ship *Henry Ware*, Captain Noah Nason, from Boston via Cape Horn, arriving at San Francisco Mar. 13, 1850. Soon thereafter he proceeded to Stockton, where, for a short time, he engaged in contracting and building. There he met Captain Charles Weber, whose acquaintance he favorably made, which resulted in his receiving a deed for 160 acres of land near Stockton, upon which, during the winter of 1850-51, he built a house and made the necessary preparations to cultivate the land, but owing to a failure of early rains, he abandoned the farming project, sold out and went to the northern mines, where he spent a year, the history of which would be filled with startling encounters with Indians, and other events incident to the early life of a miner. Having traversed the mountain ranges of Humboldt bay to the Columbia river, he returned to San Francisco in February, 1852. Finding himself in that "flat-broke" condition then so common among miners, he turned his thoughts toward the generous soil as he looked eastward across the bay, and he finally embarked on board a small sloop, from which he landed the next morning at what has since been known as Mayhew's landing, his last cent of money having been expended in the payment of his fare. Near Centerville, in what is now Alameda county, by dint of perseverance and personal application to hard work, he managed to procure sufficient means to enable him to rent land and embark in farming. In January, 1853, he settled as a squatter on what proved to be a portion of the Soto rancho.

In 1856 the title of this rancho having been confirmed to the claimants, he bought the title of one of the heirs, it being one-seventh of the ranch, which he divided with his fellow-squatters, reserving sufficient to protect his own possessions, since which time Mr. Russell has been considered among the smaller land-owners of Alameda county.

During the year 1854, Mr. Russell was elected a justice of the peace for Eden township, and served one term on the bench as an

associate in the Court of Sessions with Judge Crane, then County Judge. His attention having been called somewhat to the law, he afterward made application, was examined and admitted to the practice of law. Politically, Mr. Russell was an enthusiastic Republican at the formation of the Republican party, having cast his first vote for president for the liberal party candidate in 1852, at Centerville precinct. Adhering to his principles, he nominated his own electors and cast the one vote of his county for John P.

THE PROMOTERS OF THE NEW LAW.—A dispatch from New York on Tuesday of this week states that the Board of Directors of the American Agricultural and Dairy Association met on that day, to wind up the recent campaign against oleomargarine, which culminated in the passage of what is known as the oleomargarine bill. President J. H. Reall reported the expenses of the campaign as \$7000, and the receipts as \$5600. Resolutions were passed commending the supporters in Congress of the oleomargarine bill as wise, patriotic men. Special

JUDGE JOEL RUSSELL, OF ALAMEDA COUNTY.

Hale, of New Hampshire, the freesoil candidate for the presidency. He remained a Republican until the overthrow of slavery through the rebellion. More recently he has placed his political influence in opposition to what he deems a greater national evil—intemperance and the liquor traffic—and is therefore a pronounced prohibitionist. Mr. Russell is a man distinguished for personal qualities of a high order, commanding the highest respect of those who know him best.

Mr. R. became a charter member of Eden Grange at the introduction of the order into the State, and has ever since been an active member of the P. of H. He is also an active member of the State Horticultural Society, and of other organizations, including the Sons of Temperance, the Good Templars, and has ably filled important and honorable positions in the several organizations to which he has joined himself.

mention was made of the father of the bill, Hon. W. L. Scott, of Pennsylvania, also Hon. W. H. Hatch, of Missouri. The time and place of the National Convention was fixed for September 14th and 15th, 1886, at Philadelphia.

AN ISSUE WITH MEXICO.—There is a small speck of war in the horizon, though there is hardly any likelihood that it will be enlarged. The Mexicans insist that they have a right to try in their courts a citizen of the United States, for something done on our side of the line. Such a claim as that cannot be admitted and the United States Government has demanded the release of the man condemned by their courts. If Mexico should refuse to accede to the demand there might be trouble, but there seems little chance that our sister Republic will persist in such a course.

## Volcanoes as Soil-makers.

The industrial idea seems to be wide awake the world over. In New Zealand they had, in June last, a volcanic disturbance which buried several small hamlets, killed a large number of people and quite changed the landscape in one part of the island. One would think such an occurrence would have filled the region with brooding desolation for a decade, but not so. A scientific expert visited the scene and reported that the volcano "was a purely hydrothermal phenomenon on a gigantic scale, that it is quite local and not of deep origin, and that all danger is past for the present."

With this assurance the industrial idea cropped out, and there seems to be a chance that the great torture of the earth's crust may prove a blessing after all. We read in a local exchange that the large quantity of volcanic ashes which was thrown out in the first terrible outbreak, and which has spread over some 200,000 acres, are now found to be not hurtful to vegetation. In places where the depth has not been great the grass and other vegetation are springing up quite freely, and many believe the ashes will yet prove a benefit to the district, and several people have tested the fertility of the debris thrown out by sowing various kinds of seeds therein and watering with distilled water. In each case the seed has grown and the plants have thriven wonderfully in their new situation. So satisfactory indeed have these trials been that the Government has granted a sum of money to have several portions of the district (which are covered with too great a depth of volcanic ashes for the covered vegetation to break through) sown down with grasses and clovers as experiments on a large scale. If these are satisfactory, as it is believed they will be, the greater part, if not the whole, of the covered district will be sown with artificial grasses in the spring, before the warm weather sets in.

This turning of the debris of a terrible convulsion into profitable pastures within a few months certainly should entitle New Zealand to rank among progressive countries.

NEBRASKA STATE FAIR.—The most gorgeous State Fair entrance ticket we have ever seen is that just received from Hon. R. W. Furnas, Secretary of the Nebraska State Board of Agriculture. In the center of the card is an ear of corn embossed and gilded, the husk, partly torn away, being different shades of green. We take it the work is done by hand, and is an excellent piece of decorative art work. The emblem is to signify that corn is king in Nebraska—a fact which has been painfully impressed upon the attention of California corn-growers since overland freight rates have been so low. The Nebraska State Fair will be held at the city of Lincoln, the capital of the State, September 10th to 17th inclusive.

CRANBERRIES.—The *Sonoma Democrat* says: The prospects for a large crop of cranberries this season are very flattering. The berries around Occidental are ripening very rapidly, and the bushes are heavily laden. We should be glad to hear about this fruit from our readers in that locality. It will be something new and interesting to have the feasibility of cranberry culture demonstrated in this State. Some were shown in the city a few years ago from Bouldin Island, but we have not heard of them since.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Santa Cruz Mountain Farming.

EDITORS PRESS:—C. C. Miller, residing five miles north of Santa Cruz, in the foothills of the Santa Cruz mountains, in a high ridge, two and one-half miles long and about 1400 feet above sea level, during the rainy season, saves up water for summer use in the following manner:

He uses the high hillside above his cultivated tract for a watershed. The water of the rains of winter and spring is conducted, by means of a ditch, into a reservoir excavated in the side of the hill in the chalk formation abounding in this region, where it is allowed to remain until well settled. A few steps below this, a circular cistern is cut out of the same formation, seven feet in diameter and ten feet deep. The water is drawn from the reservoir into the cistern by means of a siphon, which is considered much better than a straight pipe, as by the siphon the purest and best water can be drawn off without disturbing the sedimentary matter contained in the reservoir after settling of the water.

Mr. M. has three such cisterns on the place, and sufficient water is thus saved and stored for domestic purposes, including the use by such live-stock, fowls, etc., as he may have. The cost is but slight. He sent to San Francisco for cement and to Santa Cruz for sand, and over and above his own labor, the cost was only about \$6 per cistern. Such ditches, reservoirs and cisterns might be constructed on almost any high ridge where water cannot otherwise be obtained. The surface material of the earth might of course materially change estimates of cost of construction, but before undertaking that could usually be determined with sufficient accuracy.

## New Blackberries.

Mr. M. is fond of experimenting, and has selected from the forests several plants of the wild blackberry producing berries of fair size and good flavor, and planted them in the rich chalky formation thrown out in the excavation of his cistern. They are growing thriftily, and bearing better than most varieties, having commenced bearing in the first of February, and continued during the spring months, blooming at the same time for additional crops. The ripe berry is very sweet, and belongs to a class of blackberries that, because of their excellent flavor, are much sought after by persons from the city and elsewhere at a distance on their visiting these foothills.

The main feature of Mr. M.'s domestication is in keeping the vines pinched back during all the growing season. This prevents their running to mere bramble and makes the plants prolific.

## Mulching.

Mr. M. is trying the principle of mulching in preference to cultivation of vines. He has several hundred wine grapes planted on a steep hillside. About four years ago, after pruning and cultivating thoroughly, he mulched 100 vines to the depth of 5 or 6 inches, using for the purpose damaged hay, corn-husks, stalks, leaves and other litter convenient. With these, the first season, the crop was light, but free from mildew, and otherwise healthy. The ones not so treated were well cultivated, but had to be sulphured several times, because of mildew. He has continued each year to add to the 100 vines some mulching material, and to prune the same as he has the ones not mulched, but lets the vines lie down. The result has been these 100 vines remain free from mildew ever since they were mulched. He has been obliged to sulphur the balance of his vineyard three or four times each season. The mulched have grown vigorously and borne heavily each year, while the unmulched have also grown vigorously and borne well—but not so well, because of the injuries sustained from mildew. The crop of the mulched is some two weeks earlier than that of the unmulched.

Aside from the consideration of mildew in the growing of grapes on hillsides, where cultivation is difficult, Mr. M. thinks the mulching process advantageous for many reasons, among which he states the following: Prunings from the vineyard are good material for mulching, and when decayed make a good fertilizer. After once mulched the labor necessary to keep the vineyard in good condition is much less. No weeds grow and no cultivation to do. The carrying of prunings from the vineyard is avoided. The mulching retains the leaves dropped from the vines. The vines may be pruned low and spreading. Here, the clusters nearest the ground are found the sweetest and best, those lying on the mulch ripening perfectly, and yet not affected by early rains. The soil under the mulch is kept mellow and moist, and at an equable temperature, thereby causing the feeding roots to reach toward the surface, where the best properties of the soil are found, and which are being continuously supplied by decomposing mulch, insuring the vines health, vigor and long life. Steep hillsides, in this region, are considered the best localities for vineyards, and mulching prevents washing.

Mr. Miller is well informed, an interesting

conversationalist, and enters into the spirit of his experiments and their results with keen enjoyment. He is trying for his grapevines the copper-line preparation recommended by Prof. Hilgard for experiment in checking mildew, and promises to report results to the RURAL PRESS.

Santa Cruz Co.

## ENTOMOLOGICAL.

## Experiments with Cottony Cushion Scale.

We stated some weeks ago that Professor C. V. Riley, U. S. Entomologist, had detailed Mr. D. W. Coquillett to conduct some experiments in killing the cottony cushion scale (*Icerya purchasi*) in Los Angeles. We are glad to have an early report of the progress of this work. Mr. Coquillett sends us a copy of a statement which he prepared for the Los Angeles Times, as follows:

Nearly all of the remedies experimented with were fatal to the young insects, but the adults—especially the females with egg-masses—were not so easily affected, while the eggs were still more difficult to destroy, on account of their being massed together in such large numbers and protected by the cottony matter secreted by the female. In order to ascertain what effect the different remedies had upon the eggs, several egg-masses that had been thoroughly sprayed by the different solutions were taken and inclosed in small pasteboard boxes; in this manner the percentage of the eggs that hatched out could be ascertained beyond a doubt.

It has been my aim in making these experiments to discover a remedy that will kill not only the insects in their different stages of development, but also the eggs, since it is evident that any solution which merely destroys the insects, without affecting their eggs, is not a desirable remedy, as the eggs will in due time hatch out, and thus the tree will again become as thickly infested with the insects as before. The full force of this remark will be better understood when we remember that each of the larger egg masses contains from 700 to 900 eggs, each of which will in due time produce a living insect.

Of course a wash that merely kills the insects without affecting the eggs could be used with quite good results by making two applications of it at an interval of from four to six weeks, so as to give the eggs upon the tree sufficient time to hatch out before the second application is made; but if it is desired to make two applications within a short time of each other, it will pay to use a wash that kills both the insects and their eggs, even if the cost of such a wash is somewhat greater than that of one which merely kills the insects. The cost of a wash, however, could be much reduced by using some contrivance for catching as much of it as ordinarily falls upon the ground after having been sprayed upon the tree, and using it over again; it is believed that by such a method fully two-thirds of the wash could be saved.

The remedies experimented with thus far include potash, caustic soda, hard and soft soap, kerosene, tobacco water, sheep dip (said to be a pure extract of tobacco), vinegar, and Paris green. The crude potash was used in three different strengths—one pound, one-half pound and one-fourth of a pound to each gallon of water. The strongest solution killed about one-half of the leaves upon the tree and one-tenth of the smaller branches, but did not kill all of the female insects with egg-masses, while the eggs were scarcely affected by it. The solution of one-fourth pound to one gallon of water killed above five per cent of the leaves, while only about one-fourth of the nearly grown insects were killed, the females with egg-masses being scarcely affected by it.

The crude caustic soda was used in the proportions of one-half, one-fourth, and one-sixth of a pound to each gallon of water. In each of these solutions the effect upon the tree was more severe than in the potash solutions of the same proportions. The strongest solution killed the tree, while it destroyed only about nine-tenths of the nearly grown insects and a smaller number of the females with egg-masses, the eggs being but slightly affected by it. The weakest solution killed about one-third of the leaves, four-fifths of the nearly grown insects and a smaller number of females with egg-masses.

The hard soap was used in the proportions of one-half and one-third of a pound to each gallon of water. The stronger solution killed nearly all of the insects and formed a hard coating around the egg masses, through which the young insects, after hatching, were unable to penetrate, and were thus imprisoned alive. The weaker solution killed the insects with the exception of about five per cent of the females with eggs, and a slightly larger percentage of the nearly grown ones; it also formed a hard coating around the egg masses, which prevented the escape of the young insects. Both solutions left a whitish coating upon the leaves and branches.

The soft soap was made by dissolving one pound of refined potash and one of concentrated lye in seven gallons of water, then adding one-half gallon of fish oil; the whole was then boiled about an hour. It was used in two

different strengths—one pint and two pints of the soap to each gallon of water. The strongest solution killed the insects with the exception of about one-tenth of the females with eggs, but the eggs were but slightly affected by it; the weaker solution killed about two-thirds of the insects.

The kerosene was used in various proportions, from one gallon in five to one in twenty-eight of water. The strongest solution produced no visible effect upon the tree; those containing from one gallon in five to one in seven of the wash killed all of the insects and their eggs, but when the solution contained only about one gallon of kerosene in ten of the wash, some of the adult females with egg-masses and a small number of eggs escaped injury. The kerosene was first emulsified in soapsuds or in milk. An emulsion made with milk does not appear to be so effectual as one made with soapsuds. The latter is made by dissolving half a pound of soap in a gallon of water and adding it hot to two gallons of the best grade of kerosene and forcing it through a force-pump back again into the vessel containing the solution; in from 20 to 30 minutes a stable emulsion will be formed, resembling a thick cream, and when a piece of glass or a knife-blade is thrust into this emulsion, the latter will adhere to it, forming an even coating, but if it collects in drops the emulsion is not perfect. It is almost impossible to form a stable emulsion with cold soapsuds. Great care must be taken in properly emulsifying the kerosene, as its success as an insecticide depends largely upon its ability to be properly diluted with water; also, none but the best grade of kerosene should be used.

The tobacco water was prepared by boiling tobacco leaves and stems in water, and was used in the proportions of one-half, one-fourth, one-sixth and one-eighth of a pound of the tobacco to each gallon of water. The strongest solution killed all of the insects and nearly all of the eggs, while the tree was not perceptibly affected by it; the weakest solution killed all of the insects with the exception of about 2 per cent of the nearly grown ones and 10 per cent of the females with egg-masses.

The sheep-dip was of the "Gold Leaf" brand, manufactured at Louisville, Ky., and costs about \$2 per gallon. It was used in proportions of 1 part of the dip to 30 of water, 1 to 60 and 1 to 90, but even the strongest solution killed only about four-fifths of the nearly grown insects and one-fourth of the females with egg-masses, while it had no appreciable effect upon the eggs.

From this it will be seen that only three of the remedies experimented with gave anything like favorable results. These were: Tobacco water in the proportion of one-half pound of the tobacco to one gallon of water; hard soap, one-half pound to each gallon of water; and the kerosene emulsion, in the proportion of one gallon of kerosene to from five to seven of water.

## THE APIARY.

## Bee-keeper's Reference-book.

EDITORS PRESS:—Bee-keeping has now reached such an advanced state, and honey is now so low in price—lower than it has ever been before—that only he who keeps abreast of the latest improvements can produce it at a profit. Although new books on the subject are occasionally published, the progress is so rapid that any book soon falls behind the times; and in order to keep fully posted it becomes necessary to carefully read the weekly and monthly periodicals appertaining to this business. There are now several excellent bee-papers, of which the *American Bee Journal*, *Gleanings in Bee Culture* and the *Canadian Bee Journal* stand at the head in this country.

In reading these papers the veteran bee-keeper will, however, find much which, although interesting and useful to the novice, is of no particular value to him. Much of the space is taken up by articles on "wintering," which are of little interest and of no use to the California bee-keeper. Only occasionally will he find some article which it may be desirable to read over again. As the papers accumulate from year to year, they form a vast amount of reading matter, and even by the aid of the indexes it may often be difficult to find some particular article.

To facilitate such research, bee-keepers should have a reference-book in which they can note down, in its appropriate place, any article which they think may be of future value. This should be done at the time of first reading the article, and before the subject is forgotten.

Mr. G. M. Doolittle once gave his method of keeping a reference-book, which consisted in dividing the book into months, and noting each article at the month during which the subject treated upon would need his immediate attention. This method has its advantages, no doubt, but a better method, I think, and the one I have used for several years, is to divide the book under appropriate heads, into the principal subjects of interest or use to the bee-keeper. One or two pages should be devoted to each subject, and the pages divided into columns with sub-heads, viz.: Subject and writer, name of paper, year, page. Thus I find on page

eight of my reference-book the heading, "foul brood." Below appears as follows:

Subject and writer.	Paper.	Year.	Page.
"How to Cure," D. A. Jones	A. B. J.	1882	761
"Method to Cure," De Layens	A. B. J.	1884	22
"Starvation Plan," Osburn	A. B. J.	1884	360
"Nature of, Etc.," Cheshire	A. B. J.	1884	644
Continuation of above	A. B. J.	1884	740
"Phenol for F. B."	Gls.	1885	100
"Thyme for F. B."	A. B. J.	1885	200

At the beginning of the book is a complete index of the main headings, which, at a glance, will refer me to any subject I wish to look up; thus, Queen-cages, page 3; Adulteration, page 4; Foul Brood, page 8; Comb Foundation, page 18; Apparatus, page 12; Statistics, page 22, etc.

Any one who will try this method will find that it will not only be very useful to keep a reference-book, but that it will save him much time and spare him much useless reading afterward. When reading a bee-paper he should always have the reference-book at hand, and while noting the matter under consideration it may be well, and will save still further time, to draw a line in the margin of the paper, indicating the exact part of the article which is supposed to need reading again.

I believe such a reference-book would be of great advantage in any business which has a literature of its own.

## HORTICULTURE.

## Dried Fruit Review and Prospects.

EDITORS PRESS:—The fruit-drying industry of this State makes increased demands each year upon the garden and orchard product. Last year it required, at the lowest calculation, 110,000,000 pounds of green fruit to give the large amount of dried fruits thrown on the market. So that the importance of this industry can be better understood, it is safe to say that 110,000,000 pounds of green fruit was valued at \$3,500,000, and to have marketed it would have taken 5500 cars carrying 10 tons each. The following comparative summary of the dried-fruit product shows the increase the past three years:

	1885.	1884.	1883.
lbs.	lbs.	lbs.	lbs.
Raisins	9,400,000	3,500,000	2,500,000
French prunes	1,400,000	1,524,000	250,000
German do.	150,000	350,000	.....
Apples, sun-dried	1,073,000	1,200,000	800,000
Peaches, do.	1,500,000	500,000	500,000
Plums, do.	1,020,000	700,000	100,000
Pears, do.	100,000	75,000	75,000
Grapes, do.	175,000	150,000	125,000
Apricots, do.	300,000	100,000	300,000
Nectarines, do.	30,000	10,000	20,000
Figs, do.	100,000	50,000	60,000
Apples, evaporated	750,000	400,000	250,000
Apricots, do.	350,000	100,000	90,000
Peaches, evaporated	150,000	50,000	.....
Peach's, evaporated	250,000	80,000	.....
Plums, evaporated	118,000	75,000	.....
Nectarines, do.	50,000	10,000	.....

Totals.....16,766,000 8,874,000 5,070,000

Notwithstanding the heavy production, we enter the new season this year with no stock of old on hand. One cause of the market being cleaned up was the cut in overland freights last spring, allowing the shipping of good, bad and indifferent, either on actual sales or else on ventures. The prices realized were much better than had been thought could possibly be obtained, particularly for the "trash" that was worked off. The East not only absorbed all the dried fruit shipped, but could have taken all of twice as much more without affecting prices in the least. This has demonstrated the fact that the East stands ready to take all the fruits that can be dried in this State, and at fairly profitable prices, provided care be taken in packing for the market.

Last year's large increased production of dried fruits was due chiefly to the heavy crop of green fruit and the low prices that ruled for most of the kinds. This year there is no doubt but the production will be light, particularly of apricots. This opinion I base on the fact that heavy Eastern shipments of green fruits have taken very large quantities that would have been cured, and as the canning and the home trade bid up for choice fruits, prices advanced to such figures as almost made it impossible to resist the temptation to market the green fruit and not dry. It is safe to say that there will not be 200,000 pounds of sun-dried and evaporated apricots this season against 650,000 last year, and as the California consumers look for this fruit, prices will, without doubt, rule high later on.

The quantity of peaches that will be dried, it is claimed by well-informed parties, will not be more than 750,000 pounds, against 1,900,000 pounds last year. The crop was short this year, while heavy shipments to the East, together with increased canning, made heavy inroads into the supply. The production of dried plums and prunes will be fully as large, if not larger, than last year; and as the quality of fruit is good, with reasonable care in preparing them for market, a fair profit ought to be realized. It is said that more nectarines will be cured, as the market for the green fruit is dull and heavy. Dried nectarines are as yet a nov-

elty and must require pushing to make a market. There will not be any increase in the quantity of dried figs; but the quality will, taken as a whole, show an improvement over last year's, as experience has demonstrated the fact that figs well cured and properly packed command good prices. It is most too early to speak with certainty regarding the production of dried apples; but from all that can be ascertained, there will not be more than last year. This opinion is grounded on the general reports that the apple crop of the State is not up to last year's, while a larger quantity has gone into consumption, thus lessening the supply for curing.

The raisin crop promises to be fully up to, if not in excess of, that of 1885, as last year's heavy pack, which was all marketed at the East at good prices, has demonstrated the fact that even twice as many raisins will be taken, and at prices that have ruled so far this year. The incoming crop of raisins will come in on a bare market, for all sent here has been cleaned up. In this connection it is well to state that the trade found gratifying improvement in the packing and grading throughout the districts, especially where the work was done by the growers themselves; and the incoming season, it is confidently claimed, will show renewed efforts to still greater improvements, which, if realized, will place California raisins where they rightly belong—ahead of the very best imported.

### New Seedling Blackberries.

EDITORS PRESS:—Judge J. H. Logan, of Santa Cruz, an amateur orchardist and gardener, is paying considerable attention to the propagation of new varieties of the blackberry, and especially seedlings from crossings of the wild with other varieties. He has now growing and in bearing quite a number of very promising seedlings from the Augbinbough, a chance California seedling of the wild berry of Alameda county, crossed with an evergreen berry from Texas, known as Crandall's Early. We had the satisfaction of sampling a few berries from some of these seedlings that happened to be ripe at the time of our visit, and found them large, well-shaped and of excellent flavor. The berries from each individual plant have a distinct flavor, and some of them very different from others, both in appearance and flavor. Most are black, while some few are red. One deserving very special mention ripens in May, is large and red, and has a flavor resembling the raspberry, and, to be judged from flavor, would seem to be a cross between the blackberry and raspberry.

These are interesting experiments and may result in the introduction to the world of some important new varieties. We would be glad to hear from Judge Logan with reference to these seedlings further on.

## POULTRY YARD.

### Eggs and Hatching.

Prof. Long writes for the *Mark Lane Express* as follows: Since, as a very young amateur, I possessed my first hens, I have known persons who have insisted that they can select eggs which, if they hatch at all, will produce cockerel or pullet chickens as the case may be; but, in a long experience among poultry amateurs, I have never come across the individual able to successfully accomplish the feat, and yet to-day there is as much ignorance upon this one point as upon anything in connection with poultry breeding. As a general rule it is quite sufficient to put one question to those who claim to be able to do what is impossible, and this may be put with effect by any person who knows but little about poultry or the conduct of a poultry yard. This question is, "Is it possible to distinguish the cockerels from the pullets in a batch of, say, Brahma or Cochins chickens which are under a week old?" As this cannot be done, it is scarcely possible that the new-laid egg will afford any clue to what is impossible of discovery in the live bird.

The generality of people do not understand the construction of an egg, to say nothing of the mystery of its vitality or that fertilizing agent which distinguishes a good egg from a bad one after it has been set upon by a hen. It is imagined by some that hens will not lay unless a male bird is in their company. This, of course, is a fallacy. Others object to eggs laid by hens in the company of a male bird because they contain a small bunch of mucilaginous substance, which they believe to be the fertilizing agent, being ignorant of the fact that this is present in all eggs, of which it forms part. Its office is to properly suspend one portion within the other. The agent referred to has never yet been discovered in the egg, and although the germ is known to exist within the center of the yolk, science has failed to show when it is fertile and when it is not. This fact bears most distinctly against the common assertion of country people that they can distinguish the egg which will produce a chicken from that which will not. If scientific examination of the very germ fails to do this, it is very difficult to understand how

any individual, no matter how clever he may be, can perform so extraordinary a feat. All the doubt arising upon a point of this kind should be at an end, for both physiology and common sense absolutely disprove any such possibility. The egg is fertilized while the yolk still hangs upon the ovary. The ovary is, to speak plainly, a bunch of yolks from the size of a small pea upward. These grow until they are normal in size and ripe for emission into the world. When ripe they fall off the bunch into the oviduct, when they are gradually enveloped in a glary albuminous fluid, which we know as the white of the egg when it is cooked. As it rolls down the duct covered by layer after layer of the white, it is finally enveloped in the shell, and the work is completed by laying. The fertility of the egg is decided before the yolk leaves the ovary, hence it is impossible to understand how the subsequent shell-covering can in any degree whatever be connected either with the fertility or the sex.

Sometimes it happens when something abnormal occurs with the hen that a yolk is ripe for laying before a sufficient quantity of the albumen has been formed—before, indeed, there is a single layer in the oviduct. In this case, the yolk, in its passage through, is either enveloped with a very small quantity or is not covered at all until it is inclosed by the shell, which is appropriate in size to the diminutive dimensions of the egg. Again, sometimes nature supplies a large quantity of albumen, i. e., the white of the egg, before the yolk is ripe. In this case the albumen is thrown off and similarly enveloped by a small shell. There are few persons who keep hens who have not at some time in their experience found an egg no larger than that of a bantam, or even of a pigeon, in one of the nests. Such eggs invariably contain the yolk or the white instead of the ordinary quantity of the two. This fact is one more physiological proof that the shell adapts itself to the requirements of the yolk and the white, and that it can, therefore, have no possible part in indicating either the sex of the chicken or the fertility of the egg. As a matter of fact, it will be found that long or pointed eggs are commonly laid either by pullets, whose eggs are always of one shape, or by old fat hens, whose condition is the cause of such a formation. Change the condition of the latter by reducing the fat—and this may be done by an alteration in the diet—and the eggs will quickly resume their rounded shape. Of course, no one who at all understands the subject will be disposed to argue that a pullet which always lays long or pointed eggs will produce nothing but cockerel or pullet chickens, as the case may be, and yet there are scores of farmers who declare that a pointed egg will produce a cockerel.

I am inclined to believe that the question of sex in poultry is one in common with that understood by breeders of the larger kinds of farm stock. It is with some a disputed point as to whether cockerels are more largely produced by the mating of young, vigorous cockerels with old hens or vigorous old cocks with pullets. I am personally of the opinion that a very large proportion of male birds come from the mating of strong pullets with old cocks, but this will not be borne out in ordinary practice, because pullets are generally late hatched, and either diminutive or lacking in vigor, while old cocks are of two kinds. If they are exhibition birds, they are seldom of value for breeding after their second year, and if they are farmyard birds, they are commonly as vigorous as young cockerels; hence the conditions of success for a trial of this kind are in a general way usually wanting.

There is another point respecting the shape of the egg which should not be forgotten, more especially at the present moment, when so many persons are using their eggs for hatching purposes. Where a number of hens are kept, some of the eggs will frequently be found with a coruscation or raised, uneven bend of the shell running round the center. I have certainly hatched chickens from eggs of this description with success, but the defect or blemish is a very undesirable one, a large proportion of such eggs being infertile. Hens which lay them are invariably out of condition and suffering from congestion or contraction of the oviduct. This has an effect upon the shape of the duct, and consequently upon that of the shell formed within it. As hens which are not healthy—and they are simply animals in this respect—seldom breed, it is not a very surprising fact that chickens in so many instances are not produced from their eggs.

There is one more feature worthy of remark. I refer to the size and position of the air space at the end of an egg, from which it is commonly supposed by some that the fertility of the egg can be ascertained. This is another mistaken idea, and one which should not for a moment be entertained. The air-space in question, however, is most important to the breeder who conducts his work rather upon modern than upon the old lines, for it enables him to tell very rapidly and very decisively at the end of a certain number of days whether the eggs he is using for hatching are fertile or not. The majority of poultry-keepers are most unwilling to touch the eggs upon which a hen is sitting until the end of the three weeks of incubation, although it often happens, especially in the early part of the breeding season, that all, or, at any rate, invariably a large proportion, are "clear," i. e., do not contain a chicken. Now, at the end of six days the most perfect tyro can, by examining an egg which he

shades by his hand in holding it before a candle or lamp, detect whether it is fertile or not. A dark line will appear at the base of the air space. Below this the egg will be dull and opaque, while, above it, it will be bright and light. Day by day the dullness increases until it becomes quite black, and the line at the base of the space referred to sharper and clearer.

## PUBLIC AFFAIRS.

### The "Health Amendment."

Question as to how and when the proposed amendment to the State Constitution passed by the last Legislature, and commonly known as the "Health Amendment," would come before the people for their suffrages, is now settled by the Governor's proclamation which we publish below. This is the amendment which proposes to tax railways 2½ per cent upon their gross earnings, and which has a clause providing that fruit trees and vines shall be assessed as part of the realty:

#### Proclamation.

STATE OF CALIFORNIA, EXECUTIVE DEPT.,  
SACRAMENTO, July 31, 1886.

Whereas, the Legislature of the State of California, at its twenty-sixth session, beginning on the fifth day of January, A. D. eighteen hundred and eighty-five, two-thirds of all the members elected to each of the two houses of said Legislature voting in favor thereof, proposed the following amendment to Sections 1, 8, 10 and 11 of Article 13, of the Constitution of the State of California:

#### Amendment Number One.

Section 1. All property in the State, except railroads, not exempt under the laws of the United States, shall be taxed in proportion to its value, to be ascertained as provided by law. The word property, as used in this article and section, is hereby declared to include moneys, credits, bonds, stocks, dues, franchises and all other matters and things, real, personal and mixed, capable of private ownership; provided, that growing crops, property used exclusively for public schools, and such as may belong to the United States, this State, or any county or municipal corporation within this State, shall be exempt from taxation. Growing vines and fruit trees shall be deemed to be and shall be assessed and taxed as a part of realty; and provided further, that railroads shall be taxed as provided in Sec. 10 of this article; and provided further, that the Legislature may provide for the exemption from taxation of ships and vessels owned and registered or enrolled in this State, or may tax such ships and vessels on their gross and net earnings, in lieu of an ad valorem tax. The Legislature may also provide, except in case of credit secured by mortgage or trust deed, for a deduction from credits of debts due to bona fide residents of this State. Double taxation in any form is prohibited.

Sec. 8. The Legislature shall, by law, require each taxpayer in this State to make and deliver to the county assessor, annually, a statement under oath, setting forth specifically all property, real and personal, except railroad property, as defined in Sec. 10 of this article, owned by such taxpayer, or in his possession or under his control, at 12 o'clock meridian on the first Monday in March.

Sec. 10. All property, except railroad property, as hereinafter provided, shall be assessed in the county, city, city and county, town, township, or district in which it is situated, in the manner provided by law. Every corporation and person owning or operating a railroad, or any portion thereof, in this State, shall on or before the first day of July of each year pay to the State Treasurer an annual tax of two and a half per cent upon the gross earnings, earned within this State, of such railroad, for the year ending upon the 31st day of December next preceding, which tax shall be in lieu of all other State and county taxes upon the franchise, business, right of way, roadway, roadbed, rails, rolling stock, fences, stations and their appurtenances, and upon ferryboats, when operated as a part of such railroad, and upon the shares of the capital stock and upon the mortgages, deeds of trust, contracts or other obligation by which a debt is secured upon such property. All other property belonging to such corporation or person shall be assessed and taxed as other property is assessed and taxed. The gross annual earnings earned during the year ending on the 31st day of December last preceding, of all railroads, shall be, annually, before the first day of May thereafter, ascertained and declared by the State Board of Equalization, under such rules and regulations as may be prescribed by said board; provided, however, that the Legislature may at any time pass laws prescribing said rules and regulations. In all cases where railroads are situated partly within this State and partly without this State, the gross annual earnings thereof shall be ascertained and determined by taking,

First—The gross earnings which, during the year last preceding, have been earned wholly within this State.

Second—The gross earnings which, during the same year, have been earned partly within this State and partly without this State, which shall be ascertained by apportioning such earnings between this State and other States or

Territories, in the proportion which the number of miles of such railroad situated in this State and used in making such earnings bears to the whole number of miles thereof, by the use of which such earnings have been made. The proportion of interstate earnings thus ascertained shall be added to the earnings made wholly within the State, and the total thus obtained shall be taken and deemed to be the gross earnings of such railroads for all purposes of assessment and taxation. For every purpose of this section, except for the purpose of ascertaining the proportion of interstate earnings to be added to the earnings made wholly within this State, all railroads operated as one system shall be treated as one road. One-third of the tax paid by corporations or persons owning or operating railroads under the provisions of this section shall become part of the General Fund of this State, and two-thirds thereof shall be paid to the county or counties in which said railroad is situated in proportion to the length of the railroad operated in the several counties. For the purposes of this section a consolidated city and county shall be treated as a county. Any corporation, association, partnership, person or persons, unlawfully failing or refusing to pay the tax herein provided, when the same shall become due or within 30 days thereafter, shall be deemed to have waived their right to operate their railroads within this State. The taxes herein provided for, together with such penalties as the Legislature may impose for the non-payment thereof, shall be a lien upon the property hereinbefore in this section designated, and may be enforced in such manner as the Legislature may by law prescribe. All railroads, so far as the same are situated within the boundaries of any common-school district, shall be subject to an ad valorem tax for school purposes voted by the electors of the district at a special election held for that purpose, the same as other property situated within the district, anything in this article to the contrary notwithstanding. And all railroads, so far as they are situated within the boundaries of any incorporated city or town, shall be subject to an ad valorem tax for municipal purposes, the same as other property situated therein, anything in this article to the contrary notwithstanding.

Sec. 11. Income taxes may be assessed and collected from persons, corporations, joint stock associations or companies, resident or doing business in this State, or any one or more of them, in such cases and amounts and in such manner as shall be prescribed by law. No court within the State shall have power, by injunction or otherwise, to interfere with, hinder or delay the collection of any tax laid under the form of law, except upon a showing that the same property has been taxed more than once for the same purpose in the same year, and then only upon payment to the tax collector or into court of a sum equal to the amount of one of the taxes so laid upon the property in question; provided that in all cases actions may be maintained against the tax collector to recover illegal taxes paid under protest. All such actions must be commenced within 30 days after such illegal taxes have been paid. It shall be the duty of the courts in which such actions may be brought to try them, upon the request of either party, in advance of all other civil actions, and such taxes so paid under protest shall be retained by the tax collector, or such other officer as the Legislature may designate, until such actions shall have been finally decided.

#### Schedule.

Nothing in this amendment shall affect any assessment or tax heretofore made or levied, or interest thereon, or any penalty heretofore incurred, or any action or right of action on account of any such assessment, tax, interest or penalty; and all laws in force at the adoption of this amendment, not inconsistent therewith, shall remain in full force and effect until altered or repealed by the Legislature. The first levy and payment of taxes against railroad property hereunder shall be made in the year eighteen hundred and eighty-six, and shall be upon the gross earnings, to be ascertained as herein provided, for the entire year of eighteen hundred and eighty-five. Taxation for the fiscal year ending June 30, 1885, is not affected by this amendment.

Now, therefore, pursuant to the provisions of the Constitution and an act of the Legislature entitled "An Act to Provide for the Submission of Proposed Amendments to the Constitution of the State of California to the Qualified Electors for their Approval, approved March 7, A. D. 1883," the said amendment is submitted to be voted upon, by ballot, by the qualified electors of the State, on

Tuesday, November 2, 1886.

The amendment is designated "Amendment Number One," and the BALLOTS used at such election must contain the words, "FOR THE AMENDMENT Number One," and the words "AGAINST THE AMENDMENT Number One," written or printed thereon.

And I do hereby offer a reward of one hundred dollars for the arrest and conviction of any and every person violating any of the provisions of Title IV, Part 1 of the Penal Code; such rewards to be paid until the total amount expended hereafter for the purpose reaches the sum of ten thousand dollars.

Witness my hand and the Great Seal of the State, the day and year first written.

[SEAL.]

GEORGE STONEMAN,  
Governor.

Attest: T. L. THOMPSON, Secretary of State,

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## National Grange Work.

EDITORS PRESS:—While on a short visit to our capital city, which, no doubt, deserves its reputation of being "the most beautiful city in the Union, if not in the world," let me send my old friend, the RURAL—of many pleasant memories—a few words of hearty greeting.

The daily press keeps the people posted on what Congress has been doing—and not doing; it has told you perhaps enough of the truly grand Washington monument, its beautiful symmetry, its high proportions. Again and again have the praises been spoken of the vast and instructive collections of the Smithsonian and the National museum, the Congressional library and other depositories of valuable information—all of which those inclined to books and science fully enjoy, when so fortunate as to spend a few weeks in Washington.

So this brief letter will be limited to a subject to which our daily journals now allude rarely and perhaps never, except incidentally during the sessions of the National Grange, which still come around as regularly each year as they have done for 19 years past, since the organization of this best of many agricultural associations, Dec. 4, 1867.

Many of your readers will like to hear something about the headquarters of the National Grange, which have been relocated here since the short stay of two or three years at Louisville, Ky. Some pleasant hours have been spent, by your old correspondent, at our Grange headquarters, chatting with the present most efficient secretary, Bro. John Trimble, who is one of the seven original members classed officially as the "Founders of the Grange."

The office and storage-rooms, for considerable room is still required for the National Grange headquarters, are well located in a handsome building on F street, midway between the high patent office and pension building.

It is a pleasure to learn authoritatively, from Secretary Trimble, that all but three of the original State Granges are still actively and efficiently at work in the interests of this truly great organization, and that the Order generally throughout the Union is in a more flourishing condition than it has been at any time during the past five years.

Among the many subordinate or local Granges in each State, 90 new Granges were organized and 150 dormant ones were revived during the last fiscal year, showing a very healthy increase of 240 subordinate Granges over the preceding year.

The sessions of the National Grange and its annual attendance is a fair test of the healthy condition of the Order throughout the United States. At the session in Boston last November—which, by the way, gave a new impulse to the very useful work of the Order—30 States were represented by their regular delegates, the Master of each State Grange and his wife—when he is lucky enough to have one. The Sixth degree, or next to the highest in the Order, was there conferred on 1566 members, who were in good standing in the preceding degrees.

The finances of the National Grange, well known to be the back-bone of all such institutions, are in a very sound condition, all the per diem and mileage of the accredited delegates for each session being paid out of its funds. Some idea can be formed of the necessary expenses of a session like that at Boston from the official facts that the total number of miles traveled by the members, to attend that session, so far from the center of our country, was 114,120, and the total number of days consumed by the various members in going and returning was 294, while the session continued nine days.

Bro. Trimble informs me that he will go early this month with the Executive Committee to Philadelphia, to prepare for the 20th session of the National Grange, which convenes there November 10th. The class that received the Sixth degree at Boston last year was the largest ever known (1566), but the prospect now is that at least 2000 members will receive that degree at the Philadelphia session.

There could be no more efficient secretary than Bro. Trimble, and the membership generally are to be congratulated on the general efficiency of the work of the National Grange and of the Order throughout all the States where it still exists. Because our daily and weekly papers do not make so much mention of the Grange work as in its earlier years, and because its live membership is not so large as it was formerly, many wrongly infer that the Grange cause has died out. But this is a great mistake. It lives not only in many subordinate Granges and numerous active members, but will ever live in the hearts of many members now unaffiliated. Many objects the Grange had in view have been accomplished. Our farming classes feel less oppressed than they did 15 years ago. But whenever certain evils, against which they found it necessary to combine, became rampant again, it is safe to predict that the Grange work will be revived in each State to gain that redress and that "easing-up" of a farmer's burdens, for which it has been clearly proved to be the most effective remedy of all

the agricultural associations ever invented; that is, where it has been kept true to its legitimate purposes and sphere.

That the Grange may continue to have a healthy life and growth, and that its motto, *Esto Perpetua*, may be fully realized, is the never-changing wish of one of its earliest workers among you. J. W. A. WRIGHT.

Washington City, Aug. 2d.

## A Word to Politicians.

You may make arrangements and compromises; you may adopt "plans" and schemes; you may pull the wires and "harmonize the contending factions" until you die of old age; but until you can get the people, the rank and file of your parties, the whole people, to take an active interest in their own political affairs, and to turn out and do their own work and rule their own organizations, you will always have bosses, corruption and discontent. But you don't want the people to do that! We know you don't; and that is just where the trouble comes in. You wish the people to take an interest in the elections and in the clubs and conventions and things. To take an interest, that is! Interest enough, but not too much interest, as it were. You wish the masses to be enthusiastic about forming clubs, contributing a little money, possibly, now and then, parading, cheering, and voting on election day; but you don't wish them to keep on being enthusiastic, to the extent, for instance, of inquiring into what is done with the taxes, and who and what manner of men and women live upon the spoils of the victories won by the enthusiasm of the aforesaid masses! Oh, no! There the duties of the good, quiet, law-and-order-loving citizen ought, as you think, to get the better of his partisan enthusiasm, and he ought to go home to his family, and to his work, content that he has helped to win a great victory for the party, and is utterly and nobly free from any paltry radical curiosity to pry into what is done with the loaves and fishes, the appointed offices and patronage, by the leaders and managers! Ah, yes! But, as we said before, there is where the trouble comes in. The masses are losing that old-time generosity and truthfulness which used to induce them to go home and go to work cheerfully, only too thankful to think that they had faithfully served the party and the country and the leaders by voting as they were told to do. Now they are beginning to look back and to wonder and to question. The day is coming when you will have to pacify them, gentlemen, and with something more than sentiment and phrases and appeals to their partisan devotion. If you had good sense and if you were honest you might yet save yourselves; but you will never become wise enough to realize that nothing short of equal and exact justice will, in the end, pacify the people. They may, they must, forgive the past; but they will have justice for the time to come.—*Hayes Valley Advertiser*.

## A Grange Memorial.

Senator Cox presented the following memorial, which was read and ordered referred to the Senate Committee on Irrigation:

To the Honorable, the Senate and Assembly of the State of California, convened in Extra Session.—Your memorialists, citizens of California, assembled in Pomona Grange council in the city of Sacramento, this 31st day of July, 1886, being profoundly impressed with the gravity of the crisis, deem it a sacred duty to express to you the deep concern and profound alarm with which we regard the object, as defined in the proclamation of his Excellency, the Governor, calling you in extra session. That object, as defined in the proclamation of his Excellency, is, first, to nullify a decision of our highest judicial tribunal, and by retroactive constitutional amendments extinguish, by the repeal of a law, property rights acquired under and by virtue of that law while in force. We submit that this would emasculate the judicial branch of government, take property from under the protection of law and subject it to the uncertain hazard of the ballot. The second proposition of this extraordinary call is supplementary to the first, viz.: That the court be reconstructed because its decision is not satisfactory to one of the litigants.

Your memorialists, mindful of their duty to themselves and to posterity, do earnestly protest against the adoption of a policy that would assassinate the independence of our judges and strike a fatal blow at the stability and integrity of property—a policy essentially lawless, revolutionary and communistic; a policy that seems to be an open declaration of war against the basis and fundamental principles upon which our Government is founded.

[Signed] C. A. HULL, W. M.,  
Sacramento County Pomona Grange.  
J. E. BEACH, Secretary.

PASO ROBLES GRANGE elected and installed the following officers July 31: D. F. Stockdale, M.; G. Kingery, O.; H. W. Rhyne, L.; John Botts, S.; M. H. Brooks, A. S.; P. T. Waggoner, C.; Levi Exline, T.; Kittie Middleton, Sec.; Byron L. Forteny, G. K.; Lena Waggoner, Pomona; Ella Waggoner, Flora; Effie Forteny, Ceres; Sarah Rhyne, L. A. S.

DEATH OF SISTER R. T. POWELL.—We have just received a letter from Bro. S. C. Carr, W. M. of the Wisconsin State Grange, concerning the sad intelligence of the death of his sister, Mrs. R. T. Powell. Sister Powell died in Chicago, July 28th, after a brief illness of a week. She has been a prominent member of the Grange ever since its organization. She spent the winter of 1884-5 in California, visiting her three brothers, Prof. E. S. Carr, of Pasadena, E. M. Carr, of Adelaida, and Nelson Carr, of Santa Rosa. During her stay in California, Sister Powell made many friends who will hear of her death with deep regret. Our fullest sympathy is extended to the bereaved relatives.

PLACERVILLE GRANGE ON IRRIGATION.—At a meeting of Placerville Grange the following resolution was adopted: *Resolved*, That the waters of the State belong to the State for the use of the people, and that we demand a general system of irrigation by the State for their distribution for the use of the people.

## Stockton Notes.

[Written for the RURAL PRESS by Mrs. W. D. A.]

Everybody that could, went to the National Encampment at San Francisco—2500 went by boat and train. The *Mary Garratt* and *T. O. Walker* made the trip in daytime, gaily decked. The *Walker* carried 1500 persons for two bits apiece; the *Mary Garratt*—tickets \$1—took the soldiers and "Woman's Relief Corps," which served home lunch on board. Conspicuous was the beautiful sign of Rawlins Post, lettered, "Headquarters of Rawlins Post, No. 23, G. A. R., Stockton," with the army badge and a picture of a sailor and soldier, representing the army and navy, with national colors and union-jack. Batchelder photographed the gay scene.

Two severe fires—one July 30th, the other August 5th—showed the skill and courage of Stockton's firemen to confine the flames and save property. Loss by the first fire, \$35,000; insurance, \$12,000. The last burned a large lumber yard (insured), a planing mill (\$4000 insurance), and a row of dwellings. The first fire started in a furniture factory; the second in the planing mill, and destroyed \$170,000 worth of property. Fires have destroyed fields of grain on Roberts and Union island. Eight hundred and eighty acres burned from a burning barn, where tramps had been. This irresponsible class are unlikely to diminish, either from home or foreign supply. The *New York Tribune* says 2500 emigrants landed in New York, July 25th, many of them paupers from Greece, Turkey and Arabia, with trinkets to peddle.

So we are to rise with the dawn to make real against bogus butter, taxed only two cents a pound! Our hearts are surcharged with wrath against the law-makers and Cleveland, who has lost another chance to endeavor himself to farmers and their wives. He does not believe in widows' pensions or helping dairymen, whose outlay to make real butter—the most nutritious of all articles of diet except cheese—is more than three times the cost of a beef-butter cellar. (It would, of course, have been better to have had a tax of five cents per pound, but two cents is a great deal better than nothing. The fact from which most is expected is that now bogus butter must be stamped, and it will be harder to sell it for the genuine article. It is hoped and believed that people will not care to buy and eat it when they know what it is.—*Eds. Press*.)

Interest is unabated in irrigation plans, but the extra session is very unpopular. Many days the thermometer has been at 90°, but breezes blow every day.

Two-thirds of the crop is out. A field of winter-sown wheat yielded 40 bushels to the acre. A Houser cut and sacked 750 bushels one day, in standing grain, and 30 acres a day for a week or more.
